I am sure that you need no introduction to Unitarianism, for being a good student of American history, you know that it was the faith of our Founding Fathers. Its history in Virginia goes right back to the days of Thomas Jefferson. The Unitarian movement is growing in Vriginia. We now have churches in Arlington, Fairfax, Mount Vernon, Charlottesville, Lynchburg, Norfolk, and Richmond. We have very active fellowships in Blacksburg, Danville, Fredericksburg, Hampton, Roanoke, and Waynesboro. So it is no longer true today, as Jefferson said of his day, that, "I must be content to be a Unitarian by myself." Incidentally, our churches in Arlington, Richmond, and Norfolk are integrated congregations—a fact which I find to be of considerable significance.

The main concern of my life is with the moral and spiritual welfare of the many families that comprise my congregation, and beyond that to the millions of people who are my brothers in the great adventure of life upon this earth. Each and every one of these, whether dwelling in the Piedmont mud of Virginia, or upon the wide, windswept plains of Siberia, I believe to be the creatures of that mysterious but wondrous creative power which some men call life, others nature, and others God. As such, then, I must think of all these people as brothers of one another, immutably bound together in a common destiny. And so I write to you, Governor Almond, as a brother in spirit, and as one who longs to see brotherhood and justice reign, not only in my own community, but over all the face of the earth.

For a long time I have wanted to write to you, but, like most citizens, I just didn't take the time. Since Tuesday evening, however, when I listened to your address on the

radio, I have felt a moral compulsion to say some of the things that have been bothering me. I suppose that you will call be a "pinko" or a "Communist sympathizer hiding behind the pulpit," but that won't bother me in the least. I can understand the psychological motivation which makes a man use such a defense as that, and I can forgive him.

But I find it difficult to forgive you for the disappointment, disillusionment, and outright disgust that you have caused many thoughtful Virginians to feel as a result of your talk last Tuesday. I have always been opposed to your doctrine of massive resistance; yet, like many other Virginians, I have continued to feel an active sympathy for the difficult position in which you found yourself. It has always been my hope that your intelligence and practical approach to problems would issue in the continuance of your early ideal of moderation. It was always my hope that when Virginia's own supreme court rendered its decision on the legality of massive resistance, your qualities and leadership would blossom into greatness, that then you would cease to be the politician and become the statesman and thus take your rank among the great men in the history of this State. The present loss of faith in the qualities of your leadership is now one of the great tragedies of our current social crisis. I hope that my letter may bring to you an inkling of some of the reactions of Americans to the abuse which you saw fit to hurl at us on Tuesday night. If it can convey some of the depth of our disappointment in you, and the genuine anguish of our anger at what you have said and done, then it will not be in vain.

I realize, of course, that there is a ridiculous element in this picture of me, an utterly insignificant citizen, writing to you, one of the most powerful individuals in the State today. My letter will probably never even reach you, and if it does, it will have little influence, for I am told that you are not easily swayed. And yet I have to write. I write to you now as I write to all of the statesmen and politicians whose policies and programs immediately or ultimately affect our Nation's welfare and destiny. I write to you now because I believe that in this present situation you are the one who is most responsible for what happens to the children of Virginia and to the concept of government by law in this Nation. Not only that, but I think you are also responsible for what happens to America's position of leadership in the world today. I make no apology, therefore, in taking my pen in hand and telling you exactly how I feel.

My main purpose in writing you this letter is to urge upon you a drastic change in your policy of open defiance of State and Federal law. To do this before it is too late. To do this, not only for the sake of Virginia, but for the benefit of America. Whether we like it or not, a tremendous responsibility has developed upon this Nation—upon us. We call ourselves the leaders of the free world. We say that ours is the task of preserving democracy, and freedom, and the high spiritual heritage achieved through the years. The United States has established itself as a Nation proclaiming individual freedom, equal opportunity, human dignity, and though all other nations fail in their basic responsibilities, it is incumbent upon us to continually strive to live up to the principles we proclaim so proudly. We must endeavor to maintain our integrity as the land of the free. We must live the words we speak, or we can never expect others in this world to believe our words; to believe that our high-sounding principles can be practiced in fact; that the way of life set forth in our Declaration of Independence and our Constitution is the better way of life; that is the only way mankind can truly come to the full glory of a fruitful, creative, peaceful, and just life. Our country today can tip the scales which decide the future course of mankind. It is within the power of our Nation to enable human beings to continue the centuries-old upward climb—or to end it all. Whether we like it or not, our actions and our decisions as individuals and as a State, will decide which of those alternatives will prevail. Whether we like it or not, there is this great weight of continuing responsibility resting upon each of us and upon the groups to which we belong. We must master the problems at home before we can master the problems abroad. And home, for us, is not Chicago or Washington or Atlanta. It is Arlington, it is Richmond, it is Norfolk, and Charlottesville, and Front Royal.

Yet, in spite of the well-known horrible reality of nuclear weapons, in spite of the obvious potential war situation that exists in the world today, in spite of our announced role as leaders, in spite of widespread education concerning the basic principles of our Nation—in spite of all these, there are those in our country—and I include you among them—who are loudly pursuing a suicidal course. As world communism engulfs more and more of the globe, you sap the vitality of our strength at home, thus weakening the ability of our Nation to combat this mortal evil abroad. Do you not realize that our Nation is under moral scrutiny today? That the rest of the world is watching and wondering whether we actually live up to our high-sounding principles and pronouncements? Whether we really are a people of integrity who practice what we preach about democracy and peace and equality under law? Regardless of how anxiously you wave the State flag and brag about Virginia's superior way of life, when you defy your own Supreme Court which upholds the law of the land, you are doing a grave disservice to your State, to your country, and to the future of mankind upon this earth.

To those of us who still hope that democracy may somehow win in the desperate struggle with communism, what is happening in Virginia, under your leadership, is profoundly disturbing. The Communists want civilization to recede. They want to limit personal freedom. They want to prevent us from living the good life. That is their declared doctrine. They are book burners, polluters of the intellect, degraders of the mind, betrayers of the soul. They are tyrants, and enslavers, tramplers. They proclaim the ancient tribalistic way of life. They want to take us back—back to the darkness from which we painfully emerged. They want defiance; they want disorder; they want bloodshed; they want revolution. They are in revolt against the higher levels of human life. They are in revolt against civilization. They loathe a world in which the individual can live the free life. They plan to reduce the whole world to a common level where that kind of freedom will be impossible.

They are against what all the prophets, all the moral pioneers, all the greatest of the human race have striven for. They are against the freedom that Socrates would rather drink the hemlock than lose. They are against the more abundant life that Jesus said He came to bring. They are against everything that would unburden and unfetter the human soul. Can you really be unaware, Governor Almond, of the tremendous aid you are giving to the very Communists whom you claim to be fighting? Can you really be unaware of the great harm you are doing to the people of Virginia and to the South and to the Nation you claim to be protecting?

Since your address of Tuesday night, I have received a letter which reminded me of King Darius I of ancient Persia. King Darius had feelings of dislike toward the Athenians, but apparently he did not trust the constant strength of those ill feelings, because he ordered a slave to call out to him before every meal: "Master, remember the Athenians." The letter which I received was from a local citizen. Following the example of King Darius, there was scribbled on a piece of paper with red pencil the words: "Remember Little Rock." I wonder if it is really necessary for anyone to remind us of Little Rock? Are we ever likely to forget it? Europeans remind us of it constantly. Asians remind us of it. Africans remind us of it. The South Americans remind us of it.

Can we here in Arlington forget Little Rock? Our Stratford Junior High School is due to be desegregated within a few days, and school integration will then become a reality in our community. I am sure that the vast majority of the people of Arlington will accept this with calmness, and that we shall be proud of the democratic behavior of our schoolchildren. There will be no disorder, no violence from the thinking citizens of Arlington. Our public officials know how important we feel it is for them to take a firm stand against violence. We support wholeheartedly our public officials in carrying out their duty to support la· and order.

I think it is important that you should know of this support before acts of violence occur, if they do occur, and not afterward. For if there is any act of violence it will be caused by the segregationists who have been whipped into fury by your vitriolic words of Tuesday night.

What I am saying is that the eyes of the world will be focused upon Arlington on February 2. What happens at Stratford will, in large measure, depend upon you. We can demonstrate to the world that democracy can really work, or we can prove to the world that what the Communists say about America is actually true—that we do not practice what we preach.

In a very real sense, the future of democracy will be determined by the behavior of the students and parents of Stratford. Democracy is destined to die in America unless its spirit of cooperation can join us together with all men to make a better world. The brotherhood of man must either extend or it must diminish. Selfishness will kill it everywhere, at home as well as abroad—if you and I allow it.

Do you ever wonder, Governor Almond, why it is that none of our pronouncements thus far on the purposes of the American dream have really been exciting? Why the concept of liberty somehow fails to cause enthusiasm throughout the world? Why we wage this bitter struggle with communism so grimly? The reason is not very difficult to understand. Just beneath the level of our ordinary thoughts—the thought that takes things for granted, that tries to be satisfied with what comes its way—below that level, there is a deeper level and it is very unsatisfied today. It wants more than pronouncements; it wants more than court decrees—more than any of these things. It wants a genuine, believable purpose—a sufficient purpose for life. Yes, and it wants that purpose backed up by deeds. Not just in the courtrooms, but everywhere.

Even people who do not realize it are haunted in their thought and conscience by the injustice of the world we try to live in. It depresses their nervous energies. It takes the joy out of life. It makes them uneasy and defensive. We know perfectly well that the brotherhood of man is right. We are beginning to know, too, that it is necessary. In the depths of our hearts—even when nowhere else—we realize that it is coming. In one way or another, it is sure to come. I write this without a shadow of doubt in my mind, in spite of a deepening feeling of distress about the human cost at which it may have to come.

Nothing that you do can keep brotherhood from coming. Nothing new that the general assembly enacts can keep it from coming.

Not even the complete abolishment of the public school system can keep brotherhood from coming. You are foolish indeed if you think the final issue can go your way. No one need think that prejudice can win. What we sow, we reap. Until we learn to sow the seeds of unselfishness, of brotherhood, we shall continue to reap a harvest of disaster. This was true when the prophets first declared it in pioneer loneliness—voices crying in the wilderness. It has been true throughout all history. It is true today. It is a truth which, when it can write itself in nothing else, writes itself in blood.

And of course, both sides of it are plainly written in American history. I need not remind you of that. The War Between the States was the dream of a better world battling for survival. So have been all the wars in which this Nation has fought. But some Americans still do not want to know it. For them, nothing is sacred, nothing full of promise, nothing dedicated to all mankind.

How long must it be, Governor Almond, before Virginians rediscover the meaning of America? How long before we know what that famous, founding declaration of human rights invoked? How long before we see that democracy is basically religious, spiritual, ethical, and that it must be the flaming passion for justice and freedom and brotherhood?

One who is only a Virginian is not yet an American. The Virginia creed must become the American deed. And this means brotherhood. Brotherhood in Arlington. Brotherhood in Richmond. Brotherhood in Virginia. Brotherhood in America. Brotherhood in the world. And brotherhood means religion—the religion that says "Thou shalt love thy neighbor as thyself."

In conclusion, I am sure that you would be first to agree that Virginia has great pride in its past. And rightly so. Here was one of the birthplaces of our democracy. Here great, democratic pioneers like Washington, Madison, Monroe, and Thomas Jefferson were at home. Virginia gave birth to ideas of freedom—freedom of thought and expression, freedom of religion—and, through Jefferson, the idea of education for all. Virginia should take pride in its past, for here in the early days of our democracy men thought and acted on the basis of reason. What has happened to that tradition today? Where are the men who can think clearly and act reasonably? You, sir, could restore that tradition with one great act of statesmanlike leadership.

The world of freemen is waiting for the restoration of human dignity and equality. If they are not revived soon, they will slip from our grasp. If they do, they may well be extinguished forever in the dark abyss of space and time.

Very sincerely yours,

ROSS ALLEN WESTON.

Oregon's Centennial Rates Three Cheers

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. PORTER. Mr. Speaker, on February 14, Oregon will be 100 years old. It is no wonder that this great event arouses ecstatic expressions from its citizens, including the poetic form. Under a previous consent, I am including a poem, written in honor of Oregon's centennial celebration, by Mrs. William McKenna, of Coos Bay, Oreg.:

OREGON

It's California for her redwood trees
And lovely girls that Hollywood sees.
And New York's fame is her gay white way,
With shows and lights on old Broadway.

Ohio and Texas have rated a rhyme,
And Rhode Island, the smallest of forty-nine.
But I've traveled afar, and none can boast
Of more wondrous sights than Oregon's coast.
Her rivers, and mountains, and cities, too,
Have more to offer than the others do.

She has myrtlewood, and Crater Lake,
And plains and forests none can fake.
They can send out posters and try real hard,
But the grass is greener in our own backyard.

Now we invite the entire Nation
To come out west for our celebration.
Oregon's centennial rates three cheers
And a wish for a happy next hundred years.

Work of the Red Cross in Pennsylvania Flood Areas

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. FULTON. Mr. Speaker, the American National Red Cross is doing an excellent job in Pennsylvania flood areas. The Red Cross, under the fine leadership of Gen. Alfred M. Gruenther, deserves the high commendation and sincere thanks from the representatives and people of the flood areas of the Nation.

The Red Cross is the quick and friendly hand that gives our people, caught in the current January 1959 flood disaster, the courage and will to rise and, through our own efforts, to clean up the damage, rebuild, and face the future with growing confidence.

WHAT THE RED CROSS DOES TO DISASTER SUFFERERS—WHAT THE RED CROSS WILL DO FOR YOU

The Red Cross is the official volunteer disaster relief agency of the Federal Government and the American people. It is the way in which people all over the country—your neighbors—are helping you to help yourselves.

Red Cross assistance is of two kinds:

First. Emergency assistance: The Red Cross will provide immediate temporary relief. If you need food, shelter, clothing, or medical attention now, report to the nearest Red Cross disaster office or emergency shelter. The Red Cross will give you a change of address order provided by the Post Office Department to speed up the delivery of your mail. On major disasters the Red Cross will provide you with safety notification cards so that you may notify your relatives and friends of your safety and whereabouts.

Second. Assistance after the emergency: The biggest job to be done is the reestablishment of homes. Those of you who need more than temporary aid to return to normal living may apply for Red Cross help at the Red Cross disaster office.

This help is an outright gift of the American people through the Red Cross. It may include:

First. Food, clothing, and maintenance.

Second. The repair or rebuilding of owner-occupied homes.

Third. Furniture and other household necessities.

Fourth. Medical and nursing care and hospitalization.

Fifth. Occupational supplies, fixtures, inventories, and equipment.

The Red Cross does not replace losses. It is not an insurance agency. Red Cross meets those needs that you cannot meet yourself without undue hardship. Your situation will receive individual consideration by a Red Cross worker. Enough time will be taken to plan wisely with you and to verify certain information, such as home ownership, income, and liabilities. The final plan will be reviewed in confidence with an advisory committee of responsible local citizens. Each case will be handled as quickly as possible with due consideration given such things as health or age, which might create unusual conditions.

WATCH OUT FOR MISLEADING RUMORS

The Red Cross never sells food or disaster supplies—no payment is ever expected for any assistance given. Any statements to the contrary are completely false and you can help by reporting them, with the name of the person you heard tell them, to the nearest Red Cross office.

THE AMERICAN NATIONAL RED CROSS,
Washington, D.C., January 26, 1959.

The Honorable JAMES G. FULTON,
The House of Representatives,
Washington, D.C.

DEAR MR. FULTON: Knowing of your great interest in the well-being of the people in Pennsylvania, I want to give you a report of Red Cross activity in connection with the flooding that began in Pennsylvania on January 21.

Incomplete surveys from Red Cross workers indicate that nearly 22,000 families have been affected by floodwaters in 63 counties in the 5-State flood area. At the peak of the flood emergency approximately 6,000 persons were housed and fed in 82 Red Cross shelters.

Chapter volunteers and national disaster workers of the Red Cross are on the job along with Federal, State, and community agencies to bring all possible relief to flood sufferers in your State and the four others affected. The full resources of our organization have been mobilized to aid these stricken families. The Red Cross will continue its emergency and rehabilitation work until the disaster-caused needs of all these families, lacking the necessary funds, have been met.

As perhaps you know, Red Cross help is based on the principle not of replacing all losses, but of assisting disaster victims in need who lack sufficient resources of their own, including insurance, to start back on the road to recovery.

All assistance from the Red Cross is an outright gift, coming chiefly from funds contributed annually by the American people. Unfortunately, our disaster reserve has been drastically reduced because of the extraordinarily heavy disaster losses in the past 4 years. For that reason special appeals for

funds have been inaugurated by the Red Cross in the affected areas. I am confident that the American people, as always, will contribute generously.

You may be assured that the Red Cross will remain on the job until all who need our assistance have been helped.

Sincerely,

ALFRED M. GRUENTHER.

JIM, this has really been a rugged flood in many of your areas.

AL.

Thank you, General Gruenther, we in the flood areas do indeed appreciate your warmhearted cooperation.

Forty-first Anniversary of Ukrainian Independence

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mrs. DWYER. Mr. Speaker, the day the people of America forget the sacrifices and sufferings of people throughout the world who value freedom enough to die for it—that day we shall have forfeited our birthright of liberty.

Happily, that day is not near. And fortunately, we are plentifully supplied with opportunities to remind ourselves that freedom is worth fighting for—opportunities like the 41st anniversary of Ukrainian independence which we commemorate here on January 22.

The national independence of the Ukrainian people—a goal they passionately pursued for hundreds of years—was won on January 22, 1918, with the formation of the Ukrainian National Republic.

But independence for these brave people was destined to be brief. In 1920, invading Communist armies from Russia overran the proud and fertile land and absorbed the country as a part of the new Soviet state.

Thus, the Ukrainian people became the first in a long series of victims of Communist terror, oppression, and slavery. Virtually every form of persecution has been used to kill the instincts of freedom in the breasts of Ukrainian patriots: starvation, murder, imprisonment, religious, and ethic genocide, and slave labor.

The overwhelming force of the totalitarian state has succeeded in keeping the Ukrainian nation enslaved. But this brutality has not succeeded in killing the Ukrainian people's undying devotion to freedom. We have seen it happen so often—in Russia, Germany, Hungary—that whenever the struggle against Communist oppression breaks into the open we can be certain that Ukrainians are playing a prominent role.

This ceaseless fight for the freedom of their homeland is supported, at least in spirit, wherever Ukrainian people have settled throughout the world. To a large degree, it has been because the Ukrainian people, and others with firsthand experience, wherever they may be, have insisted on raising their voices and telling the world of Russian brutality that the free world has remained alert to the menace of Soviet communism.

Freedom-loving Americans owe a great debt of gratitude to those of our fellow citizens who have cared so strongly.

Because Union County, N.J., has a relatively large proportion of people of Ukrainian descent among its population, I know personally of their deep feeling for freedom. It has been a major element in their success as active, public-spirited American citizens, and a contribution we must always cherish.

Let us, therefore, rededicate ourselves at this time—especially those of us who carry the responsibilities of representatives of the people in Congress—to the ancient principles of personal freedom and national independence. Let us strengthen our resolve to fight oppression, to oppose brutality, to stand steadfastly against all the relentless pressures of Communist totalitarianism.

Let us, that is, absorb the spirit and courage of those Ukrainians who have loved freedom so truly that they have died for it.

Another Honor for Budge

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. BOW. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Twin Falls, Idaho, Times-News, paying tribute to the very able gentleman from Idaho on the occasion of his membership on the Committee on Rules. The editorial quotes another distinguished statesman from Idaho, Hon. John Sanborn, who will be remembered with affection and respect by many of us here today.

The editorial follows:

ANOTHER HONOR FOR BUDGE

A few days ago, a news item from Washington told of the appointment of Idaho's Representative HAMER H. BUDGE to the powerful Rules Committee in the House of Representatives. Informative, certainly, but it didn't sound much out of the ordinary. It took a former Representative from Idaho's Second Congressional District, John Sanborn, of Hagerman, to grasp the full significance of the appointment.

"You can't appreciate this honor unless you're familiar with the workings of Congress and the House of Representatives," former Congressman Sanborn points out.

"Most people who are not familiar with the workings of Congress fail to realize the significance of this appointment. It's importance comes from the power of the Rules Committee. All important legislation is referred to the Rules Committee after other House committees have considered and approved such legislation. The Rules Committee can refuse to release any bill or legislation, thus preventing the House from acting on it.

"Or it can set the rules under which the legislation shall be considered by the House, whether the debate shall be short or long, setting specific time. It can permit or deny the privilege of amending a bill on the floor of the House," Mr. Sanborn points out.

The fact that only 12 Members of the House are appointed to the Rules Committee from the four hundred and thirty-some Members is an honor in itself. Hence, only 12 of the 49 States can possibly be represented on the Rules Committee, the most powerful in the House. As Mr. Sanborn points out, no Idaho Representative has ever been a member of the Rules Committee before.

"The people of Idaho and especially those of the second congressional district can feel a great pride and satisfaction from the appointment," Mr. Sanborn declares.

Membership of the Rules Committee is made up of eight Democrats, who have a large majority in Congress, and four Republicans. Besides Idaho's Representative BUDGE, the other Republicans are LEO ALLEN, of Illinois; CLARENCE BROWN of Ohio; and CARROLL REECE of Tennessee.

During his tenure in the House of Representatives HAMER BUDGE has built an enviable reputation. Last November, Idaho's voters in the second congressional district recognized and approved Mr. BUDGE's record. Not only did he survive the Democratic landslide, but he was returned to office by his usual wide margin.

Now Mr. BUDGE's associates in the House of Representatives have recognized his ability and constantly growing reputation by designating him as a member of the most powerful group in the House.

The Times-News is happy to join Mr. Sanborn in congratulating Mr. BUDGE on his appointment.

Views on Immigration

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement which I presented to the graduate club and ladies' auxiliary of the Phi Delta Epsilon medical fraternity, Washington, D.C., on January 27, 1959.

The statement follows:

Immigration has been a perennial subject of debate in the United States, ever since our Declaration of Independence ascribed a bad immigration policy as one of our reasons for wanting independence from England. This is not surprising, since immigration has been one of the most characteristic and distinctive marks of American history and has contributed enormously to our growth, our wealth, and our international preeminence.

However, I am not unaware that sometimes discussion of immigration palls. The subject has been drowned with a deluge of words. There is none of us who has been intimately concerned with the liberalization of our immigration policy who has not, at one time or another, felt that whatever observations we can make have long since become trite and platitudinous.

But the seriousness of today's struggle for freedom, for the right of people to live in decency and dignity, for liberty from oppression and dictatorship, make it all the more important for us to realize that immigration is a continuing challenge. We cannot afford to become weary of the fight for a decent immigration law. Russia's sputnik and lunik have caused us to lose face in the East-West struggle, and threaten to drive non-committed nations in today's divided world

into the Communist camp. We ignore only at our peril the question of how much face we have been losing for years among these same uncommitted nations because of our American immigration law which announces our belief that other groups of people are more desirable than the very noncommitted peoples whose loyalty to the free West is so sorely needed and so assiduously courted.

A decent and nondiscriminatory American immigration law could be a great secret weapon against the efforts of communism to subvert the uncommitted nations. If we could only see ourselves as others see us, we would not wait a moment to discard the present immigration law and substitute for it one more in keeping with the traditional image of America, the country that pronounced the radical doctrine that all men are born equal, the nation that was never afraid of immigrants and always welcomed them regardless of their national origin, creed, color, or race.

But I am a little ahead of myself. If immigration is important not only to our domestic economy, but also to our international relations—to the critical question of war and peace—what should our immigration policy be? As I see it, after a third of a century of intensive study of the subject, there are three major areas in which our present policy is sadly, nay desperately, in need of major overhaul. To accomplish these ends, I have reintroduced my bill of last year, now numbered H.R. 16. These three major areas are as follows:

I. WHO SHOULD BE ADMITTED INTO THE UNITED STATES?

Under the present law, we look to the national origin or race of the prospective immigrant as the over-all criterion of admission. If he comes from some areas of the world, he has carte blanche for admission (subject to some technical health, security and other requirements which I shall not discuss at this point). If the would-be immigrant was born in other areas of the world, he might just as well forget trying to come to this country, because the quotas are so small, and so heavily oversubscribed, that no one but Methuselah will ever be reached in his lifetime.

I believe that what we have to seek to establish at this time is the reassertion in our immigration law of the American principle of equality of opportunity for all, regardless of race, color, or creed. In our present discriminatory immigration law, we also have a time-tested example that such American principle of equality is in our own best interest. The present law applies the discriminatory quota system to Europe, Asia, and Africa, but not to the Western Hemisphere. So, for the past 5 years, an average of 45,828 Mexicans entered this country each year, as against approximately 223,716 from Europe, Asia, and Africa together. I have seen no injury to our Nation from this Mexican immigration, nor has it been a subject of complaint by those who urge immigration restrictions against the rest of the world. I point to this fact merely to show the fallacy of the restrictionists' thinking purportedly based on a pretended homogeneity of the American people.

My bill proposes elimination of the discriminatory features of the present law. Under my proposal, there will be no discrimination based on national origin or race. This will be achieved in my bill by wiping out the present discriminatory national origins quota system, and by substituting a new formula for the distribution of quota visas. In an atempt to make the new quota flexible in order to permit the United States to adjust its intake of immigrants in enlightened self-interest to the fast changing political, economic, and social situation of the world, under my new proposal our annual quota will be distributed among five classes of immigrants without regard to national origin, race, or any results of the U.S. census as follows: (1) Family unification, (2) occupational class, (3) refugee asylum class, (4) national interest class, and (5) resettlement class.

Within each of the five classes, no more than 15 percent of the annual allocation could be issued to inhabitants of any single country. Here is how the annual distribution of the overall immigration quota will be established: Each year the President of the United States, after consulting with the Secretaries of State, Commerce, and Labor, and with the Attorney General, would submit to the Congress, prior to March 1, the proposed allocation for each of the five classes, and Congress will have 60 days following the submission of the President's proposal to disapprove it by passing a concurrent resolution. If the proposal is not disapproved by the Congress, it would take effect on the first day of the fiscal year immediately following. If the Congress disagrees with the President, the allocation effective in the preceding fiscal year would automatically become effective.

In order to get the joint executive-legislative responsibility for the annual distribution of the total immigration quota started, I propose that the first presidential allocation plan shall reach the Congress within 6 months immediately following the enactment of my bill and if agreement is not reached on this first presidential proposal, the total annual quota of 250,000 would be simply cut across the board so as to give each of the five classes 20 percent of the total. This interim allocation would, of course, be valid for the first fiscal year of operations, pending the submission of the next presidential proposal which, again, will be subject to congressional disapproval.

My main purpose in proposing this flexible distribution of a permanently fixed annual quota is to permit the President to decide—on a year-to-year basis—with congressional concurrence, whether it is desirable in any particular year to grant more immigrant visas to relatives of U.S. citizens or to, say, refugees, or to, perhaps, immigrants possessing special skills needed in the United States at that particular time, or to any of the other classes.

The 15 percent permanent limitation affecting the participation of any single country in the distribution of the fivefold allocation is, in my opinion, a sufficient guaranty that no unfair distribution of visas for the benefit of inhabitants of one particular country would be practicable.

The history of our immigration legislation since World War II is a clear example of the ineffectiveness of our present national origins law to meet our national and international needs. When the war ended, and displaced persons in camps had to be moved to new homes, our national origins law was a block to all action of substance. Congress had to amend the law to set aside the rigid and discriminatory national origins quota system. When the country wanted to show its gratitude to our GI's, by permitting them to bring in their alien brides, here again our national welfare was frustrated by the national origins law, so Congress had to enact another law to set it aside for this purpose. After the DP Act expired, there was still more to be done with the remaining refugees, and with new escapees from communism, again the national will was thwarted by the national origins requirement, and again Congress had to set that requirement aside for this purpose. The most recent example of how the national origins law prevents us from doing what is right and proper is the Hungarian situation, where an explosion of freedom fighters against communism enabled us to show our traditional humanitarian belief in the right of asylum only through disregard of the provisions of the law, a disregard which was later ratified, in effect, by a special act of Congress which was necessary since the some 30,000 Hungarian freedom fighters would have been barred under our quota laws. Something must clearly be wrong with a law that stands in the way of so many important and critical national objectives, and Congress itself has realized that the national origins system was wrong, but has repealed it only for the specific purposes under consideration.

And while I am on the subject of recent legislation, it is appropriate to say that there are many other eligibility provisions, apart from national origins, which are sorely in need of amendment. Some of these were tinkered with—and I am glad they were—in an act passed in 1957, but much more needs to be done here. Among the matters which need change are the now ancient definitions in the law of insanity and other medical conditions.

II. HOW MANY IMMIGRANTS SHOULD BE ADMITTED INTO THE UNITED STATES?

It is of utmost importance to separate the two questions, "How many immigrants?" and "How should they be selected?" I have already indicated that no matter how many or how few are to be admitted, there should be no numerus clausus. Admission should be in terms of the five criteria I have just outlined.

I believe that our present maximum admission of some 156,000 belittles our faith in the United States and shows distrust of our own stability and strength. I agree with the AFL–CIO that the United States should admit 250,000 quota immigrants each year, and that if we do so this will strengthen and reinvigorate our Nation in precisely the same manner which immigration has always done in our history. I have based this annual quota on the average number of immigrants actually admitted into the United States within the last decade.

Spokesmen against change will move away from its heaviest emphasis on possible subversives, and even away from the argument of inability of southern Europeans to assimilate easily into our culture. The argument is shifting to what will undoubtedly be termed "problems of overpopulation." It will be pointed out that we already have a population of some 170 million; that in about 20 years the population of the United States will increase by some 60 million; that the pattern of large families will continue; that our schools are overcrowded, to put it mildly; that our hospitals are already inadequate for our growing population; that automation is and will continue at accelerating pace to displace American workers; that increased population—either through natural increase or through immigration—will increase demands which, in turn, will increase inflation because productivity will not catch up with such demands.

It will be argued that immigrants almost invariably settle in cities already populated beyond the point of comfort, adding to congestion and, hence, contributing to delinquency. It will be argued that immigrants do not settle on farms where population is decreasing.

These, I believe, will be the main burden of the refrain. These arguments will have to be answered and I maintain that all these assertions can be rationally met. In general, these various arguments against change of the national origins formula come from the prophets of doom and express the view that this is the best possible world and that any change means catastrophe. This same sort of argument has been advanced against all forward-looking and liberal proposals and has invariably proved to be false and unwarranted. I am convinced the same will prove true here.

III. WHAT GOVERNMENT AGENCY SHALL EXERCISE JURISDICTION OVER IMMIGRATION?

Under the present law, we have a two-headed system where officials of the Depart-

ment of State issue visas to both immigrants and nonimmigrants abroad, while officials of the Department of Justice determine at ports of entry whether the holders of visas are admissible to the United States. This is an antiquated, cumbersome, and expensive system. It creates anxiety and uncertainty in the minds of the immigrants and nonimmigrants alike, and it causes friction between two governmental agencies operating independently in the same field and stepping on each other's toes.

Under my proposal, the entire administration of our immigration and nationality laws will be placed in the hands of a Director of Bureau of Immigration and Citizenship, who will be an Assistant Attorney General, subject to confirmation by the Senate. His officers, acting as immigration attachés, will be stationed at our consulates abroad and will issue immigrant and nonimmigrant visas after a finding is made that the recipient of a visa is found to be eligible actually to enter the United States.

In addition to simplification of procedures and elimination of dual standards, as well as uncertainty in the minds of immigrants or foreign visitors, my proposal will automatically open visa issuance to administrative review in the Department of Justice by the well-qualified and trusted Board of Immigration Appeals. The issuance of diplomatic visas will, of course, remain a function of diplomatic officers of the Department of State.

I believe that the administrative system which I propose will not only provide for a more efficient and more equitable issuance of visas abroad, but that it will also bring a great saving to the American taxpayer.

So much for what I believe to be the heart of our immigration policy; namely (1), our quota system, and (2) jurisdiction over immigration. There is much more in my bill that is new and desirable. Wives, husbands, and minor children of United States citizens will continue to be admitted as nonquota immigrants, but I have added to the nonquota class parents of United States citizens and professors of academic schools. In the naturalization portion of the law, my bill will not tolerate classification of United States citizens into two categories: native-born and naturalized. There will be no additional grounds for loss of U.S. citizenship by naturalized citizens except those that apply to native-born citizens.

My bill would eliminate all retroactive application of grounds for deportation and humanize all the unduly harsh provisions applicable in exclusion. We should humanize the provisions relating to suspension of deportation, through removing the present extremely harsh eligibility requirement, and enact the provisions of my bill designed to prevent the separation of families.

IV. WHAT WE SHOULD NOT DO

I would like to discuss with you one final problem which the Congress will face this year: a very bad and unwholesome bill which is being pressed for enactment. It flies in the face of a provision of my bill which provides for what is basic to our American concept of fairness and decency, a full and unlimited judicial review of administrative decision in all immigration proceedings, including rulings on deportation and exclusion. Contrary to this basic concept of American law, a bill (H.R. 13311) was rushed through the House of Representatives last year; designed and intended to curtail judicial review of deportation and exclusion orders. That bill has been reintroduced this year, and effort will be made to push it through. The bill would prevent aliens from seeking judicial review in the Federal district court, and compel them, generally speaking, to go to distant courts of appeal, which are fewer in number. Thus, review can now be had in 94 courts; under that bill, it would be limited to only 11 courts. The court of appeals is what its name indicates, a higher court which normally hears appeals from lower courts. Litigation in the appellate courts is normally more expensive, both in terms of legal fees and expenses. Furthermore, the bill specifically denies to aliens the rights to obtain declaratory judgments in certain cases, although the Supreme Court of the United States twice ruled that under current law aliens are entitled to this remedy. The bill also restricts the rights of persons who claim to be citizens to litigate their claim. And there are a wide variety of other ways, most of them technical, but highly important in terms of substantive rights, in which this bill would seriously handicap the presently available rights of aliens and citizens to obtain judicial protection against illegal, capricious, and arbitrary action of Government officials.

I testified against this bill; so did the American Bar Association, the Association of Immigration and Nationality Lawyers, and the Immigration Committee of the Bar Association of the District of Columbia. In addition, the American Council of Voluntary Agencies for Foreign Service, Inc., through its Committee on Migration and Refugee Problems, which consists of 20 of the major religious and social agencies working in the immigration filed, deplored the bill's effect and urged against enactment. That distinguished body of representatives of the American people warned the Congress that instead of simplifying the process as is the alleged purpose of this bill, it might in fact increase the number of cases on the court calendars.

As a result of statistics provided me by the Commissioner of Immigration, at my request—figures which, by the way had not even been compiled previously—it is perfectly clear that the bill is not only dangerous but quite unnecessary. When I asked for a list of cases which justified so drastic a remedy as proposed in the bill, I was given 7 cases extending over the last 5 years. Imagine, just 7 cases out of a total of many, many tens of thousands which were under consideration during the 5-year period, and yet they would junk a time-honored protection for judicial review! The truth of the matter is that less and less cases are getting into court anyway, and there is no reasonable justification for the bill. It would be like putting all sick people in jail, simply because there may be one or two typhoid Marys around.

After all, judicial review of illegal administrative action is not a matter of grace conferred upon an alien; rather it is a mark of the highest civilization in according equality before the law. Deportation of an alien means banishment from all that may be dear to him. We must not forget that in immigration we deal with human beings, not inanimate or senseless things. An alien or a citizen deprived of the right of judicial review is cut off from protecting his way of life, his very existence. I sincerely hope that the Congress will reject any such unjustified, unwarranted, and unnecessary tampering with fundamental principles upon which our entire jurisprudence is founded.

Immigration is a large and controversial subject. But I would be less than candid if I were to leave you with the impression that a bill such as mine, which I believe to be moderate and reasonable and in our best national interest, will have easy sledding. I am not clairvoyant and do not presume to know what Congress will do. But I do know what is unfavorable and what is favorable in the climate which could or could not produce changes in the immigration law. I know that approximately two-thirds of the Congress are against change; particularly, they are opposed to any change in the national origins system.

Nevertheless, one of the hopeful signs of the times is the most recent Gallup poll on immigration which showed that although really very few Americans knew or understood this problem, where they did, they were largely opposed to the present law and in favor of major overhauling of it. This gives us the key to action. A democracy cannot thrive in the ignorance of its people. This subject is far too important to be relegated to senseless name calling, the heat of passion instead of the light of reason, and lethargy. The three major religious faiths of this country have demanded substantial liberalization. Organized labor has done likewise. If the proponents of liberalized immigration laws do their homework, carry their message to the people throughout the length and breadth of the land, and encourage the widest possible discussion and debate of this subject, I am morally certain that we will at least start the ball rolling toward an immigration law that will do honor to us and proclaim to the world at large that we have an effective and working democracy.

Hale's Mission of Faith to Israel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Ruth Gruber which appeared in the New York Herald Tribune of January 23, 1959:

HALE'S MISSION OF FAITH TO ISRAEL

(By Ruth Gruber)

Lincoln Hale died 1 year ago today. He had been in charge of America's point 4 program in Israel. On January 23, 1958, he was standing before the members of the Theodor Herzl Institute in New York, a Christian telling Jews about the land of Israel. He said what he felt about Israel, and then, just before he was finished speaking, in the middle of a sentence, he died.

It was symbolic, somehow. For Lincoln Hale never believed that anything was ever finished, that life was all a process of beginnings.

In 1954 the U.S. Government asked him to take a leave of absence from his post as president of Evansville College in Indiana to direct the U.S. Operations Mission in Israel. For Lincoln Hale, who had been a Congregational minister in Oxford, Conn., going to Israel was the great challenge of his life. His job was to direct American technical aid and economic assistance.

He became part of Israel. Israel's problems became his problems.

Dr. Hale did big things in Israel, but he did them quietly, with wisdom and simplicity. He was the second most important American in Israel, second only to the U.S. Ambassador. Yet his simplicity extended to everyone.

The people of Israel grew to know the mild-mannered, soft-voiced round little man with the bright blue eyes, and his round and happy and wonderfully enthusiastic wife, Sallie. Lincoln loved to meet the people and to talk to them. You could wake him at his home in Tel Aviv at midnight, after an exhausting day in the office or in the field, and tell him that a group of people wanted to hear him speak in Haifa. Lincoln would call his chauffeur, Amnon Gil-ad, and off they would go.

Speaking at the opening of a new road, a new school near the Dead Sea, he said, "We are dedicating a road built by the pioneers of today, and dedicating a school built

for pioneers of tomorrow. Thus too did we build in America."

Countless times at dawn he watched new immigrants who had been brought in by the United Jewish Appeal, come off the ships at Haifa. He traveled with them to their new settlements in the Negev to help them with technical aid and with point 4 money for houses and roads, for water piped in from the north, and for cotton and crops to seed their land.

He became a kind of practical missionary who understood Israel's mission. He saw the newcomers, broken, illiterate, hungry, riddled with disease—and he knew that no other land in the world would have taken them.

His mission grew broader constantly. He was no manager; no efficiency expert. But he knew that if Israel survived, she would have to compete in the world market.

His predecessor, Bruce McDaniel, had strengthened the Institute of Productivity inside Israel's Department of Labor. Lincoln Hale expanded it still further and helped develop a management training program. This was perhaps his greatest contribution—helping Israel keep its strides in agriculture but placing more emphasis on industry.

In November 1954, Lincoln Hale told a UJA study mission what the United States point 4 program was doing in economic and technical aid. He talked of Operation Cowboy to raise cattle, of bringing water to the Negev, of searching for oil and copper, of public health, of training managers, and of the meaning of Israel.

"My friends," he said, "this is a land of beginners. On every hand you see the young tree, the young vine, the new furrow in a long-neglected field. I have gone into factories where production is in its sixth, seventh, and eighth month, and have been amazed at the results, knowing that operation started with three or four trained personnel. Men and women have the confidence that comes from trying the new and novel. It is a land with a dynamic quality. It is a land of faith."

His name was Lincoln Hale. Two names that were the essence of America. And inside of 2 years Lincoln Hale became the essence of America in Israel. Not all Americans understood him, but the Israelis did. For them, he was the symbol of America's compassion, of our desire to help others live a better life by our willingness to teach them what we know.

The Alternative to Competition

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1959

Mr. BOW. Mr. Speaker, Mr. E. W. Dykes, a distinguished architect, of Canton, Ohio, has revealed great insight into some of the problems that beset our free enterprise system in an article in the January issue of the Freeman. Under leave to extend, I include Mr. Dykes' article, as follows:

THE ALTERNATIVE TO COMPETITION

(By E. W. Dykes)

From time to time we are told that competition is an evil thing. Few among us will deny that it certainly produces its trying moments. There are, in fact, some persons who will argue that the harm from competition far exceeds any possible good which may result.

For example, they suggest that the student who does not get good grades suffers damage to his ego and may react in a most unsociable manner. I am sure there have been cases of persons who have failed in business and who have become bitter and despondent—perhaps even to the point of suicide. Some will say that these persons were victims of the urge to make a profit—a compulsion even worse than ordinary competition. Cooperation, they say—not competition—is what is needed for the good society. To equate competition with "the law of the jungle" is to leave little doubt in one's mind of its implied nature.

These ideas of the harmful effects of competition receive considerable support from various sources. Many school systems have eliminated grading on a competitive basis. Labor unions have undertaken to remove competition for jobs and to remove competition between individual workers on specific jobs by setting standard rates for a standard output which the least productive worker can meet. Some businessmen press for fair trade laws which will eliminate price competition on certain items. They may urge tariff barriers to protect them from the rigors of foreign competition. Farmers vote for subsidies and acreage controls to escape the vagaries of the free market. And so on and on, countless examples might be written, all of which show how we try to escape competition.

I suspect that most people believe competition to be neither generally good nor generally bad, but that a middle-of-the-road process will most likely produce a healthy society. They are all for competition in a horserace or in the American League or even among the suppliers of the things they have to buy, while going to no end of trouble to eliminate it, by law if necessary, in their own field as sellers.

Regarding competition, per se, they have no definite convictions. But persons with definite convictions about anything appear to be in rather short supply. Strong beliefs are developed by intimate knowledge of the true nature of the subject. If this be true, then it follows that we need to find the true nature of competition and then judge its merits.

A NONCOMPETING SOCIETY?

It is useful, at times, to examine the extreme point of view to show the probable effects of a particular policy or action and to indicate the direction most likely to produce desirable results. My study convinces me that there is but one alternative to competition. If I can show what the alternative actually is, that may help the part-time competitors in making a clear-cut choice.

Let us assume that we abandon competition in our society as of tomorrow. At once there would be a mad rush of people from their present jobs to more glamorous or more highly paid jobs. Thousands decide to be big league ballplayers. Hundreds of thousands decide to be movie stars. Those ready to become bank presidents are in oversupply. No one hauls garbage. No one waits on tables or digs coal. And since price competition is eliminated, no one knows how much to charge or how much to pay for a particular product. As a matter of fact, the dislocation would be so complete that the economy would come to a standstill. Clearly, competition cannot be eliminated overnight. A great deal of advance work would be needed if such a move were not to result in total confusion.

So let's go at it another way. Assume a society in which competition is to play no part from the very beginning. Our first problem is to decide who will do what. For instance, who will be the doctors? Who will write music? Sell shoes? Make shoes? What will determine prices and wages? Who decides all these things? Certainly not one person because he would be a dictator. A committee, perhaps, but who shall choose the committee? It's difficult, indeed.

It looks as though we'll have to have some competition—at least enough to select a committee. And so we have to select nominees, take a vote, and of course, accept a decision arrived at competitively. We will select those with the most votes. Now, perhaps, can't we do away with all competition?

WHO SHALL BE THE DOCTOR?

Then the committee is faced with the questions: Who shall be doctors and who shall write music and so on? Before they face up to that one, an infinitely more difficult problem faces them. How many shall be doctors? Will specialization be allowed or shall that become a subproblem after deciding how many doctors? And what about fees, prices, and wages? How will they be determined? Will any persons be appointed to act as inventors? Will anyone be set apart to occasionally don an asbestos suit and step into a flaming oil or gas well out of control? Who will become the lawmakers? This last may give a clue as to where the committee will locate itself.

It is not necessary to labor the point further to show that the committee has its hands full. But let us assume that a formula has been worked out by the committee. An extremely large catalog of possible occupations has been set up which takes account of the innumerable differences in jobs and which describes each in sufficient detail to render selection a little easier. Now we are ready to select the actual people to man these occupations.

"Everybody stand up and count off. The first 2,000 are doctors, the next 1 million go to the factory suboffice and get divided up there." And so on. Ridiculous, isn't it? Of course, that couldn't be the way. "We'll give tests—aptitude tests, of course." And so a long series of aptitude tests are evolved with thousands of subtests and gradations in order to match as easily as possible the many variations in a particular job category. Now, shall the best jobs be given to those with the highest grades? Or is that too competitive? Finally, we decide that we must introduce that much additional competition.

WHERE SHALL HE LIVE?

Where shall people live? Obviously, all the doctors can't be in one town or State and all the blacksmiths in another. The formula must be applied and all the jobs filled in the right proportion. The committee, of course, must decide who lives in what towns, too. Well drillers can be easily placed, you see, because it's well known where oil can be found—isn't it? And this brings up an interesting point. Who decides precisely where the bit shall bite? And how shall a test be devised to find that man? On the inventors' list, what shall we decide to have invented? And if something amazing comes out of it, what will that do to the formula? Dizzy? Then don't get elected to the committee.

And I shouldn't want to sit on the subcommittee which sets prices and wages either. That committee would have to bring wages and prices into balance so that everything produced could be bought. How to decide how much of even one single item should be produced almost defies comprehension. For instance, how many radios will be sold next month? How would we decide how much a doctor would be paid in contrast with a day laborer—or would they both get the same? The committee must decide. There is no other way—the law has been passed.

COMPETE OR SUBMIT

It should be clear from the foregoing that all matters which are not decided by com-

petition must be decided by decree. In other words, if wages, prices, production, jobs, and succesful inventions are not set or selected by competition, then an authority has to rule on them step by step.

In other words, the "alternative" to competition can only be the planned society. Every successful attempt to rule out competition in any area is but a step nearer the socialized state. We have taken far too many such steps already. The more we do without competition the more planned is the society. Admitting for one reason or another that some persons of high potential are occasionally and temporarily bypassed in the free, competitive society, it should appear clearly that the way to find the best of anything is to allow competition to decide. Just as the best ballplayers are competitively selected, so it is for surgeons, professionals, bank presidents, and playwrights.

The marketplace operates constantly with millions—no, billions—of decisions each day to elevate the best to the top, and each of us may aspire to reach the top. Consumers, in their market decisions, actually decide who or what shall succeed or fail. Good products are selected by each of us, voting in the marketplace with pennies and dollars as votes. High living standards are the direct result of competition. Competition, far from being the evil thing it is often represented to be, is the guarantee of the best for the least the most often.

OPPORTUNITY FOR COOPERATION

Now let us recall the brief reference, early in the discussion, to the suggested need for cooperation rather than for competition. To search for a clear insight to this problem, ask yourself, "With whom shall I cooperate?" The anticompetition adherents will say, "With everyone, of course." It is a pleasant idea, one which which few will argue. It just happens to be impossible. For example, if you purchase a Ford, the sellers of other makes would hardly decide that you have cooperated with them. When a maiden selects her spouse, her other suitors must necessarily have been rejected. Competition, you see, serves to select the persons with whom you would most like to cooperate—and it leaves you free to decide for yourself who they shall be. But this is a subject which, of itself, might be deserving of an essay. Suffice to say that cooperation and competition, diverse though they may seem to be, go hand in hand in the free society. The planned society, as it eliminates competition, eliminates the basis for voluntary cooperation and substitutes planned cooperation, whatever that is.

In planned societies the committee is always replaced by the strong man—the dictator. Competition and a planned society are incompatible. Freedom and a planned society are impossible. Free people and competition are inseparable.

The alternative to competition is to give up your freedom.

Newark Kiwanis Good Deeds

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, the Kiwanis Club of Newark, Calif., is an outstanding example of an American service club.

Newark is a typical small American industrial city. Her citizens are proud of their home community. Her city fathers are men dedicated to making their town a good one in which to live.

Newark counts no extremely wealthy people as citizens and conversely there is no great element of poor or underprivileged within her borders.

Newark is a better place in which to live because such institutions as her Kiwanis Club reflect the conscience of the community in its drive to improve the social and educational advantages of her people.

Here is the box score of the club's accomplishments as reported in the Newark News-Register of January 8, 1959:

NEWARK KIWANIS GOOD DEEDS

With the installation of new officers of Newark Kiwanis Club this Saturday night at a big event at Castlewood Country Club, Kenneth Foster is to succeed the present president, Herbert Lacey. We are proud of the year's record of Herbert Lacey and officers.

During year 1958 the Newark Kiwanis has sponsored the community projects which were made possible by the financial support of people of Newark.

More than 2,400 hours were devoted to civic and charitable activities, as follows:

BOYS AND GIRLS WORK

Took part in Scout work, sponsored local scout troop.
Purchased flags for scouts.
Gave financial aid toward a scout training program.
Encouraged local scouts to go on in scouting.
Helped recreation department with annual kite contest.
Purchased tickets for community concert series, for music students in local school.
Assisted recreation department in Easter egg hunt.
Put on a magic show for elementary school children.
Helped in annual pet parade.
Paid tuition fees of six outstanding music students for the summer school.
Sponsored boys for the local Little League by paying for uniforms for individuals.
Assisted recreation department summer program.
Held a watermelon feed for children of Newark.
Entertained children of Newark with free movies on Newark Charter Day.
Gave skating party for school children on traffic patrol.
Encouraged local 4-H group providing trophies in contests.
Sponsored Key Club at the Washington Hi and activities.
Provided Thanksgiving baskets for needy families.
Provided Christmas baskets for needy families.
Assisted in planning and financing Newark's toy bank.
Helped set relief program.
Purchased needed clothes and shoes for needy families.
Furnished blankets for families in need.
Sent local children to summer camps.
Maintained a dental loan fund for needy school children.
Assisted in sight conservation.
Worked closely with Salvation Army.

VOCATIONAL GUIDANCE

Sponsored tour of local industries for school children.
Rented vocation guidance films for interested boys.
Helped obtain employment at summer jobs for local high school boys.
Presented plaques to outstanding local school graduates.
Sponsored a science fair at local M. D. Silva School by providing Government bonds for winners.

PUBLIC AFFAIRS COMMITTEE

Worked with local chamber of commerce on civic affairs.
Helped obtain employment for disabled veterans.
Participated in parade for City Charter Day.
Encouraged industries to locate in Newark.
Assisted United Crusade.

SUPPORTED CHURCHES

Published church directory which gave time of all church services. Was in both local newspapers.
Members worked for local church undertakings.

Housing

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the statement made on January 26, 1959, by Mayor Robert F. Wagner, of New York, to the U.S. Conference of Mayors regarding new Federal housing legislation.

The statement follows:

Mr. HARRY R. BETTERS,
Executive Director,
U.S. Conference of Mayors,
Washington, D.C.:

As mayor of the city of New York and chairman of the New York Metropolitan Regional Council I vigorously support the views of the U.S. Conference of Mayors on new housing and urban renewal legislation and ask that the officials of the conference have this brief statement placed on the record when they testify before the Banking and Currency Committee of the U.S. Senate.

We are gratified that major housing and urban renewal legislation is being considered so early in this session of Congress. No other legislation is of more importance to the continuing health and sound development of cities and urban areas.

We take pride in the fact that New York has pioneered in programs which utilize the resources and assistance of city and State to produce low and moderate rental housing. But in common with all other cities, we must continue to look to the Federal Government for major support. Urban decay is a national as much as a local problem. Its cure far transcends the capabilities of limited local resources alone.

A program which measures up to the needs of this Nation's cities should include the following:

1. Federal contributions to title I redevelopment and urban renewal of $600 million a year for 10 years. The success of the title I program to date in New York City, as evidenced by 13 projects now underway and five more pending, the backlog of projects that are needed and could be advanced if sufficient funds are forthcoming, and the enthusiastic response of private redevelopers to the new west side urban renewal project where techniques are being developed that should be applicable to deteriorating

areas in cities throughout the country—all testify to the potential of the title I program for stimulating the private investment necessary for the renewal of our cities. So far this potential has been barely utilized. A program of the size indicated is needed to enable us to move ahead of the rate of deterioration, and will therefore result in the smallest ultimate expenditure of public funds.

2. The present two-thirds Federal contribution to write-down costs must be increased, rather than decreased. In view of the acute financing problems faced by all cities, any such decrease would be self-defeating and tantamount to reducing the scope of a program which sorely needs expansion.

3. Continuity adequate to permit and encourage sensible long-range planning and programing. In addition to the basic 10-year program, authorization for advance acquisition in blighted and deteriorated areas, and the provision of two-thirds grants for the preparation or completion of community renewal programs would be of great benefit. The community renewal program would enable cities to survey their older and declining communities and make comprehensive plans for orderly renewal programs.

4. An increase in the amount of funds that may be used for nonresidential redevelopment above the 10 percent now permitted, and elimination of the requirement that such nonresidential redevelopment sites must include a substantial number of slum or blighted dwellings. Whatever the form of blight, it undermines the foundations of a city. A successful renewal program must be broad and flexible enough to meet the particular needs of the community.

5. Liberalized relocation assistance for both the families and the businesses displaced by renewal programs. The amounts of payments should be increased and the ways in which they can be used broadened in order to give maximum assistance in relocation. Every effort should be made to provide equality in treatment to those displaced by the various types of public programs. Relocation assistance should be authorized for families displaced within a renewal project by voluntary rehabilitation or code enforcement on the same basis as for those displaced by clearance. This is of crucial importance to the success of a program such as our west side project, which combines conservation, rehabilitation, and redevelopment. The growing impact of renewal activity on small business and industry requires not only an increase in relocation payments, but assistance through a program of Federal long-term, low-interest loans.

6. The interest charge on funds advanced by a municipality to develop a renewal project should be allowed as a proper charge against the gross project cost. Otherwise a city like New York is penalized because it doesn't borrow Federal funds for this purpose.

7. Restoration of the low-rent public housing program established by the Housing Act of 1949. Even with this, the balance of annual subsidy contributions will provide less than half of the remaining number of units authorized at current costs. An adequate public housing program is essential to increase the supply of housing serving that sector of the market which no privately financed housing can reach. It is vital to the success of the urban renewal program since so many of the families now living in deteriorating areas which desperately need renewal fall within this sector. The regional administrators and the local authorities should be given greater autonomy to establish more liberal administrative practices, eligibility requirements, and rent and income limits. The acquisition and rehabilitation of existing structures where suitable for public housing purposes should be encouraged. Programs of housing for larger families and elderly persons should be fostered. Continued occupancy of over-income tenants on the basis of nonsubsidized rentals should be authorized in order to promote stability of projects and neighborhoods, and to broaden the cross section of families served by public housing for whom private housing is not available.

8. Strengthening of the FHA multifamily housing program, upon which New York City is singularly dependent, in the following ways:

An increase in the mortgage limits on sections 207, 213, 220, and 221 housing. Because of rises in construction costs the existing statutory ceiling on the amount of mortgage per room and per dwelling unit should be increased. Level payment mortgage plans for sections 220 and 207 housing should be made mandatory in order to reduce rents on new apartments. Increased FNMA special assistance for all multifamily programs is needed to support the apartment mortgage market. Section 221 should be revised to permit the purchase of existing small rental properties. FHA appraisal formulas should be changed to allow for more widespread use of sections 207 and 213 housing in the central portions of the city and to reduce the cash equity requirements now imposed on the private builder.

ROBERT F. WAGNER,
Mayor, City of New York.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided,* That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Williams of Delaware, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Cotton, and Curtis.

Committee on Foreign Relations

Messrs. Green (chairman), Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Langer, Aiken, Capehart, and Carlson.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Gruening, Moss, Dworshak, Kuchel, Goldwater, Allott, and Martin.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Langer, Dirksen, Hruska, and Keating.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Cooper, Dirksen, Case of New Jersey, Javits, and Prouty.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Yarborough, Clark, Jordan, Carlson, Langer, and Morton.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Neuberger, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Case of South Dakota, Martin, Cooper, Scott, and Prouty.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Morton, and Keating.

UNITED STATES SUPREME COURT

UNITED STATES JUDICIAL CIRCUITS JUSTICES ASSIGNED TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

The Civil Rights Proposal of Senator Lyndon Johnson

EXTENSION OF REMARKS
OF
HON. ALAN BIBLE
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Thursday, January 29, 1959

Mr. BIBLE. Mr. President, we who serve with him day to day know LYNDON JOHNSON as a driving, dynamic man-on-the-go. His boundless energy is matched only by his unfailing grasp of matters of great import to our Nation. What I am saying, Mr. President, is only a prelude to the distinguished Texan's latest proposal in the turbulent field of civil rights legislation.

Senator JOHNSON'S plan for sane and sensible approach to this extremely knotty problem has drawn accolades from all over the country. Bill Baggs, editor of the Miami News, is among the Nation's outstanding newspapermen who have commented favorably on the Johnson civil rights proposal. I ask unanimous consent that Mr. Baggs' comments be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Miami News, Jan. 25, 1959]

LYNDON JOHNSON COMES UP WITH A GOOD PLAN

(By Bill Baggs)

The people who want integration in the morning and the people who want segregation forever got a chance to shake hands with one another last week.

It was a historic moment of sorts.

For the very first time, the hot integrationist and the defiant segregationist were standing there together on a common piece of ground.

At last they had agreed on something.

SOME SNICKERED

In essence they had agreed that the plan which LYNDON B. JOHNSON pulled out of his hip pocket and tossed on the table of Congress was no good.

Robert R. Nathan, chairman of Americans for Democratic Action, classified the plan as a typical Johnson compromise and dismissed it as unworthy.

Some southerners snickered. One prominent man of the South told the writer:

"What JOHNSON proposes is ridiculous."

The hard political truth is that nothing proposed by Senator JOHNSON is ridiculous.

Or unworthy.

STAMP OF APPROVAL

LYNDON JOHNSON has been described as at least the second most influential American today. He runs the Federal Senate as if it were a commissary. His partner from Texas, SAM RAYBURN, is the proprietor of the House of Representatives. For practical purposes, this gives Senator JOHNSON a congressional stamp of approval most anytime he wants it.

All of which makes anything proposed by LYNDON JOHNSON anything but ridiculous.

And what did the man propose?

He suggested a civil rights bill with an accent on conciliation instead of force.

The heart of his proposal is a Federal conciliation agency for civil rights. The agency would get white and Negro leaders of a community around a table, talking to each other, trying to work out their differences.

IT HAS MERIT

This smacks very much of the thought introduced to the Nation by Governor Collins.

As I recall, there were some snickers then.

But the idea does have merit • • • and especially when LYNDON JOHNSON in person tosses it up on that table in Congress.

Senator JOHNSON admitted that his plan was inspired by the tested concept of the Federal Mediation and Conciliation Service. This is an agency which accomplished much in areas of labor-management trouble.

STEP AT A TIME

Of course, the Mediation Service is helped along the road by certain laws which are precise and are accepted by the American people. Senator JOHNSON did not get into these waters. He is taking this trip one step at a time. He's a practical man.

The Senator admitted his first step was no solution. It was, he said, a step in the right direction.

And what better first step has been offered the American people?

At the moment schools are padlocked in Little Rock and in several places of Virginia.

In Little Rock there are 3,600 young boys and girls outside the public schools. Of these, 1,000 have traveled out of Little Rock to other cities to seek an education.

FOR 600, NO SCHOOL

Of the children left, 830 are going to the "private" school which Governor Faubus and his friends got into business. Reports from Little Rock indicate this school is a poor substitute for Central High, the public school now closed.

Five hundred children in Little Rock are attending church schools of one kind or another.

Four hundred children are taking correspondence courses.

Six hundred children are not going to any school at all.

This is what happens when the public schools close. And there is every reason to believe that it could happen right here in south Florida.

ON A TREADMILL

Possibly most of the readers of this newspaper feel a closed school is better than an integrated one. Maybe you think so. But the young minds of the South go on a treadmill when the schools are closed, and these hasty alternatives to public education lead inevitably to situations where children cannot qualify, actually or technically, for higher education.

Senator JOHNSON has suggested a plan to keep the school door open and meanwhile to work toward a legal and voluntary arrangement for the public education of all children.

As one newspaper in this town, we cast our vote for the Johnson proposal.

Budget To Resist Communist Expansion?

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, January 29, 1959

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD an editorial from the Army-Navy-Air Force Journal of January 24, 1959.

The editorial expresses concern over the President's budget requests for the Department of Defense. As such, it is representative of considerable body of opinion in the country today, and I think it is important that it be made a part of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BUDGET TO RESIST COMMUNIST EXPANSION?

In his budget message President Eisenhower says:

"It has become increasingly apparent that the Communist bloc is following a policy of deliberately and constantly probing free world positions to test our determination to resist the further forcible expansion of Communist influence. Under these circumstances, it is prudent not to plan for any significant changes during fiscal 1960 in our deployments overseas or in our ready military forces at home."

This is a sound and worthy objective. We hope it can be accomplished with the funds recommended in the budget. But on close examination of its provisions, misgivings arise as to whether the fighting forces and the weapons available in our deployments overseas or in our ready military forces at home would, in fact, be powerful enough to serve as an effective deterrent in 1960.

The administration's estimate foresees an expenditure for military purposes in 1960 only $145 million more than the current year. Yet the President reports that $800 million additional will be spent on missiles next year. It is evident, therefore, that all other weapons and forms of offense and defense will have to get along on about $650 million less than this year—a year in which personnel force levels in all of the military components are being reduced.

Even the $800 million increase in missiles cannot be considered as a remarkable gain when one considers that to reach this figure the President's budget advisers lumped in not only the procurement of missiles, but missile research, development, test, evaluation, construction costs for launching sites, and even the building of submarines designed to launch the Navy's fleet ballistic missile Polaris. We recall that in his state of the Union message the President stressed the high price of modern defense weapons by saying that each Atlas missile has cost $35 million. That figure, of course, included the research, development, and testing back to the very beginning but it does serve to show

that the currently recommended increase in this area could not go very far.

The comprehensive reports and analyses in this issue of the Journal show nothing that can be considered as augmenting our strength in areas other than missiles.

The Air Force loses, from 1958 to 1960, both in total manpower (5,000 less) and in total number of combat wings (15 less). The greatest loss in wings is in the tactical category, including the airlift upon which the Army depends for the mobility everyone says it needs, where the loss will be 11 wings. The total active aircraft inventory also drops.

The Army loses another division this year, bringing it down to 14, and that loss will be carried on into next year. The provision for Army procurement is only a small fraction of the extra $3 billion per year Gen. Maxwell D. Taylor has estimated the Army requires for 5 years in order to achieve the modernization it needs.

The Navy will have 869 active ships—27 less than in 1958. It will have one less carrier group than in 1958. The Marine Corps will keep its three divisions and three air wings. The total active aircraft inventory of the Navy and Marine Corps drops 1,333 below the 1958 level to wind up at 9,200.

These are not encouraging figures; certainly not what one would expect of a force designed to meet any Communist aggression, including "nibbling" and limited wars, in 1960.

When Congress makes its promised detailed inquiry into the sufficiency of these figures, it will run up against the Budget Director's warning to witnesses that they must not urge increased spending. But we are sure that the military representatives who will appear before the congressional committees are fully aware of their obligation to furnish Congress with all of the facts it requires.

Man of the South for 1958

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, January 29, 1959

Mr. SPARKMAN. Mr. President, in the Anniston (Ala.) Star for December 19, 1958, Col. Harry M. Ayers, the distinguished publisher of that paper, had an editorial regarding the recent designation of Mr. Frank P. Samford of Birmingham as Man of the South for 1958.

The title of the editorial is "Magic City Triumvirate," referring to three distinguished citizens of Birmingham who have been honored in such a manner.

I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MAGIC CITY TRIUMVIRATE

An excellent selection was made recently by Dixie Business magazine when it named Frank P. Samford, outstanding citizen of Birmingham, as its Man of the South for 1958.

Previously, this honor had been conferred on Thomas W. Martin and Donald Comer, so that the Magic City is alone at this time in boasting a Man of the South triumvirate.

A perusal of the record reveals, moreover, that, if anything, the distinction is even more impressive from a qualitative than from a quantitative standpoint.

Like Messrs. Martin and Comer, Mr. Samford has played a leading role in the upbuilding of this part of the country.

As a young insurance executive, he joined Liberty National Life Insurance Co. in 1921 in the capacity of its corporate secretary. He was elected to its vice presidency in 1932, and 2 years later became its president.

Under his leadership the firm has grown phenomenally—a fact that has meant much to Birmingham and all of Alabama since insurance dollars that otherwise would have gone out of the State have been put to work right here at home.

As an illustration, there is the impressive Liberty National Building on North Noble Street, in Anniston, which is headquarters for a large corps of workers assigned to east Alabama.

Nor is it only in terms of his able guidance of Liberty National that Mr. Samford has made important contributions to the advance of Alabama and the South.

At present he is serving on the boards of directors of a dozen of this region's leading utilities, financial institutions and manufacturing enterprises, including Southern Bell, Continental Gin, West Point Manufacturing, and the Birmininghan Trust National Bank.

Furthermore, Mr. Samford had headed at one time or another such highly useful organizations as the Birmingham and Alabama Chambers of Commerce, Associated Industries of Alabama and the Jefferson County Tuberculosis Sanitorium Society—not to mention the year he served as district governor of Rotary and long tenures on the boards of trustees of both Alabama Polytechnic Institute and Howard College.

A great deal more would have to be included in a detailed chronicling of Mr. Samford's accomplishments as businessman and public spirited citizen. But we believe the foregoing is ample to support the newest honor that has been bestowed upon him—that of being named "Man of the South for 1958."

People's Right To Know Is Vital to Democratic Government

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, January 29, 1959

Mr. PROXMIRE. Mr. President, the importance of a free flow of information and a well-informed public is so well recognized that these basic elements of a free society are taken for granted, and thus are in constant danger. The Milwaukee Journal, in a January 27 editorial, explores this problem and points out how the threat to the people's right to know manifests itself at the Federal level of government. This is a matter which should be of utmost concern to all of us. I ask unanimous consent that the editorial, entitled "Battle for Right To Know," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BATTLE FOR RIGHT TO KNOW

A democratic government must lean heavily on an informed public. Free government and free information are synonymous. These points, made in a recent telecast called the Press and the People, are too obvious to need enlarging upon.

Yet there is, in Washington as in other governmental areas, a constant effort on the part of officials to keep information from the people. In the last several years in particular, our Federal Government has used secrecy and even distortion and misinformation almost as a policy. Secrecy and misinformation, as Senator HENNINGS, Democrat, of Missouri, has pointed out, carry in them the seeds of dictatorship. At the very least, they help create an uninformed public, a dangerous state of affairs when the public is also the electorate.

One of the biggest efforts to get rid of unnecessary secrecy in Government has been made by a special House subcommittee on freedom of information headed by Representative Moss, Democrat, of California. The committee has spotlighted secrecy, jogged officials right up to the White House, and fought for the public's right to know. It still has a lot of work to do.

But it is not certain that the subcommittee will be allowed to do that work. Representative HOFFMAN, Republican, of Michigan, a member and an enemy of the subcommittee, says that it has not been renewed. Representative DAWSON, Democrat, of Illinois, chairman of the parent judiciary committee, says that it is possible that the subcommittee will not be reestablished. He hasn't made up his mind.

It would be most unfortunate if the subcommittee were not continued. Its fine job to date is widely recognized, even by DAWSON. It has a lot more to do. The fight against secrecy can't succeed if it is carried on in fits and spurts. It needs to be waged constantly. Let the subcommittee continue to battle for the people's right to know.

The Destiny of America in the World

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, January 29, 1959

Mr. THURMOND. Mr. President, I was brought up to believe that an individual should not meddle in the affair of others when he has plenty of problems of his own. David Lawrence, in a brilliant column entitled "Whither America," published in the November 28, 1959, edition of U.S. News & World Report, reminds us all of the real challenge facing the United States today and warns us to accept this challenge or else further weaken our world position. I ask unanimous consent to have this column printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHITHER AMERICA?

(By David Lawrence)

What is the destiny of America in the world? How can we best serve mankind and at the same time keep from dissipating our energies and our resources?

These questions go to the heart of public policy today. They are not solely international. They also challenge the fundamentals of domestic policy.

For what doth it profit a nation to seek laurels abroad if it forsake its ideals at home?

We have in America today two basic philosophies at work inside our two political parties.

One philosophy is that the end justifies the means—that the attainment of a meritorious objective must be compelled even if this means disregard of a written Constitution.

The other philosophy holds true to the principles on which this Republic was founded—that we must have a government of laws and not yield to the concept of a government of men. Progress in government achieved at the expense of a violated contract inspires no faith or spirit of permanence. It fluctuates with the will of the mob. The intolerance of majorities has throughout history left in its wake a casualty list of human freedom destroyed.

Too many people in America today would indignantly disavow any thought of totalitarianism, but they are often ready to accept some of its ways. They cry out that the process of amending the Constitution is too cumbersome or time consuming. They do not advocate, as they could, a change in the method of amending the Constitution as already prescribed in that document itself. They prefer usurpation instead—even the seizure of a whole industry to curry favor with labor leaders or the use of Federal troops to enforce a sociological doctrine. It is defended as a quicker process. So is dictatorship.

Too many people believe that the writing of laws should not be confined to Congress but that the Supreme Court of the United States must legislate. Many of the professors in our law schools and many of their deans are resentful of any criticism of the Court and say frankly that it is up to the Court to reconcile the past with the present—to take care of evolution and adapt the Constitution to changing conditions.

This is reminiscent of the speech which Hitler made in the 1930's when, after accepting election under the legal process of the German Constitution, he proclaimed that the courts should take into account public sentiment in writing their decisions.

We have today many perplexing problems to solve in America. We have severe competition now with goods made abroad, where labor is cheaper and trade unions have no such economic power to raise prices as they have here in the United States.

We fought successfully for decades against monopoly by corporations, but today we have in our midst a far worse monopoly power in the labor unions. The unions win political elections by the expenditure of many millions of dollars. They influence a sufficient percentage of voters to swing elections. Labor unions have become a sort of supergovernment.

We have also a serious problem in combating the inflationary trend that has come upon us. We have taxes that are almost confiscatory and a $12 billion deficit this year.

How can we assume, as some crtics repeatedly suggest, that "bold and imaginative ideas"—which means American money for the underdeveloped nations—are all that's necessary to make American leadership supreme and thus counteract Soviet infiltration?

We must continue certainly to spend billions for armament so as to deter a potential enemy. This in itself is draining our resources and frustrating our normal progress. We cannot, however, take on the support of all the rest of the world, too.

There are some things we can do in world trade and through developmental loans, but these should be largely by private capital. The era of lavish expenditure in the form of grants and gifts is about over. It is time to take a good look at internal America and put our own house in order.

Unless we start now to readjust our domestic position, we shall have a depression in the next 5 years that will weaken our world position. This is not a time for starry-eyed sprees in "welfare" spending.

It is a time, moreover, to examine critically the functioning of our system of government.

It is a time for a crusade to restore the constitutional system our forefathers gave us and to use it as they prescribed. For if we give up government by law and yield to government by the caprice of individuals, we shall destroy the American Republic and find ourselves surrendering gradually to the totalitarian concepts of our chief adversaries.

The best way to advance American leadership abroad is by maintaining solvency and adhering to constitutional government at home. Then we will by example prove that the United States is succeeding and will continue to succeed as a great republic.

For a Better Senate

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, January 29, 1959

Mr. GORE. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD an editorial from the St. Louis Post-Dispatch entitled "For a Better Senate."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR A BETTER SENATE

The Senate committee assignments, Republican as well as Democratic, suggest that both parties have paid attention to the message of the November election.

On the Democratic side, it deserves to be said first in fairness to Majority Leader LYNDON JOHNSON that there is no evidence the voting on the filibuster was a factor in determining which posts went to the new Democratic Senators. Eight of the 15 new Democrats voted against the Johnson position either two or three times, and yet they fare very well on committee assignments.

HART of Michigan, who voted against JOHNSON four times, receives two choice committee assignments, Judiciary and Agriculture, committees for which veterans have striven in the past. ENGLE of California, goes to Armed Services and Commerce; MCCARTHY of Minnesota, Finance and Public Works; Moss of Utah, Interior and Public Works; MUSKIE of Maine, Banking, Government Operations and Public Works; WILLIAMS of New Jersey, Banking and Labor.

DODD of Connecticut and YOUNG of Ohio, who voted against JOHNSON on two of the three first rollcalls, also do well. Dodd is assigned to Appropriations, Judiciary, and Space Sciences. YOUNG, who turned the big surprise of the election by ousting John W. Bricker, is appointed to Agriculture, Public Works and Space Sciences.

The six new Democrats who supported JOHNSON on every rollcall do well also, but relatively no better. Alaska's BARTLETT, goes to Armed Services and Commerce and GRUENING to Government Operations, Interior and Public Works. The others in this group are: ROBERT C. BYRD of West Virginia, Appropriations and Banking; CANNON of Nevada, Armed Services, Rules and Space Sciences; HARTKE of Indiana, Finance, Commerce and District of Columbia; and MCGEE of Wyoming, Appropriations and Commerce. RANDOLPH of West Virginia, who backed JOHNSON on three of the four votes, goes to Labor and Public Works.

These assignments reflect generally the preference of the Senators in terms of experience and interests. MCCARTHY, for example, is a former professor of economics. Joining DOUGLAS, of Illinois, he will make the second professional economist on the committee which handles tax bills in the Senate. GRUENING and Moss have deep interest in the work of the Interior Committee and HARTKE, former mayor of Evansville, should be a major help on District of Columbia problems.

While no newly elected Democratic Senator goes to Foreign Relations, the Democratic additions to that committee are notable: GORE, of Tennessee; LAUSCHE, of Ohio; and CHURCH, of Idaho. LAUSCHE and CHURCH entered the Senate only 2 years ago.

The practice under LYNDON JOHNSON of giving at least one major committee assignment to every Democratic Senator has finally been adopted on the Republican side under pressure from the Aiken-Cooper-Case-Javits-Kuchel group. The three Republican newcomers, all of whom supported COOPER, of Kentucky, for minority leader in opposition to the Bridges-Dirksen-Saltonstall combine, receive good committee posts. KEATING, of New York, goes to Banking and Interior; SCOTT, of Pennsylvania, to Commerce and Public Works; and PROUTY, of Vermont, to Labor, Public Works, and District of Columbia.

In a harmony move, Minority Leader DIRKSEN even gives up his cherished seat on Appropriations. It goes significantly to KUCHEL, of California, who was elected Republican whip after being nomintated by the liberal group. The prize new assignment among the Republicans goes to CARLSON, of Kansas, the only Republican to get a new seat on the Foreign Relations Committee. Significantly CARLSON, too, backed the liberal group. HICKENLOOPER, of Iowa, and SALTONSTALL, of Massachusetts, gave up Space Science seats to make way for JAVITS, of New York, and CASE of New Jersey, two leading liberals.

With the Democrats outnumbering Republicans two to one in the Senate, the Republicans owe the Democratic leadership a vote of thanks for increasing the size of several of the major committees. Had this not been done many veteran Republicans would have been knocked from committee seats in which they were secure—until last November.

It is being said by some Washington commentators that the effect of the November revolt at the polls has already been swallowed up in the sea of professional politics that surrounds Capitol Hill. On the basis of what the election has done to the Senate committees on both sides of the aisle, we suspect that some of these words will have to be eaten—and perhaps before many months pass.

Our Relations With Latin America

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, January 29, 1959

Mr. HUMPHREY. Mr. President, a very thoughtful editorial on our rela-

tions with Latin America appeared in the January 14 issue of the Middletown Daily Record of Middletown, N.Y. It emphasizes, quite rightly, the vital importance of our country training dedicated young Americans to supervise our aid programs.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE EISENHOWER REPORT

Dr. Milton S. Eisenhower, president of Johns Hopkins University and brother of the President of the United States, submitted a report to the White House the other day on our relations with Latin America. "The whole region," he said, "is in ferment—political, social, economic, financial. It is growing rapidly, with an explosive population rate and inadequate capital."

U.S. policies toward Latin America, he feels, are confusing to the peoples south of our border, because we seem to be too cozy with too many local dictators. "At best," he says, "we should offer them a cool handshake rather than a warm embrace. This calls for a change of heart on our part."

Dr. Eisenhower's report is thoughtful, kindly, and generous. But we wonder whether a change of heart is enough.

Even the U.S. offer to subscribe $400 million to the capital of a new Inter-American Development Bank is only a small step.

To begin with, we probably need a real understanding of the opportunistic psychology of Latin dictators. Too many do not have any sense of responsibility; they may be despots but they are rarely benevolent. On the other hand, so long as the peoples themselves accept dictatorship, we should recognize that any such government will accept outside help from the United States if that help costs them nothing. But U.S. help should be provided only if we are able to send into each country trained, dedicated young Americans to supervise our aid programs.

The Latin American countries need government grants, private loans, and private capital investment; and it would be in our interest to see that they get these things. But it would surely not be in our interest if they are used merely to line the pockets of the Batistas—past, present, or future. They must be truly useful; they must be truly practical; and they must be supervised in such a way as to benefit the people themselves.

Unless we provide manpower and supervision, our financial, business, and technical assistance will be worthless.

The Missile Controversy

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, January 29, 1959

Mr. DIRKSEN. Mr. President, in connection with the missile controversy which has been on the front page and in Senate discussion for some time, a very interesting article appeared in the New York Herald Tribune on January 26, by Mr. Joseph Alsop, under the title "The Major's Friend."

Inasmuch as a record is being built to dispel the confusion and get at the hard core of fact on this whole problem, I believe this column should be made available to more readers through the medium of the CONGRESSIONAL RECORD, and ask that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MAJOR'S FRIEND

(By Joseph Alsop)

WASHINGTON.—The day they brought the major in, the forward airbase in east China staged a celebration. The Japs had shot Rex Barbour down north of the Yangtze River. He had been too badly injured to walk. He had been carried several hundred miles on the backs of Chinese guerrillas. He had had several hair's-breadth escapes from Jap patrols. Altogether, a celebration was in order.

Later in the evening, after a good many "kan peis" of the local white mule, someone said, "Rex, tell us about how you got the Japanese admiral." An odd look crossed the major's handsome young face. Perhaps he was tired of describing the last seconds on earth of Admiral Isoroku Yamamoto, commander of all the Japanese Emperor's ships in the Pacific. Yet he told it well, all the same.

One all but saw the brilliant interception—the two little American fighters coming in on the flank of the big Jap bombers and their six escorting Zeros, just at the planned interception point over a steamy, palm-fringed South Pacific island. One all but watched the grim fight against these fearful odds—the Americans' quick, deadly first attack, the two bombers flaming and falling, then fighters diving and twisting in the bright air, and the Zeros also bursting into quick, hot flame, and the two American planes turning for home at last, their mission miraculously accomplished. One held one's breath, indeed, until the major finished:

"But the man who got the admiral was Tom Lanphier. I was his wing man. He led the attack. We each got a bomber, but he took the first one, and the first one had Yamamoto on board." There is a current reason for digging this snapshot of the forgotten past out of memory's album. This same Tom Lanphier, whom the major talked about for much of the rest of that happy, long ago evening, is again being talked about here in Washington. But this time Lanphier is being discussed in very different language, by men on the highest level of the American Government.

Primarily, Lanphier is being discussed because he is a very worried man, and because he has attacked the thing that worries him with the same devil-may-care, go-for-the-lead-bomber determination that he showed when Yamamoto met his end. But the thing that worries Lanphier happens to be the Eisenhower administration's complacency about the missile gap. So this new fight against odds is unlikely to be rewarded with the Navy Cross, the Silver Star, and the Distinguished Flying Cross, as the last fight was.

When Senator STUART SYMINGTON was Secretary of the Air Force, Tom Lanphier was his Assistant Secretary. Lanphier is still SYMINGTON's close friend; and in the last month SYMINGTON and Lanphier, with Lanphier feverishly spurring SYMINGTON on, have desperately pressed for a cold, hard, new look at the changes in the military balance between the United States and the Soviet Union.

This was a wholly private effort. It was only the failure of the private effort that drove SYMINGTON to speak out in public, with bitter eloquence, in the Senate last Friday. Twice before the private effort failed, SYMINGTON saw President Eisenhower himself, to beg for bold action to meet the challenge of Soviet progress in ballistic missiles.

Twice SYMINGTON and Lanphier, also saw the Director of the Central Intelligence Agency, Allen W. Dulles, whom the President told off to soothe the anxious Senator. On the second occasion, which had been planned as a fairly grandiose briefing, Lanphier all but broke up the party by declaring that his own manufacturing experience proved the dangerous overoptimism of the official estimates of Soviet missile output.

Lanphier knows most of the secret facts that are withheld from the American public, precisely because he is a manufacturer of ballistic missiles. But as vice president of Convair, which makes the Atlas Intercontinental Missile, Lanphier has an obvious interest in bigger Atlas orders from the Air Force. Thus a good many men on the higher governmental level are smugly saying that Tom Lanphier has just been "selling a bill of goods with his furious, worried talk about the missile gap."

That is one way to look at it. The other way to look at it also involves a snapshot from the forgotten past—the tragic picture of Winston Churchill and Sir Austen Chamberlain going to plead with Stanley Baldwin for British rearmament to match Hitler's rearmament, and getting a smug, dusty answer to their anguished and farsighted pleas. The two ways of looking at it are diametrically opposed; and the choice between them deserves further investigation.

Pay for Retired Service Personnel Must Be Equalized

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, January 29, 1959

Mr. YARBOROUGH. Mr. President, the United States is discriminating against a large number of servicemen who served it so well on so many occasions. Under the military pay bill passed by the 85th Congress in 1958, two persons who were in the same service and retired with the same rank can be paid on different scales.

I do not believe this is just, and I feel it makes our service personnel, who have stood ready to answer our Nation's call at any time, feel the Nation is ungrateful to them. Therefore, I have joined in sponsoring a bill to equalize the amounts paid to retired members of the armed services.

The military pay bill of 1958 provides that members of the Armed Forces who retire after May 31, 1958, receive pensions based upon a percentage of the current pay for persons on active duty, which is higher than the percentage granted those already retired.

A straight 6-percent increase was granted those who retired prior to that time.

This bill carries out the recommendation of The Cordiner Report that retirement pay scales be refigured each time

laws pertaining to them are changed.

I have just received a letter from Robert E. Joseph of San Antonio, Tex., a retired U.S. Army colonel, who is commander of the San Antonio Chapter of the Military Order of the World Wars, with some timely comments on this important subject:

The greatest single incentive to careers in the uniformed services—

Colonel Joseph writes—

is the time-honored principle that retired pay, once earned, will continue to be at the established percentages of active pay.

Colonel Joseph continues—

Young men of character and ability are now asking: "Shall I commit myself to a military career when the rules may be changed before the final whistle has blown?"

Are we to ignore the experience of mankind and established and maintain a policy which will inevitably result in mediocrity in our military leadership? I believe not.

Military men, whether they serve 50 years on active duty or 20 years, have been assured equality of treatment in the computation of their retired pay with those who are to follow them into retirement.

What am I to tell my son and son-in-law, both young regular officers and both graduates of the U.S. Military Academy, who are devoting their lives to military careers? I expect to say to them:

"Continue upon your careers in the profession of arms and the 86th Congress, in its wisdom, will reestablish equality in the computation of retired pay of personnel."

I hope that I shall not be proven a false prophet.

Mr. President, in further support of the necessity for the passage of this new bill on retirement pay for servicemen, I request unanimous consent to have printed in the Appendix of the RECORD a resolution passed by the Military Order of the World Wars in national convention at San Juan, P.R. on October 24, 1958.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF THE MILITARY ORDER OF THE WORLD WARS

"Whereas military retirement and its firm tie-in with active duty compensation is perhaps the most powerful long-term career incentive existing within the military compensation system; and

"Whereas the Cordiner committe said of this recommended feature now abandoned by Public Law 422 of the 85th Congress:

" 'The committee has therefore concluded that the incentive value of this existing military retirement program depends to a major degree upon its integral relationship with active duty compensation and the confidence which has been built up in the military body that no breach of faith or breach of retirement contract has ever been permitted by the Congress and the American people'; and

"Whereas this law should be amended to comply both with the recommendation and with the long-standing tradition which has been, and remains, the major incentive to retention of military personnel: Now, therefore, be it

"*Resolved by the Military Order of the World Wars in convention assembled at San Juan, P.R., this 24th day of October 1958,* That we urge upon the Congress the enactment of amendatory legislation to Public Law 422 of the 85th Congress to restore the incentive feature embodied in this historical relationship between active duty pay and retired pay, in order to insure the highest caliber of personnel for our national defense."

In witness whereof, I have hereunto set my hand and caused the seal of the Military Order of the World Wars to be affixed this 24th day of October 1958.

ROBERT G. KALES,
Commander, U.S.N.R. (Retired),
Commander in Chief.

By the commander in chief:

HARRY F. MCCULLAH,
Commander, U.S.N. (Retired),
Secretary General.

Help for School Construction

EXTENSION OF REMARKS
OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, January 29, 1959

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the January 22, 1959, issue of the Wall Street Journal headlined "Agency Works on New Plan To Spur School Building—Uncle Sam Would Help Local Units Pay Debt Interest, Not Construction Bills."

I also ask unanimous consent to have printed in the Appendix immediately following this news story, my press release of the same date, in which I point out that the administration's school-aid proposal, as leaked to the Wall Street Journal, is designed to help bankers rather than schoolchildren or schoolteachers, and that it shifts the cost to future years so the administration will not have to account for the expenditures during its remaining 2 years.

This administration proposal, I regret to say, bears no relationship to the realities of educational needs.

There being no objection, the article and address were ordered to be printed in the RECORD, as follows:

AGENCY WORKS ON NEW PLAN TO SPUR SCHOOL BUILDING—UNCLE SAM WOULD HELP LOCAL UNITS PAY DEBT INTEREST, NOT CONSTRUCTION BILLS—FEDERAL SHARE STILL QUESTION

(By James A. Reynolds)

WASHINGTON.—Administration officials are trying to draft a new program to stimulate school construction that would not involve Federal sharing of building costs.

Instead, it would empower Uncle Sam to pay part of a local school district's debt service load—the interest on money the district borrowed to finance construction of new classrooms. Earlier administration aid-to-education proposals included outright Federal grants for school building.

Health, Education, and Welfare Department officials hope the new approach will appeal to White House budget balancers. They figure no Federal outlays would be required until mid-1960, at the earliest. School districts, they argue, would need a few months to float new building bonds, and a year would pass before the first interest on the new bonds would come due.

WOULD NOT AFFECT NEW BUDGET

Thus, the new plan would not unbalance the administration's $77 billion budget for the fiscal year which starts July 1. However, Federal payments might run high in later years.

To get an idea how big the Federal program might grow, consider the size of the present and future school district debt service burden. Federal officials estimate the local districts have obligated themselves to pay $6.5 billion in interest on the outstanding principal borrowed to finance classroom construction. Within the next decade, it's estimated, the districts must add another $6.5 billion to their debt service burden if they hope to keep pace with the demand for new classrooms.

But the Federal agency's planners are not proposing that Uncle Sam take over all of this load. The question of how big a share the United States should accept and for how long is, in fact, the toughest problem facing the bill drafters.

Some officials think Uncle Sam and the school districts should split the future debt service payments 50–50, while others believe the States should assume part of the burden. Only a few States at present help local school districts pay interest on their construction bonds, and in these cases the State share is small.

LENGTH OF PROGRAM

Officials doubt the administration will go so far as to propose that Uncle Sam help carry the debt service load for a bond issue's full term, which frequently runs for 20 to 40 years. It's more likely, they say, that the program would run for only the next 5 or 10 years—the period when they figure most building would have to be done, adding to the chore of carrying the present debt.

The new approach, Health, Education, Welfare officials believe, would stimulate school building in two ways. Districts theoretically would find it easier to borrow money—that is, sell bond issues—if they could show that the State and Federal Governments would be responsible for meeting part of the interest payments.

Moreover, they figure many districts that are already heavily in debt might be encouraged to take on still more in an effort to overcome classroom shortages if some of the worry over the cost of future borrowings were shared by the Federal and State Governments.

Currently, officials are studying the new scheme only for elementary and secondary school construction. But if it's tried and works, they add, it might later be used to stimulate construction of college classrooms. The Federal Government already offers low-rate loans for the construction of college housing, but is not seeking any new funds for this program for fiscal 1960.

NEW APPROACH FOR ADMINISTRATION

If it were adopted, the new approach would mark a major change in administration thinking on school construction. Twice before, President Eisenhower has asked Congress for up to $2 billion of Federal aid to States over a 4-year period to spur building of new classrooms. Both times the program failed to pass when it got snarled in a congressional fight over civil rights. Last year, the administration dropped its school construction efforts, and instead concentrated on winning legislation to step up science and engineering education.

This year, many Democrats are expected to line up behind an aid-to-education measure sponsored by two Montana Democrats, Senator MURRAY and Representative METCALF. They propose Federal grants to States, based on each State's school-age population, for school buildings or teachers' salaries. If the Federal payment was fixed at $25 per child, the program might cost $1.1 billion a year.

The National Education Association currently favors the Murray-Metcalf approach, but N.E.A. officials decline to say how they'd view the Health, Education officials' plan.

Senator JAMES E. MURRAY, chairman of the Senate Education Subcommittee today made the following statement:

"The administration's school aid proposal, which was leaked to the Wall Street Journal today is designed to help bankers rather than schoolchildren or schoolteachers. It

shifts the cost to future years so the administration won't have to account for the expenditures during its remaining 2 years.

"The administration proposal bears no relationship to the realities of educational needs.

"The administration would have the Federal Government pay part of a local school district's debt service load. According to the Journal:

" 'Health, Education, and Welfare Department officials hope the new approach will appeal to White House budget-balancers. They figure no Federal outlays would be required until mid-1960, at the earliest. Thus the new plan would not unbalance the administration's $77 billion budget for the fiscal year which starts July 1. However, Federal payments might run high in later years.'

"In other words, the Eisenhower administration does not care if the Federal budget is unbalanced, provided it will be the budget of the succeeding Democratic administration. Furthermore, the bankers who have done so well under Eisenhower want this program so the succeeding Democratic administration will have to continue paying them high Republican interest rates. I imagine administration officials and their big business friends stayed late at the club several evenings cooking up this bit of mockery.

"It is also evident that the advice of people who know educational needs was disregarded. The Secretary of Health, Education, and Welfare has stated his view that teacher salaries should be doubled. To do this would require approximately $6 billion annually. According to the U.S. Office of Education it would require about $5.4 billion to construct the more than 135,000 classrooms needed just to meet present needs.

"S. 2 which 30 Senators joined me in introducing, would permit a start on meeting this great need, by authorizing grants to the States to be used for classroom construction or teacher salaries or a combination of these two purposes, as each State sees fit.

"I would suggest to the administration that in preparation for forthcoming hearings by the Education Subcommittee it begin to consider the needs of education rather than the desires of bankers, and the relative financial condition of States and local school districts as compared with the Federal Government. From 1948 to 1957 our national debt increased from $252 billion to $270 billion, but our national income increased from $223.5 billion to $364 billion. We as a Nation are like the man who 10 years ago bought a house with a $6,000 mortgage when he made $5,000 a year. He recently bought a bigger house which had a $7,000 mortgage; however, his salary is now more than $8,000 a year. He obviously is now in a much better position to pay for his new house.

"And he certainly is in a better position than the man who, like many local school districts, is in debt so far, according to his ability to pay, that the banker waves him out the door."

Insecure Protection

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wall Street Journal of January 27, 1959:

INSECURE PROTECTION

The multitude of things that can be covered by national security is shown once again in the rejection of a low British bid to supply hydraulic turbines for an Army project in Arkansas.

Under our Buy American Act, a foreign company interested in Federal contracts not only has to bid lower than the domestic competition; it has to bid substantially lower. And if there is heavy unemployment in the area of an American producer, the bid has to be 12½ lower. In this case, English Electric's bid was some 19 percent lower than that of Baldwin-Lima-Hamilton, which eventually got the contract.

The decision was made by the Office of Civil and Defense Mobilization, which claimed that national security would be jeopardized by awarding the contract to the British firm. The rationalization was that domestic productive capacity for making these turbines would be reduced to a level inadequate for emergency requirements. In other words, if we got into a war we might not be able to produce these turbines fast enough.

This is a weak argument on the face of it; for one thing, Baldwin is not the only company making the machines. Also, as English Electric sensibly retorted, the way for Baldwin or any other American firm to keep busy is by effective competition. Nevertheless, the national security argument is made for protectionism for all kinds of domestic industry, some of whose connection with defense is tenuous to say the least.

In this case hardly anybody even believes the argument. The real reason for the decision appears to lie in Pennsylvania politics. So there is something less than candid about dragging in national security as an ostensible justification for the decision.

Naturally the decision is causing a hullabaloo in Britain, as did a similar celebrated case several years ago. It certainly doesn't make the United States look good when it preaches free trade and practices something different. Then, too, this sort of thing always stirs the temptation on the other side to retaliate; and it is in such widening mutual retaliations that international commerce sickens, to the detriment of everybody.

But it isn't the foreign aspect that most concerns us; we have never believed that the United States should conduct its trade or any other policies simply to please people abroad. What mainly concerns us is that behavior like this hurts ourselves. In this particular affair it is perfectly plain: Unless the decision is reversed, the American taxpayer will have to fork out more than $300,000 more than is necessary for the turbines.

That isn't much for a Government that spends billions as though they were dimes, but why should the taxpayer have any amount of his money wasted? Moreover, this is an illustration of the way protectionism in general works, whether the protectionism takes the form of tariffs, quotas, national security decisions, or whatever other gimmick.

Protectionist devices amount to a hidden tax on the consumer. He simply has to pay more than he would otherwise have to for the things he or his Government buys. That is the whole point—to shelter some firms from price and other competition.

We aren't trying to say that much freer trade would cure all the ills of the world. We do say it would be in the national interest and spur competition to the great benefit of the consumer-taxpayer and even of the firms that want protection. In the process it would improve our image in the world's eyes far more than all the billions we throw around as foreign aid.

In short, a policy of protectionism may protect a lot of firms—for a while, anyway. But the one thing it does not protect is national security.

Castro Is Betraying His Own Revolution

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, January 29, 1959

Mr. PROXMIRE. Mr. President, the Capital Times of Madison has won a reputation as a militant fighter against tyranny, dictatorship, and corruption everywhere. For this reason it enthusiastically supported the Castro revolution against the Batista tyranny in Cuba.

For this same reason it has protested against the newborn tyranny of Castro which seems to be developing now in Cuba. In commenting on the merciless violence of Castro toward the conquered Batista forces, the Capital Times writes:

Orderly justice and democratic procedures cannot grow out of such a grisly carnival. Terror spawns more terror.

Castro is betraying his own revolution.

Mr. President, I ask unanimous consent to have the editorial printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CASTRO IS BETRAYING HIS OWN REVOLUTION BY A REIGN OF TERROR

A Capital Times reader has written to protest our critical attitude toward the terror loosed by Fidel Castro and his Cuban revolutionaries. Revolutions, he suggests, are not Sunday school picnics. Violence and bloodshed are the trademarks.

Our correspondent misses the point—a point well made in a recent column in the New York Post by Max Learner, the distinguished scholar and author who has been in sympathy with Castro's struggle to rid Cuba of Batista tyranny:

We had better face it: The things that are happening in Cuba today, as the execution toll mounts and the reign of terror moves into full swing, present an unlovely picture of the political animal as revolutionary.

It is one thing to spill blood—to kill and be killed—in the course of revolutionary or civil-war fighting itself. It is quite another thing to keep killing after a revolution is over, and victory has been achieved.

In the one case it is killing in the heat of battle, as part of a war, with victory and survival at stake. In the other case it is killing in cold blood, out of hatred and revenge, with no real justification except the conviction that you are God and can mete out death to those who deserve it.

Nor is it an answer to cry out against the crimes of Batista. Two wrongs have never made a right. The revolution was fought to rid the country of terror, not to substitute one brand for another.

It is argued that there were reprisals against the Tories in the American Revolution, but only a perversion of history could compare it with what is going on in Cuba. Insofar as it did exist it was wrong and should be condemned by all who understand what democracy and justice really mean.

What is going on in Cuba today is more like the terror that came with the French revolution when the guillotines bathed the

streets of Paris with blood to satisfy the lust of the mob. The trials before 17,000 shrieking spectators in the Havana sports area are tragically reminiscent of the days of Robespierre.

Fidel Castro might well reflect on the lesson of the French revolution in which the executioner of one day was the executed of the next. If the tide should turn against him the same mob whose blood lust he is satisfying today will call for his blood tomorrow.

Orderly justice and democratic procedures cannot grow out of such a grisly carnival. Terror spawns more terror.

Castro is betraying his own revolution.

A Loan Program for Nongovernmental Hospitals

EXTENSION OF REMARKS
OF
HON. DALE ALFORD
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. ALFORD. Mr. Speaker, Dr. F. J. L. Blasengame, a distinguished physician of the State of Texas, has made the sacrifice of leaving private practice to serve his profession and his country as the executive vice president of the American Medical Association.

A recent letter by him to the chairman of the Subcommittee on Housing of the Senate Banking and Currency Committee, sets out the position of the American Medical Association as approving and supporting a Government-insured loan program of the FHA type for non-Governmental hospitals and nursing homes, whether the ownership is of a nonprofit and proprietary character.

For the information of the Members of Congress, I request that his letter be placed in the Appendix as follows:

AMERICAN MEDICAL ASSOCIATION,
Chicago, Ill., January 26, 1959.

Senator JOHN J. SPARKMAN,
Chairman, Subcommittee on Housing,
Senate Banking and Currency Committee,
Senate Office Building,
Washington, D.C.

DEAR SENATOR SPARKMAN: I am writing this letter to you to express the official views of the American Medical Association with respect to title II of S. 57, 86th Congress, which I understand, is now pending before your committee. Our position with respect to this proposal, which would make proprietary nursing homes eligible for mortgage insurance, is one of active support.

Our deep interest in the subject of the health care of the aged and the occurrence of some significant recent developments have prompted me to mention certain activities in this field before outlining the specific reasons for our support of title II of S. 57.

Since its beginning, more than a century ago, the American Medical Association has been deeply concerned with the medical aspects of caring for the aged. In recent years, however, our interest and activities in this connection have kept pace with the ever-increasing amount of national attention being given to the subject both within the Government and among groups and associations outside Government. This general trend is understandable, of course, since the proportion of our population over age 65 is increasing at an amazing rate. In 1900 there were only 3 million of these elderly citizens whereas now there are approximately 15 million.

For the past several years the American Medical Association has had a committee on aging, composed of some of the leading medical authorities in the United States in this field, which has devoted its full effort to this problem. In addition there are 45 committees on aging actively at work in the State medical societies. To facilitate and coordinate the work of these committees, a set of guides for their organization and operation has been developed and made available to them.

As a climax to a series of five regional meetings which were held last year, and in an effort to prepare a positive program for use by the State committees, an AMA National Planning Conference for Medical Society Action in the Field of Aging was held in Chicago on September 13–14, 1958. This conference was attended by over 175 people, including official State medical society representatives from 46 States and the District of Columbia, as well as 27 State health departments. A copy of the official proceedings of this conference, together with a related brochure entitled "Health Aspects of Aging," are enclosed for the information of the committee.

In our consideration of the health problems of the aged we have also given serious thought to effective methods of financing medical and hospital care. In considering this facet of the problem, it should be noted that enrollment of older people under voluntary health insurance has increased substantially in recent years. In the last several years alone the percentage of coverage has gone up approximately 100 percent. Presently, exclusive of the approximately 3 million older persons who receive public assistance, more than 50 percent of those over age 65 have some form of health insurance. Nevertheless, in our opinion, there is a need for further expansion of voluntary health insurance coverage among the aged.

During the last year the association has conducted or participated in numerous meetings and conferences with commercial insurance carriers and with State and national Blue Cross and Blue Shield commissions to encourage still greater efforts in the development of new insurance programs and in the expansion of lower-cost protection for persons over age 65. These companies, as well as Blue Cross and Blue Shield plans, are now engaged in intensive studies designed to develop new types of policies tailored to meet the needs of the aged ill; present retirement financing of health insurance policies with paid-up status at age 65; use of life insurance after 65 to pay for health care; and the application of deductible and coinsurance to permit coverage of costly illnesses at a low premium rate, among others.

In order to stimulate further the interest of State medical societies and individual physicians in this movement the house of delegates of the association approved the following resolution at its clinical meeting which was held in Minneapolis in December of 1958:

"For persons over 65 years of age with reduced incomes and very modest resources, it is necessary immediately to develop further the voluntary health insurance or prepayment plans in a way that would be acceptable both to the recipients and the medical profession. The medical profession must continue to assert its leadership and responsibility for assuring adequate medical care for this group of our citizens.

"Therefore, the Council on Medical Service recommends to the house of delegates the adoption of the following proposal:

"That the American Medical Association, the constituent and component medical societies, as well as physicians everywhere, expedite the development of an effective voluntary health insurance or prepayment program for the group over 65 with modest resources or low family income; that physicians agree to accept a level of compensation for medical services rendered to this group, which will permit the development of such insurance and prepayment plans at a reduced premium rate.

"This recommendation has been studied and restudied by the board of trustees and has received its wholehearted endorsement."

In addition to the numerous and varied medical, scientific, and socioeconomic activities being pursued in this field, physicians through their associations have, for some time, recognized the need for additional organizational weapons to attack these problems. For many years the American Medical Association was an active participant in the affairs of the Commission on Chronic Illness, in cooperation with representatives of the general public, industry, labor, agriculture, education, religion, social sciences, journalism, health and welfare. One of a number of studies which were conducted was entitled "Nursing Homes, Their Patients and Their Care." A copy of this study which was published by the U.S. Public Health Service is also attached for the information of your committee.

Last year the American Medical Association joined with the American Hospital Association, the American Dental Association, and the American Nursing Home Association in the formation of the Joint Council To Improve the Health Care of the Aged. In broad outline the program of the joint council will include a coordinated plan of research designed to:

(a) Determine the extent, utilization and availability of facilities and the economic status and resources of the aged.

(b) Spearhead the expansion and experimentation in all types of voluntary health insurance coverage for the aged.

(c) Encourage the expansion of health care facilities for the aged.

(d) Encourage the development of community health services for the aged.

(e) Urge State and local legislative bodies to provide realistic financial support for medical, hospital, and nursing home care of aged public assistance recipients and

(f) Appraise the problems of the aged who are mentally ill and provide an intensification of education, research, and action programs directed toward health problems of the aged at National, State and local levels.

In its work in connection with the overall medical care problems of the aged, the American Medical Association has long recognized the importance of proper nursing home facilities. For this reason the association has had a close relationship for some time with the American Nursing Home Association to work toward the development of higher standards for medical care in nursing homes. In February of 1958 the first National Conference on Nursing Homes and Homes for the Aged was held in Washington. Our association was an active participant at that meeting. On December 16, 1958, a conference on Nursing Homes and Related Facilities between representatives of our association, the American Hospital Association, the American Nursing Homes Association, Public Health Service, and public assistance agencies was held in Chicago to discuss current activities and projected programs concerning facilities for the chronically ill and the aged. The purpose of this meeting was to seek a coordinated effort on the part of interested national organizations.

In addition the AMA is currently making a survey of nursing homes throughout the United States. The American Nursing Home Association is also engaged in such a project and is surveying approximately 5,000 member homes to obtain data on the cost of care to the patient, the type of patient in the homes and the type of medical care provided.

As an outgrowth of all of these various related activities in connection with the health care of the aged, our Council on Medical Service has prepared a 6-point program, the details of which are outlined in the attached brochure entitled "Medicine's Blueprint for the New Era of Aging."

In conclusion I should like to comment more specifically with respect to the provisions of title II of S. 57, 86th Congress. As stated at the outset, the American Medical Association has approved and supports a Government-insured loan program of the FHA type for nongovernmental hospitals and nursing homes whether their ownership is of a nonprofit or proprietary character.

We have taken this position because we believe there is a critical need for new and improved facilities tailored to the specific health requirements of older citizens. It is our understanding that representatives of other organizations such as the American Nursing Home Association have or will appear before your committee. They have evidence accumulated over recent years showing that they cannot provide service of the desired quality or quantity because they are unable to obtain the credit they need on reasonable terms to permit them to increase the number and size of adequate nursing home facilities.

Under the Hill-Burton program the Federal Government has for years been assisting public and nonprofit institutions through money grants. It is also our understanding that the Federal Housing Administration is presently offering mortgage insurance for construction of large nonprofit institutional-type homes for the aged which may have a section for those needing nursing care. In our opinion the immediate need is for a similar program of loan guarantees for proprietary organizations, since, according to the latest statistics, over 70 percent of nursing home patients are cared for in such facilities.

In the administration of a grant program under the Hill-Burton system and a loan guarantee program under the Federal Housing Administration, we recognize the desirability of cooperation; however, we believe that the loan guarantee program proposed under title II of the pending bill should be administered by the Federal Housing Administration without mandatory supervision or coordination with the Department of Health, Education, and Welfare.

I would like to request that this letter and attachments, to the extent possible, be made a part of the record of the hearings of your committee. If you or any of the members of the committee desire additional copies of the attached material or any further information from our association, we shall be happy to provide you with anything we have.

Your willingness to permit the American Medical Association to present its views on the pending proposal is sincerely appreciated.

Very truly yours,

F. J. L. BLASINGAME, M.D.,
Executive Vice President.

People Can Help Check Inflation

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. CHAMBERLAIN. Mr. Speaker, inflation is the major enemy on our domestic front. It is an insidious economic smog that penetrates all levels of life in the United States. It is an enemy that cannot be fought by the President alone, or the Congress, or business, or the consumer. In order to lick this foe, we must all get on the front line and fight.

The press in the United States has a major role in reminding the American people that they are all in this up to their ears, and must get in there pitching if they don't want to see their dollar shrivel to the worth of green paper.

The editor of the Flint Journal in my State of Michigan, has given brilliant evidence of his realization of the responsibility of the press in this respect with the attached editorial, of January 25, which I submit herewith for inclusion in the RECORD:

PEOPLE CAN HELP CHECK INFLATION

President Eisenhower has put defense of the value of the dollar in the "must" category of national policy. He declares that inflation, which means the decline in the value of the dollar, must be checked if America is to avoid economic decay.

The President says control of inflation and retention of the value of our money is the task of everyone—Congress, business, labor, consumers. He wants Congress to avoid deficit spending, business to hold down prices, labor to refrain from excessive wage demands, consumers to shop carefully.

Unless self-discipline and restraint in economic matters are provided, Mr. Eisenhower warns, it may be necessary for the administration to ask Congress for wage and price controls such as this Nation had during World War II.

Dangerous, destructive inflation will result unless some kind of restraint is imposed. Already we have experienced too much inflation. It has been the slow, creeping kind, but it could get out of even partial control and become a vicious spiral as it feeds upon itself.

We have been fortunate in America that the inflationary spiral has not been completely destructive. World history contains many instances of inflation ruining nations. Inflation in Germany after World War I wrecked the Germany economy and created conditions which contributed to the rise of Hitler. Right now Argentina is experiencing inflation so serious that an economic revolution is a possibility.

It is amazing that there is so little public concern about inflation. It is amazing that there has been no loud public demand that Government institute policies which will stop the spiral. Instead, results of the last election indicate voter endorsement of spending programs which, if adopted by Congress, will put more fuel on the inflationary fires.

Perhaps the absence of public agitation results from a lack of realization of the extent of inflation in the last 20 years. Some figures from a Saturday Evening Post article by Roswell Magill, chairman of Tax Foundation, Inc., may make the picture clearer. He writes:

"Inflation has been called the cruelest tax of all—and we are paying it, whether or not we realize it. In the last 20 years the value of our dollar has been cut in half; just since the end of World War II the purchasing power of our dollar has been reduced by 23 cents. Since the war, inflation and taxes together have taken such a toll that the man who earned $5,000 in 1946 would have to earn $7,343 today—nearly 50 percent more—just to hold his own in buying power."

Mr. Magill, who was Franklin D. Roosevelt's Under Secretary of the Treasury in 1937–38, has some other comparisons. The man with an income of $3,000 in 1946 would have to earn $4,445 in 1958 to stay even in purchasing power. The man earning $10,000 in 1946 now needs to earn $14,485.

Mr. Magill wonders if we are on the downhill road of inflation that ends in economic disaster. He wonders if we will come eventually to the dollar which is worth only 10 cents in purchasing power; perhaps to the 1-cent dollar.

Take just one of the inflationary factors—deficit spending by the Federal Government. The public can control that if we will accept the danger and become vocal enough so we will be heard in the House of Congress and in the bureaus of the executive branch.

We can insist that Federal spending in the coming fiscal years be tailored to fit income so that the highly inflationary process of borrowing will be avoided. We can insist that the new spending programs, which are being offered in Congress, be rejected until the money is on hand to pay for them.

We know defense spending will have to continue high because of the threats from Russia, but we can insist the military services stop competing for the defense dollar. We can insist that they stop duplication and give us a defense system that is worth every cent it costs.

We can demand the budget be limited to essentials. The desirable can be postponed until the Federal Government again shows a budget surplus. We can demand that Congress ignore the pressure groups that constantly seek more Federal handouts.

Inflation will continue to build up under deficit spending. The people, if they want their dollars to have some value, can be a pressure group for fiscal policies which will put brakes on the inflationary period.

Labor's Attack on Mikoyan

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. PUCINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Columnist John Herling, which appeared in the Washington Daily News of January 27, 1959:

LABOR'S ATTACK ON MIKOYAN
(By John Herling)

Back in Moscow, Anastas I. Mikoyan, the No. 2 man in the Soviet Union, this weekend filed one large-scale complaint about his U.S. visit. He charges the spokesmen of organized labor in the United States are unfair to the Soviet dictatorship.

He can't get over the way he was handled in the United States. He got the roughest handling, not from the capitalists, but from the union leaders. The rudest statements, he said, came from labor spokesmen.

What bothers Mr. Mikoyan is not the lack of etiquette on the part of any section of American society. What eats at him is his failure to hit the main Communist target in this or any country; the workers and their organizations. Here he fell flat on his face in his efforts to flatter, cajole, or mollify organized labor.

In the United States, five American trade-union presidents gave him lunch and then proceeded to spoil his appetite by telling him off with words that a top Soviet political boss never hears from the representatives of the state-controlled Soviet labor unions.

A couple of days later, AFL–CIO President George Meany, who sent his regrets to the luncheon, unloaded a personal and political attack on Mr. Mikoyan for his doublecross

of the Hungarian revolution, climaxed by the murder of Imre Nagy, Hungarian Prime Minister.

Even more all-out in its attack was a group headed by the officers of the United Hat Workers and Upholstery Workers who bought an ad that said: "Mikoyan, Go Home."

In Moscow, Mr. Mikoyan tried to do, verbally, what Communist tacticians have always tried to do with their opponents: drive a wedge in the opposition and so weaken it before moving in for the kill. In this instance, Mr. Mikoyan has tried to exaggerate the difference of opinion between Mr. Meany who wouldn't break bread with him and those who did: IUE President James B. Carey, Auto Workers President Walter P. Reuther, Letter Carriers President William C. Doherty, Karl Feller, president of the Brewery Workers, and Communications Workers President Joseph A. Beirne.

This obvious maneuver by Mr. Mikoyan had already been anticipated in American labor circles. One key labor observer said: "What is the difference between Mr. Meany's position and that of Messrs. Reuther and Carey toward Mr. Mikoyan? I'll tell you what it is: Mr. Meany believes Mr. Mikoyan isn't fit to live with pigs and Messrs. Carey and Reuther say he is." There is cold comfort for Mr. Mikoyan in this distinction.

Mr. Mikoyan's version of his conversation with the trade union leaders reveals that two of the main international subjects in their talk had to do with the Berlin crisis and the Hungarian revolution. Evaluating his own achievement, Mr. Mikoyan said he repulsed the attacks by the American labor leaders on those subjects.

Mr. Mikoyan said that despite the strong dispute, the meeting with the trade union spokesmen was friendly. Like many another salesman, Mr. Mikoyan likes to claim he made contact, especially when he has lost a sale.

What rankled Mr. Mikoyan especially is this exchange between him and the U.S. trade union leaders:

Mr. Mikoyan: "You fellows are more vicious than the capitalists. They don't talk to me the way you do."

Trade union leaders: "We know you better, Mr. Mikoyan."

Liberalization of the Social Security Act

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. HOLTZMAN. Mr. Speaker, today I am reintroducing in the House of Representatives legislation which will provide for some liberalization of the Social Security Act.

The bill is a package bill, and provides for three major changes in the act.

The first revision is the removal of the present limitation of $1,200 per annum on outside income that can be earned by those individuals who are receiving social security benefits. It is a well-known fact that the cost of living has continued to rise, and it is practically impossible for our older citizens to live comfortably and securely solely on the amounts they receive from social security. Over the years with such increased living costs whatever savings they might have been able to accumulate have been utilized for various reasons, and in many cases they find themselves dependent to some degree on relatives or friends, or on the various welfare agencies, for the additional help they need. To remove this restriction on the amount of income which can be earned would certainly make it much easier for them and their families.

At the present time the retirement age for men under the Social Security Act is 65; for women 62. Under the second provision of my bill this would be changed. Men would become eligible for full retirement benefits at the age of 60; and women would be entitled to full benefits at the age of 55. We hear much talk today of early retirement, and our older workers are encouraged to retire as soon as possible to make way for the younger employees. This could be an actual reality and not just a dream if the retirement age were lowered and the benefits liberalized. The life span of the individual is growing longer and it is estimated that within 20 years we will have over 20 million Americans over the age of 65. It is the responsibility of the Government to see that an adequate program for the care of these citizens is put into effect.

The final section of the bill deals with the elimination of the requirement that a person must have reached the age of 50 before he can become eligible for disability benefits under the Social Security Act. Many times an employee is injured and disabled through no fault of his own, and under the current provisions must wait many years before he can collect benefits. This proves to be a hardship for him and his family. My bill would permit such an employee to file immediately for benefits to which he is rightfully entitled, thus assisting him in some measure to contribute to the support of his dependents, and preventing his absolute dependency on others.

As Members of Congress we must look to the welfare of all our citizens whether they are young or old, able or disabled. If it is necessary to revise some of our programs to meet the challenge of the changing times then this we must do.

I respectfully urge my colleagues to give every possible consideration to the enactment of my bill.

The Last Republican

EXTENSION OF REMARKS
OF
HON. A. PAUL KITCHIN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 28, 1959

Mr. KITCHIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article from the Raleigh (N.C.) News and Observer, of January 26, 1959:

THE LAST REPUBLICAN

To the EDITOR:

Will Rogers used to say all he knew was just what he read in the News and Observer, or words to that effect.

According to your newspaper it is about time for Mr. Joe Nathan Daniels to write himself a new book, entitled "A Democrat Discovers a Democrat." A man named James Fennamint Cooper wrote a book one time called "The Last of the Mohicans."

It is also about time for John Frosty Dulles or Henry Cabbage Lodge to write a book called "The Last of the Republicans." It would compare favorably with Hoover's book called "Ragged Individualism."

The southern Democrats committed ambush on themselves when they let the two-thirds rule be abolished in the national convention. Now the two-thirds Democrats tell the southern Democrats to shut up, integrate, or get out. When Democrats begin casting out Democrats, where will the benighted southern Republican appear on the scene? He becomecs an innocuous desuetude. If he follows the national leadership, he must abandon all his ideals of racial integrity and come out wholehearted and barefooted for integration and this makes him about as popular as illegitimate twins at a family reunion.

The southern Democrat and the southern Republican have been treated by the national leadership like the preacher who got mad with the congregation and wouldn't preach, so he took up collection and left. Every election year involving the Presidency a group of Yankee Republicans drift South over the Potomac and appear on the scene in the Southern States. They beat on tomtoms and gather a multitude of Republicans together at some central point. Then they brag long and loud an Lincoln and Teddy Roosevelt. Then they cuss out the Democrats in general, Truman in particular, and communism and high taxes just to be cussin'. Then they get real mealymouthed about a two-party system down South, and how they are going to help out with it. Then they take up a big, fat, juicy collection and flee back across the Warren-Nixon line behind the nylon curtain and that is the last you hear of them.

This method of building up a two-party system in the South is like the man who used to always put vitamin pills in his liquor, so he could build himself up, while he was tearing himself down.

"CHUB" SEAWELL,
Ex-Republican.

The Family Budget

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. MINSHALL. Mr. Speaker, we who compose the militant minority of economy-minded Members of Congress know that those at home appreciate and understand our efforts to eliminate wasteful, unnecessary Federal spending. As another budget battle approaches, I am gratified that such an outstanding newspaper as the Cleveland Plain Dealer continues to share my conviction that a sound fiscal policy is compatible with efficient government and a strong defense. Under unanimous consent of the House, I insert an editorial from the January 27 Plain Dealer which sounds a sharp warning to those who would jeopardize the economic integrity of the Federal Government:

THE FAMILY BUDGET

At one time or another the head of every prudent family tries to make out a budget. He or she first writes down the amount of income the family can reasonably expect during a given period. Against that there are certain expenses which must be met, such as rent or mortgage payments, taxes, utilities, food, clothing, transportation, and insurance.

Too often, alas, these amounts eat up all the anticipated income, but sometimes, after the necessities have been provided for, there is something left over for other things, such as entertainment, vacation trips, new furniture, and so on. The problem then is to decide which of these other things the family can afford. Obviously, the family can't have everything it wants because if it could there would be no budget problem to worry about.

But the leftwing Democrats who are complaining that President Eisenhower's $77 billion budget isn't big enough would go about things in a different way. First they would list everything that the family wants under the heading of necessities and, if there wasn't enough money coming in to pay for them, they would borrow the balance.

That's what has been done all too often in the past, so that the Federal debt is now above $280 billion, a staggering amount. But the people who have loaned this money to the Government expect to earn interest on it, and that includes the holders of $25 U.S. savings bonds, as well as the banks and insurance companies that buy larger amounts of Government bonds in long and short term issues. As a result, interest on the Government debt is one of the big, irreducible items in the Federal budget. It amounted to $7½ billion this year and will be over $8 billion next year.

That brings us to the spokesman of the Democratic leftwingers, the Democratic Advisory Council. It complains that the only people who benefit in a big way from the new budget are those who have money and lend it to the Government. That's because the Government has had to increase its interest rates in order to induce the owners of capital to lend it to the Government. If the people who have money to lend can get better interest rates elsewhere, or if they fear that inflation will erode the value of their money if they put it in Government bonds, they will invest in something else.

As Raymond Moley pointed out in a column on this page last week, the time might come when the Government couldn't borrow any more money to finance its deficits. Then it would have to resort to the printing press and runaway inflation would be upon us.

The Democratic Advisory Committee is completely oblivious to this potential disaster. It wants the Government to spend more, to borrow more, and to cut down on interest rates, thus leading to a situation when the Government could no longer borrow. It's the classic road to ruin, whether it happens to your family's budget or the Government's.

Private Versus Public Power: A Lesson in Free Enterprise

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. COLLIER. Mr. Speaker, by a slim margin of two votes, a public power at an estimated cost of $575 million was scuttled 18 months ago in the Committee on Interior and Insular Affairs. There is little doubt that approval of this legislation in committee would have resulted in final passage in the House of Representatives. I refer, of course, to the controversial high Hells Canyon project.

Now, after a relatively brief lapse of time, we should take inventory of just what has happened, for certainly there is a lesson to be learned by those who are inclined toward Federal spending versus free enterprise.

I personally take pride in the vote that I cast against this proposed half billion dollar-plus project in the face of what has since transpired. The Idaho Power Co. as you know, took on the job as a private enterprise. Now let us look at the situation as it now stands.

The first of three dams has been completed. At Brownlee, just 2 weeks ago, the fourth generating unit in the power-producing facilities of this project was placed "on the line" and is now furnishing 360,000 kilowatts of electric energy to serve the Pacific Northwest. Not only does this constitute a major milestone of progress, but it stands as evidence that costly Government programs which can be handled by private enterprise should be discouraged at every opportunity.

Proponents of this legislation fought to put the Federal Government into the power business at a tremendous expense to the taxpayers of this Nation. Several efforts were made from 1949 until a year and a half ago. When it failed, and while the Idaho Power Co. was proceeding with the job, the taxpayers of my State of Illinois alone were saved exactly $38,023,620, their share of the estimated original cost.

Brownlee Dam is now the second highest rockfill dam in the world and takes its place among the major power-producing installations in the Northwest. Construction is now proceeding vigorously at Oxbow Dam, second unit of the development and preliminary work has already been started on the third unit.

The Idaho Power Co.'s total investment in its three-dam development was approximately $110 million as of the beginning of this year. Power production equipment on special order total several more millions of dollars. Total cost of the entire project will be about $164 million. In addition to generating tax revenues of $10 million annually for the local, State, and Federal governments, the development is providing substantial public benefits in the way of flood control, navigation, fish conservation, and recreation.

The first of two upstream-migrant fish facilities is in operation and the second will be completed by March 1. Concrete placement for the Oregon side spillway is nearing completion. The embankment's impervious clay core and downstream rockfill section are under construction. Excavation of two power tunnels starts next month. Nearly 230,000-volt transmission lines to carry the development's electricity into the Northwest power pool are either completed or under construction.

Just as the crocodile tears of public power pressure groups trickled into the waters of the Snake River and disappeared, so have the ill-conceived arguments for the Federal project been washed away by what has been achieved without astronomical Government spending in this instance.

Not only will the full capacity be made available several years sooner than if the Federal Government had done the job, but it will be completed at a cost far less than if Uncle Sam had taken on the responsibility. Public interests will be served better as the private operation flourishes. Instead of spending tax moneys it will bring in revenue. Yes, the high Hells Canyon story is a case in point.

And it brings to mind, too, the words of Abraham Lincoln, who 100 years ago said:

> The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do for themselves in their separate and individual capacities. In all that people can do for themselves, government ought not interfere.

There are many good citizens who apparently have yet to learn that Federal spending for projects that can be accomplished by free enterprise is basically wrong. From this lesson, we learn, too, that the Federal Government invariably spends far more to do the same job than it costs private industry or local government. Will we ever learn that we cannot continue merrily along the road to coddling by the Federal Government in so many areas of our national life? The folks who think that they are getting something for nothing because Uncle Sam takes over the responsibility are either misinformed, too frequently, or they simply will not face the facts of life. In the first place, dollars spent at a Federal level shrink from 25 to 35 percent through administrative costs. And an additional loss occurs through the tremendous interest payments on the national debt.

From all this, we will do well to learn and practice prudence. Perhaps we need some other yardstick by which to measure our spending activities in Washington than the superficial benefit of transferring responsibilities to the Federal Government which do not belong with it. Instead, perhaps we can develop a demand for fiscal responsibility on the part of elected representatives by the electorate in this way.

Yes, it will be a great day for this Nation when political popularity contests are not won by pork barrelling, especially when it involves deficit spending.

The Story Ends

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mrs. GREEN of Oregon. Mr. Speaker, at a time when racial problems are in the forefront of public attention, it is a

real satisfaction for me to be able to call the attention of this House to the successful and unnoticed culmination of a struggle which began during the early years of World War II and has just now become a matter of historic rather than immediate interest. The treatment of the Japanese American residents on the west coast was a shameful episode in our Nation's history. It was especially so as far as the States bordering on the Pacific, including my own State of Oregon, were concerned, because we could not even plead long-lived historic social patterns as an excuse for our behavior.

To the credit of the United States, the mistakes of this program were eventually recognized and restitution made. To the credit of the people of the West, the atmosphere of hysteria was eventually replaced by an atmosphere of sorrow and regret. But to the Americans thus discriminated against belongs the greatest credit of all. They have never demonstrated the bitterness which should have been expected. Within the very concentration camps in which they were herded, their young men volunteered in unequaled numbers for service in the Armed Forces, serving in, among other units, the famous 442d Infantry Combat Team, the most decorated unit in the war. Their families and these returning heroes themselves came back to their homes after the war and have demonstrated by their lives in these postwar years a pattern of devoted citizenship, which has been unequaled by few and surpassed by no ethnic group in the Nation. It is with deep satisfaction that, under unanimous consent to extend my remarks in the RECORD, I include an editorial of November 19, 1958, from the Eugene (Oreg) Register-Guard, concerning the completion of restitution to America's proud Nisei citizens:

STORY ENDS

Too little noticed in the public prints was a quiet ceremony in Washington, D.C., last week. There in the Office of the Attorney General was completed restitution to the Nisei (Americans of Japanese origin) who were herded into concentration camps on our west coast a little less than 17 years ago. It cost the Government $36.9 million to make amends for the indignities heaped upon loyal Americans by their jittery fellow citizens.

We're still waiting for the book, the book that will set out in shameful detail the injustices wrought here on the west coast. We picked on these people because of the color of their skins, the slant of their eyes, and the national origin of their parents. Before we here in the Northwest feel too superior about Little Rock, we should reflect upon our own cultural lapse.

The story ends more happily, to be sure. As Mike M. Masaoka, the Nisei representative at the ceremonies, observed, this restitution program demonstrates that "democracy can take care of its mistakes." And that's something. But it does not eliminate from the memory of the white westerner that when he needed to be calm and strong, he responded to fear—and sometimes avarice—with a base Ku Kluxism that was made worse because it had the approval of his free Government.

The Highway Trust Fund and Automotive Excise Taxes

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. KNOX. Mr. Speaker, I take this time to advise my colleagues that I am today introducing legislation providing for the dual purpose of first, strengthening the solvency of the highway trust fund; and, second, reducing to 5 percent the Federal excise taxes applicable to automotive vehicles and parts and accessories. In order that all of you will be familiar with the objectives of my bill I am including in my remarks the following news release I have made on this very important subject:

Congressman VICTOR A. KNOX, Republican, of Michigan, today announced introduction of legislation providing for the dual purpose of (1) strengthening the solvency of the highway trust fund; and (2) reducing to 5 percent the Federal excise taxes applicable to automotive vehicles and parts and accessories. In addition, KNOX's bill would ultimately repeal these excises. The present rate of tax applicable to automotive vehicles is 10 percent and in the case of automotive parts and accessories it is 8 percent.

The bill would provide that the rate reduction to 5 percent would be retroactively effective to sales occurring on or after January 1, 1959. This retroactive date would assure that the benefits of the tax reduction would be available to consumers purchasing automotive vehicles or parts on or after the beginning of the year. Congressman KNOX stated that in addition to immediate tax reduction his proposal would also provide (1) that the funds collected from these reduced tax rates would be entirely earmarked for the highway trust fund beginning with calendar year 1959; and (2) that the reduced rates would be repealed outright on July 1, 1972, at the conclusion of the present Federal-aid highway program.

In summary form the excise tax reductions that would be effective beginning January 1, 1959, and the revenue additions to the highway trust fund from earmarking for fiscal years 1959 and 1960 that would result from the bill are as follows:

1. The present 10 percent tax on passenger automobiles would be reduced to 5 percent. The additional revenue to the highway trust fund from earmarking would be $265 million in fiscal year 1959 and $625 million in fiscal year 1960.

2. The present 10 percent tax on automotive trucks, buses, and trailers would be reduced to 5 percent. This would have no effect on trust fund receipts because one-half of the present 10 percent tax is already earmarked for this purpose.

3. The present 8 percent tax on parts and accessories would be reduced to 5 percent. The increased highway trust fund revenues resulting from the earmarking of the parts and accessories tax would be $50 million in fiscal year 1959 and $100 million in fiscal year 1960.

Total additions to the highway trust fund would be $315 million for fiscal year 1959 and $725 million for fiscal year 1960. Under the KNOX proposal the revenues resulting from the earmarking of these tax sources would continue to augment the trust fund receipts for the duration of the present highway program and the taxes would be repealed outright effective July 1, 1972.

Congressman KNOX stated that one of his objectives in sponsoring this legislation was to achieve the meritorious result of immediate reduction in automotive costs imposed on the American people. At the same time he would bolster the economic strength of the automobile industry which is such an important factor in determining the level of overall national prosperity.

Another important objective in the sponsorship of this legislation, according to Congressman KNOX, was his desire to provide a feasible alternative to the budget message proposal to increase highway trust fund revenues by imposing an additional 1½ cents per gallon tax on gasoline. Mr. KNOX stated that by providing an alternative solution to the possible need for added revenues in the highway trust fund he was giving the Congress and the American people opportunity to express a preference for the possible solution desired—either higher motoring taxes; or lower highway taxes better used.

The Michigan legislator stated that while the automobile industry had sustained a promising start toward a more favorable year in 1959, he favored the immediate reduction and ultimate repeal of the automotive excises so as to remove the depressing long-run effect that the onerous Federal excise taxes have had on the industry. He called attention to the fact that nearly 1 million workers look for their employment in industrial plants producing automotive vehicles, parts and tires and that 9 million more individuals look for their employment to other phases of highway transportation. Added reason for a strong automotive industry is found in the fact that one of every seven persons works in the manufacture, distribution, service, or use of motor vehicles.

In demonstrating the benefits that would be realized by industries serving as material suppliers to the automobile industry Mr. KNOX set forth the facts that the manufacturers of motor vehicles and parts buy 23 percent of all steel, 69 percent of all plate glass, 72 percent of all upholstery leather, 41 percent of all lead, 29 percent of all zinc, and 10 percent of all copper sold in the United States.

Congressman KNOX called attention to the fact that another reason supporting his proposed excise tax reduction on automobiles and equipment can be found in other reductions of Korean war excise taxes that have occurred since the termination of that conflict. Mr. KNOX stated that the excises applicable to automotive products are virtually the only rates on any major products that have not been substantially reduced in the intervening period.

Congressman KNOX pointed out that while the enactment of his legislative proposal would tend to reduce highway user taxes presently going into the general funds of the Treasury, the American public is already overburdened with taxes, taxes of every variety. He stated the need for additional highway funds should be met by greater utilization of taxes presently collected from highway use sources and not in higher discriminatory taxes. He also stated that, consistent with his past position in advocating Government economy, he expected to continue his support of Government economy in more than sufficient measure to offset any general fund revenue reduction resulting from his bill.

Draft Law Issues: Waste, Unfairness

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mrs. GREEN of Oregon. Mr. Speaker, the haste with which this administration has urged the extension of the draft is, I believe, not in keeping with the importance of this issue and with the tremendous impact of the peacetime draft upon America's domestic condition, our defense posture, and our foreign policy. It is my hope that sufficient time and attention be given to this legislation, both by the distinguished Armed Services Committee and by the entire House, to bring all the revelant facts into the clear light of day.

Opposition to draft extension, Mr. Speaker, is not limited to any one part of the spectrum of American thought. There are responsible business leaders, labor leaders, and men in religion and education, who have expressed doubts about extending the draft. Certainly, in view of these doubts, extended consideration is called for. As one example of the questions that have been raised, I ask unanimous consent that the following article, appearing in the November 1958 issue of the Nation's Business, published by the United States Chamber of Commerce, be printed in the Appendix of the RECORD:

DRAFT LAW ISSUES: WASTE, UNFAIRNESS

Rewriting the Nation's military manpower laws will be a priority task when the new Congress convenes in January.

Authority to draft men into the armed forces expires on July 1, 1959. A month later the basic reserve forces statute, enacted in 1955, expires.

Businessmen have a fourfold interest in what Congress does about these laws.

As citizens, they are concerned with providing armed forces that are adequate, both in quality and quantity, to the requirements of national security in an era of rapid advance in weapons technology.

As taxpayers, they are concerned with staffing the armed forces in an economical and efficient way.

As employers, they are concerned with minimizing the disruptive effects of military service on civilian careers, and with avoiding an excessive drain on manpower resources.

As parents, they want to be sure that the draft and reserve programs operate fairly, and that they do not exact unnecessary or unreasonable sacrifices from any young American.

Devising new legislation that meets all of these tests will be difficult. Congress may be tempted to take the easy way out by pushing through a simple extension of the present laws. This temptation must be resisted for two reasons:

1. Peacetime conscription is deeply repugnant to American traditions. It is tolerated by public opinion only when people are satisfied that the draft is necessary and that it is being carried out in a way that is scrupulously fair. Millions of Americans today are not satisfied on either of these points.

2. Radical changes in military strategy and manpower requirements have taken place since the present draft and reserve laws were enacted. In the words of Thomas R. Reid, Ford Motor Co. executive who heads the manpower subcommittee of the Chamber of Commerce of the United States, the the assumptions on which the 1955 laws were based are now "obsolete."

The basic assumption of the 1955 laws is that the Nation's need for trained military manpower can be met only by compelling every qualified youth to serve. It is clearly reflected in the official title of the draft law which is not the "Selective Service Act" but the "Universal Military Training and Service Act."

It places on all physically and mentally qualified men between the ages of 18½ and 26 a legal obligation to perform at least 6 years of military service. This may be fulfilled by various combinations of active and reserve duty—the Armed Forces currently offer 34 alternative enlistment programs. Theoretically, any qualified youth who fails to sign up for one of these programs will be drafted for 2 years of active duty.

The flaw in this universal service plan is that it cannot be applied fairly without yielding far more manpower than the armed services need or want.

A little arithmetic will show why this is true.

In 1955, the number of youths flowing into the draft-age manpower pool was 1.1 million a year. About 300,000 of those were physically or mentally disqualified for military service. That left 800,000.

The Armed Forces at that time had an active-duty strength of 2.8 million. To maintain this strength, they were taking in from civilian life about 600,000 men a year—through the draft, through draft-stimulated enlistments, and through call-up of reservists.

Congress saw a prospective surplus of 200,000 men a year. So it wrote into the law a program which a House Program Committee report frankly labeled a control factor over the manpower pool. This is the now-famous 6-months-training plan, under which a youth can avoid being drafted by signing up directly in a National Guard or Reserve unit for 6 months' active-duty training followed by several years in drilling Reserve status.

Several factors have rendered the plan obsolete. New weapons, including missiles, have sharply altered military strategy and have reduced the need for massed manpower. The services this year are paring down to an active-duty strength of 2.5 million men. This strength can be maintained with a total intake of 450,000 civilians a year, or 150,000 less than were needed in 1955.

The postwar baby boom is beginning to be reflected in the late teen-age groups. The number of youths reaching the threshold age of 18½ rose this year to 1.2 million; by 1960, it will be 1.3 million; by 1965, nearly 2 million.

Finally, the Armed Forces have displayed a marked lack of enthusiasm for 6 months' trainees as a source of manpower for the Ready Reserve. Instead of the 250,000 a year authorized by Congress, the services this year took in only 55,000. The largest number they have accepted in any year since the law was passed was 95,000.

The net result of all this has been to confront Lt. Gen. Lewis B. Hershey and his 4,000 local draft boards with an embarrassment of riches. They are trying to enforce a law which envisions universal military service in a period when the Armed Forces are no longer interested in training every able-bodied youth, even for reserve duty. This dilemma has been solved—if such an expedient can be termed a solution—by rigging the manpower pool.

By Presidential order, all youths who become fathers before induction are automatically moved to the bottom of the call-up list. General Hershey can rightly say that they have not been exempted from the draft, because they are theoretically still classified 1–A. But with draft calls running at a level of 10,000 a month, there is no conceivable likelihood of their actually being called. About one youth out of six is beating the draft via this escape hatch.

Two young men out of every six are avoiding service on grounds of physical or mental unfitness. General Hershey suspects that some of them are deliberately flunking the mental examinations which are formulated and administered by the Army at induction stations. The flunk rate will almost certainly show a substantial rise in coming months as a result of a law, passed at the last session of Congress, which authorizes the Army to raise the present passing grade on mental tests. With an abundance of 1–A's awaiting call, local draft boards have been liberal in granting deferments to students and to vital workers in agriculture and industry. Anyone who gets such a deferment theoretically remains liable for induction until he is 35 years old. But by Executive order, men with this extended liability go to the bottom of the call-up list, along with the fathers, as soon as they turn 26. So the actual prospect of being inducted is virtually nil.

Other relatively small groups of youths are draft proof because they are clergymen, divinity students, aliens, public officials, conscientious objectors, or sole surviving sons of families bereaved by war. This brings us to an eye-opening fact:

Less than half of the young men in the draft age group are actually seeing military service under the present universal service laws.

The public is increasingly aware of this fact. That's why Congressmen, stumping the hustlings this fall, have heard so much grumbling about the unfair and discriminatory draft.

Meanwhile the draft is under heavy attack from another quarter. A growing body of Americans—including some business leaders—believe that the draft is an inefficient, and, in the long run, uneconomical way of filling military manpower needs.

These Americans have rallied around the professional forces concept outlined last year by a high-level Defense Department study committee. The committee was headed by Ralph J. Cordiner, then president and now chairman of General Electric Co., and included a number of other prominent business executives.

According to the committee, the real personnel problem in the Armed Forces today is quality rather than quantity.

"Strategy and tactics are undergoing radical change," the report said. "Yet strangely enough, the principles and practices which guide the recruitment, motivation, compensation and development of men have not changed substantially in the history of our country.

"It is foolish for the Armed Forces to obtain highly advanced weapons systems and not have men of sufficient competence to understand, operate, and to maintain such equipment.

"The solution is not to draft more men to stand back and look helplessly at the machinery. The solution is to give the men already in the Armed Forces the incentives to stay long enough and try hard enough to take on higher responsibilities."

Congress responded to the Cordiner report by enacting this year a military pay bill which granted raises of at least 6 percent to all men with more than 2 years' service, and which set up a brandnew proficiency pay system under which the services will henceforth offer incentive pay boosts, ranging up to $150 a month, for specialists and technicians.

Although this pay bill is expected to cut losses of highly skilled servicemen who have been trained at great expense, Pentagon leaders say emphatically that it will not eliminate the need for draft authority.

"The draft is still absolutely essential if we are to maintain the military strength levels that are necessary for national security," says Charles C. Finucane, Assistant Secretary of Defense for Manpower.

Mr. Finucane says the Army has concluded, from extensive recent studies, that it could not maintain a strength of more than 535,000 men on the basis of voluntary enlistments alone. The Army's present authorized strength is 870,000 men.

While the Navy, Air Force, and Marine Corps are now meeting all their requirements through voluntary enlistment, Mr. Finucane says these services admit that their success in recruiting has been at least partly due to the stimulus of the draft.

He adds that draft-inspired volunteers are also of crucial importance in keeping the National Guard and other Ready Reserve components up to strength.

Mr. Finucane agrees that professional armed forces, composed entirely of volunteers, would be vastly preferable to a partially conscripted military establishment.

Modern armed forces require increasingly larger proportions of technical and skilled manpower—jobs requiring extensive and expensive periods of training. We know that enlisting men voluntarily for 3, 4, or more years produces a more effective force at less cost than inducting them for 2 years. We have been trying for the past several years to make military service more attractive in order to increase our voluntary enlistment and reenlistment rates.

He ticked off some of the career incentive measures placed in effect during the past 4 years—improved survivor benefits, medical care for dependents, better housing, larger reenlistment bonuses, dislocation allowances on change of station, Government-guaranteed home loans, and better promotion opportunities.

As a result of these measures, Mr. Finucane says, reenlistment rates have improved appreciably. The average reenlistment rate for first-term regulars (the most critical retention group) rose from 15.7 percent in fiscal 1955 to 27 percent in fiscal 1958.

"We hope that all of these career incentive programs will eventually require less and less resort to compulsory military service," he says. "But it would be folly to abolish the draft next year in the mere hope that volunteer programs would do the job."

Outside the Pentagon, several proposals have been made for speeding the day when the services can rely entirely on professional volunteers.

One is to raise the starting pay of recruits, which the Cordiner pay bill left untouched at $78 a month.

Dr. J. K. Galbraith, Harvard economics professor, believes that the increases in basic pay required to attract much larger numbers of men to the Armed Forces would not be astronomic.

Another suggestion, from a study sponsored by the Fund for the Republic, is to make more widespread use of civilian personnel and civilian contractors in construction, procurement, warehousing, supply transportation, housekeeping and record-keeping operations, thereby reducing the need for men in uniform.

If one accepts the Pentagon position that some kind of draft law will continue to be necessary after mid-1959, the next question is what changes are needed to bring the law into reasonable conformity with actual military requirements and to make it more equitable in operation.

Here is where Defense Department manpower experts part company with General Hershey.

Defense officials are greatly concerned about the rising age level of inductees. In an effort to maintain the congressionally decreed concept of universality of service, draft boards are filling their quotas with the oldest eligibles on their lists. But as the pool of surplus 1–A's grows, the average age of the men being called creeps steadily higher. It is now about 22 years and 9 months. This is at least 3 years and 9 months past what the military regard as the prime age for recruits.

There is growing sentiment in the Pentagon for two fundamental changes in the law. They call for:

1. Reducing draft age limits so that a youth is liable to call-up for only about 2 years after his 18th birthday instead of remaining eligible until he is 26 (or until he is 35 if he gets a deferment).

2. Recognizing that the Armed Forces need only a fraction of the youths in the draft-age group, and selecting by lot those to serve.

These changes would achieve several results. They would insure the Army's getting the younger men it wants. They would ease public criticism that the present draft throws a pall of uncertainty over a youth's life for an intolerably long period. Finally, they would end the hypocrisy of the universal service slogan, and would put the selection of draftees on a basis that Americans have traditionally regarded as the fairest possible.

There is, however, one flaw. It is spotlighted by General Hershey's question to an interviewer:

"Are you going to have a real lottery • • • or a phony one?"

To General Hershey, a real lottery means actually inducting the man whose number comes up—unless he is found to be grossly unfit for any kind of service. It means wiping out the special categories—students, essential workers, fathers, etc.—and throwing all able-bodied men into the pool from which the choice would be made by lot.

General Hershey well knows that the Pentagon is likely to balk at such a lottery. What the Army manpower planners really want is to continue the present system of screening out all of the less desirable draft candidates—the fathers who would rate dependents' allowances, the men who may need a lot of dental care or arch-supporting shoes, the slow-learners who create problems for training instructors (just as they create problems for high-school teachers and shop foremen). The lottery would then be applied to those who are left.

In General Hershey's view, this would be just as discriminatory as the present system.

General Hershey acknowledges that the present draft setup is not ideal but he believes that many complaints voiced against it would disappear if the Defense Department would operate the 6-month-trainee program at the 250,000-men-a-year level authorized by Congress. This would soak up a lot of the surplus in the 1–A pool and slow the risk in the average age of inductees.

It would also, General Hershey says, provide the Nation with something that it needed badly at the time of the Korean war and may need again—a large reservoir of ready reservists who are trained but have not served.

Defense officials would prefer to move in the opposite direction if they could.

The 1955 law authorized a Ready Reserve of 2.9 million men, and provided elaborate arrangements for channeling into it, not only 6-months trainees, but draftees and enlistees at the conclusion of their active duty service. Provision was made for enforcing the obligation of ready reservists to participate in regular drill sessions, under penalty of being called to active duty or even being court-martialed.

This much-publicized paraphernalia for compelling service in the drilling Reserve has come to a rather farcical end. The plain fact is that the Armed Forces are unwilling to invest their limited defense dollars in a Ready Reserve force of the size Congress contemplated. Less than 1 million men are now on drill-pay status—which is the real criterion for determining who is in the quick call-up components of the Reserve. The Defense Department tried valiantly this year to reduce the total still further by making 10 percent cuts in National Guard and Army Reserve personnel drawing drill pay. But an uproar from State Governors and Congress blocked the move.

The situation at present is that the Ready Reserve components generally have more men who are eager to draw drill pay than they have vacancies. Once in a while they have to invoke the compulsory clause to avoid the ultimate scandal of a 6-month trainee abandoning the weekly drill periods which alone bring his service into rough balance with the draftee's 2 years of active duty. But there is little point in threatening to recall or court-martial a former draftee or enlistee who fails to keep up the 3 or 4 years of postgraduate drilling Reserve participation which ostensibly is required of him by the 1955 law.

Obviously, both the draft and Reserve laws have already been amended by history. The only question now is whether Congress will lend history a hand, and try to put our military manpower statutes on a fair and rational footing.

Merit and Public Service Long Unrecognized

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. HOFFMAN of Michigan. Mr. Speaker, the specialist, the politician, the successful businessman, the stage or picture celebrity, and many others, receive public acclaim through the press, radio, and TV.

Unfortunately for the youth of the land, we get comparatively little information about the activities or character of many individuals who render long, valuable, distinguished public service in a quiet manner.

Many an individual, trained in law, ignores the opportunity to become wealthy, attain fame by selling his talents in the open market. Many such a man accepts a judicial position, retires to judicial chambers, and there spends his life in the effort to bring equal justice under law to those who present issues to the court which he serves.

The law is said to be a jealous mistress. She demands the full attention and loyalty of those who serve her.

Those who benefit, because of the ability, the courage, and the determination of a judge, seldom recognize the service rendered.

Nor does the public often consider the loyalty, the patriotism; and the sacrifice of the judge who protects our freedom, insures opportunity to the average citizen.

The occasion for this comment is an editorial printed in the Dowagiac Daily News, Dowagiac, Mich., of January 27, 1959, and which reads:

The man on the cover of the Michigan State Bar Journal magazine this month is Raymond W. Starr, chief judge of the U.S. district court, western district of Michigan.

While Judge Starr and many of his counterparts are recognized for their value to American justice by those closely associated with courts outside of their own profession, their sacrifices, compassion and tremendous responsibilities are little known to the layman.

Judge Starr is one of the several Federal judges whose courts fell in our journalistic jurisdictions during our hectic and turbulent 25-year career, and the impressions he left are indelible.

A Federal judge is like a physician who works 18 hours a day. The only difference is that the judge can pick out what 18 hours he wants to work.

Judge Starr's ditsrict embraces 31 counties in western Michigan, including Cass County.

Even prior to World War II, the duties of a Federal judge were cumbersome. After that Federal judges were swamped with the addition of various new duties involving numerous Government agencies that sprang into existence such as the OPA, WPB, and others such as farm control programs.

It amazed us when Judge Starr was appointed to the bench in 1946 after serving 5 years as a member of the supreme court of Michigan. He rejected several lavish offers to go into private practice.

A mercenary-minded reporter asked him "Why?" He replied that he thought he could best serve his country on the Federal bench.

Judge Starr served on the board of control of Ferris Institute; was chairman of the Michigan Crime Commission, the Michigan Public Debt Commission; president of the Blodgett Home for Children, Michigan's Children's Aid Society and was a member of the so-called Little Hoover Commission prior to going on the bench.

One of his most important achievements was in 1911 when he established a legal aid service in connection with social welfare work. It was one of the first of its type in the United States.

Just to give you an idea how tough a job like that can be, Judge Starr studied chemistry nights for 6 months before he felt that he was ready to rule on an involved case.

About the only time we can remember when the soft-spoken, gray-haired, and dignified judge looked out of character was one day he was caught playing a pinball game in his chambers—black robes and all.

The reason—he had to rule on a patent case involving a pinball machine and wanted to study its operation.

It never was my privilege to appear in the Michigan State Supreme Court when Judge Starr was on the bench, though I did have the opportunity of appearing prior to that time before many a distinguished Michigan justice of the State supreme court.

I have read many of the decisions rendered by Judge Starr while a justice of that court and have noted some of the decisions he has made while serving as a Federal judge in the western district of Michigan.

He was a worthy successor to Judge Knappen, Judge Sessions—whom I served as office boy while he was with the firm of Smith, Nims, Hoyt & Erwin of Muskegon, and of Judge Raymond.

Not only the citizens of western Michigan but of a large section of the Midwest are indebted to Judge Starr for the exceptionally able, unselfish service which he has so quietly, so unobtrusively, rendered to them and to our people as a whole.

Can the Republican Elephant Be Whitewashed?

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. HECHLER. Mr. Speaker, in the heart of the farm belt at Des Moines, Iowa, last week some very plain words were spoken by leading Republicans. The chairman of the Republican National Committee, Mr. Meade Alcorn, and other high officials in the Republican Party called for more leadership from the White House and also a statement of principles to define what the Republican Party stands for.

The Republican leaders cheered loudly when these suggestions were made.

At the Des Moines meeting, it was reported that Claude Robinson of the Opinion Research Corp. of Princeton, N.J., stated that surveys showed that the Republican Party is suffering from political anemia and can only be cured by strong medicine, that the Republican Party has come to be regarded as the party of the rich and privileged—the uppercrust—whereas the Democratic Party is regarded as the party of the common man, the masses.

It was further reported that Mr. Meade Alcorn agreed with Robinson's statements, and Mr. Alcorn added:

We must immediately undertake to change the false image of the Republican Party as the party of big business the party of the vested interest and so on. It's time we snatched off the big business false face that the Democrats placed on us years ago. It's time we erased the dollar signs painted on our vests.

Mr. Speaker, the Republican Party can try and try to put a coat of whitewash over its elephant, but the elephant will still look as though it were made of gold.

Many years ago P. T. Barnum advertised far and wide that he had imported a white elephant which he would present at the circus. Mr. Barnum got scores of newspapermen together and plied them with lots of liquor before he brought them out to view his white elephant. One of the journalists who never took a drink caught up with Mr. Barnum, however, and exposed the hoax when he scratched off some of the white paint with his fingernails. Mr. Speaker, I am sure that the same thing will happen if the Republican Party tries to whitewash its elephant.

Mr. Speaker, it took great courage for Mr. Alcorn and the leaders of the Republican Party at Des Moines to speak out so forcefully, and to demand that the White House provide the country with some leadership. That is exactly what we Democrats have been saying for 6 years, but it takes courage for a Republican to speak up and confirm what we have been saying. Yesterday, one of our newspaper columnists wrote that there were rumors of a great revolutionary movement going on: now that Sherman Adams has left the White House, it is even rumored that President Eisenhower will seize power.

On November 4, 1958, an election was held. The voice of the people spoke. And it spoke in favor of action rather than drift, leadership instead of the Alphonse-and-Gaston approach, and an end to the part-time attention to full-time problems.

We Democrats in the 86th Congress intend to provide the leadership which the people of our country demand to carry out a program in the interest of all the people. And then in 1960 we will restore to our great country and the free world the leadership on the other end of Pennsylvania Avenue which we have not seen since Franklin D. Roosevelt and Harry S. Truman.

G. Robert Dodson

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mrs. GREEN of Oregon. Mr. Speaker, last December Brig. Gen. G. Robert Dodson, chief of staff of the Oregon Air National Guard, died, having been taken ill the previous summer while on field duty with the guard. This distinguished Oregonian and outstanding American has been memorialized by an article on his career which appeared in the magazine the National Guardsman for February 1959. Under unanimous consent to extend my remarks, I include this article in the Appendix of the RECORD.

IN MEMORIAM: G. ROBERT DODSON, BRIGADIER GENERAL, OREGON AIR NATIONAL GUARD, JULY 25, 1904–DECEMBER 18, 1958

Stricken while on duty at summer field training, the chief of staff of the Oregon Air National Guard, secretary of the National Guard Association of the United States, and chairman of the Air National Guard Section of the Air Staff Committee on Air National Guard and Air Force Reserve Policy, died in Portland, Oreg.

Commissioned in the old Air Corps Reserve in 1938, General Dodson was appointed commander of the Oregon National Guard's 123d Observation Squadron in 1941. Entering active Federal service that same year, he commanded the 70th Observation Group and the 70th Tactical Reconnaissance Group, later commanding the 1st Liaison Group and the 3d Combat Cargo Group in the China-Burma-India Theater, and earning the Distinguished Flying Cross and the Air Medal with two Oak Leaf Clusters.

As a colonel, he plunged into the postwar reorganization. His active participation in National Guard Association affairs stemmed from that time, also, with attendance at the first postwar general conference in 1946. He served on the Air Force's Air Section 5 Committee from 1951 until early 1954, and then again from 1956 until his death. Meantime, he also served on a number of National Guard Association committees—continuously on the former Air Advisory Committee and its successor, the Air Affairs Committee, from 1953 until late 1957, and on the executive council from 1955 until his election as the association's secretary in October 1957. Pilot of his private aircraft, General Dodson also held command pilot

rating, with nearly 4,000 hours of military flying time.

In civilian life, he was vice president of Jantzen Knitting Mills.

General Orders No. 111, December 19, 1958, issued by Maj. Gen. Thomas C. Rilea, The Adjutant General of Oregon, summed up General Dodson's life, and his death, in this manner:

"An officer and gentleman unexcelled, an irreplaceable leader, the loss of General Dodson in the prime of his life is a tragedy to the State and Nation. The standards he set and the course he followed will long serve as guideposts to the officers and men who have had the privilege of serving with him throughout his career."

Ike's Better Labor Bill

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. MICHEL. Mr. Speaker, it is most heartening to note the favorable comment which has been expressed throughout the Nation in the form of editorials, articles, and general discussion concerning the President's labor reform bill. This is particularly impressive at this time because it points up the desire of the general public to obtain complete and effective labor-management legislation in the President's measure as compared with the noncontroversial and inadequate provisions of the Kennedy bill, which, as we all remember, failed to pass the House last session.

The two following editorials from today's Chicago Sun-Times and the Chicago Daily Tribune emphasize that it is imperative and mandatory for Congress to take the full step toward labor reform rather than half steps as proposed in the piecemeal Kennedy program.

The Sun-Times article, "Ike's Better Labor Bill," emphasizes the fact that responsible collective bargaining can be carried on with full protection to the rights and freedoms of workers and with adequate guarantees of the public interest, and can be secured by support of the administration's bill.

The Tribune story, "Diversionary Exercise," points up the attempt by the proponents of the Kennedy measure to divert the public spotlight from the shortcomings contained in that measure:

[From the Chicago-Sun-Times, Jan. 29, 1959]

IKE'S BETTER LABOR BILL

The big difference between President Eisenhower's antiracket labor bill, sent to Congress yesterday, and the bill of Senator JOHN F. KENNEDY, Democrat, of Massachusetts, that was introduced last week is in their respective provisions concerning picketing.

Both bills contain provisions that would stop certain racket practices within some unions, especially the Teamsters Union. These provisions would undercut the power of James Hoffa and his hoodlum associates. They would, for example, make it illegal for such men to use union dues to build their own personal financial kingdoms. They would restore to union members control over their own affairs.

The Eisenhower bill goes further than the Kennedy bill regarding picketing. The Kennedy bill would ban only shakedown or extortion picketing, set up in the hope of getting a personal payoff. The AFL–CIO agrees that such picketing is clearly a crime but says it is punishable under State statutes.

The Eisenhower bill is written to outlaw other union activities that have been uncovered by the McClellan rackets committee—activities that have put some companies out of business because they refused to cave in to union demands. The Eisenhower bill would strengthen secondary boycott provisions of the Taft-Hartley law and would prohibit picketing to force an employer to recognize a union against the will of his employees.

KENNEDY concedes that these provisions deserve consideration by Congress but that they are so controversial they would bog down his bill in acrimonious debate and delay swift action against organized labor's Hoffas.

The Eisenhower picket and boycott provisions are controversial only because labor leaders oppose them. They fear that they could be used to hamper reasonable union activity.

The truth is, however, that the provisions have become necessary because some unions have been unreasonable and unfair in their dealings with employers—and with employees, too. They have brought about a need for the kind of legislation proposed by the President. Even Senator KENNEDY recognizes that there may be a justification for such legislation but he wants to delay an all-out argument about it until after he puts through his agreed-on, noncontroversial measure.

Certainly the legislation needed to curb the Hoffas should not be delayed or imperiled by arguments over legislation not directly concerned with racketeering unions. But, as we said last week, any bill designed to strike at the excesses of the Teamsters Union must contain prohibition against racket picketing, not just shakedown picketing.

If there is to be a battle in Congress over picketing law changes, then let us get on with it, the sooner the better. While the public wants union members protected from their racket leaders, the public wants businesses protected from them too. And this calls for protection against the kind of coercion, threats, and picket activity the Teamsters Union has used to force employers to do business with them or drive them out of business.

As the President said, his proposals will not impose arbitrary restrictions or punitive measures on the legitimate activities of honest labor and management officials. The McClellan committee files are filled with cases that cry out for legislative relief—cases honest labor union officials should not condone. They should support, not oppose, the Eisenhower bill.

[From the Chicago Tribune, Jan. 29, 1959]

DIVERSIONARY EXERCISE

Robert F. Kennedy, counsel for the Senate Rackets Committee, which has been digging into union abuses, announces that he has asked for a transcript of the Edward R. Murrow radio show, "The Business of Sex." This program, presenting testimony from disembodied voices, purported to show that prostitutes carried on company payrolls are used to influence clients to purchase goods from or sign contracts with the employing company.

The National Association of Manufacturers, anticipating a move of this sort, predicted that the principal beneficiary of the Murrow stunt would be the labor unions. It said that they desperately need something to divert the public spotlight from their own wrongdoings to the sins of business, even if, as in this case, the sins turn out in the end to be mostly a hoax."

Young Mr. Kennedy is, as is well known, the brother of Senator JOHN KENNEDY, of Massachusetts, who has been knocking himself out to get the Democratic nomination for President in 1960. He has been most scrupulous not to give offense to Walter Reuther and other union bosses and unquestionably would like to take the heat off this crowd, which wields great political clout. It certainly is handy to have brother Bob in a strategic spot, and, of course, sex is always good for attention.

Extension of Public Law 480

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

PROGRAM AUTHORITIES

Mr. HOEVEN. Mr. Speaker, I am pleased that the President is recommending an extension of the Agricultural Trade Development and Assistance Act of 1954, commonly described as Public Law 480, an authority we have used during the past 4½ years to make effective use of our agricultural abundance at home and abroad. All of us can take pride in the results achieved under this authority.

The four programs operating under Public Law 480 have moved, or will move shortly, agricultural commodities valued at about $7½ billion. Some of these programs supply commodities at the cost that the Commodity Credit Corporation has invested in them. Even so, the value of these commodities at world market prices exceeds $5½ billion.

The largest and most important program under Public Law 480 is the title I authority to sell commodities to friendly countries for foreign currencies. These sales are opening up markets in many countries, particularly those that are less developed, where the demand for American farm products is high, but where the dollars to make such purchases are extremely scarce.

Two donation programs are authorized. One permits the President to send CCC surpluses abroad to meet the needs of countries suffering from natural disasters such as drought or flood or other emergencies; the other donation program provides for the distribution of commodities from CCC stocks to needy persons in many countries of the world through United States voluntary relief agencies. And, of course, Public Law 480 is the law under which food is furnished to needy persons in the United States.

The fourth authority is the barter program by which we exchange CCC surpluses for strategic and other materials which may be stockpiled or used by U.S. Government agencies.

TITLE I FOREIGN CURRENCY SALES

More than 60 percent of total programing under Public Law 480 has come under title I, a unique approach to the use of U.S. farm production. This device has proved useful far beyond our original expectations. It has been largely responsible for expanding U.S. agricultural exports in recent years, thereby keeping large quantities of commodities from going into Government warehouses. It has increased farm income. And through the use of the foreign currency sales proceeds, it is contributing to the economic development of our friends and allies abroad.

Title I agreements already concluded provide for the sale of 800 million bushels of wheat, of which 600 million bushels have already been exported; 200 million bushels of feed grains, of which about 180 million bushels have been shipped; 3 billion pounds of fats and oils, such as soybean oil, of which 2.5 billion pounds have been shipped; 3.5 million bales of cotton, of which 3 million bales have been shipped; 29 million bags of rice, virtually all already shipped; 225 million pounds of tobacco, of which 190 million pounds have already been exported; 235 million pounds of dairy products, of which 185 million pounds have been shipped; and other commodities.

Program operations under the current authorization are moving along very well with signed agreements having committed about $800 million of the $2¼ billion authorization. These agreements were concluded since last September when the new authorization was made available to the Department of Agriculture. I understand from the Department that additional programs are being developed which will bring the total commitments to more than $1 billion very shortly.

These new agreements, plus unshipped quantities from previous authorizations, have enabled the Department to increase exports under the program during the first 6 months of this fiscal year substantially as compared with the same period of fiscal year 1958. During the first 6 months of this year, for example, title I has resulted in the exportation of about 100 million bushels of wheat, 40 million bushels of feed grains, 365 million pounds of soybean oil, and 45 million pounds of dairy products.

OTHER BENEFITS OF TITLE I

The commodity importance of title I is obvious. There are other important collateral benefits of the program. A substantial portion of the sales proceeds is loaned back to participating countries for projects which will develop the economies of these countries: electric powerplants, roads, distribution facilities, railroads, and similar basic improvements which are being made to raise standards of living, increase jobs, and in general accelerate economic development plans already started by many of the less fortunate countries in the world.

Under agreements concluded during the past 18 months up to 25 percent of the sales proceeds are loaned to private business firms, mostly U.S. firms, for business development or to establish facilities to increase the consumption of U.S. agricultural commodities. Loans to U.S. businessmen have been made, for example, in Mexico, Israel, and France and loan applications are now being reviewed for the use of currencies in many other countries.

The title I program also helps attain U.S. foreign policy and mutual security objectives. In certain countries currencies are made available for military assistance purposes and grants are being made to improve and expand health and education programs.

Not the least important is the use of currencies to develop markets for U.S. farm products. Millions of dollars in foreign currencies are being used in various ways to maintain and expand our markets throughout the world.

I know that the President can count on the support of the Congress for the extension and enlargement of Public Law 480.

The President's Farm Message

EXTENSION OF REMARKS
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. TEAGUE of California. Mr. Speaker, I rise to give the strongest possible endorsement to the recommendations in this special message on agriculture. This is the fourth special message which the President has sent to the Congress during his tenure in office. It is a sound message. It is a constructive message.

These are critical times. The men in the Kremlin talk about their desire for a thaw in the cold war. But there is no evidence that the temperature of that conflict is rising by so much as one single degree.

We must keep our economy sound, strong, and vigorous. We must live within our income as a Nation. The recommendations of the President's farm message are a long step in that direction.

Mr. Speaker, I have long been concerned about the high cost of our farm programs. When the President tells us that the outlay for these stabilization programs this current fiscal year will be $5.4 billion, I am deeply concerned. And I think the American people should be, and are, also deeply concerned.

The net income of our farm operators last year was about $13 billion. In other words, these prices and income stabilization programs are currently equal to more than 40 percent of the net income earned by our farm operators. This is an alarming situation—a dangerous situation. It is a situation that the American people will find hard to understand.

If these costs were only temporary—if they were solving the problem—if they were leading to a better balance between supplies and markets—taxpayers would feel that such heavy costs were justified.

But we all know this is not the case. Under the old farm programs these costs are not only continuing year after year; they are continually rising.

Instead of solving the problem the programs under which these vast sums are being spent are creating additional problems. They are causing distortions throughout the agricultural economy. They are making agriculture more and more dependent on Government. More and more of our farm products are finding their way into Government warehouses—and a Government warehouse is not a market.

Instead of cutting down the surplus, the programs responsible for these heavy costs are leading to increased accumulations. The wheat surplus is now far larger than ever before and it is expected to go on increasing at least until the end of the 1960 fiscal year. The feed grain surplus is also at an all-time high.

By next July the Government will have an investment of over $9 billion in price supported farm commodities.

By the time the Government completes its takeover from last year's crops, it will have acquired—since January 1953—25 million bales of cotton and 2½ billion bushels of wheat.

This is a fantastic situation. Do the Members realize that 25 million bales of cotton is more than twice as much as our whole cotton crop last year? Do the Members realize that 2½ billion bushels of wheat is more than our 1957 and 1958 crops combined?

But even these figures do not tell the whole story.

Mr. Speaker, when the 1958 crops have come into Government ownership the cost for storage, interest, and other charges of managing the inventory of supported crops will exceed a billion dollars a year. Think of it. More than a billion dollars a year, not for price support loans to farmers, but simply for keeping these inventories. And we are told that unless fundamental changes are made, this annual cost of over a billion a year will rise.

We must move promptly toward sounder, more realistic, farm programs—toward farm programs that make sense. The President has wisely warned us against jumping from the frying pan into the fire by attempting programs that would be even more costly and dangerous.

We must not fall into the trap of direct payments. These would make our farm people dependent for much of their income on the Federal Treasury. Direct payments could cost from $7 billion to $10 billion a year.

Multiple price programs are also unsound. They would tax American consumers to permit the sale of farm commodities for feed and export at lower prices.

Let us be sound. Let us be realistic. We owe it to farmers and consumers alike. Let us adopt the President's recommendations.

Let's Save Our Historic Treasures

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. WRIGHT. Mr. Speaker, I have this week introduced in the House a bill designed to save from destruction many historic buildings, landmarks, and works of art owned by the Government throughout the country. Such treasures continue to be threatened intermittently with demolition.

It is my privilege to sponsor this legislation jointly with my colleagues and friends, the gentleman from New Jersey [Mr. THOMPSON], the gentleman from Wisconsin [Mr. REUSS], the gentleman from New Hampshire [Mr. MERROW], and the gentleman from New York [Mr. WAINWRIGHT]. The bipartisan nature of this endeavor is particularly gratifying to me.

The bill has been referred for action to the House Committee on Public Works, on which I am privileged to serve, and I am confident of a sympathetic hearing in that committee. Similar legislation is being introduced in the other body by Senator CLARK.

The need for such legislation, Mr. Speaker, was first made evident by the protests of the Federal Commission on Fine Arts, the American Institute of Architects, and the National Trust for Historic Preservation.

Studies by these groups and by others have made it obvious that literally thousands of the most priceless treasures of our national heritage have been plowed under and utterly destroyed by the bulldozers of a ruthless progress during the past few years. The tragedy is that in most such instances, the destruction was wholly unnecessary. The valuable historic objects could have been preserved without retarding progress.

We obviously should not permit this thoughtless and wanton destruction of these last relics of our past, because they provide, in many cases, the only visible links to connect us with periods of our own national history. They remind us of the greatness of our past, of the hardships endured by those who with such painstaking care laid the foundations of our history.

Permit me, Mr. Speaker, to cite just a few illustrations as examples of the thoughtless destruction of priceless edifices by various governmental agencies.

A number of historic buildings dating back to the Revolutionary period, including the ancestral homes of the Lee family of Virginia, are right now in danger of being obliterated to make way for the new Chantilly Airport. These homes should be preserved and if necessary relocated.

The old San Francisco Mint, one of the few buildings to survive the famous earthquake and fire of 1906, a classic building of great historic and architectural value, has been declared surplus by the General Services Administration. The site is wanted for a parking lot.

A historic Dutch mansion, built around 1790, was acquired by the Government along with the surrounding land on the Hudson River for a Veterans' Administration hospital. This building certainly could have been preserved on the site as a museum and used as a waiting cottage for visitors. Instead, it was sold to a wrecker for $32. The wrecker dismantled it, sold the facade for $3,200 and disposed of the remainder in piecemeal sales.

A number of extremely ancient Indian pueblos, probably dating to a prehistoric period, have been destroyed in the path of bulldozers on highway work throughout the Southwest, notably in New Mexico. One is reminded of the supposed American visitor to Pompeii. The dynamic fellow's only remark, upon viewing the ruins, was "just think how fast a few bulldozers and razing cranes could level this outfit and let them start all over."

Only a very few of the remaining log cabins in Texas have been preserved, and the rate at which they are going out of the picture may leave us without adequate links to our western frontier.

I certainly do not want to stay the hand of progress, Mr. Speaker, nor retard the necessary developments of our advancing civilization, but I do feel that progress can and should move forward with an eye to saving the truly valuable and inspirational remains of our proud past.

This bill would direct the Administrator of the GSA, the real estate arm of the Government, and the Secretary of the Interior to preserve such objects when they come into the Government's possession. I respectfully petition the support of my House colleagues in this worthy effort.

Federal-City Relations Vital to Whole National Economy

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, January 29, 1959

Mr. SPARKMAN. Mr. President, not long ago the Senator from Pennsylvania [Mr. CLARK] made a most interesting and provocative speech at the Boston convention of the American Municipal Association. The story was carried as the opening article in the January issue of the Alabama Municipal Journal, one of the very best publications of its kind in America.

I ask unanimous consent that the speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FEDERAL-CITY RELATIONS VITAL TO WHOLE NATIONAL ECONOMY

(By Hon. JOSEPH S. CLARK)

I propose to speak today about some aspects of what seems to be emerging more and more clearly as the central issue of our public life. That central issue is whether the United States is going to come to grips with the great problems of the nation and the world, and master them—or whether we are going to fumble the ball.

Every city official in this room knows what our problems are. They are recognized, identified, admitted. They are just not being mastered.

PROBLEMS ARE NOT MASTERED

What are some of them?

National security is the most important.

The Soviet Union has attained a faster momentum than we in the race for modern weapons. That fact is recognized, identified, admitted—but not dealt with.

The Communists are making tremendous gains in their campaign to drive Western influence out of Africa and Asia. That problem is recognized, identified, admitted, but not dealt with.

Education is the next critical problem. The deterioration of our public schools, the inadequacy of our higher educational facilities, the decline of the teaching profession, our primitive failure even to build enough classrooms, the fact that hundreds of thousands, if not millions, of boys and girls who would profit from a college education won't get it, all this is recognized, identified, admitted—but it is not being mastered.

ECONOMIC SECURITY A PROBLEM

Personal economic security is a pervasive problem. The poverty of our retired citizens; their total inability, for example, to pay for medical care; the collapse last year of our unemployment compensation system—these problems are known, recognized, and admitted—yet not dealt with.

City slums are a problem every mayor knows, one that is visible, tangible, measurable, yet they are getting worse, not better, every year.

The crisis in school desegregation, the twin problems of recession and inflation, the great problems arising from metropolitan growth, of declining central cities and suburbs without adequate public services, of water resources inadequately conserved, of traffic and transportation strangulation, all these are known, recognized, admitted, but not grappled with and mastered.

LOCKED IN A COMPETITION

And so it goes. We suffer from a paralysis in our public life. The scope of our action is determined not from a forthright analysis of the facts which all admit, but by preconceived limitations growing out of inertia, timidity, and outmoded thinking.

Perhaps time was when we could sit like Ferdinand the bull smelling flowers under a tree and still survive. But that time has gone forever. We are locked in a competition with the Soviet Union and Red China in which our very existence as well as the survival of the good society is at stake. Our adversaries can mobilize their resources in ways we can't and wouldn't if we could. We must find alternative ways of mobilizing our own resources, or the ways of freedom will be lost in a universal state ruled by international gangsters.

ALARMING SIGNS OF SOFTNESS

Let us start from the frank assumption that we may not win this fight. Twenty earlier civilizations have risen, flourished, grown soft, and been overrun by brutality and tyranny. Nor need we look far to see

alarming signs of softness in America. The self-indulgence, the emphasis on luxuries, the juvenile—and adult—delinquency, the lack of self-discipline, the tendency to sweep hard facts under the rug, the unwillingness to ask the people for any sort of sacrifice—all these are danger signs.

But against these danger signs there are indications of some hope. Please believe that I do not speak as a partisan politician when I say that one such sign was the result of the last election.

A PROFOUND PUBLIC DISCONTENT

That the election returns indicate a profound public discontent with the way things are going seems clear beyond doubt. The people voted for candidates of both parties who look to the future and not the past, who represent and promise action rather than more complacency and inertia. The men who won are not happy about present day America.

The election was not a mandate to stand still. It was a mandate to move forward. It was a mandate to political leaders to get on top of our problems, to master them, to take control of our destiny.

Now, what stands in the way?

The answer we always get—whether the issue is national defense, or mutual security, or education, or housing, or urban renewal, or social security, or the development of Asia and Africa is, "We can't afford it," or "We must cut costs and balance the budget."

OUR PROBLEMS COST MONEY

Now let me admit that most, although not all, of the problems that confront us do cost money. And let me also state my own strong belief that governmental budgets at all levels, local, State, and national, should be brought into balance.

So the issue of whether we master our problems becomes, in concrete form, the issue of taxation and public spending. And that, as Walter Lippmann has said, will be the great debate of 1959.

I want to enter that debate by chopping away some of the folklore that surrounds the subject of public spending. Perhaps no topic in our time, has been the victim of so much nonsense. If we can dispel the nonsense and the fallacies, then we can put the Federal budget, as well as your city budgets, not only in perspective, but in balance and we can get ahead with the job that needs to be done.

FIVE MAIN FALLACIES

There are five main fallacies.

Fallacy No. 1 is that private spending is inherently good and public spending inherently bad—and therefore public spending should always be minimized and private spending increased to the maximum the gross national product will permit.

This fallacy is assiduously cultivated by conservative molders of opinion. The word "government" is equated with other nouns having an evil connotation—such as "waste," "extravagance," "socialism," "bureaucracy." Taxes are never referred to except as a burden. Private spending is described with fair-sounding words, such as "enterprise," "free," "competitive." The semantics are all wrong.

This is a pernicious tendency. Taxation and public spending are the means by which we divide resources between the public and private sectors of the economy. Those activities which are in the public sector are there not because they are naughty and ought to be destroyed, but because they are essential and cannot be adequately performed by private enterprise.

EXTRAVAGANCE IN GOVERNMENT

Activities in the private sector are there not because they are necessarily good and useful, but merely because they are not illegal and can be conducted at a profit.

There is, unfortunately, often extravagance in Government services, but I suspect that objective appraisal would show more in private business. Just compare, for example, the luxurious motor cars of today with the inadequate highways on which they must move; compare the extravagance of our country clubs with the spartan character of State and national parks; compare the lavishly appointed corporation and national labor union headquarters with our disgracefully rundown public buildings; compare the compensation of TV entertainers with that of great schoolteachers. We can only conclude that the private sector is comparatively plush and the public sector relatively starved. Indeed, as Prof. J. K. Galbraith has recently pointed out, the private sector of our economy is so plush that to get the private product purchased requires the strenuous efforts of huge advertising firms to create synthetic wants and needs that people do not even know they have. There is no problem at all, on the other hand, in identifying huge backlogs of essential public services for which we appear unwilling to pay the price.

WE MUST DIVERT RESOURCES

If the distribution of our national resources is to reflect the true value judgment of the American people, we must divert resources not from Government to private spending but in exactly the opposite direction.

Fallacy No. 2 is that the Federal Government is crushing the people and endangering the economy with a growing burden of taxes, expenditures, and debt, and that this threatens the health of our free enterprise system.

What is overlooked, of course, is that the ability to carry taxes and debt is related to income. Other things being equal, a man making $10,000 can pay at least twice as high taxes and carry without hardship twice as large a debt as a man making $5,000. And the same is true of the country as a whole. And taxes, expenditures, and debt are actually less today—as a proportion of gross national product—than at the end of World War II.

RATIO OF DEBT TO PRODUCT

In 1945, our gross national product was $213.6 billion, while the public debt was $278.7 billion. The ratio of the debt to the gross national product was 130 percent. In 1957, gross national product had risen to $440.3 billion, and the national debt had declined to $275 billion. The ratio of the debt to the gross national product was 63 percent.

Our debt is accordingly less than half as burdensome to the country as it was 12 years ago. Total debt has been almost stable, since the war, while the gross national product has more than doubled. The fact is that we could, if necessary, more than double our national debt and not be in any more peril of national bankruptcy than we were with the debt we carried without alarm or danger in 1946. Fortunately it isn't necessary.

TAXES PROPORTIONATELY LOWER

Similarly, Federal taxes, as a proportion of national product, are less now than they were 10 years ago, or 5 years ago, or 3 years ago. If people were going to be crushed by our present tax load, they would have been crushed long since. Lower taxes are always desirable, of course, when national needs are being met, but let us not say that there is a compelling economic necessity for reducing them. There just isn't.

This is a growing country. Our population is rising. The public services required by urbanization and national security are growing. Our civilization is becoming constantly more complex. States and localities are increasingly incapable of meeting new and growing needs. Naturally, the Federal Government should grow too. The Federal budget should rise. Given normal growth in our economy, it can increase by $3 to $4 billion annually with no change in the tax rates and no increase in the real burden—which gives us considerable room for expanding public services. And, if our public services need more than that—which I suspect they do—we can get most of it without raising tax rates by closing the outrageous tax loopholes which have made our Federal Internal Revenue Code a veritable sieve.

GOVERNMENT SPENDING NOT INFLATIONARY

Fallacy No. 3 is the notion that Federal spending is inflationary. Government spending is no more inflationary than private spending—provided the Government balances its budget. Deficit spending can be inflationary, of course, but even this is the case only when demand for goods and services exceeds supply, a condition which does not exist today.

Industry is far below capacity and unemployment is far above what it should be.

Our recent inflation arose from causes other than Federal spending. The Federal budget is being made the scapegoat by those who seize on any argument to stop Government programs which they have always opposed.

WHOSE FOOT SHOE IS ON

Fallacy No. 4 is that all Federal expenditures are alike. If a private bank makes a loan that is called an investment; if the Small Business Administration makes a loan, that is called spending. If a private power company builds a dam that is called investment; if TVA builds a dam that is called spending. One would have thought that this businessman's administration might have introduced business concepts into Government bookkeeping, but they have not done so. It may be that for bookkeeping purposes, we must continue to lump all accounts of Government disbursements together. But there is no reason why intelligent people, for purposes of public discussion, should not distinguish between operating expenses, loans which create accounts receivable, and investments which are offset by created assets, just as corporations make this distinction and just as municipalities distinguish between current and capital budgets.

SHOVING FUNCTIONS BACK TO STATE

Fallacy No. 5 is the notion that if the Federal Government shoves its functions back to the States and cities this constitutes economy. It is not economy at all if the functions are performed. The question then becomes simply which taxing system is used, and which administrative structure is employed.

There are good reasons for decentralizing administration. But that does not mean the financial burden should be thrown back on the States and cities too. The Federal tax system is far superior in justice and efficiency to those of State and local governments, and there is great merit in using it for urban functions. Taxpayers cannot threaten to flee the Nation, as they can and do the city and State. The Federal tax burden falls evenly across the land, based in large part on ability to pay. There is every reason to use it in preference to State and local systems where the choice exists.

I shall oppose proposals to turn Federal functions back to the States and cities. This would result in crippling essential functions. Important services now being rendered would be abandoned. An unjust tax system would be substituted for a better one.

I will press for Federal help in new fields, especially education. I hope the mayors of America will join me in these stands as they have done so effectively in the past.

The Federal Government must give greater, not less, support to the urban areas of America, because the great domestic problems of the second half of the 20th century are urban problems. We are no longer an agricultural society.

NO DEPARTMENT FOR CITIES

This brings me to my final point. A visitor from outer space, looking at the structure of our Federal Government, would conclude that America is still a rural nation. We have a Department of Agriculture, which devotes itself to the problems of the farm. We have a Department of Interior which reflects the interests and needs of the more-sparsely settled States. But there is no department with responsibility for the problems of the tens of millions of people living in forced congestion in sprawling metropolitan areas—one of which stretches unbroken all the way from Portland, Maine to Alexandria, Va. City people, too, need an advocate in Washington.

To illustrate: The Senate became disturbed last year about the plight of the Nation's railroads. The Department of Commerce was concerned; so was the Interstate Commerce Commission. The Commerce Committee of the Senate has a standing subcommittee with jurisdiction over railroads. So it organized a study.

Those of us who have been worried about a related problem—namely, the plight of the commuter and the deterioration of mass transit in the cities—tried to make sure that urban mass transit problems would be covered in the general study that was organized. The answer was "No." States rights intervened.

MASS TRANSIT A REAL PROBLEM

No department of the Government has any interest in what should be done about commuter transportation services. No committee or subcommittee of the Congress has any jurisdiction.

Yet you know that mass transit is not merely a State and local problem. Much of the traffic crosses State lines. Some of the railroads involved serve many States. Let's face it, State and local governments are incapable of dealing successfully with this problem in most localities—just as urban renewal was generally beyond their competence until the Federal Government stepped in to help.

Maybe the ultimate answer is that mass transit should not be a Federal problem, even in part. Maybe the same applies to air and stream pollution, and water supply. But what concerns me most is that, at the present time, we have no mechanism even for examining such problems comprehensively and making intelligent national decisions.

DEPARTMENT OF URBAN AFFAIRS

I believe the first step should be the creation of a Department of Urban Affairs at Cabinet level with the responsibility of keeping abreast of urban and metropolitan problems and developing recommendations for Federal, State, and local action. The Department would represent the urban viewpoint in the administration of nationwide programs which particularly affect cities and their suburbs, notably, highways and water conservation. It would be assigned initially, at least, only those operating programs which are peculiarly urban, and these are clustered already in the Housing and Home Finance Agency. But the Department, to my mind, would be something far beyond the present HHFA. The additional element would be a hunting license to study, research, and recommend, and a responsibility to listen to representatives of groups like this one, understand their problems, and reflect that understanding in the policy forming processes within the executive branch. Urban extension is a procedure and a program we could well adopt from our agricultural friends.

INTERGOVERNMENTAL RELATIONS EVOLVE

I have seen the criticism that a new department should not be formed until a philosophy of Federal-State-local relations is developed and agreed upon as the new department's basis. Personally, I think the logic points in just the opposite direction. Governmental philosophies do not spring full blown into being; they evolve. But they cannot evolve unless someone in government has responsibility for thinking creatively about them. We will get the philosophy far quicker if we establish the mechanism first.

Some of us in the Senate who are former mayors put in a bill 2 years ago to create a new Department of Housing and Urban Affairs. We will do so again in January, and I hope the mayors of America will make the enactment of this bill an important policy objective and give us their full support as we attempt to push this bill through the various stages on the long road toward enactment.

German Cartels Rebuilding

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. ROBISON. Mr. Speaker, on January 7 I introduced H.R. 1345 which would permit the sale of vested enemy assets by the Attorney General with the proceeds to be held pending final outcome of litigation as to ownership.

The largest single property in the alien property problem is the General Aniline & Film Corp. There are many strong arguments against the return of GAF to its onetime German ownership. One of these is mentioned in a recent letter to the editor of the New York Times by Mr. Arthur W. Rhodes of Darien, Conn. I invite the attention of my colleagues to this letter pointing out that there is ample evidence of a rebirth of industrial cartels centered in Germany. My bill would insure that GAF does not return to become a component of a German cartel, but it offers assurance that the claimants eventually determined as owners by the courts would receive adequate compensation.

The letter follows:

[From the New York Times, Jan. 21, 1959]

CARTEL REBIRTH FEARED—RECENT STEEL MERGER VIEWED AS SIGN OF RELAXING CURBS

To the EDITOR OF THE NEW YORK TIMES:

Approval of the merger of two large steel companies in Germany by the high authority of the European Coal and Steel Community is cause for alarm.

According to the account of Sydney Gruson in the New York Times of January 7, "One of the allies' painfully achieved deconcentration orders against big German industry * * * has apparently been jettisoned."

These orders were issued in 1946, when memories of the disastrous effects of the international cartels were still vivid. The deadline for Herr Krupp, head of the industrial family, to dispose of large sections of his holdings was March 1959. To permit the purchase of additional industry is a complete reversal of the original order. Why scrap these painfully achieved curbs now?

Certainly we welcome a strong and free Germany as a NATO ally. But we do not welcome the rebirth of international cartels. The files of the Antitrust Division of the U.S. Department of Justice contain ample evidence of the dangers of permitting industrialists of any country to gain too great a control of the world economy. International cartels can control prices, production, and distribution of vital goods. The cartels can then manipulate the economy according to their own desires.

GERMAN OBJECTIVES

There are evidences that the German industrial empire is rebuilding. In November 1958, the 10-year-old case to sell General Aniline & Film Corp. was given a new legal complication. As an out-of-court settlement appeared likely, the German I. G. Farben interests came out in the open to claim that Interhandel, the former owner, was an instrumentality of Farben. This maneuver has striking similarities to the incidents reported by Joseph Borkin in the book, "Germany's Master Plan," by Joseph Borkin and Charles A. Welsh (1943). American business ethics, our democratic procedures, and the justice of our courts have been used whenever it is convenient to foster the primary objective—German control of the world economy.

There appears to be no lack of concern and effort on the part of our Government to restrict monopoly powers and mergers of U.S. companies. The many companies that have pending antimerger cases against them portend no letup in the trust-busting activity in this country. Cannot this same type of vigilance be applied by the allied control council to West German business?

We should have learned that German cartels are of vital concern to our national security and world security. Surely those people who formulate the policy and enforce the orders of the allied control council are aware of the facts of economic history. Can there be a reasonable explanation for this reversal of policy?

ARTHUR W. RHODES.

DARIEN, CONN., *January 17, 1959.*

Code of Ethics of the National Association of State Agencies for Surplus Property

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. McCORMACK. Mr. Speaker, according to reports of the Secretary of Health, Education, and Welfare the Federal Government allocated to the States for schools, hospitals and civil defense last calendar year property which originally cost $334,109,167. This was made possible pursuant to Public Law 61 which I introduced in the 84th Congress. Under this law the various States are required to designate a responsible State agency to operate the program in the State to insure fair allocation to many institutions, etc. The State agency representatives have organized themselves into a national association known as the National Association of State Agencies for Surplus Property—NASASP. This organization has been most helpful to the Congress in presenting the problems and the needs of the States with respect to the donable program.

At the national meeting of the association in San Francisco in July, 1957 I suggested to the association that since

the donable program had now reached such large proportions that the group might consider the adoption of a code of ethics under which it would voluntarily operate. Since that time the group has given much thought to this matter and I am in receipt of an excellent code which they have recently adopted. Under unanimous consent to extend my remarks, place the wording of the code in the RECORD at this point:

CODE OF ETHICS OF THE NATIONAL ASSOCIATION OF STATE AGENCIES FOR SURPLUS PROPERTY

We, the members of this National Association of State Agencies for Surplus Property, do ordain and declare that this code of ethics is a true expression of the desires, attitudes, and objectives which govern the activities of all representatives of State agencies for surplus property. We, the members of this association, further proclaim that we will give first consideration to the expressed purposes of this association's constitution and the beliefs, purposes, and principles of this code of ethics.

BELIEFS

Excess Federal property, before being declared surplus, should be utilized to the fullest extent practicable in these United States of America by the Federal Government.

Once property has been declared surplus to the needs of the Federal Government, the highest and best secondary utilization is by public and private organizations of this Nation that are dedicated to the education, training, health, civil protection, and safety of our people.

Only after these requirements have been satisfied should surplus property be disposed of by other means.

PURPOSES

We dedicate ourselves to the purpose of accomplishing the will of Congress through fairr, honest, and unbiased execution of the duties and responsibilities entrusted to us. Fully recognizing the responsibility that is ours, we accept the call of duty with a sense of humility, and with the firm resolve to give our best efforts at all times to those tasks that are inherent in the surplus property utilization program.

PRINCIPLES

Individually as members and collectively as an association, we subscribe unreservedly to the following principles to motivate and guide us in the proper conduct of the affairs of the surplus property utilization program:

To be guided by honor, honesty, and integrity in order that we may merit the respect and confidence of our associates and the public whom we serve.

To hold as dishonest any personal gain or profit obtained through abuse of our public trust.

To decline personal gifts or gratuities which might influence strict impartiality that must prevail in all business relations.

To foster and promote fair, ethical, and legal business practices; to measure each transaction on its own merit; and to grant all eligible organizations equal consideration.

To conduct all public relations and business affairs without prejudice; and to disavow all political, religious, or racial bigotry, or bias.

To be willing to submit any major controversies to arbitration.

To respect the policies of our immediate superiors, and to advise them on problems and progress of the program.

To counsel and cooperate with our membership; to subscribe to the association's objectives; to respect State boundaries in the screening of property; and to promote a spirit of unity among member States.

To promote the maximum utilization of surplus property through an educational program for all eligible organizations.

To maintain minimum service charges by the elimination of all unnecessary practices and procedures that do not directly benefit those we serve.

To accord prompt and courteous treatment to those transacting legitimate business missions.

To recognize and appreciate the total problem of surplus property disposal; and for this purpose to cooperate with Federal holding, custodial and disposal agencies.

To maintain professional attitudes at all levels of State agency service.

Tour of Philadelphia

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1959

Mr. TOLL. Mr. Speaker, Philadelphia is a historic city, with many interesting places and monuments. So often, however, visitors to our city have only a limited time to sightsee and can cover only some of the highlights.

To them particularly I commend the tour recommended by the distinguished political columnist, John C. Calpin. His recent article appeared in the Philadelphia Evening Bulletin. He recommends a 2-hour tour by car of about 25 miles whereby one will see some of old and new Philadelphia.

The article follows:

[From the Philadelphia Evening Bulletin, Jan. 4, 1959]

SIGHTS OF OUR CITY—TWENTY-FIVE-MILE TOUR TAKES 2 HOURS AND IS WORTH EVERY MINUTE OF IT

(By John C. Calpin)

Many Philadelphians, it is said, have never seen Independence Hall. Also, many people do not know city hall, except as that tall building in the wide space where Broad and Market Streets meet.

Others, secure in their own neighborhoods, have not seen many other points of interest. There have been so many changes in recent years that most anyone who is interested could see things to their advantage—even those who come into town every day to work.

To someone with 2 hours to spare and an automobile to drive or to be driven, a tour of old and new Philadelphia could be covered by traveling only about 25 miles.

Start at city hall, where the tower is open the 5 week days during the winter. There is no other view like it in Philadelphia. Even a tour of the city hall offices would be worthwhile.

SKATING RINK, TOO

Across the street is Penn Center, stretching from 15th Street to 18th Street and containing new, modern office buildings, a transportation center, a hotel, a concourse shopping center, landscaped courts and a skating rink.

Going north on 20th Street to the parkway, one finds the north triangle area, which was cleared by the Redevelopment Authority, and on which 4 buildings with 971 apartments are just about completed. The cost is over $16 million. This adds further majesty to the view out the Benjamin Franklin Parkway and also from the west.

Cross over the Spring Garden Street Bridge and the next stop could be the Powelton area, which once contained many of the best homes in the city, but which now is seedy and rundown. The feature here is the effort to restore the homes rather than raze them and start all over again.

Site clearance is only one way to fight blight, and there will be more effort to save what is salvageable. The Powelton area will be one of the tests.

EDUCATIONAL CENTER

Next, turn down 34th Street to our educational center south of Chestnut Street. It combines the University of Pennsylvania and Drexel Institute of Technology. Part of it, for the time being, is a rubble heap, where hundreds of houses and buildings have been torn down to make way for more college buildings.

Football fans for generations have been going to Franklin Field, and in recent years the Palestra has been one of the Nation's basketball centers.

Hundreds of thousands of people have been in the Convention Hall, but not one-tenth of them took the time to go to Commercial Museum, next door, where the amazing Philadelphia panorama is on view. This display of city planning could well be the finest in the world. The University of Pennsylvania Museum also is worth anyone's visit. As a view of one of the greatest hospitals in the world, there is Philadelphia General.

From here go south on Vare Avenue to Passyunk Avenue, seeing along the way, some of the city's big industrial plants. Go out Passyunk Avenue to Essington Avenue and then south on Island Road.

EASTWICK PROJECT

This brings you to the Eastwick section, where one of the biggest efforts in the world will be made to reclaim an area for both residential and industrial use. On 2,500 acres there are 1,600 substandard homes. Private groups will develop it. The work is underway and the city has just let a contract for the pumping of 9 million cubic yards of fill for the lowlands.

At the southwestern tip of the city lies the new Tinicum Wildlife Preserve of 140 acres. So far, 230 species of birds have been sighted at the preserve. During the spring and fall migrations, it is an important feeding place for waterfowl who use the Atlantic flyway.

Coming back to the east, there is the International Airport, one of the busiest and best equipped along the Atlantic coast. The visitors gallery is always open.

OUR FOOD CENTER

Returning along Penrose Avenue through the area of the oil tank farms the trip switches to Pattison Avenue to the Food Center, which is being built to replace antiquated Dock Street and the produce market. It will bring better, cheaper, and more sanitary food to the people of the entire region.

To the south is League Island Navy Yard, and to the north, the $85 million Walt Whitman Bridge, which was called, when opened, the most beautiful bridge in the world. About 17,500,000 vehicles already have crossed it.

Heading north along Delaware Avenue one sees a small part of the city's waterfront, including piers 38 and 40, which have been rebuilt into a general cargo pier. Three ocean-going ships can be accommodated at one time.

Between Lombard Street and Market, and from the river to about Eighth Street, plans are underway for restoration of the "Old City"—nearly 300 years old. The restoration, by private individuals, was triggered by the work on Independence Mall.

Entire blocks of the Society Hill-Washington Square section will be restored to their historical character. The area could become one of the most desirable in the city.

The section around Independence Hall, Independence Square, and 18 additional acres has become the Independence National Historical Park. The State has improved the section as a mall, north to the Benjamin Franklin bridge plaza. The Federal Government has appropriated millions for the work, under the urging of a committee headed by former Judge Edwin O. Lewis.

By 1963, about $17 million will have been expended.

These are only a few of the things worthy of seeing and cover only the southern section.

On This Thy Day

EXTENSION OF REMARKS
OF

HON. WALTER H. MOELLER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1959

Mr. MOELLER. Mr. Speaker, the Reverend Frederick J. Forell, D.D., executive secretary of the Emergency Committee for German Protestantism has called to my attention a solemn and moving appeal by the Right Reverend Bishop D. Otto Dibelius, Lutheran Bishop of Berlin, in which the bishop called for the daily prayers of the people of Berlin to save the city from the catastrophe of Communist control and for freedom for all the people of Germany.

Bishop Dibelius' sermon was delivered in his cathedral, the Marien-Kirche, in East Berlin under the very noses of the Communist oppressors, on the second advent Sunday, December 7, 1958. Bishop Dibelius has long stood out as a symbol of Christian courage in the face of the Communist conspiracy to destroy religious values in the lives of the people of Germany and, indeed, in the entire world. Coming at this crucial time in the struggle for the control of men's minds and hearts, as symbolized by the current crisis threatening the freedom of West Berlin, I believe that it is highly important that the people of the free world be aware of and join in the crusade of prayer for which the heroic bishop pleads as with the voice of a prophet of old. I, therefore, ask that his sermon, with an accompanying foreword by Merwin K. Hart of the National Economic Council, be included in the CONGRESSIONAL RECORD today at the conclusion of these remarks. The honest, pious prayers of a truly religious people would have prevented the destruction of the city of Jerusalem which Jesus foresaw and over which He wept. Let us take our lesson from that terrible story and pour forth our prayers in a mighty torrent to the throne of the Almighty so that Berlin, Germany, and the entire free world may be saved from such a righteous judgment.

FOREWORD

Public affairs and Christianity are closely knit. Seldom has this been more apparent than in the critical situation in Berlin today.

Here in our Christian country in the days ahead, as in Berlin, Christianity and personal liberty are going to survive together or go down together.

In recent months the Soviet authorities in East Germany have put into effect a rule that no person who adheres to the Christian faith may enter high school or university, thus condemning any youth, no matter how great his talent, who refuses to conform to Soviet edict to become an artisan or fieldworker.

By agreement among the United States, Britain, France, and Russia, following World War II, the Berlin area was divided into four sectors, and control of a sector was assigned to each of those countries. The sectors assigned to the United States, Britain, and France, like all of West Germany, have made an amazing recovery. But, aside from the narrow strip containing the street called Stalin Allee, East Berlin has continued largely in ruins.

A few weeks ago Khrushchev suddenly demanded that the other three powers get their forces out of Berlin. There is much evidence that Soviet Russia will this time not relent. Meanwhile, the United States, Britain, and France have refused to yield an inch.

We are assured by close German contacts that the loss of Berlin to the West would be a catastrophe psychologically, and might lead to the loss of all Germany and perhaps all Europe. On the other hand, there is some reason to believe that there are such weaknesses in the Soviet setup that Khrushchev believes his only safety lies in striking a blow now, such as this proposed attempt to seize Berlin.

One of the greatest men of our time is 78-year-old Otto Dibelius, Protestant Bishop of Berlin and Brandenburg, and holder of honorary doctorates from Yale, St. Andrews, Toronto, and other universities. Till he was absolutely forbidden a few weeks ago, he continued to preach throughout East Germany, and brought courage and comfort to millions in that unhappy land.

On a recent visit to Berlin, as vice president of the Emergency Committee for German Protestantism, I spent an hour with the bishop in his Berlin home. Like everyone who has met him, I was greatly impressed with this great Christian. With Adenauer, he has been a pillar of strength, not only to Germany but to the whole Christian world.

On Sunday, December 7, Bishop Dibelius preached in his cathedral in the eastern sector of Berlin. In his sermon, given below, he calls for 10,000 Berliners to pray daily for the saving of the German people.

Washington prayed at Valley Forge. At Benjamin Franklin's suggestion, when the Constitutional Convention was deadlocked, the members turned to prayer. We have no greater weapon in this present German crisis.

We of the National Economic Council, believing deeply in the efficacy of prayer where offered in the name of Christ, urge all Americans to join the Berliners in their prayers.

We urge all priests and ministers, Catholic and Protestant, to lead their congregations in this plea to the Almighty for the people of Germany. We ask them to secure from their flocks pledges to pray daily; and to forward the pledges to Rev. Dr. Frederick J. Forell, executive secretary of the Emergency Committee for German Protestantism, at 325 Central Park West, New York 25, N.Y. That will enable Dr. Forell to let Bishop Dibelius know that Americans care.

(The following translation from the German is by his son, Rev. Dr. George W. Forell, of Chicago.)

MERWIN K. HART.

ON THIS THY DAY

"When Jesus was come near, He beheld the city, and wept over it, saying: If thou hadst known, even thou, at least in this thy day, the things which belong unto thy peace. But now they are hid from thine eyes." (Luke 19: 41–42.)

"Was this fellow Jesus also for peace?" This was the question which a cabdriver asked his passenger here in East Berlin in the course of a conversation; for he had noticed the passenger was a minister. This cabdriver had apparently only the vaguest notion about Jesus Christ, and he was only able to think in terms of the slogans with which political propaganda blankets our people day after day.

"Was this fellow Jesus also for peace?"

Yes, indeed, He was for peace. When He beheld His Jerusalem and realized that soon this city would be rubble and ashes as the result of a cruel war, His eyes were filled with tears. The Gospel reports only twice that Jesus wept. Once He wept at the tomb of Lazarus where He was overcome by the fearful power which death holds over the life of men. Here we read: "Jesus wept." (John 11: 35.) The other time was in this passage where He thought of the judgment over His Jerusalem. He was always for peace.

But, of course, this was not an outward peace where for a time atomic weapons are scrapped and guns put away only to await the next opportunity when one will use them again. And meanwhile one expresses hostility by means of the weapons of the cold war. Christ's concern was a peace which descends from God's forgiveness into the hearts of men. This peace changes their attitudes and finally makes the very thought impossible that human beings and brothers should shoot at each other, knowing that others are just as close to God's heart as they are themselves.

Indeed, He was for peace. This is what He lived for. To bring this peace into the hearts of men, He went to the cross.

But mankind was not interested in this kind of peace. In the prologue to the Gospel of St. John, we read the sad sentence: "He came unto His own and His own received Him not." (John 1: 11.) These words are a summary of the entire life and suffering of our Saviour from that day on until now. "He came unto His own and His own received Him not."

To be sure, nobody wanted war. Whenever war came mankind felt sorry for themselves and nobody would take the responsibility. But they did not want to be bothered with the things which belong to peace. They did not want to prepare for the change necessary in man as he is now in the event that the dark threat of war should ever disappear from this world. They wanted to eat and to drink, and were willing to accept a little anxiety in the intermissions. To change their lives was far too inconvenient. In fact, to this day, this is too inconvenient. Men still say: "Whatever will be, will be. Better not think of it. This is all that is left to us." This is what they still say in Berlin today.

But it seems to me that in the case of most people, the soul announces its presence from time to time. Perhaps only very quietly, but the soul, the very soul they wanted to suppress, speaks up. "Can we live like this? Can we be so shallow and irresponsible?"

Boris Pasternak's Dr. Zhivago says: "No man can do violence to his soul for very long without suffering the penalty."

And because this is a fact, man is ever and again confronted by the question: "Should you really do something?" Physical blindness is something that we have to accept as God's will, and bear it in faith. But blindness of the soul, the blindness which refuses to see and which is quite satisfied if the decisive fact is hidden from our eyes, this blindness is always guilt. And all guilt must be paid for in Heaven and on earth.

Dear friends, this brings us to the theme of the second Sunday in advent. According to the tradition of our church, we must speak of God's judgment over man's unbelief on this day.

These judgments of God are always present. They take place in man's outward life, but above all in his inner life. No one should deceive himself into thinking that he can throw away his faith and remain the

same person he was before. He will notice how, step by step, he will become more selfish, more uncharitable, more inconsiderate, more untruthful. And should he fail to notice it himself, others will surely realize it. And even if others fail to realize the change, the Holy God in Heaven will surely see it. What the consequences will be in all eternity we can only anticipate.

God's judgments are carried out every day. There are hours in every life when these judgments gain special meaning. Then Jesus' lamentations about us are heard: "If thou hadst known, even thou, at least in this thy day, the things which belong unto thy peace. But now they are hid from thine eyes." These are the decisive hours in the life of men and nations.

It appears to me that our city of Berlin, and, indeed, our entire German nation, is now passing through such a decisive hour. We all know what is at stake.

The worship service is not the proper place for political discussions. But this is the place to talk about the concern of man's soul. This is the church's task. In the 33d chapter, verse 7, of the Prophet Ezekiel, we read:

"So thou, O son of man, I have set thee a watchman unto the house of Israel; therefore, thou shalt hear the word at my mouth, and warn them from me."

What was first assigned to the prophet as an individual has come to be entrusted to the whole church of Christ. And as a watchman the church must now say three things:

First. The attempt is now being made to change the way of life of the 2 million people who live in West Berlin and—this is also openly admitted—later include the 50 million people who live in West Germany. In deed, this is to be done without asking the people whether they want this new way of life or not. In short, the same is to be accomplished as happened immediately after the last war 13 years ago when millions of human beings were thrown around like pieces of baggage and no one was in position to defend himself.

But all this is contrary to the proclamation of the Gospel of Jesus Christ. This Gospel proclaims that God wants free men, not men who are treated like things. He wants free men, not slaves, since faith can unfold only in an atmosphere where man is not the victim of overwhelming powers, but rather is able to make free decisions about his life, for or against the glory of God.

Since this is a fact, since our faith cannot live, in the long run, unless it breathes in a world of freedom, the church of Jesus Christ must warn all those concerned against subjecting the earth to brute force.

If you ask what belongs to our peace, the answer is not more barbed wire, but rather more freedom for all.

Indeed, freedom for all. That is the second point I must make. This does not merely affect the men and women of the West; the men and women of the East are just as much involved. Should a new barbed wire fence at the Brandenburg Gate in the center of Berlin, in the future, mark the border between two countries—this seems to be the fashion nowadays—the last chance will have been lost for human beings from both sides of the border to come together, to greet each other, and to exchange ideas. Then the last chance will be lost for mothers to see their children, who might live on the other side of this barbed wire. New suffering, new bitterness, will engulf millions of people. Against this development rises the love which our Lord Jesus Christ has commanded us.

We are told that sources of tension are to be cleared away. Yes, indeed, clear away these sources of tension, of which every Christian will say that they are unhealthy and unnatural. But watch out that you do not clear them away by bringing new heartbreak over mankind. Rather, clear away the sources of tension by doing what the church of Jesus Christ has been asking for in our country all these 13 years. Give back to the German people their national unity, and with the unity, peace and freedom.

The third point can only be stated with some hesitation. Nobody should be able to accuse me that I am trying to overdramatize the situation and that I am unduly pessimistic. But 10 years ago we had the very same experience, and we all know where it led. Violence breeds nothing but more violence.

Again I remind you of the Prophet Ezekiel, who says in the 33d chapter, verse 6:

"If the watchman see the sword come, and blow not the trumpet, and the people be not warned; if the sword come and take any person from among them, he is taken away in his iniquity; but his blood will I require at the watchman's hand."

The bishop of Berlin stands today under this word. For this reason, I can only raise my voice and entreat all those whom it may concern: Abandon violence, grant freedom, and grant peace.

There remains but one question: What can we do in this situation? What can each one of us do? Is there anything that can be done? When our Savior spoke the words of our text about Jerusalem, the case of Jerusalem had already been closed in God's council. Nothing else remained but sorrow and lamentation. I do not know whether in the same council of God the case of Berlin is by now also closed. There is none of us who knows. But because we do not know, these words "On this thy day," tell us not only to obey but also give us hope that in God's mercy there may be possibilities for salvation. And this hope demands that we redeem the time.

Therefore, let me ask again: What shall we do? On the day when the Russian note was released, I met a western statesman whose findings will influence greatly what will happen in the next 6 months. We had little time for long conversation, but he looked at me, shook my hand, and said three words: "We must pray."

What this layman told the pastor is ultimately what the pastor has to tell the congregation. Our duty now is to pray for our city of Berlin and for our entire German nation. The Prophet Jeremiah says expressly: "Pray to the Lord for your city." The whole New Testament is full of such sayings: "Pray without ceasing." Indeed, while you pray, all nervous strain will vanish from your hearts. Your soul will become calm through trust in God. This will belong to your peace, and to the peace of the whole city.

In such an hour of decision, no Christian can pray in any other way than his Savior and Lord prayed in Gethsemane, namely, with the conclusion: "Nevertheless not My will, but Thine be done."

Here we find the calm confidence which realizes that even if God should have decided not to answer a certain prayer or, to put it more accurately, to answer it differently than man had anticipated, God's grace is at work. To say it with the words of a German hymn:

"Nothing can happen to me
But what God has decreed
And what leads to my salvation."

Even through darkness, God can lead us to the goal which His mercy has destined for us.

But these other words of Jesus are no less sure, they belong to the great paradoxes of our Christian faith which no logical effort can dissolve but which are, nevertheless, most real. "Ask and ye shall receive." Whoever asketh receiveth. "Whatsoever ye shall ask in prayer, believing, ye shall receive." I stand on this promise and because of this promise I cast away all anguish and sorrow, and I trust that no faithful Christian in this, our city, will lose himself in his own anxieties. United in prayer, let us face the coming months in quiet confidence.

Abraham prayed to God: "If only 10 righteous men be found in the city of Sodom, wilt not thou, O Lord, save the city from destruction?" That means only 10 men who want to serve God and pray to Him. And God said: "I will."

Sodom was a small town; Berlin is a big city. Let us apply it to the larger scale of our city. If there are found in Berlin 10,000 people to pray in these months every day faithfully to their God, asking Him that nothing should happen that would bring new heartbreak to its people, then God will say: "Yes, for the sake of these ten thousand, I will."

Will you be one of these 10,000? Amen.

The President's State of the Union Message

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Walter Lippmann that appeared in the Washington Post and Times Herald on Tuesday, January 13, 1959:

THE PRESIDENT'S MESSAGE

(By Walter Lippmann)

Granted that the President's first message to Congress is bound to be rather general in character, what the President had to say on Friday throws very little light indeed on the state of the Union. He said in effect that we are ceaselessly challenged, and that in meeting this challenge all that we can afford to do, without raising taxes, is all that we need to do.

This is a remarkable coincidence—that we are able to meet so great a challenge without any additional effort and sacrifice during the coming fiscal year, and that in the following year we may be able to relax and to reduce taxes. We are confronted, said Mr. Eisenhower, with a question which is as old as history, whether a government based upon liberty can endure when it is ceaselessly challenged by a dictatorship with growing economic and military power. And what is the answer to this question which is as old as history? It is that we can indeed endure by doing no more than we are doing now.

But just what is the use of asking this tremendous question about whether we can endure if the answer is that we are already doing all that is necessary? The explanation, I am afraid, is that the President is trying to ride two horses at once—to be hard when he talks to Moscow and soft when he talks to our own people. We are to defy the challenge abroad and are to reduce taxes at home.

This does not sound as if the President expected the Nation to take the ceaseless challenge very seriously. For if it is true, as in fact it is, that the Soviet Union is challenging us with an economic and military power of great and growing strength,

how is it conceivable that we can look forward to a tax reduction just before the coming national presidential election? This is the kind of softness and self-indulgence which is as old as history, and again and again in history has meant the ruin of great states.

To be hard on the outside and soft on the inside is to invite trouble. For this is a changing world in which the power and the influence of the challenger are growing. We cannot long hope to succeed in meeting this challenge by a policy of standing pat in all things—on all of our positions abroad and on our efforts at home.

The right position is that of Churchill's when he said "we arm to parley." We should arm more strongly and we should negotiate more readily. We should be not inflexible but we should be tough, remembering that what is inflexible is usually brittle.

Wheat—And the Farm Message

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. ARENDS. Mr. Speaker, wheat is in serious trouble. Surpluses of the bread grain have built up so fast and so high that they now represent the biggest single problem we face in agriculture. And present trends show that the situation would get worse if we continued along the way we have been going.

We are nearly smothered under excess wheat now. The surplus pile will reach really impossible levels in the near future if we fail to take necessary action. Let's take a quick look at the facts—the highlights of the wheat situation.

We made a little progress in whittling down the wheat surplus between 1956 and 1958. Through aggressive and expensive efforts, we managed to cut production temporarily through programs like the soil bank—and to expand exports through special programs under Public Law 480.

Last summer, however, the dam broke. Excellent weather, combined with price support incentives, brought both yields and total production to alltime records. The gains of 2 or 3 years were more than wiped out. Surpluses shot up to new peaks in a hurry.

Total wheat production in 1958 was about 1,450 million bushels. Added to a carryover of 880 million bushels of old wheat on hand last July 1, this gave us a total supply for this marketing year of more than 2,300 million bushels—a record, 14 percent above the previous high.

To see what this means in terms of surplus, let us check our outlets for wheat—the total annual disappearance. Domestic use has been running around 600 million bushels; exports, with the aid of special subsidy programs, around 400 million—or total annual disappearance at about the billion-bushel mark.

And so—unbelievable as it may be—we had enough wheat on hand after last summer's harvest to meet all our domestic and export needs for 2 full years, and more. Put another way, if we did not grow a bushel of wheat this year—1959—we would still have enough to fill all available outlets until the 1960 crop came in. And, in fact, we would have a 300 million bushel carryover to start off that 1960–61 marketing year.

In carrying out mandatory price-support programs, the Government has had to invest tremendous sums in wheat. One and one-quarter billion bushels are being held in inventory or under price-support loan. The investment in this hoard of wheat is $3 billion—well over a third of the total price-support investment.

When the Commodity Credit Corporation takes over 1958-crop loan wheat later this spring, it will be paying $700,000 a day for wheat storage alone.

I said the wheat surplus figures might be almost unbelievable. They are, but unfortunately they represent hard, realistic facts. Action to reverse this blind trend toward catastrophe is past due.

In his farm message, the President has faced up to the wheat crisis. He has done so clearly and constructively, recognizing the basic problems and giving us clear guidelines for alternate courses of action.

Rigid, too-high support prices have obviously been responsible for much of our current trouble. The President wisely calls for adjustments to correct this weakness. One course would be to relate price supports to the average market of recent years. The other would be to provide the same discretion in setting price levels, as a percentage of parity, which now holds for all crops except the half dozen so-called basics. Either course would be a long step toward a sound basis for the wheat program.

Production and marketing controls represent the other major part of the basic wheat program problems. Those we have been trying to use have not worked. The President outlines two possible changes. One would relax controls, giving wheat farmers the freedom to produce and compete for markets, and using the conservation reserve of the soil bank to help cushion the transition. The other would tighten controls and eliminate present loopholes in the operation of the program—at least during an emergency adjustment period.

As the President points out clearly, the tighter control route would mean a degree of regimentation more drastic than Congress has been willing to impose in the past. It would mean lower acreage for wheat producers, more positive production controls, and heavier marketing penalties.

Virtually everyone agrees that we must do something about wheat now. The President has courageously recognized the inevitable. He has outlined alternate choices of action, with the final decisions properly left to the Congress. The action we take can reverse adverse trends and lay the foundation for continuing sound growth of our great wheat industry, or it can permit the already crucial situation to build toward the impossible.

Tariff on Coal to West Germany

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. DENT. Mr. Speaker, the unprecedent decision by West Germany to close its ports to American coal by the imposition of an unrealistic, unreasonable, and uncalled for embargo tariff is only a forerunner of what we can expect from our stupid approach to reciprocal trade agreements.

This comes from so-called gentlemen's agreements to take foreign affairs out of partisan review and criticism.

A person fears even the word of "partisanship" in talking of foreign trade and aid.

The time has come for a hardheaded Yankee businessman approach based upon the economies of the situation.

Compromise and confidence are two way streets. We cannot open our borders to unrestricted foreign imports while our funds restrict and close their borders.

The statement of the John S. Routh of tthe Coal Exporters and Tom Pickett of the National Coal Association tell but a part of the story.

When you get the full story on glass, toys, textiles, rubber goods, and so forth, you may find part of the answer to our chronic unemployment of 4 million American workers.

I attach the following statements from the coal industry.

Hon. JOHN FOSTER DULLES,
Secretary of State,
Washington, D.C.

DEAR MR. SECRETARY: The National Coal Association, whose members produce most of the Nation's commercial bituminous coal, urges the Department of State to protest most vigorously the announced intention of the German Federal Republic to impose a prohibitive tariff of $4.76 per ton on coal. Most of West Germany's coal imports come from the United States.

This arbitrary, unilateral action will effectively deprive the United States of about 60 percent of its largest overseas market for bituminous coal. So onerous is the tariff that its effect will be to hold German imports of U.S. coal to the 3,500,000 tons allowed to enter duty-free.

This is only the latest damage done the coal industry in the field of international relations. In the name of free trade and international friendship, we have seen coal's normal markets on the Atlantic coast submerged by an ever-increasing tide of imported residual fuel oil.

In spite of the heavy damage to the coal industry, our own Government has failed to stem this tide, and I am informed the State Department has had an important voice in this refusal to act. While facing unrestricted foreign competition in this country, the coal industry encounters prohibitive tariffs when it tries to sell its product in West Germany.

West Germany's action is all the more arbitrary because long-term contracts between U.S. exporters and German importers are still effective. No indication was given that such a prohibitive duty of any kind was to be assessed.

The Bonn government's move is disappointing because American taxpayers—the coal industry and its workers not the least of these—have furnished West Germany more than $13 billion in aid since 1948, exclusive of U.S. expenditures in West Germany for military purposes. Much of this money went to rebuild the German coal industry. The hand that fed West Germany has now been bitten.

The effect of this action is also severe on the U.S. railroad industry, which transports coal from mine to tidewater.

The bituminous coal industry is placed in an extremely serious situation. We sincerely hope the Department of State will do its utmost to impress on the Bonn government possible consequences of its action.

Very truly yours,

TOM PICKETT,
Executive Vice President.

NEW YORK, January 27.—John S. Routh, president of the Coal Exporters Association of the United States, Inc., today called the new West German tariff on U.S. coal shipments stupid and prohibitive.

Mr. Routh urged the State Department to oppose enforcement of the new tariff, which was approved Friday by the West German Cabinet and is expected to be debated by Parliament Wednesday.

West Germany set a quota of 3,500,000 tons of American coal which could be imported duty free, with the rest subject to a levy of $4.76 a ton. Since the quota is retroactive to January 1, Mr. Routh said the 3,500,000-ton mark would be reached by May, leaving the rest of the year's shipments subject to a duty of $4.76 per ton which practically equals the price of coal at the American mine.

"In my 40 years in coal exporting I have never heard as much furor as this contemplated action is entailing," Mr. Routh said in a telegram to W. T. M. Beale, Deputy Assistant Secretary of State for Economic Affairs.

The Administration's Labor-Management Proposals

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. AYRES. Mr. Speaker I wish to say a few words in support of the administration's labor-managment proposals. I am particularly happy to see that provision is made in these proposals for the regulation of union trusteeships. In this respect, I think this bill is an improvement over the administration's legislative recommendations in this area last year.

The extensive hearings of the McClellan committee have shown that one of the principal means by which a few unscrupulous labor leaders have grasped and retained unfettered control over local unions is through imposing trusteeships. There are, of course, times when it is necessary for a national or international union to assume such powers, but there is never any excuse for continuing a trusteeship beyond the time necessary to put the local's affairs in order. The administration's bill makes adequate provision for imposing such control under proper circumstances, but it also provides machinery by which it may be terminated if improperly imposed or continued beyond the time actually needed.

I believe the provisions the President asks will go a long way toward eliminating and preventing abuses of power and corruption not only on the part of labor leaders but also by unscrupulous employers. I heartily endorse this bill and hope it will soon be enacted.

The Elkhart Truth Speaks: "Let's Get U.S. Aid to the Disabled"

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. BRADEMAS. Mr. Speaker, I am happy to insert in the RECORD an excellent editorial published this month in the Elkhart Truth, an editorial which criticizes the head-in-the-sand attitude of the leaders of the Republican Party in Indiana.

This responsible and thoughtful editorial points to the burden placed on local property taxpayers because "our State of Indiana refuses to participate in the Federal aid to permanently and totally disabled program.

I cannot understand why the Indiana GOP supports this reckless giveaway of nearly $3 million, much of it the money of Hoosier taxpayers, to the other 48 States.

I commend the Elkhart Truth for opposing this radical Republican spending of our citizens' resources.

We Hoosiers pay Federal taxes. We have a right to share in Federal grants-in-aid programs.

He who feeds the cow has a right to at least some of the milk.

The editorial follows:

[From the Elkhart Truth, Jan. 10, 1959]

LET'S GET U.S. AID TO DISABLED

A count November 1 showed 77 totally and permanently disabled persons receiving aid from the tritownship relief office in Elkhart, which serves Concord, Osolo, and Baugo Townships.

Local property taxpayers have this burden for one reason alone:

Our State of Indiana refuses to participate in the Federal aid to permanently and totally disabled program.

In fiscal 1957, the Federal Government parceled out $106,927,775 to the States for this assistance.

Indiana could have had close to $3 million of this sum, which could have been administered by our county welfare department.

Instead, we got not a thin dime. We paid for the aid in Federal taxes, but other States got all of it.

It seems to us that the State legislature should vote to take this Federal grant.

The legislature should look into the entire problem of grants-in-aid.

Indiana at last report has been participating in only 41 of 64 Federal grant-in-aid programs.

In 1957 Indiana received $59,385,210 under these Federal grants, which was 1.5 percent of the amount paid to all States.

But in the same year, we were paying in 2.36 percent of the Federal revenue.

We are being shortchanged, by our own choice.

Now we share some of the misgivings about Federal aid. We agree that some of these programs well could be turned back to the States.

In fact, a joint action committee appointed by President Eisenhower has already suggested turning back vocational education and waste treatment construction to the State levels.

This seems reasonable. No doubt the prospect of getting Federal grants has actually deterred construction of some sewage-treatment plants in Indiana. Elkhart built its own plant on its own.

We do not agree with the Indiana commission on State tax and financing policy (in its recent report) that pressures should be placed on Congress to return to the States all Federal-aid programs which are not absolutely essential to national security.

Some programs should have national administration, and highways are a prime example.

But in any case, we see no immediate prospect at all of a mass abolition of Federal-aid programs.

On the contrary—judging by the election results in November—there will be heavy pressures for more aid programs.

Therefore Indiana should carefully scan the existing programs and decide which have merit and which do not. If an aid program can be better handled at the local level, our Congressmen should fight for legislation to do this.

But so long as a Federal grant-in-aid program exists, Indiana should get its share. We should stop cutting off our own noses.

We should take what is coming to us—both as a matter of right and to take some of the burden from local taxation, as in the case of the permanently and totally disabled category.

Another Berlin at Panama?

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of Tuesday, January 13, 1959, as well as a news story from the Washington Post of Thursday, January 15, 1959, regarding the announced intention of Panama to extend its territorial waters from 3 miles to a total of 12 miles:

[From the Washington (D.C.) Daily News, Jan. 13, 1959]

A CLOSER BERLIN?

Is another Berlin about to be created in the Western Hemisphere?

That appears to be the prospect if the Republic of Panama goes through with its already enacted law for extending territorial limits 12 miles at sea on either side of the Isthmus.

This means the United States-owned Panama Canal would be boxed in at both ends over an area extending 12 miles at sea. Technically, it means Panama would have the right to control shipping crossing this stretch while approaching or leaving the canal.

In effect, this vital and strategic waterway would be completely surrounded by the Republic of Panama, just as West Berlin is cut off and landlocked, subject to the whims or mood of any changing government.

For some time there have been reports of Communist encouragement of a long-range plan to get control of the Panama Canal away from the United States. So-called internationalization of the canal has been persistently pressed, along with the growth of nationalism in Panama. It is a familiar pattern.

Was the United States caught by surprise when this Panama territorial-limit law went through the National Assembly last month and promptly was signed by the Panamanian President? It would appear so.

In any case, we are acting now—after the fact has been accomplished. The State Department has asked Panama to reconsider its action, pending a study of the whole question. And we have notified Panama we do not recognize the new law. The U.S.-Panama Treaty of 1903 specifically guarantees free and unlimited access to the canal. Few nations have declared a 12-mile territorial limit on their waters, as compared with the usually recognized 3 miles. Interestingly, the 12-mile nations include the Soviet Union, Red China, Communist Romania and Nasser's Egypt.

It's something we'd better watch closely from now on.

[From the Washington Post and Times Herald, Jan. 15, 1959]

PANAMA STANDS FIRM ON NEW 12-MILE LIMITS

PANAMA, January 14.—The national assembly unanimously rejected last night a U.S. request for reconsideration of its laws extending Panama's territorial waters. The extension to 12 miles boxes in the Panama Canal entrances.

An assembly resolution asked friendly nations to support the extension from the previous 3-mile limit. The law passed last month promised free passage to innocent shipping.

During a debate on the U.S. request, former Foreign Minister Aquilino Boyd called for Panama to receive half of the gross revenue from the canal, which is operated by the United States under long-term treaty.

Boyd asserted that the United States makes $100 million from the canal while paying Panama only $1,900,000 a year. He said Panama was not seeking a voice in canal administration.

The Panama Canal Co. reported that in the year ended last July 1 it collected nearly $43 million in tolls and made a net profit of $2,656,000. The United States pays Panama $1,930,000 a year for use of the 10-mile-wide canal strip, which includes 3 miles of the water off each end.

Other assemblymen criticized U.S. Representative DANIEL FLOOD, Democrat of Pennsylvania, who touched off the debate by telling Congress the territorial waters extension created another Berlin.

Our Federal Timber Sales Program Needs a New Goal

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1959

Mr. PORTER. Mr. Speaker, our Federal forest resources constitute a tremendous national asset. Our timber sale policies are of great importance in realizing the greatest return from this asset. Robert E. Wolf, forest consultant, at the request of Senator JAMES E. MURRAY, upon the suggestion of Senator RICHARD NEUBERGER, made a personal study of these policies last fall. Under a previous consent I am including in the RECORD at this point the summary of his report and the conclusions and recommendations. The report is entitled "Review of National Forest Timber Sales in Three Western Regions," and includes a memorandum of the chairman to members of the Senate Committee on Interior and Insular Affairs, together with the staff study by Mr. Wolf.

Mr. Wolf is highly competent. His findings and recommendations are worthy of close attention by Members of Congress.

SUMMARY

In order to view in perspective the Forest Service timber-sale program it is well at the outset to examine briefly the changes that have taken place over the years.

This table illustrates the growth of the national forest timber-sale business.

TIMBER SOLD

Fiscal year	Region 1		Region 5		Region 6		All regions	
	Volume (billion board feet)	Dollars (millions)	Volume (billion board feet)	Dollars (millions)	Volume (billion board feet)	Dollars (millions)	Volume (billion board feet)	Dollars (millions)
1920	0.15	0.4	0.35	0.9	0.24	0.4	1.26	2.9
1925	.10	.3	.16	.4	.68	1.4	1.32	3.3
1930	.08	.3	.16	.4	1.72	5.6	2.77	8.6
1935	.11	.4	.04	.7	.71	.1	.67	1.6
1940	.20	.7	.17	.3	.69	1.6	1.78	4.7
1945	.25	.7	.19	.7	.96	4.7	2.39	10.4
1950	.33	1.9	.34	3.9	1.38	14.0	3.43	33.0
1955	1.11	6.9	1.11	16.3	2.39	50.9	[1] 9.63	[1] 100.4
1956	.64	7.8	1.19	21.5	2.45	69.6	6.84	129.3
1957	.68	6.5	.81	14.1	3.00	65.9	6.53	111.1
1958	.90	5.8	1.03	11.9	3.92	62.8	[2] 13.29	[2] 112.6

TIMBER CUT

1920	0.13	0.3	0.15	0.3	0.25	0.4	0.81	1.8
1925	.13	.5	.21	.6	.30	.7	1.02	2.8
1930	.13	.5	.46	1.4	.51	1.3	1.65	4.8
1935	.07	.2	.12	.3	.23	.6	.75	1.9
1940	.14	.5	.30	.6	.67	1.8	1.74	4.8
1945	.30	.9	.46	1.3	1.28	5.0	3.14	13.0
1950	.30	1.7	.41	4.0	1.50	14.6	3.50	30.7
1955	.86	4.9	.84	10.0	2.63	37.3	6.33	70.8
1956	.94	7.1	1.06	18.0	2.63	49.4	6.91	97.6
1957	.91	8.4	.97	17.5	2.75	64.7	6.97	115.6
1958	.77	6.3	.95	11.8	2.62	54.4	6.42	94.2

[1] Includes a long-term sale in Alaska: Volume 3 billion board feet; value, $6.2 million.
[2] Includes a long-term sale in Alaska: Volume 5.25 billion board feet; value, $10.7 million.

Except for the depression years there has been a generally steady growth in the volume of timber sold and cut. Some of the unusual increases in timber sold in various years resulted from large long-term sales. Timber cut has shown a steadier growth better reflecting the real availability of timber sold. The phenomenal aspect is the tremendous increase in the value of timber cut which was $2.20 per thousand board feet in 1920 and stayed at about this level until 1940 when it rapidly climbed to $8.50 per thousand board feet by 1950 then to $14.50 per thousand board feet by 1958. Timber cut climbed from under 1 billion board feet in 1920 to 3.5 billion board feet by 1950. Then up to almost 7 billion board feet by 1958.

With such a great growth both in volume and value in recent years it is evident that national forest timber is increasing in importance. It is neither surprising that there have been problems nor that with the increase in business some of these problems have become more difficult while others have been solved.

This report does not deal with the problems that have been successfully solved nor does it dwell upon accomplishments. The record, and the generally high regard which the public have for the Forest Service make this unnecessary. Rather it reviews the one particular segment of the Forest Service program which has accounted for 86 percent of the $1 billion in cash income which the national forests have deposited in the Treasury since 1905. The review is an effort to identify the steps that may be helpful to making the record better in the years that lie ahead.

The review was made at this time because groups in the forest products industry alleged that the Forest Service was not adhering to published timber sale announcements furnished the industry and that there was a substantial gap between timber sales and allowable cuts. Additionally, groups indicated concern about other elements of the timber-sale program such as sale size, opportunities to salvage timber, access roads, and right-of-way needs.

The field review was conducted to assess both the validity and dimensions of complaints and to determine their cause.

The review showed the following record for the three regions studied in detail:

Financed program—Regional office quotas

[Million board feet]

	Timber to sell, fiscal years—					Timber to cut, fiscal years—				
	1955	1956	1957	1958	Total	1955	1956	1957	1958	Total
Region 1	-------	1,045.0	920.0	1,245.0	3,230.0	-------	920.0	1,000.0	950.0	2,870.0
Region 5	1,190.0	1,176.0	1,595.0	1,452.0	5,413.0	822.0	905.0	1,231.0	1,189.0	4,147.0
Region 6	2,471.1	2,869.5	3,188.5	[1] 4,150.0	12,379.1	2,590.7	2,855.1	3,231.3	[1] 2,995.0	11,672.1

[1] Based on revised quota for year. Exhibit 5, p. 124, gives revised quotas. The table on p. 34 and exhibit 10 are computed on the original quotas.

Timber cut and sold

[Million board feet]

	Timber sold, fiscal years					Timber cut, fiscal years				
	1955	1956	1957	1958	Total	1955	1956	1957	1958	Total
Region 1	1,109.0	636.8	679.4	901.0	2,216.9	865.0	944.4	910.3	773.0	2,627.7
Region 5	1,099.0	1,178.0	800.0	995.0	4,072.0	820.0	1,043.0	958.0	932.0	3,753.0
Region 6	2,392.0	2,446.0	2,979.0	3,919.0	11,753.0	2,633.0	2,633.0	2,775.0	2,616.0	10,656.3

Percentage of financed program accomplished

	Timber sold, fiscal year					Timber cut, fiscal year				
	1955	1956	1957	1958	Total	1955	1956	1957	1958	Total
Region 1	----	61	74	71	69	----	103	91	81	92
Region 5	92	100	80	69	78	100	115	78	78	90
Region 6	97	85	93	102	[1] 94	102	92	86	[1] 84	91

[1] These percentages are based on revised goals. Figures originally supplied by the region were on a different base. Revisions were made only in total figure.

The above tables show the volume of timber that the regional offices estimated would be sold or cut with funds provided and the actual record expressed as a percentage each year when the funds are allotted the Washington office first sets quotas. Regions 1 and 6 usually set forest quotas which in sum were for about the same total volume as the Washington quota. Region 5, however, set selling quotas which for the 4-year period show a performance record of 75 percent against one of 91 percent when measured against the Washington office quota. Region 5's optimism on accomplishments has not been matched by its sales record.

The record on timber sold is well below financed levels except for region 6. While regions 1 and 6 have shown improvement, region 5 has not. The industry cut about 90 percent of the financed cut in each region but the Forest Service did not offer as large a percentage of sales as they were financed to handle. On a quantity basis the volume sold has exceeded the industry's removal of timber except in region 1 where the reverse is true.

The record based on financed plans is reasonably good. It masks the fact that if the industry had cut the full amount of timber the Forest Service estimated it would cut there would have been a further drain on funds and less money would have been available for sale preparation. The recent fair sales record in regions 1 and 5 and the good record in region 6 would have fallen to a less satisfactory level.

In region 6 when funds were reapportioned sales goals were revised upward and cutting goals downward in fiscal year 1958. This had the effect of reducing sales performance percentages while raising cutting performance percentages. However, the region was also financed to prepare for sale an additional 800 million board feet for future years. Immediate sales goals were only 94 percent met and cutting was 91 percent of the revised goal.

Sales goals for fiscal year 1959 are 3,802.9 million board feet compared to 4,150 million for 1958, while cut goals have rise in 1959 to 3,534.5 million board feet compared to 2,995 million board feet in 1958.

Revised goals for 1958 were not met and the position of the 800 million board feet in additional sales preparation is not readily ascertainable. This backlog of patrially prepared sales should be helpful in meeting 1959 sales goals.

In addition, measured against available data on announced plan accomplishments, region 6 sold only 79 percent and region 1 49 percent. It was the failure to adhere to timber sales plans announced on the various national forests, plus an inability to offer sales at full allowable cut level, which are the focal points of industry complaints.

The Forest Service did announce annual sales plans for volume substantially above these subsequently made. Except in region 1 (Montana and north Idaho) the announced plans have been for volumes well above the level of sales activity financing. The closer to the forest, the more optimistic forest officers are about the timber sales volume that can be processed. To some extent this represents an effort to respond to local demands for timber and the hope of obtaining a larger share of each region's allotment to meet this demand. It also stems from a realization that not all scheduled sales will materialize due to technical problems.

Among the major obstacles found to marketing announced national-forest timber sales were cancellations which occurred because needed rights-of-way and cost-sharing agreements had not been obtained from intermingled landowners who generally are members of the forest products industry. Another obstacle is the cost of needed mainline roads required. When timber purchasers are required to build the needed road, particularly in timber stands with marginal value species salability is diminished. Financing for timber sales has not been adequate to build a backlog of prepared sale so that varying market conditions can be met. Currently when an obstacle to planned sale cannot be overcome a new sale must be layed out if program goals are to be met.

Forest Service timber-sales programs rest on decade revised timber-management plans which describe overall management goals on the forest, annually revised 5-year cutting budgets which attempt to define and locate general sale areas, and an annual timber business report which combines a budget request for the fiscal year 2 years off with a request for an allotment from the next year's budget.

There is no common anniversary date for timber-management plans thus they provide only a broad guide for management. The 5-year cutting budgets do not have a common anniversary date either but they can be coordinated, while the annual timber business reports afford a current device for fiscal coordination. Until recently these reports showed timber to be cut but did not show timber to be sold. This has been a basic weakness in operations planning and budget presentations.

The volume and rate of timber cutting is largely affected by the economic situation of the industry, the extent to which alternate log supplies are used, the size of contracts, roads needed to permit cutting and the operating pattern of customers. It is the element which the Forest Service has made the least effort to consciously direct but it has been the biggest element used to relate fund requirements to program goals.

The Forest Service timber-sale program really consists of three interdependent parts:

1. The presale activity which leads up to programing sales for detailed preparation work;

2. The actual layout of the timber for sale and its advertisement; and

3. The supervision of sales under contract.

In the timber-sale business, the future is governed by the present, but the present is governed by the past. An effective timber-sale program requires that the three elements move forward in harmony.

The volume under contract creates an inescapable workload which influences the amount of presale preparation and actual sale layout work can be accomplished. The sales activity determines the workload in the future and the size and conditions of sales made coupled with the desires of purchasers influences when the timber will be cut.

There is no publically set forth long-range program which the Congress or the public can examine to determine the goals that the Department of Agriculture has for national forest timber management. This review of current problems in the national forest timber-sale program must be considered against this background because the operational and budgetary difficulties that presently exist stem from the lack of a clear goal with quantitative accomplishments related to time.

Finally the Forest Service annual plans and accomplishments reports do not presently give a complete picture of the operational problems or a quantitative assessment of situations requiring policy consideration.

CONCLUSIONS AND RECOMMENDATIONS

The problems found in this study are cumulative and growing because the basic tools for their solution have not been fully utilized. The study made leads to these conclusions and recommendations:

1. National plan needed

In the public mind the Forest Service timber-sale program has as its only announced goal reaching something called the "full allowable cut" at the earliest practical date. Because of the rapidly growing importance of the national forests, as a timber source, for recreation and other uses there is an urgent need for definite management goals, fixed to a point in time, explained as to objective, and relating operating and investment requirements to benefits. The Department of Agriculture has just completed publication of Timber Resources for America's Future, the most complete analysis of the Nation's timber resources that has been made. This review includes forecasts of timber supply and demand both for the years 1975 and 2000.

A national plan should be made setting forth forest-management goals for the future which adequately describes:

(a) Timber-harvesting goals;

(b) Reforestation and silvicultural work needed to attain optimum forest production;

(c) Recreation, watershed protection, grazing goals, and land-use adjustments needed to harmonize multiple uses;

(d) Estimates of the role the national forest will play in the Nation's economy;

(e) Road and servicing facilities needed for management and operation;

(f) Cost estimates to reach stated goals within the first 5-year period, as well as overall costs.

The overall program should be utilized to formulate short-term goals and as the background for budget requests. Special attention should be given to developing presentations which evaluate how program goals are being met.

2. Lack of access held up sales

The major factor holding up planned timber sales in the period studied was lack of rights-of-way. This includes obtaining bare-land rights-of-way in order to construct a Forest Service road, purchase of the right to use an existing road, and agreements for cooperative construction of new roads serving two or more ownerships. Information furnished in region 6 showed that over 1 billion board-feet in unmade or delayed planned sales was due to these problems. In region 1 over 500 million board-feet in sales delays stemmed from the same source. In addition, there are substantial volumes ready to put into sales that never enter plans because of unresolved right-of-way difficulties. While on the one hand, it is a fact that the Forest Service has not been financed to sell all the timber that theoretically could be sold, on the other, it is clear that the Service, under present policies, has expended considerable time in fruitless negotiations where it is unlikely that agreements will be forthcoming.

Policies have not been set forth and backed up with funds so as to enable the Service to utilize the full range of possibilities in negotiations. Thus, the United States is at a disadvantage in negotiating both with parties who proceed in good faith, as well as with those who do not.

Progress has been made under the present ground rules but the true measure is the relation of this cause of delay to other causes and its effect on the sale program. Timber management is not possible without permanent access arrangements.

The Department of Agriculture should set forth a right-of-way policy and an active adequately financed program geared to solving problems in an orderly, firm, and fair manner.

3. Inadequate records

Forest Service records on timber sales are not sufficient to reveal significant and important facts on a timely basis for its $100 million annual business. The Forest Service has emphasized "timber cut" as an expression of timber-sales accomplishments. This measure is incomplete and misleading because it fails to properly describe accomplishments. The Service should clearly show the entire program and the interrelationships that exist. The minimum elements of the sale program that should be included are:

(a) The volume of timber in the various stages of sale preparation.

(b) Sales planned for the coming year with appropriate information on sale-size components, the cost of accessory timber, purchaser roads, and the anticipated rate at which the sales will actually be loggable.

(c) The volume of timber under contract and the rate at which it will be logged in the forthcoming year.

These key records, adequately briefed and highlighted for use by the Chief, the Department, the Bureau of the Budget, and the Congress, should form the nucleus of the budget justification for timber sales, and would be the basic tool for timber-sale policy and program decisions.,

Adequate facts would then be available to aid in securing necessary funds to maintain a suitable backlog of work in the various stages of preparation, to maintain an even flow of sales from preparation into production, to gear sales to meeting the requirements of prospective customers, to assuring that sales preparation and administration work is of a high quality and that increases in timber cutting can be met without later jeopardizing other elements of the timber-sale job.

Red Berlin Threat May Revise U.S. Military Policy

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Los Angeles Times of Tuesday, January 13, 1959:

RED BERLIN THREAT MAY REVISE U.S. MILITARY POLICY

(By Waldo Drake)

PARIS, January 12.—The Soviet threat to oust the West from Berlin comes at a critical moment, when the United States is at the threshold of momentous decisions which may revise the basic strategy of our national defense.

The Army and the Navy have consistently sought adoption of a policy which would at once safeguard the Nation against surprise nuclear devastation and prepare its Armed Forces for immediate action against limited warfare, or armed encroachment, anywhere in the world. The Air Force has, in effect, opposed this policy with a program that has progressively reserved a larger and larger share of military appropriations for that service. Under the Eisenhower level budget growing Air Force appropriations have simply meant less and less for other defense activities of all sorts.

A revised strategy following the historic recommendations of the Army, Navy, and Marine Corps and a growing body of disinterested but informed opinion would result in the defense budget's being reapportioned so that all three services could be welded into an instrument of team policy, effective either for unlimited war or to resist Communist nibbling operations around the periphery of the Iron Curtain.

Advocates of revision contend that current American defense policy—based on spiraling number of intercontinental bombers and eventual ballistic missiles as a strategic deterrent—is wrong. Why? Because the Soviets' weapons achievements already have thrown the mutual destruction stalemate out of balance and have made SAC's air-breathing nuclear delivery systems obsolete; because the newly projected bombers-missiles warning net would be too fabulously expensive for the Nation to bear; and because fiscal neglect of other areas of defense effort leaves the Russians and the Communist satellites free to pursue nibbling operations (such as Korea, Indochina, and more subtle economic warfare) throughout the world.

In bare essentials, the new plan proposes that:

1. The Strategic Air Command's role, as the massive deterrent against Soviet nuclear attack, would be share with the Navy's new missile-firing atomic submarines, which will be armed with the solid-fueled Polaris intermediate range ballistic missile. The term "massive deterrent" which has been the Air Force's license to steal in the past would become a tailored deterrent with dimensions. Its objective would be to put enough of the Soviet population and governmental paraphernalia at risk to deter. Many studies from various sources agree that this could be done at a fraction of the expense and effort now programed.

A program of this sort would recognize that in the area of nuclear stalemate deterrence must have dimensions; that national political-military problems cannot be solved simply by spending more and more to achieve damage beyond significant dimensions or to provide for excessive losses of vulnerable delivery systems. A deterrent effort with dimensions demonstrates cognizance of national objectives, i.e., "to maintain U.S. institutions and ideals" and does not permit unbridled pursuit of an objective which looks more and more like bluff and bravado and less and less like a balanced, rational, and stable program.

2. With the resultant savings in defense funds and manpower the Army, Navy, Air Force, and Marine Corps would be rebuilt in to a highly mobile integrated team, ever ready for all contingencies: First, the deterrence of the big war of fantastic mutual nuclear destruction; second, deterrence or capability to fight the so-called compatible or little war against Communist encroachments; and finally a capability for the "broken-backed war" of survival which would follow the nuclear devastation of Eurasia and North America, if deterrent forces perform their retaliatory role.

Studies indicate that less than 20 percent of the annual defense budget would provide the "tailored deterrent," convincing Moscow that nuclear attack on the United States, or her allies, could trigger unacceptable devastation in the Soviet Union and Communist China.

The remaining defense budget would be divided between the several armed services for development of a balanced team, ready to defend American interests anywhere and in a variety of suitable ways.

FIRE BRIGADES

The Army, Marine Corps, and Air Force, for example, would have specially equipped battle groups, ready to move into immediate action. The U.S. fleet would be ready to support and sustain these fire brigades and to bring the necessary sea-tail reinforcement of airborne movements.

The newly defined deterrent of the defense team would call for a sizable contribution from Polaris submarines. Four missile-firing submarines are now being built; five others have been authorized. A program realizing about 50 boats by 1966 is within construction capabilities and compatible with balanced funding. Polaris, which will be operational in 1960, will have a range of some 1,500 nautical miles. Although designed to permit launching from deeply submerged submarines, Polaris also could be employed by surface ships. More than half of the Polaris submarines could be kept constantly at sea around the Sino-Soviet perimeter, ready to attack from submerged positions unknown to the enemy.

FOURTEEN CARRIERS PROPOSED

The Navy also proposes a modern fleet of 14 large aircraft carriers in which 9 World War II ships are being replaced by the 6 new Saratoga-type carriers and eventually by atomic-powered carriers. The first atomic carrier will be commissioned in 1961. These big carriers, with a mobility ballistic missiles cannot solve, have long-range attack bombers which are equally effective for a variety of limited tactical operations or for delivering high-yield nuclear weapons. They afford, in short, ideal tools for limited war with an economical and significant bonus contribution to deterrence or the broken-back war.

We can anticipate that on March 1 the Congress will be asked to approve a defense budget of nearly $41 billion for the 1960 fiscal year. Of this total the Air Force hopes to get $18 billion, leaving less than $24 billion to be divided among the Army, Navy, and Marines.

GOAL OF SAC

These figures conceal, however, the ambitions of the Strategic Air Command to begin construction of an imaginative, world-encircling readiness net: of aircraft and missile bases, radar screens (land, air, and

seaborne), and early warning and aircraft control systems. SAC has not divulged cost of this scheme, but has proposed a massive increase in manpower, which could only be obtained by denying support of a balanced and versatile concept. This denial of support is not bad in itself if justified; but such justification does not exist. The division represents indecision and inertia, a perpetuation of a trend to delegate real solution of our military problems to an almost paranoiac belief in the efficacy of massive retaliation—a trend whose faint basis in logic collapsed completely when atomic stalemate was reached.

America's strategic plans up to now have been a hodgepodge of compromise. Issues have not been clearly resolved but rather submerged and censored. We engage in an atomic arms race that lacks the logic of earlier ones; the atomic forces do not engage each other and relate to each other only in their ability to do significant damage. We can program atomic capability beyond requirements whenever we resolve contending concepts by compromise and fail to define the dimensions of deterrence.

PERIOD OF STALEMATE

Compromise has enveigled the United States to pass from a period where we alone were a nuclear power into a period of nuclear stalemate without a corresponding revision of our concept of the utility of atomic weapons as an instrument of national policy. We have not faced issues and have, in essence, supported a will-of-the-wisp promising security if we unquestioningly put our dollar on massive retaliation.

This sustained confusion in the Pentagon is partly responsible for the unwillingness of our European partners in the Atlantic Alliance to provide their shares in the common defense.

Britain's resultant dilemma over her own defense is described by the London weekly Observer, which says:

"Should we give the (nuclear) deterrent top priority and spend what is left on conventional forces? Or should we do exactly the opposite, concentrate on the conventional and put the remainder into nuclear development?"

WHITE PAPER CITED

"Some still accept the views (to concentrate on nuclear weapons) put forward in the 1957 white paper. Others believe that the deterrent theory is a dangerous myth and that if we continue with it we shall become perilously enfeebled. We shall have neither conventional forces nor nuclear weapons mighty enough to frighten off an aggressor."

On the other side of the coin, the Soviet Union is far advanced with a fourfold military program, viz: a fleet of 500 submarines which are likely, soon to include atomic-powered boats which could devastate the United States without warning by concerted missile attack from submerged positions around our coasts; a nuclear-equipped, highly mobile team of armies and tactical air forces in Europe, which holds an overwhelming superiority against anything the West could assemble today to defend either Europe or the Middle East; a diversified ballistic missile system, from short-range weapons already poised along the Iron Curtain to attack Britain and the great cities of Western Europe to intercontinental missiles intended for the United States, and a multiple screen of ground-to-air missiles and interceptor aircraft designed to prevent high altitude bomber (B–52) attacks on Russia's strategic targets.

SOVIET SMOKESCREEN

The Russians have developed this whole complex for modern war behind a propaganda smokescreen that they were building a powerful fleet of long-range jet bombers for nuclear attack on America. Instead, they were developing ballistic missiles, giving their armies a devastating punch, and assembling the greatest submarine menace in history. In short, we face a Soviet bloc capable and preparing for warfare of all sorts while we see larger and larger portions of our defense budget assigned to forces for the massive retaliation of the broken-back war.

A main reason why the mounting costs of our national defense threaten to bankrupt the Nation is because the American people have been bamboozled into spending too much of their money for costly weapons which are useful only for the nuclear holocaust.

This broken-back war is more likely to happen if we continue to concentrate our resources on an obsolete massive retaliation strategy, whose weapons would be useless against the limited wars and armed encroachments which the Soviet bloc is more likely to attempt throughout the world.

COLD WAR DEFEAT

The United States, consequently, is being defeated in the cold war because we have not acted decisively in determining what is required to (1) deter big war; (2) to deter little war; or (3) to fight little war. We have, for too long, accepted a policy of massive retaliation as a panacea from a threat of higher taxes, more rigorous draft provisions and reality, itself. We are today, inadequately prepared for limited warfare or to counter the Soviet's economic and psychological campaigns, as in the Middle East, Africa, and Latin America.

A new brush fire war, therefore, might force the United States, largely in frustration, to use tactical atomic weapons to offset overwhelming strength of enemy forces. This could set off the holocaust.

Address by Alvin G. Waggoner, Executive Assistant to Director of Guided Missiles, During Commissioning Ceremonies of "Observation Island," Norfolk Naval Shipyard, Portsmouth, Va., December 5, 1958

EXTENSION OF REMARKS
OF
HON. PORTER HARDY, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. HARDY. Mr. Speaker, on December 5, a new ship, the U.S.S. *Observation Island*, was commissioned at the Norfolk Naval Shipyard at Portsmouth, which is in my district. This ship is designed as a test ship for the Polaris missile.

This new type ship represents a major milestone in the development of the Polaris weapon system which is so vital to our national deterrent posture. With this ship the Navy will be able to test its new Polaris missiles in a seaborne environment at an early date, thus advancing and accelerating the availability of this weapon system. The commissioning of this ship is of great significance because of the part it will play in the development of missiles, which may bring about a change in our concept of warfare. Mr. A. G. Waggoner, executive secretary of the Office of the Secretary of Defense Ballistic Missiles Committee, was the principal speaker on this occasion. I am inserting Mr. Waggoner's address in the RECORD and commend its reading to the Members of Congress.

The commissioning of this fine ship today is, indeed, a memorable occasion for it is a most important step in giving our U.S. Navy a new capability, an intermediate range ballistic missile capability.

The mission of the U.S.S. *Observation Island* is to serve as a mobile test ship in the Polaris fleet ballistic missile program. She will be, however, the first ship in history configured to fire a weapon that will have a range of 1,500 miles. She is the first ship to mount weapons that can travel at speeds of 10,000 miles per hour. These facts make this a truly historic occasion.

For centuries, control of the seas meant control of the surface of those seas. History has seen the fleets of Carthage, of Rome, of Britain's Admiral Nelson, and of our own John Paul Jones, David Farragut, and George Dewey destroy enemy seapower by surface action. World War I introduced us to the menace of underwater warfare, the Navy's second medium or dimension of attack. Then came World War II with its decisive battles of Midway and of the Coral Sea in which enemies never even saw each others' fleets, but destruction was rained from the clouds through the medium of Naval Air Forces. That was the third dimension of naval weaponry.

Today we hoist the flag over the latest, and possibly the most amazing combination, the first ship to mount intermediate range ballistic missiles.

In wishing this fine ship, the U.S.S. *Observation Island*, a successful and fruitful existence of service to the Navy and the Nation, we must wish, quite paradoxically, that the Polaris system which she will assist may never have to be fired in anger.

Let's take a look at what this ship stands for and why she is being commissioned today.

About 3 years ago it became evident that a new instrument of delivery was being fashioned in our country and on the other side of the Iron Curtain to carry destructive warheads faster, more certainly, and farther than could be envisioned a few years ago. This instrument, of course, was the ballistic missile which could span oceans in minutes and reach out to targets hundreds and even thousands of miles distant.

Now, a ballistic missile is unique in that it is steered electronically or guided for only a very short part of its flight. Its guidance mechanisms place the missile on the exact path that will take it to its target and then say, in effect, "Now, Old Fellow, you're on your own." The last rocket stage and the guidance sections then detach themselves and drop back to earth, their tasks accomplished. This happens beyond the influences of the earth's atmosphere after the various rocket stages have built up to required speed in the first minute or so of flight.

From this point on the ballistic missile is merely a projectile winging its way to a distant target, out of reach of any control of any kind of either friend or foe. The only way to intercept it would be to knock it literally to bits by hitting it with another missile, and since the speed of ballistic missiles reaches 10,000 and even 15,000 miles per hour, to do this successfully promises to be quite a task.

We are assembled on the deck of a ship configured to test-fire the Polaris ballistic missile, the Navy's part in the overall longer range ballistic missile program about which you have read and heard so much.

Let me tell you a bit about Polaris. It will be an intermediate range ballistic missile with a range of some 1,500 miles. In speed attained and distance traveled Polaris will be exceeded only by the so-called intercontinental ballistic missiles, such as Atlas

and Titan. However, Polaris will have much in common with these long-range giants. First, it can be fired from our own soil—for every ship flying our flag is American soil—and hit targets far inland. The launching platforms of Polaris will be American ships using the great international highways of the open sea.

Polaris is the first, and only, ballistic missile designed to be launched from a moving, seagoing platform. Not only will this platform be located on a ship at sea, it will be located on a ship operating deep beneath the surface of the sea—a submerged submarine. This brings together in a new partnership two of the most revolutionary developments in military hardware since the close of World War II—a ballistic missile and the nuclear-powered submarine.

Now, what promise does this combination offer? First, distance covered by the missile. A Polaris missile will travel as far as from here to Denver in a single leap. Then, speed. This flight will take about 15 minutes. It will reach a speed of 10,000 miles per hour. In actual operation the missile flight will begin in the silent black ocean depths, sweep briefly through the atmosphere in which we have our being, proceed into the equally black silence of space, passing through our atmosphere again just before reaching its target.

Now, the performance of the nuclear submarine which will carry the Polaris weapon. Here is a ship that not only breaks, but shatters all previous submarine records. It can travel many times around the earth without refueling. It can travel submerged for weeks or even months at a time. It can cross major oceans at full speed without ever surfacing. It can travel faster than all but the fastest surface vessels. It might interest you to know that the crews in these submarines strap themselves into their seats, as in an airplane, so swift are the sub's motions in changing course at full speed. It can navigate under water for days at a time, even under thick arctic ice. These are not theories or prophecies. All of these submarine accomplishments are realities.

So here we have, combined in a single weapons system, the speed and ranges possible of an intermediate range ballistic missile and the vast potential of concealment offered by the millions of cubic miles of open ocean, the great watery blanket that covers some three quarters of our globe. With Polaris-armed submarines, our Navy can patrol the seas well within range of enemy targets for months at a stretch, silently, unseen, constantly on the move and ready to unleash its full striking power.

The *Observation Island*, the fine ship on whose decks this ceremony is taking place, will play a most important and even vital role carrying this daring concept of weaponry from the drawing boards of the technicians to operational reality. It will permit the Navy to make essential tests of the weapons system in virtually all its phases while the Polaris submarines are being built. It will permit a sensible step-by-step testing program to iron out all the "bugs", as we engineers call them of a wholly new mechanism. Since Polaris will contain some two hundred thousand separate parts, some of extreme complexity and exactness, quite an insect colony of such "bugs" may have to be explored and conquered.

We have all followed the tests of various missile projects at Cape Canaveral, cheered the successes and groaned at the failures, almost like spectators at a ball game. We know that in rocketry, as in the development stages of any technology, full accomplishment does not come in one step.

Though strictly a "test ship", the *Observation Island* will perform several most important missions. It will put together for the first time all elements of the Polaris fleet ballistic missile system in a seagoing ship and then test them in the ocean environment. In so doing, it will perform a major service.

The second big job which this ship is designed to carry out is that of training crews for Polaris missile submarines. For, like flying an aircraft missile handling and launching is an art which cannot be learned overnight. It takes practice and patience. It means learning every step of the job, and doing it over and over again. That is where this ship will repay the investment of her conversion many times over.

Now, finally, where does Polaris fit into the overall scheme of the security of our country?

Fundamentally, we have two big military jobs. One is to take care of the crises, the brush fires, the threats to peace that seem to have become the milestones of the cold war age. Suez, Indochina, Lebanon, Quemoy, Berlin, wherever trouble spots develop, it is our job to see that they don't grow into major wars. Then there was Korea, that was the time the Communist leadership wanted to find out whether we would stand and defend ourselves. They found out.

The second job is to retain sufficient military power in being to swiftly render an aggressor impotent, no matter how completely he may try to wipe us out before we can strike back. That's where Polaris comes in as a major factor in impressing the Communist leadership that the terms "aggression" and "suicide" are synonymous.

The Polaris-armed submarine, lurking beneath the surface in a position unseen and unknown, can be assured of surviving an attack on this country and thus can be a deliberate instrument of policy rather than an automatic weapon of revenge. These submarines, strategically deployed, could destroy many major centers within minutes.

No one can "zero in" these submarines for destruction in advance.

Furthermore and importantly, this weapon will force a potential enemy to divide further his attention to our total retaliatory forces.

I sincerely and firmly believe that the Polaris program is a major force for peace. I believe that we can equally sincerely dedicate the fine ship on whose deck we are gathered to the mission of peace, not war. For in these times peace must be bolstered by the readiness and ability to apply force decisively. All of us wish it were otherwise, but merely wishing won't make it so.

The *Observation Island* begins its mission today. It is a mission of technological testing. It is a mission of training. It is a mission which will pave the way for achieving one of the most effective retaliatory instruments of destruction ever conceived. Finally, it is a mission of buying time until reason and statesmanship can become the dominent factor in keeping peace in the world.

Of one thing, however, we can be certain. If we are not ready, if we do not possess destructive weapons which can survive enemy attacks, we lay ourselves open to aggression, and to aggression just as soon as the opposing leadership can be sure that the price of such action is not their own national suicide.

The *Observation Island* has a job to do in bringing the fleet ballistic missile system to a stage of readiness that assists in deterring any potential aggressor, no matter how power crazed and reckless.

We wish the captain and his crew the best of luck in placing their ship in the service of peace. We wish the test crews, and later the crews in training, all success in their endeavors. Most of all, we wish that all Polaris missiles ever launched will be test missiles, and that never will one be sent on its way to destroy human life.

God bless the mission of the *Observation Island*. May it be a major factor in driving the specter of war from our civilization; may it prove to be a milestone in our path to world peace.

Taking a Look at Spending

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. SMITH of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call the following editorial from the Glendale News-Press to the attention of the membership. It is entitled "Taking a Look at Spending—Lawmakers Should Study Topic." I think all will find it of interest:

[From the Glendale News-Press, Jan. 19, 1959]

TAKING A LOOK AT SPENDING—LAWMAKERS SHOULD STUDY TOPIC

The first duty of lawmakers in Sacramento and Washington is to take a hard look at the extent and direction of government spending.

The first two-edged question that should be asked and answered in both capitals is what do we really need, and what can we prudently afford.

The key to sound and responsible fiscal practices lies in striking a balance between the reasonable needs and expectations of the people, and the financial ability of the State and national treasuries to pay for them without dipping further into red ink.

Until such a realistic appraisal is made and acted upon, talk of balanced budgets and an end to inflationary deficits is pure rhetoric.

There is a heartening indication that this approach will have influential backing in Sacramento.

Senator James J. McBride, Democrat of Ventura, the State's senior senator and head of the senate finance committee, says that California's budgetary problem should be approached, not merely from the standpoint of increasing taxes, but by a thorough study of all the State's spending programs and its revenue laws.

"I am not convinced," McBride said in commenting on Governor Brown's promise of higher taxes, "that the premise of funding existing programs is justified since all deficit estimates ($195 million) are based on the same level and quality of service that is currently being provided by the State."

We recommend the same skepticism to our Washington lawmakers.

There is a point beyond which we cannot sanely go in providing bigger and bigger benefits to more and more people and projects without risking financial disaster.

Twenty-five years ago we had just one big Federal subsidy—$250 million for highways.

Today, there are about 40 million people getting checks from the U.S. Treasury.

The States are beneficiaries of 62 programs of Federal grants totaling nearly $5 billion yearly.

Individuals and businesses, including the housing industry, are indebted for Federal credit to the extent of $80 billion.

All governments—Federal, State, and local—are in hock to the tune of nearly $350 billion.

All private debts total $850 billion.

All governments—Federal, State, and local—now spend $145 billion a year.

All taxes now siphon off $130 billion a year.

Ours is a wonderfully big and growing, rich and productive country.

But it is prudent to ask ourselves, and our lawmakers, where's the end of spending more money we don't have for many things we can do without.

The day of the political promise, the outpromise, and the superoutpromise has brought us to the question:

"How ridiculous can you get?"

The Boston University Symposium

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. LANE. Mr. Speaker, on Sunday, February 8, 1959, Boston University's Sargent College, one of the oldest schools for physical education and physical therapy in the Nation, will hold opening exercises in its new building, gymnasium, and other facilities on the university's Charles River campus.

To commemorate this occasion, 11 members of the Sargent College faculty or staff, headed by Dean George K. Makechnie, have participated in a written symposium on the subject "Do Americans Have Sufficient Health and Energy in This Modern Era?"

Although it may be premature, I am enclosing one of the answers written by Elizabeth Wellman Gardner who has been on the faculty of the Sargent College since 1928. She was graduated from the Sargent School in 1926, received her B.S. in education and her Ed. M. from Boston University, and her M.A. and Ph. D. from Radcliffe College. She is a member of the American Association for the Advancement of Science, the New York Academy of Science, the Society for the Sigma Xi, and Delta Delta Delta.

Her answer follows:

Publications, both lay and professional, can have left little doubt in the public mind that the answer to our query is negative. How can this be true in a country whose standard of living, sanitation, and medical care are the best in the world, where one after another the major infectious diseases are being conquered, and where the average life expectancy is well over 60 years? For the same reason that our No. 1 killer is cardiovascular disease. Not only does the average American citizen fall short of optimal status in regard to circulatory health today, but he is likely to depart still further from desirable standards as the next decade proceeds. Why? Because the main cause of his circulatory inadequacy is lack of exercise—just plain lack of muscular exercise. And with industry bending ever greater efforts to develop more and more labor-saving devices, the situation can only worsen unless we do something about it.

Man, as an animal, is anatomically and physiologically designed for a life of vigorous physical activity. Had he been intended to live the sedentary life of automation (instead of animation) which he is increasingly adopting, he would never have developed an internal skeleton of linearly arranged bones with muscles whose attachments favor speed and range of movement. Nor would he have been equipped with specialized systems for respiration, excretion, digestion, temperature regulation, and circulation to support the energy demands of activity. But these are a part of his biological inheritance. He is "stuck with them." They can only be maintained in optimal condition by constant use, by periodically and frequently being pushed beyond the meager limits of today's requirements. As their health fails, so does his. And of all these systems, the circulatory system is the most essential because the functions of the others rely upon it as their go-between. If it fails, all fail.

Man is, relatively speaking, one of the larger animals, but it is not his size which requires these specialized systems. The largest living things ever to exist on our planet are the giant redwood trees. Being incapable of movement, they need no digestive system to periodically process enough food to last till the next meal, nor respiratory system to make oxygen continually and quickly available to each cell in large amounts, nor excretory and temperature regulatory systems to eliminate the waste products of metabolism, nor a circulatory pump and muscular-walled vessels to maintain a pressure-flow circulation of blood. Yet, the same biochemical processes go on in the great tree as in man and animals, differing only in rate. It is muscle whose activity so increases the metabolic rate of animals; muscle whose imperative demands can suddenly multiply the energy needs of man's body by 20 to 40 times, or as suddenly drop it again to the resting level.

Man's circulatory system is marvelously designed to meet, from moment to moment, the large variations in metabolic requirements of the muscles. Delicately adjusted feedback mechanisms, the prototypes of modern engineering, maintain functional levels in such a dynamic equilibrium that they just meet the needs of the active muscles without wasteful overfunction. A marvelous interplay of acceleratory and inhibitory regulators, acting simultaneously, hold increases of heart rate, blood pressure and respiration down to a minimum appropriate to the needs of the moment.

Everyone knows that frequently repeated activity promotes strength and skill. The skeletal muscles and nervous system are not the only organs to profit from use, however. The heart muscle itself, the smooth muscles of the blood vessels, and the muscles of respiration are also strengthened so that they too can function with greater efficiency. In fact, it is only by daily vigorous use that these vital systems can be maintained in peak condition. Habits of inactivity result not only in atrophy of voluntary muscles, but in circulatory deterioration as well. The capacity of the heart to handle a sudden increase in blood volume diminishes insidiously until someday, under the stress of sudden exertion, the heart my fail, or a tiny blood vessel in the brain, its walls having lost their elasticity, may rupture and a man may lose his life or be condemned to a wheelchair.

Man must recognize his need for proper exercise as he has his need for proper nutrition. Exercise must be a part of each day's living. Specific provision must be deliberately made for it in the daily routine. It is hoped that doctors and educators will join physical educators in awakening the American public to an intelligent realization of the importance of daily exercise to our national health, and that governmental agencies will act to make adequate and easily accessible recreational facilities available to all. If, however, it should happen that physical activity, like vitamins, must be popularized by the propaganda of modern advertising, I hope that the manufacturers of sports equipment will outdo the producers of the lie-still-and-be-jiggled devices. In your exercise, I implore you, do it yourself.

Emancipation From Tyranny

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. PORTER. Mr. Speaker, the Washington Post has pointed out that some insight into Cuba's present mood can be gained by glancing through the current issue of Bohemia, a respected Havana monthly, now on sale on some Washington newsstands.

Bohemia is printed in Spanish. It is regarded as a conservative magazine. I believe the following translation of Bohemia's lead editorial of January 11, 1959, does much to set the current Cuban situation in perspective.

The emerging democracy made possible by Fidel Castro and his followers has won the praise of the archbishop of Santiago. Archbishop Enrique Perez Serantes' comments were carried in the Catholic Standard of January 23, 1959. Under leave to extend my remarks, I include both in the RECORD:

[From Bohemia, Jan. 11, 1959]

Bohemia's first word cannot be other than a word for the martyrs. Let us still for a moment our cries of joy, such justifiable joy. Let us not deliver ourselves entirely to the frenzy of our victory over the most repulsive and barbarous tyranny in the history of the Americas. We have a solemn debt toward the dead, and we must begin to pay it with a salute born of the heart that feels and the conscience that reflects. This is but the beginning of our tribute to the fallen.

We are tempted to affirm that it is necessary to go back to the living memory of the great collective sacrifice for independence carried on for 30 years by the Cuban people during the 19th century in order to find a parallel to the sinister period that has just ended. But on second thought we must correct ourselves and say that, notwithstanding the countless major calamities of that unforgettable historical period, the events of recent years are characterized by a blacker and more condemnable seal of cruelty.

In those days we fought against colonial despotism, against a regime controlled from Spain and defended by outsiders; this time native-born citizens fought against each other. In those days we were afflicted by a war during which Cuba's enemy often showed nobility and generosity; this time the defenders of the satrapy, though born in the same land and related by blood to the other people of the island, treated their fellow citizens as ferociously as the Nazi Gestapo and Hitler's army dealt with defeated nations.

The police of the tyrant Batista acted as an imported gestapo; Batista's army behaved as an occupation force in its own country. These monsters did not recognize human rights or feelings of brotherhood, did not have scruples over sex or age, did not respect prisoners. Defenseless civilian populations were subjected time and again to the most merciless bombing, as a punishment for their obvious sympathy for the rebel cause. The acts of genocide and the concentration camps were everyday facts in the horrendous strategy of Batista's militarism.

Crime ruled. The victims were a whole nation. The political leader, the professional, the heroic child, the priest and the

mason, the student, the housewife, the professor and the workingman, the farmer and the urban dweller, contributed their bloody quota of martyrs to the holocaust. History was written in blood, justice was frighteningly subverted; Cain and Abel were multiplied to the infinite.

Now the 7 years of infamy and death unload their unspeakable burden on the new year—which auspiciously begins with emancipation from tyranny—Bohemia rises to remember our dead, our most sacred memory, and to pledge the best it can offer, the determination to carry out without yielding the mandate ensuing from their sacrifice.

[From Catholic Standard, Jan. 23, 1959]

CATHOLICS BACKING CASTRO SEE EXECUTIONS JUSTIFIED

SANTIAGO, CUBA.—The archbishop of Santiago has praised the revolutionary triumph of Fidel Castro and his followers and called upon the country's new government to improve the lives of the people.

Archbishop Enrique Perez Serantes made 9 reform proposals in a 2,650-word letter read in all of the churches of Oriente Province, the birthplace of Mr. Castro's 26th of July movement.

He called the overthrow of the former government a triumph gained by the valiant followers of Mr. Castro. The leader himself was praised as a man of exceptional qualities.

Archbishop Perez Serantes listed the achievement of his nine points—which are mainly concerned with social justice and clean government—as the second stage of the revolution. The first stage, the overthrow itself and the installation of a new government, was "glorious, but is now closed," he said.

The social encyclicals of two Popes, Leo XIII and Pius XI, were cited in the archbishop's list of principles to be achieved by the new Cuban President, Manuel Urrutia, and his government.

The prelate recommended that the Government follow Leo XIII's "Immortali Dei"—on the Christian constitution of states—and "Rerum Novarum"—on the condition of the working classes. He also suggested that it follow Pius XI's "Quadragesimo Anno"—on social reconstruction—in providing Cuba with a new order.

"If Dr. Fidel Castro and Dr. Manuel Urrutia and the rest of the cooperators * * * inspire themselves with these principles * * * they will have deserved well from God and country," the archbishop said, adding:

"Should they not do this and should we revert [to the former type of government] then little will have been accomplished in spite of everything done by these new men, in whom the large majority of Cuban people have deposited their trust."

In Havana a Catholic publication said executions of ousted dictator Fulgencio Batista's agents were conducted in line with a military code providing strict guarantees of justice.

It added that the shooting of "a few hundred guilty persons" was "mild punishment" in view of all the "horrible things" that took place under the fallen dictator's 6-year regime.

The influential weekly La Quincena denied that the executions ordered by the military courts of revolutionary leader Fidel Castro constituted acts of political retaliation. The denial came from the magazine's own director, Franciscan Father Ignacio Blain.

NO CIVILIANS EXECUTED

The Catholic publication, noted during the years of the uprising for its condemnations of rebel terrorism and government reprisals alike, stated that all persons sentenced to death were convicted of common law crimes.

It said that no civilians had been executed, but only members of dictator Batista's secret police and armed forces "who were clearly men stained with serious crimes."

Revolutionary leaders have been quoted as saying that under Batista's regime some 20,000 persons, including women and children, were tortured or killed by the fallen dictator's agents. Supporting this view, the magazine said:

"The chain of murders was so long and the men who commited them so well known that we can easily assert that the testimony of witnesses (at the trials) was backed by truth, devoid of a spirit of vengeance, and above all free of unjust accusations."

The magazine noted that the revolutionary courts established in Santiago and other cities were the same tribunals operated by the rebels during Castro's 2-year-long uprising.

It declared that "although summary" the trials of Batista agents were conducted in such a way as to insure that sentences were handed down "with strict justice." The magazine added:

"When the world will have become fully acquainted with all the horrible things that occurred in Cuba during the past 6 years the executions of a few hundred guilty persons will seem to be mild punishment."

Address by Hon. George H. Roderick, Assistant Secretary of the Army

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. FLOOD. Mr. Speaker, on the 13th of last September, at the Union League Club in Philadelphia, a very striking and interesting ceremonial was performed in the formal presentation of a Scottish claymore—the long-time and most effective fighting weapon of the Highlanders—to the 111th Infantry, Pennsylvania National Guard. This was upon the 210th anniversary of the organization of the Black Watch, the widely famed military unit of the British Army, with Scottish background. Also, the occasion particularly commemorated the association of the Black Watch with the 111th Infantry on a battlefield in North America; that is to say, 195 years before, during the French and Indian wars. The 3d Battalion, the Black Watch of Canada, is allied with the parent Black Watch organization, which has more than two centuries of gallant military history behind it, and its allied units.

The presentation was made for all ranks of the Black Watch; and on behalf of the 111th Infantry—itself of a brilliant fighting record—the acceptance was made by our very popular Assistant Secretary of the Army, Hon. George H. Roderick, in a concise, able, and most interesting and informative address.

Pennsylvanians have every reason to be proud of their colonial history, and Secretary Roderick's reference thereto is especially appreciated.

Believing that the address is well worthy of a place in the CONGRESSIONAL RECORD, under leave granted, I now include it as a part of these remarks:

ADDRESS BY THE HONORABLE GEORGE H. RODERICK, ASSISTANT SECRETARY OF THE ARMY, CEREMONIAL MESS, 111TH INFANTRY, UNION LEAGUE, PHILADELPHIA, PA., SEPTEMBER 13, 1958

I am honored to receive in behalf of the U.S. Army this Scottish claymore which is so beautifully inscribed, "Presented to the 111th Infantry on the occasion of its 210th anniversary by all ranks of the Black Watch."

I am happy that the presentation of this claymore, a weapon symbolic of the soldierly tradition of the Scots, can be made before members of the Black Watch of Canada. Indeed, it is to commemorate the association of your allied regiment in the British Army with the 111th Infantry on a North American battlefield 195 years ago that this presentation is made. We deeply appreciate this thoughtful gesture on the part of Her Majesty, the Queen Mother, Colonel in Chief of the Regiment, and all ranks of the Black Watch.

I should like to take this opportunity now to add my expression of welcome to the officers and wives of the Third Battalion, the Black Watch of Canada. I consider it a singular distinction that your battalion commander, Lt. Col. William Wood is one of only two men to occupy the chair which, for almost 200 years, has been reserved at this ceremonial mess for the regimental commander of the Black Watch or his designate. This honor accorded your commander is also a tribute to each of you in the organization.

The Black Watch of the British Army, whose commander you represent here tonight, Colonel Wood, is held in highest esteem by the many Americans who are familiar with its history. This is true because the regiment has participated with distinction in significant military campaigns in many parts of the world beginning in 1743 with the War of Austrian Succession. Units of the Black Watch have through the years perpetuated the great traditions of soldiering which characterized the ancient Scots. One has only to review the battle honors of the regiment to see how the valor of the brave men who have worn your traditional uniform have contributed to great victories that have often shaped the course of history. Waterloo, Sevastopol, the Marne, the Hindenburg Line, are some of the battles in which the Black Watch won honors. In World War II and Korea, the regiment continued its outstanding record of valor.

The Black Watch of Canada has carried on the fine traditions of its Allied regiment in Britain since its organization in 1862. Today, I understand, it is the oldest Highland regiment in any Dominion of the British Commonwealth of Nations. It too has won many battle honors, including such campaigns as South Africa (1899–1900), Ypres, Passchendaele, Hindenburg Line, France, and Flanders. The traditions of the Black Watch have been perpetuated by the splendid record of achievement of your regiment.

It is a significant fact—a fact which all of us here tonight should know—that one of the first campaigns fought by the Black Watch, and for which it won battle honors, was in North America during the French and Indian wars. In a series of actions at Fort Pitt and at Bushy Run in that year detachments of the Black Watch were joined by companies of rangers or provincials. Numbered among these provincials were the associators, an outgrowth of Franklin's Associators, organized by Benjamin Franklin in Philadelphia in 1747. It is to this organization founded by Benjamin Franklin in Philadelphia that the 111th Infantry Regiment traces its ancestry. It is also a significant fact that the action at Bushy Run in which the antecedents of the Black Watch and the 111th Infantry fought side by side resulted in a resounding victory.

I shall not attempt to review this evening the splendid chapter which the 111th Infantry has writen in American history. The battle honors which have already been extolled here tonight are sufficient evidence of a magnificent record of achievement. But there is one aspect of this fine record which I would like to note. The 111th Infantry has maintained well the great American tradition of the citizen-soldier. From the earliest days of our history this Nation has maintained a small Regular Army and has relied upon its reserve of citizen-soldiers to form the bulk of our fighting forces in time of war. The record of the 111th Infantry with its many battle honors has exemplified the highest order of performance of the citizen-soldier in the defense of his country. America has always been proud of its citizens whose patriotism and love of country prompt them to take the time from their civilian occupations to maintain their military readiness to defend their country in time of war. I commend each of you this evening for your contribution to the defense of your country by your service in this great National Guard unit of the State of Pennsylvania. And, General Biddle, it is particularly pleasant for me to say to you, the adjutant general of Pennsylvania, distinguished soldier and statesman and admired personal friend, that the Department of the Army holds this service in highest terms of regard and pride.

The tradition of the citizen-soldier is likewise maintained in Canada by you gentlemen of the 3d Battalion. I understand that one of the outstanding features of your regiment in Canada has been the tremendous family spirit which has been present since its founding in 1862. Successive generations of officers and men from the same families have served both at home and abroad, in the same tradition that prompted the building of the parent unit in Scotland in 1739. We in America are very cognizant of the efforts which you are making to prepare yourselves as citizen-soldiers and appreciative of the importance of those efforts to the defense of your country and of the free world.

Knowing, then, the history of the Black Watch, it is with great pride that I accept this claymore in behalf of the United States and the U.S. Army. I accept it not only as a token of friendship and respect but also as a symbol of the fighting spirit and rugged character of the ancient Scot who used it as his primary weapon. It is this fighting spirit of the ancient Scot typified by his fierce loyalty to those he loved, his intense pride, his indomitable will, his determination never to yield to his enemies, that forms the basis of the Scottish tradition. In the U.S. Army we have always prided ourselves that our soldiers have been imbued with many of the characteristics of the great Scottish warriors. I hope that this Scottish claymore will serve to remind us again of the value in war of the individual soldier. For I say again, as many of the military leaders of the U.S. Army have said, that even in this age of the thermonuclear weapon a most essential prerequisite for victory on the battlefield is the fighting spirit of the individual soldier.

In this Scottish claymore I see an analogy. In its construction as a two-edged sword, the claymore can be said to be symbolic of the fighting forces of our two countries, the United States and Canada. Each force, like an edge of the sword, is capable of inflicting separate damage upon our enemies, but like the claymore, these fighting forces are wielded together operationally by single direction. Thus we in the United States and Canada along with Great Britain and our other allies have joined forces in NATO and are, with unity of purpose, directing our efforts in a common cause, the defense of freedom.

With knowledge then of the great symbolism and tradition associated with the Scottish claymore and with awareness of the deep significance of the expression of friendship on behalf of all ranks of the Black Watch. I turn over this claymore to the commanding officer of the 111th Infantry. Colonel White, I charge you in behalf of the U.S. Army to maintain this symbol as a cherished possession. Let it continue through the years to remind you to preserve the great traditions for which it stands and which have been the guiding spirit of your great regiment for over 200 years. Let it also serve to remind all of us of the strength that comes when great nations such as ours are united in common purpose and motivated by a common tradition. With the strength which abounds from such friendship we can truly say in the words of the motto the Black Watch of Canada, "No one strikes me without fear."

Interest on the National Debt

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include an informative article written by Sylvia Porter, appearing in the Boston Herald of January 26, 1959, relating to the tremendous increase of interest and money paid on the national debt. Few persons seem to know of and appreciate that this large increase has taken place as a result of the policies of the present administration.

There is another aspect of this policy of high interest which could have been avoided and that is the effect upon the market value of Government bonds of prior issues with a smaller rate of interest, the sharp drop in the market value of such bonds.

TEN CENTS OF EVERY DOLLAR OF TAXES GOES FOR INTEREST

(By Sylvia Porter)

A full 10 cents of every dollar you and I and America's businessmen will pay in Federal taxes in the new year will go just to meet interest due during the 12 months to owners of U.S. Government securities.

This is a slice of the budget second only to that taken by the catchall "major national security." It dwarfs the 7 cents of every dollar going for all veterans' services and benefits, tops the 8 cents of every dollar going for all farm programs.

Of the billions we'll be pouring into the Federal Treasury in the year starting in mid-1959, more than $8 billion will be automatically set aside for public debt interest.

This is a total which defies comprehension. It represents a new peak in the cost of carrying the debt, compares with an annual interest load of $1 billion as recently as 1940.

When World War II ended and we toted up the cost of that global conflict in dollars, we found that war borrowing had pushed the national debt close to $280 billion.

CRIES FOR EXPLAINING

The yearly payment made by the U.S. Treasury to holders of that massive amount of I.O.U.'s, was only around $4.7 billion, though.

Today the national debt is around $282.7 billion, not much higher than at the close of World War II.

But the yearly payment by the U.S. Treasury to holders of today's massive amount of I.O.U.'s, is over $8 billion—an upsurge of more than 70 percent.

It's a tale that cries out for explaining, for while there will be countless headlines about the coming congressional debates on spending for farm supports, veterans' benefits, housing, foreign aid, etc., there will be little noise about this far bigger chunk of spending.

And the reason is that Congress cannot do a thing about this expense. Once the Treasury has pledged to pay a specified interest rate to a buyer of its obligations, it must pay that rate for the life of the obligation. It cannot cut the interest rate while the I O U is outstanding. Of course, it can default on a note. When the President, in his budget message, estimated $8.1 billion for debt interest alone in the 1959–60 fiscal year, he wasn't exaggerating one bit.

What has been happening? A key point about what has been happening is that it has not been an accidental swelling in spending. Rather, it has been the result of deliberate policies adopted at the highest policymaking levels in Washington.

First, the Federal Reserve System has been encouraging rising interest rates across the board through most of this decade. In simplest words, the theory has been: "Higher costs of borrowing money will restrict speculative activities by curbing marginal borrowing, and this will help restrain price rises. When business is swinging upward, the costs of borrowing money should properly go up too. Only when business is declining should we expect lower borrowing costs."

INCREASE IMPROVED

Second, under President Eisenhower, the heads of the Treasury have not fought the higher borrowing costs—as did the Treasury chiefs under President Roosevelt and President Truman. In simplest words, the position of the Treasury in this era has been: "The Treasury should not get special protection against a general rise in borrowing costs. The Treasury is just another borrower competing for available funds, and it should compete as others do—meaning the Treasury must pay the price (the interest rate) demanded by lenders for cash."

The result of these policies has been that as the Treasury has borrowed new cash in recent years and replaced maturing I O U's with new ones, it has paid higher and higher rates.

In World War II the going interest rate on long-term U.S. bonds was 2½ percent a year—and the Treasury borrowed billions from us at that level.

Today the going rate on long-term U.S. bonds is over 4 percent a year—and the Treasury can't get much cash even at that rate.

Sure, the United States can afford today's debt and interest load—but that doesn't make $8 billion a year in interest alone any less staggering. What's more, the top of the debt or the interest cost is not yet in sight.

The President's Message on the Agricultural Program

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. RAY. Mr. Speaker, I have examined carefully the President's message on the agricultural program and the

supporting memorandum of Secretary Benson, both of which were submitted to Congress today. The message and the memorandum reflect careful and thorough study by able and well-informed specialists. In my judgment the recommendations so presented are wise and constructive and I hope they will all be enacted into law promptly.

An Amendment Clarifying the Intent of the Outdoor Advertising Control Section of the Federal-Aid Highway Act

EXTENSION OF REMARKS
OF

HON. JAMES J. DELANEY

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1959

Mr. DELANEY. Mr. Speaker, I have introduced today an amendment to the Federal-Aid Highway Act to clarify the intent of Congress regarding the regulation of outdoor advertising along the Interstate System. My amendment proposes to make it clear beyond any doubt that Congress intended to regulate—not prohibit—advertising along this great new network of roads.

Furthermore, my amendment insures that any such regulation must be fair and reasonable, and must not be prohibition in disguise.

What has made the introduction and the adoption of this amendment absolutely essential is the fact that the regulations, as they exist today, do constitute prohibition.

This unfortunate situation—posing a substantial threat to a large portion of our economy—was created by the Department of Commerce when it wrote the regulations. That agency completely misinterpreted the intent of Congress. Instead of regulation, the Commerce Department interpreted the act passed by the 85th Congress last year to mean prohibition and wrote a set of rules accordingly.

These rules are known as national standards for the display of outdoor advertising. Unless the proposed amendment is adopted, there is nothing to prevent the national standards issued last November 10 by former Secretary of Commerce Weeks from continuing in full force and effect.

Such an eventuality would work a great injustice upon the outdoor advertising business, which is a thoroughly legitimate and necessary business that helps promote our economy. We should not permit an administrative agency to flout the intent of Congress and injure such a business. It is therefore essential that prompt action be taken by this House to right the wrong that has been done.

For the benefit of the Members who are not familiar with this legislation, I will briefly review it. It has been customary every 2 years for Congress to pass a Federal Aid Highway Act, the most important provisions of which authorize appropriations for road construction for the ensuing 2 years. The latest of such acts became the law on April 16, 1958—Public Law 85-381—and is known as the Federal Aid Highway Act of 1958. It included a section 122 entitled "Areas Adjacent to the Interstate System." Section 122 has been incorporated into the codification of the Federal Aid Highway Acts, title 23 of the Code, and is now known as section 131. I will refer to it as section 131.

This section declares it to be a national policy that the erection and maintenance of outdoor advertising signs within 660 feet of the edge of the right-of-way of the Interstate System should be regulated. It further provides that the regulation must be consistent with national standards to be prepared and promulgated by the Secretary of Commerce. These standards are to include only four types of signs. After the adoption of the standards, the Secretary of Commerce is authorized to enter into agreements with the State highway departments to carry out the national policy. Any State that enters into such an agreement is entitled under this section to have its share of the Federal aid, payable on account of any project on the Interstate System, to be increased by one-half of 1 percent of the total cost of the project. That, in brief, summarizes the pertinent provisions of section 131.

Section 131 uses the word "regulate." It does not use the word "prohibit." In fact, one of the earlier bills upon which section 131 was based did use the word "prohibit." This word was stricken from the compromise measure which formed the basis of section 131 as finally adopted.

Indeed, the sponsors of this legislation declared frequently during Senate debate last year that the purpose of the act was to regulate and not prohibit outdoor advertising.

For example, on last March 25, and I quote from the CONGRESSIONAL RECORD, Senator GORE said:

> The bill does not provide for prohibition, either by States or by the Federal Government.

Senator NEUBERGER said on March 24 that—and I quote again from the CONGRESSIONAL RECORD:

> If State law authorizes the kinds of signs mentioned in the third and fourth classes of subsection (a), the standards promulgated by the Secretary may only contain reasonable regulation of them, not total prohibition.

Mr. Speaker, what could be clearer as to legislative intent? But did the Secretary of Commerce need this mandate? No; he went several steps beyond.

Allow me to cite some specific examples from the national standards. Take section 20.10 titled "State Regulations." This section reads:

> A State may elect to prohibit signs permissible under the standards in this part without forfeiting its rights to any benefits provided for in the act.

I ask you, is this a standard of regulation? No. It is nothing more than a gratuitous invitation on the part of the Secretary of Commerce for the States to prohibit advertising completely. Quite plainly this section tells the States that they may prohibit a legitimate business and still get their bonus. They will be paid for complete prohibition.

Only the most technical of interpretations of the wording of the act could justify the Secretary in making a payment for prohibition, or for that matter, to even invite prohibition.

Let us look at it this way. If Congress had intended to make the bonus payable for straight prohibition, then why did not Congress say so right in the law? Since this was not the intent of Congress, why then should it be allowed to stand as part of the national standards?

There are other—more direct provisions in the national standards leading to prohibition. Section 20.6 of the standards authorizes what it calls informational sites. Where one of these sites was constructed, all commercial signs would be prohibited for 12 miles in either direction.

This, too, is a gratuitous addition to the law. If you read section 131 of the Highway Code you will find no mention whatsoever of informational sites. Furthermore, at the time the act was being debated in Congress last year there was no mention or suggestion that informational sites should be established along interstate highways.

As a matter of fact, the first reference in Congress concerning these sites did not come until May 13 of last year, nearly a month after the law was enacted. On that day Senator NEUBERGER put forth the idea. The Commerce Department promptly grabbed it as an easy way to make it appear as though outdoor advertising were being permitted, when in actual practice informational sites would prohibit it.

The Commerce Department envisions these sites as being pulloffs from the highway where a number of small commercial signs are displayed on big boards, like a directory. Motorists would even have to get out of their cars to read them.

Now the purpose of outdoor advertising is to convey a message to persons as they move about from one place to another—walking, driving a car, riding a train, et cetera. This is the historical, commonly understood, and generally accepted concept of the meaning and purpose of outdoor advertising.

If one took a classified telephone directory and hung it on a post out of doors, we would not have outdoor advertising. By the same token, informational sites are not outdoor advertising. Because they would no more fulfill the true function of outdoor advertising than a telephone directory hanging from a post along the highway.

I might point out that there is no such thing as an informational site in existence in this country today.

Certainly, if there were any utilitarian advantage to such a device, some State would have constructed one by now.

Another provision of the national standards which leads to the virtual prohibition of outdoor advertising is the one contained in subparagraph (b) of

section 20.7. This prohibits signs within 2 miles in advance of an interchange. The latest figure that I have been able to obtain from the Bureau of Roads indicates that interchanges on the Interstate System will be on the average about 3½ miles apart. While it can be said with accuracy, that this regulation does not absolutely prohibit all signs, it also can be said with equal accuracy that it prohibits so many signs that it will act as a practical prohibition.

Furthermore, there is practical prohibition in the size limitation set by the Secretary on the few signs which are permissible. He has decreed that the maximum size shall be 150 square feet, which would allow for a 10- by 15-foot sign.

Now, Mr. Speaker, this restriction would exclude one whole segment of the outdoor advertising business, the segment known as the standardized outdoor advertising industry.

This advertising medium, as it is called, many years ago standardized its signs at 300 square feet, a fact, I daresay, that is well known by the Secretary. Yet, he wrote the standards so that standardized outdoor advertising would be prohibited.

I ask you, Is this reasonable regulation to make a raw discrimination against an established industry which has earned its niche in the economy? No. It is prohibition by regulation, just as the other facts and figures show that I have presented.

Prohibition of alcohol was tried once in this country. It was a failure. Prohibition is not the way of a democracy. It is an exercise of tyranny. Let us live up to the spirit of democracy and not be tyrants. Once the door is open to prohibition of legitimate business for purely esthetic reasons, where will it be stopped? Perhaps other groups will criticize and then try to abolish other types of structures for esthetic reasons. Certainly there is room for great differences of opinion. What is a pleasing attractive structure to one, may be completely unattractive and unpleasing to others. Are we to turn over to an administrative agency the power to prohibit a legitimate business on such unstable grounds? Shall we permit a precedent that may leave the door wide open for the prohibition of other legitimate businesses in the future according to the whims of an articulate minority?

In conclusion, section 131 authorizes the appropriation of several hundreds of millions of dollars to be paid to the States for the regulation of outdoor advertising. The Secretary of Commerce, through his promulgation of the national standards, has authorized the pouring out of these millions for a very different purpose, that is, as a bonus to those States which completely prohibit outdoor advertising or which adopt the national standards which require a virtual prohibition of outdoor advertising. In my opinion, no bill that called for paying these millions for a complete prohibition could have passed Congress. The national standards go far beyond the intent of Congress. The only way to carry out the intent of Congress is to pass the proposed bill, which will make it clear beyond all shadow of doubt that it is a regulatory, not a prohibitory, bill, and which will require new national standards that are not confiscatory, but fair and reasonable, and permit the continuation of a legitimate business which benefits this economy.

The Education of Our Children Is of National Concern, and if They Are Not Educated Properly, It Is a National Calamity

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, President Eisenhower said at his White House press conference on July 31, 1957, that:

> The education of our children is of national concern and if they are not educated properly it is a national calamity.

Fred M. Hechinger, a past president of the Education Writers Association, wrote an article which he titled the "Five Basic Problems of Education" and which appeared as the lead article in the New York Times magazine of January 25, 1959. The New York Times is to be congratulated for its generosity in giving so much space to a discussion of this vital subject by a former education editor of the New York Herald Tribune.

It must be said of Mr. Hechinger's article, I think, that it almost entirely ignores the vital point that inadequate pay is the fundamental reason why better people do not become teachers and why so many competent people leave the profession. This view was expressed repeatedly by the many distinguished witnesses who appeared before the subcommittee of the Education and Labor Committee of the House of Representatives during the 85th Congress.

Similarly, the Rockefeller report on education (p. 25) declares that:

> The root problem of the teaching profession remains financial * * * until we pay teachers at least as well as the middle echelon of executives we cannot expect the profession to attract its full share of the available range of talents. Salaries must be raised immediately and substantially.

Since Mr. Hechinger's article is in all other respects such a timely and incisive discussion of American education, I include it for the information of my colleagues.

Mr. Speaker, I have introduced three major bills designed to assist in solving the basic problems of education. H.R. 284 would amend the National Defense Education Act of 1958 to provide for 20,000 national defense scholarships and for other purposes.

President Eisenhower called for 10,000 scholarships during the 85th Congress. The House provided these but they were dropped by the Senate.

A preference for science and mathematics written into the National Defense Education Act would be modified by H.R. 284 to give equal weight to the other disciplines including the humanities.

Repeal of the loyalty oath is provided in the H.R. 284, however the measure also calls for an affirmative oath of allegiance. Many educational leaders believe the present requirement of a loyalty oath, applying as it does to a large number of young people and teachers, is thoroughly harmful since it singles out people in education as objects of suspicion. Further, the present act tragically stifles the free exchange of ideas in the classroom and leads to complete stultification of the educational process.

My second bill, H.R. 965, provides financial assistance for the support of public schools by appropriating funds to the States to be used for constructing school facilities and for teachers' salaries.

Federal grants to the States would be on the basis of each State's school-age population and would amount to $25 per child during the first year, $50 the second, $75 the third, and $100 for the fourth and succeeding years. Written into the bill is the assurance that no department, agency, officer, or employee of the United States shall exercise any direction, supervision, or control over policy determination, personnel, curriculum, program of instruction, or the administration of any school or school system. To make sure that the States and local school districts do not slacken their own efforts, the bill provides for a reduction of the grants if a State's educational program is below the national average. The effective date of this reduction provision would be delayed for 3 years to give State legislatures two sessions to work on their programs.

Federal officials have estimated that we are short 140,000 classrooms and 135,000 teachers. It is a shocking thing to realize that only one-half cent of every Federal tax dollar goes to support public schools. This must be compared with the 43 cents out of every local tax dollar and the 31 cents out of every State tax dollar which goes to public education. Our schoolchildren must have the support of the one level of government which to date has been resting on its oars where education is concerned—the Federal Government. It is time that we began putting first things first. A nation which does not put a top priority on education will not remain a first-class power very long. At the present time we have launched a multi-billion-dollar Federal roadbuilding program; we spend $40 billion plus on defense, and several million dollars apiece for our missiles. Our citizens spend hundreds of millions of dollars each year on liquor, tobacco, advertising, automobiles, and other luxuries. Our materialistic culture can and it must find funds for education which is essential to our survival as a free nation.

My third bill, H.R. 2440, amends the Internal Revenue Code of 1954 to provide funds for educational purposes by providing increased incentives for private

giving through the allowance of a tax credit for charitable contributions to institutions of higher education.

The following letter explains the purposes of H.R. 2440 in detail:

JANUARY 23, 1959.

Mr. EDMUND J. GLEAZER,
Executive Director, American Association of Junior Colleges, Washington, D.C.

DEAR MR. GLEAZER: I have your letter expressing interest in my bill, H.R. 2440, to provide increased incentives for private giving to colleges and universities, and asking for a statement regarding it.

This measure follows the recommendations of the American Association for the Advancement of Science, and the resolution adopted by the Association of American Colleges at its convention in Miami, Fla., last year. Many other organizations have called for increased private giving including the Council for Financial Aid to Education, the National Planning Association, and the recently established Independent College Funds of America consisting of 40 State and regional organizations representing 467 colleges and universities. Most corporations and individuals conspicuously fail to contribute the sums permitted under the present tax laws. In fact, it is the failure of the present tax laws to realize the sums necessary which has led to H.R. 2440 and the other bills in the Congress to increase private and public funds for educational purposes.

H.R. 2440 would allow a taxpayer a credit against income tax for charitable contributions made to institutions of higher education. In the case of an individual taxpayer, the limit on this credit would be the same as the present limit on the deduction for charitable contributions. H.R. 2440 would not give him a tax benefit with respect to more contributions than he may now include for deduction purposes alone; he may elect to treat a charitable contribution (if it is to an educational institution) as a credit rather than as a deduction, but the total of credit plus deduction is no greater than the present allowable total of deductions.

In the case of a corporate taxpayer, the limit on this credit would be increased from 5 percent to 10 percent of taxable income (where the percentage-of-taxable-income method of computing the limit is used), and this credit would be in addition to the deduction presently allowed for charitable contributions generally; a corporation may elect to treat charitable contributions to educational institutions as credits rather than as deductions (up to 10 percent) without cutting into the amount of such contributions (along with other types of charitable contributions) which may be allowed as deductions. Of course, the same contribution cannot be counted as a credit and a deduction.

Under H.R. 2440 the taxpayer would be allowed a 2-year carryover on the credit just as he is presently allowed a 2-year carryover for deduction purposes. The Secretary of the Treasury would be directed to prescribe regulations governing the time and manner of making the election to treat a contribution as a credit rather than a deduction and imposing conditions to ensure the effective correlation of the new credit section with the existing deduction provisions.

I am sending along two copies of H.R. 2440 for your use.

Cordially yours,

FRANK THOMPSON, Jr.,
Member of Congress.

FIVE BASIC PROBLEMS OF EDUCATION

(By Fred M. Hechinger)

Ever since the cold war moved into outer space, the American people have been concerned about education. No longer is the sky the limit; even the moon is only a whistlestop. And in the futuristic contest, the classrooms are the launching platform.

Hardly a week passes without several television programs peeking behind the scenes of education. Not long ago, a broadcaster cornered a few high school students, and their deplorable ignorance set off a national storm of criticism. The Rockefeller report on education got top billing on the front pages of even small-town dailies. Rear Adm. Hyman G. Rickover, father of the atomic submarine, received a sympathetic public ear when he proclaimed that, if the money for education could not be found in the Federal budget, the defense appropriation should be cut.

President Eisenhower appointed a special Committee on Education Beyond High School. The Ford Foundation made the largest gift in the history of private philanthropy for the increase of professors' salaries. James Bryant Conant, Harvard's former president, has devoted the past 2 years to an attempt to find out what is wrong with American high school education. In fact, the Conant report, which is set for publication next Wednesday, has already stirred up more excitement than many Government white papers.

Everybody is concerned about education; but education is an elusive, amorphous thing. Before it can be understood and improved, some of the crucial problems must be singled out and defined. As an observer of the educational scene, I have visited classrooms, talked with teachers, listened to parents, sat through speeches and conventions, scanned the statistics and studied the reports.

Let me set down what seem the five most immediate problems; then let us see what the experts recommend.

THE PROBLEM

1. How can American standards of education be raised, and what, especially, can be done to meet the challenge of the exceptionally gifted child?

American democracy promises every child a full elementary and secondary education, but the unanswered question has always been how to do this without surrendering to the lowest common denominator. Our educational laissez-faire, which permits even able students to pick elective snap courses, has allowed standards to slip.

The raising of educational standards for the great mass of students would mean a spectacular improvement in the country's total reservoir of skills. But what about the small number of exceptionally gifted children—the top 2 percent? The talents of these, if lost, are irreplaceable. In terms of the country's progress and of competitive coexistence in a cold war period, they may well hold the key.

THE PROPOSED SOLUTIONS

There is almost unanimous agreement that the search for quality in a system of quantity rates first attention. To cope with the problem of a curriculum which has been loaded down with an almost unlimited variety of subjects from driver education to citizenship training, the Rockefeller report, entitled "The Pursuit of Excellence," demands that "we reach some agreement on priorities in subject matter." Educators are asked to make up their minds which of the many elective courses are most important.

The Conant report will go a step further. It will clearly demand that all high school students complete 4 years of English, 3 to 4 years of history and related social studies, 1 year of mathematics and 1 year of science. Students in the top 20 percent would take 3 additional years of science, 3 more years of mathematics and at least 3 years of 1 foreign language.

For all students there must be improved guidance. Dr. Conant asks for 1 guidance counselor for every 250 to 300 high school students. And, in order to assure adequate programs and facilities, he asks for elimination, through consolidation, of all high schools with graduating classes of fewer than 100 students.

All proposals for the improvement of education demand a greater sense of continuity of subjects and a greater scope of understanding. Study of a foreign language for less than 3 years, says Dr. Conant, is like drilling for oil and then stopping before striking it. In the study of history, too, efforts are largely wasted unless there is a sense of the natural sequence of events.

For the 2 percent of gifted pupils, even more of a concession to the difference in human talent must be made. "A school system that insists on the same instruction for the talented, average and below average child," said Rear Admiral Rickover, "may prevent as many children from growing intellectually as would a system that excludes children because of the social, political or economic status of their parents. Neither system is democratic."

The experts agree. "Any educational system is, among other things, a great sorting-out process," says the Rockefeller report. But while the European sorting out is achieved almost entirely by impersonal examinations, the American experts call for a variety of tests, some scoring native talent, others the actual achievement of the student, with personal observation and guidance. Once the gifted students are recognized, the experts want them to be given advanced work, without separating them from their classmates.

Toward the end of high school the extra work would be increased. Thus, juniors and seniors would be offered college-level instruction in some subjects, as they now are under the advanced placement program sponsored by the college-entrance examination board. Another program for early admission to college, initiated by the Fund for the Advancement of Education and hailed by all the experts, has sent more than 1,000 gifted students to college during the past 5 years without completion of the last year or two of high school.

THE PROBLEM

2. How can we get better teachers?

There is no way to improve the quality of American education without an adequate supply of good teachers. Already a serious shortage of highly educated manpower exists. This shortage will become increasingly critical unless we find enough of what the Ford Foundation calls the seed corn—teachers who, through their superior efforts, help to raise new generations of educated brains.

Perhaps even worse, the standards set for the teachers are often pitifully low. For example, at a convention in Bowling Green, Ohio, recently, an education spokesman demanded that chemistry teachers be given at least 32 hours of college study in that subject. A Russian student in a college-preparatory high school, by comparison, gets more than 340 hours of chemistry before graduation.

THE PROPOSED SOLUTIONS

"No educational system can be better than its teachers," warns the Rockefeller report. It estimates that the number of new teachers needed in the next decade is somewhere between one-third and one-half of all college graduates in that period. The present ratio of college graduates entering the teaching profession is only one out of every four or five. And yet, even today, the report warns, the problem of quality is critical. As of 1956, 33 percent of all elementary teachers did not hold an A.B. degree, while more than 21 percent of all public school teachers had less than 4 years of college.

Since the training of all teachers depends on the quality of the training of

college teachers, there is special significance in a report by the National Education Association that "since 1953–54, holders of the doctor's degree among newly employed, full-time [college] teachers have decreased 25.2 percent." And the manpower pressures of the immediate future may make this situation even worse.

The Rockefeller report calls for an improvement in the courses and training procedures given teachers. "If the programs for the preparation of teachers are rigid, formalistic and shallow, they will drive away minds as fast as they are recruited," it warns. "Unhappily, preparation for precollege teaching has come all too close to that condition."

The report warns against the practice of handling teachers as "interchangeable units in an educational assembly line." At present, "the best teacher and the poorest in a school may teach the same grade and subject, use the same textbook, handle the same number of students, get paid the same salaries, and rise in salary at the same speed to the same ceiling." The ironic result is that school administration—and the end of active teaching—often becomes the only refuge for able teachers who want to advance their careers.

The problem of getting a sufficient number of teachers is primarily one of recruiting and of offering an attractive career. "But even with aggressive recruitment there appears to be little or no likelihood that we can bring into teaching at any level anything approaching the number of qualified and gifted teachers we need," says the Rockefeller report. "We must therefore utilize our superior teachers more effectively."

All the experts agree that, in the words of the Rockefeller report, "one way to make better use of the ablest teachers is to eliminate many of the petty tasks which occupy a teacher's time. Less highly trained classroom assistants may accomplish much in the lightening of this burden." The Fund for the Advancement of Education, putting this theory to the test in Bay City, Mich., found it successful, and it has spread from there to many communities across the country. A bonus, it was found, came when many of the aides, seeing teaching at its best, became so interested that they went back to college to get their teacher training.

Other experiments have been sparked by the success of the first one. The use of teams of teachers, made up of 1 master teacher, 1 regular teacher, and 1 untrained assistant has made it possible to increase the class size for some subjects to 3 times a normal classroom quota, while, at other times, permitting 1 teacher to work with only 8 to 12 pupils. The use of television has also made it possible to get more of the best teachers into contact with more students.

THE PROBLEM

3. Should we emphasize science as against the liberal arts?

However we respond to the challenge of sputnik or speculate about the importance of moon shoots, one fact is inescapable—science and technology are intimately linked with modern man's destiny.

Traditionally, there used to be a clear dividing line between the liberal arts and the sciences. The high school student who thought he had no interest in a career of science frequently was allowed to get by with a minimum of mathematics and science instruction. Reports about the Russian schools, which go to the opposite extreme of requiring a stiff dose of science and mathematics for all high school students, have intensified the problem of just how much science training should be required of every high school graduate.

THE PROPOSED SOLUTIONS

The experts agree on two fundamental points: (1) that, despite the panic headlines, science must not crowd out the humanities; (2) that it is vital for all students, not just the scientifically inclined, to have a thorough measure of basic mathematics and science.

On the first point, the President's Committee on Education Beyond High School says that the country "would be inexcusably blind if it failed to see that the challenge of the next 20 years will require leaders not only in science and engineering and in business and industry, but in government and politics, in foreign affairs and diplomacy, in education and civic affairs."

On the second point, Dr. I. I. Rabi, Nobel Prize physicist and chairman of the President's Science Advisory Committee, says: "We must teach science as an intellectual pursuit rather than as a body of tricks." And he adds: "As yet, if a man has no feeling for art he is considered narrow-minded, but if he has no feeling for science, he is considered quite normal. This is a fundamental weakness."

Probably the greatest waste of scientific talent stems from social clichés which discourage girls from studying science and mathematics as "unladylike." Dr. Conant found that, even in the best high schools, fewer than half of the gifted girls elect 4 years of mathematics.

The experts agree that it is not a question of "either-or" between science and the liberal arts. The Rockefeller report warns as much against the narrowly trained scientist as against the educated man who is illiterate in science.

THE PROBLEM

4. Who should go to college?

Already more than 3 million young Americans are enrolled in college—a total of one-third of the eligible age group. Is universal college the next step, following the universal high school? Some State universities have, in practice, accepted this principle; they consider a high school diploma an automatic admission ticket. Other college spokesmen warn against the danger of indiscriminate admission policies as an invitation to lowered standards. They are, however, more concerned that rising costs will price the colleges out of the market for many able students.

One fact is clear: Even if the present policy of selection is continued, most colleges would have to double or triple in size by 1975 in order to accommodate the same percentage of students who go to college today.

No expert wants to restrict college admission, but all would like to see standards raised so that the restrictions could be built into the procedure of selection. They applaud current trends in that direction. They cite the announcement by the University of Illinois that by September 1960 its freshmen will no longer be nursed along in remedial English courses. They point with approval to more than a dozen colleges which have revived foreign-language requirements for admission.

The problem is not so much whom to keep out of college, but rather how to make sure that those who should go to college do so.

The two roadblocks, the experts agree, are motivation and finances. To remove the first, they say that young people with talent will have to be shown more effectively that there is real value and excitement in higher education. To remove the second, they suggest more scholarships.

The President's committee called for 10 times the present total amount of scholarship money, estimated at about $60 million. It wants about 200,000 of the ablest and neediest high school graduates annually to be assured of a college education by having the financial burden removed from them.

In addition, it calls for between 25,000 and 50,000 subsidized campus jobs so that another large group will be able to support itself with work-study programs. In order to build higher education firmly into the American way of life, the President's committee also suggests that the tax laws be revised so that students and their parents would be assured of credits or deductions.

THE PROPOSED SOLUTION

All the experts agree that there should be a greater number of 2-year colleges for those who are unwilling or unable to commit themselves to 4 years of higher education.

Finally, the Conant report will urgently demand another reform plan which would eliminate those students who feel that they are inadequately prepared to make a living when they leave high school, and who go to college for vocational training rather than for education. The Conant plan would expect the high schools to offer vocational training of highest caliber to these students.

Considering the importance of the problem of who should go to college, it is disappointing to find the experts vague and hedging in their replies. The reason is simple: they are torn between rational planning and the commitment to an ideal. The first calls for toughness in setting up restrictions so that the colleges and universities can be made into institutions of excellence; the second dreams about the removal of all limitations from a child's educational horizon. At present, the American genius for compromise is in search of a formula that will be democratic without destroying the standards of scholarship and education.

THE PROBLEM

5. How do you pay for all this?

If mass and class in education are to be combined, perhaps for the first time in history, then the cost will be high. What compounds the difficulty is the almost pathological fear of Government control through Government financing. Yet, from the problem of the loss of potentially able teachers to higher paying jobs to the fact that local spending is not even beginning to catch up with school construction needs, every sign points to an inescapable truth: the present sources of money are insufficient to pay for a first-class mass education system.

Many schools are overcrowded, understaffed and ill-equipped. There is an estimated shortage of 142,000 classrooms and an excess of almost 2 million pupils. And within 10 years the high schools will have arrived at a point where they will face 50 to 70 percent more pupils than they can now accommodate.

THE PROPOSED SOLUTIONS

None of the experts has tackled the money problem with complete candor. The fear of an allout fight over the principle of Federal aid has led to a flood of cautious statements and even more cautious legislation. Yet between the lines the implication is clear: Federal aid will have to be a permanent part of the picture.

What are the real needs? Our total expenditure for education, from elementary school through the universities, today is approximately $14 billion annually. This is 3.6 percent of the gross national product. The experts estimate that, in order to attain the goals of quality in a system of quantity, the Nation will have to spend $30 billion annually 10 years from now, with those $30 billion measured in terms of today's purchasing power. This would mean, according to the best economists' predictions, about 5 percent of the gross national product.

The Rockefeller report points out that local and State tax systems are in some respects archiac. School expenditures are charged almost entirely to the revenue raised through

property tax—and this is also the tax which meets with the most solidly organized and most vocal opposition. It is no coincidence that the rejection of school bond issues in New York State reached an all-time high last year—despite sputnik.

"It is this weakness in the State and local taxing systems more than anything else that gives rise to current proposals for increased Federal support of education," says the Rockefeller report. "For those who wish to resist or postpone the resort to Federal funds and at the same time not constrict educational services, there seems to be only one alternative: a thorough, painful, politically courageous overhaul of State and local tax systems."

Almost certainly this is not going to happen, and definitely not in time to bolster a weakened edifice of education.

The only public acknowledgment of these unpleasant facts was made by the White House Conference on Education, late in 1955, which voted better than 2 to 1 in favor of Federal aid to education, to be devoted specifically to school construction.

Congress omitted all Federal aid to school construction, however, after the administration's Federal aid proposals in 1958 completely dropped the demand for money for buildings.

Congress and the public had their eyes on scholarships, which they considered the chief ingredient of a crash program to compete with the Soviet Union. When it came to a vote and a series of compromises, the less than $1 billion aid bill offered mainly student loans (not scholarships); some graduate fellowships, plus special financial lures in the form of partly written-off loans to draw students into the teaching profession; and special funds for the improvement of guidance, language, and science teaching, vocational education, and research. The largest single amount—$300 million—was earmarked to buy science equipment for school systems in the various States. The most critically needed items, funds for buildings and for teachers' salaries, were overlooked.

Thus, the real Federal aid problem as a key to the financing of the schools remains an issue, with the fear of Federal control still the major roadblock to more sweeping appropriations. The Rockefeller report points out some safeguards that could be built into Federal aid to prevent it from leading to Federal control:

1. Federal funds would be one source of support among many.

2. State, local, and private sources of funds should continue to be the major factor in the support of education.

3. Federal funds should be used only to balance the serious gaps in the total educational system, and should be given in such a manner as to encourage State and local governments to use their own resources.

Whatever the sources may be, the experts have no doubt whatsoever that, financially, we have already face a real emergency. "It will not be enough to meet the problem grudgingly or with a little more money," says the Rockefeller report. "The Nation's need for good education is immediate; and good education is expensive. That is the fact which the American people have never been quite prepared to face. At stake is nothing less than our national greatness and our aspirations for the dignity of the individual. If the public is not prepared for this, then responsible educators, business leaders, political leaders, unions, and civic organizations must join in a national campaign to prepare them."

Blind Lawyer Accepts Post in Washington

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. BOLAND. Mr. Speaker, I would like to call to the attention of my colleagues that one of my constituents and a good friend, Attorney John F. Nagle, of Springfield, Mass., has joined the National Federation of the Blind here in Washington as its national legal representative. Mr. Nagle is blind himself, having lost his sight at age 12 when a seventh grade student in school. Despite this handicap, he demonstrated courage and initiative and completed his education at the famous Perkins School for the Blind in Watertown, Mass., the American International College in Springfield, and Northeastern University Law School, also in Springfield.

Under leave to extend my remarks, I would like to have printed in the RECORD a news story from the Springfield Union of November 24, 1958, concerning Attorney Nagle.

BLIND LAWYER ACCEPTS POST IN WASHINGTON—J. F. NAGLE TO REPRESENT NATIONAL ORGANIZTION FOR SIGHTLESS

John F. Nagle, blind lawyer, Sunday announced acceptance of an executive position with the National Federation of the Blind in Washington, D.C. He is leaving Springfield immediately and will begin his new duties December 15.

As national legal representative of the blind association, Nagle will promote the interests of the blind before Congress and various Government agencies, will help with drafting legislation, will appear as counsel for blind persons in social-security and civil-service cases, and will travel widely in the eastern part of the United States to help State blind associations with problems of organization and legislation.

The National Federation of the Blind has a membership of 40,000 blind members. It promotes and initiates legislation at Federal and State levels, conducts surveys of blind services in various States at the request of the State authorities and wages a ceaseless battle against discrimination against blind people in terms of job opportunities.

Nagle, who currently makes his home at 34 Myrtle Street has a law office at 782 State Street. He travels unaided, with a cane, between these two points twice daily. Until recently he had a seeing-eye dog, a Labrador retriever named "Cap."

Work with the organized blind is not a new thing for Nagle. He has long been active in this work. He is currently president of the Associated Blind of Massachusetts and chairman of its executive committee, and was general chairman of the national organization's last convention, held in Boston last July. He is also a member of the advisory board of the Massachusetts Division of the Blind, to which he was appointed in February 1958 by Gov. Foster Furcolo.

His other community activities are numerous. He is a member of the Springfield Lions Club and chairman of its sight conservation and blind committee. He is active in the United World Federalists, holding posts as member of the board of directors, chairman of the speakers' bureau, chairman of the study group committee, and legal counsel for the New England branch of the organizations, as well as being much in demand as a speaker on world federalism.

In the local Unitarian Church he is a member of the standing committee charged with running local church affairs and a teacher in the church school, as well as being active in other committees. For 6 years he was legal adviser for the Junior Chamber of Commerce.

MEMBER OF BAR

He is also a member of the Blind Profession Association of America, the Civil Liberties Union, the Adult Educational Council, the Hampden County Bar Association, and the American Bar Association.

Nagle lost his sight at age 12, when he was in the seventh grade in a local school. Thereafter he attended the Perkins School for the Blind, Boston University, American International College, and Northeastern University Law School, Springfield division. He holds two college degrees, one in law, and has been admitted to practice at the Massachusetts bar, the Federal bar, and the Department of Justice, Bureau of Naturalization and Immigration. While at Boston University he was a member of the varsity debating team.

During World War II he took special training in assembling and machine operation at Springfield Trade School. He was employed on the night shift at the U.S. armory and practiced law in the daytime.

In May of this year he married Miss Virginia Clarke of Worcester, also totally blind, and at that time president of the Associated Blind of Worcester.

A Bill To Expand the Veterans' Administration Direct Loan Program

EXTENSION OF REMARKS
OF
HON. FRED WAMPLER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. WAMPLER. Mr. Speaker, on Tuesday, January 27, 1959, I introduced the bill, H.R. 3513, which would expand the veterans' direct loan program by $150 million thereby permitting the Veterans' Administration possibly to make in the neighborhood of an additional 15,000 loans. I understand that this increment in direct loan authority would make it possible for veterans' home loan applications to be processed on a current basis.

My bill is similar to other measures currently before the House Committee on Veterans' Affairs. I feel that finding a solution to the veterans' home loan financing problem, particularly in the rural areas where private money

is not readily available, is of signal importance.

Had it not been for the Veterans' Administration's direct loan program, the Nation's veterans, and those veterans in the Sixth District of Indiana, which I have the honor to represent, would have received fewer loans than they have. And, although I find that in the State of Indiana the Veterans' Administration has made approximately 400 direct home loans in a period of less than 9 months, there are, at present, 1,312 Indiana veterans waiting for such a loan; and, unless they get a direct loan, they will be unable to buy a home.

The fact that these 1,000-plus veterans in the State of Indiana have not been able to find private financing has prompted me to introduce the measure, Mr. Speaker, and to urge that it be favorably considered by the House Veterans' Affairs Committee. I am genuinely interested in doing everything possible to allow these Indiana veterans, living predominantly in rural areas, small cities and towns, to take advantage of their veterans' benefits, bestowed upon them by law for their service to our Nation.

For example, I am informed that in Warren County, Ind., where there is a veteran population of 790, no guaranteed loans have been made and absolutely no direct loans. I might add that the entire county is eligible for Veterans' Administration direct loan financing.

Surely, the House Veterans' Affairs Committee and the House of Representatives will want to act to ease, if not totally correct, the home-purchase inequity placed upon the veterans of this country's rural areas.

God and Mr. Dulles

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks, I wish to insert a letter to the editor which appeared in a recent issue of the Washington Post and Times Herald.

I wish to say at the outset that I am in complete agreement with the views expressed by Rev. John P. Gorsuch. This Nation's policy toward Red China is wholly unrealistic, and I said so publicly last fall in a press conference. I advised the people of my congressional district that the question of recognition and of admission to the United Nations was a foregone conclusion. The only question to be determined is, when. The vote in the United Nations last fall on the question of admitting Red China to the U.N. was a clear signal to Mr. Dulles and his advisers that it should not be delayed much longer. If we are to entertain any serious hope for peace, it is not by denying the very existence of a nation of over 600 million souls.

In closing I wish to say, Mr. Speaker, that the writer of this communication is the son of one of my closest personal friends. This young man's father and I were classmates at the University of Denver Law School. It gives me a great personal pleasure to insert this letter in the RECORD:

GOD AND MR. DULLES

In a recent story in the Washington Post reference was made to the fact that a high percentage of Protestant clergy were opposed to either the recognition of Red China or to its admission to the United Nations. Apparently the Committee of One Million which made this estimate felt this refuted the Cleveland resolution adopted by the National Council of Churches in November which proposed that diplomatic recognition should be given.

I for one wasn't polled. Nor, I suspect, were a number of other clergy. I simply want to bear witness to the fact that there are a good many of us, as there are a good many Americans in other professions, who feel the Cleveland resolution makes some real sense. It represents a flexible and open-minded approach that is sorely needed.

Our State Department has too frequently been pietistic and doctrinaire. And, tragically, one sometimes gets the impression that the churches feel that God and Mr. Dulles are on intimate terms.

What the churches need to make clear, and this is what the Cleveland report seeks to spell out in reference to a concrete issue, is that it is not so-called abstract moral principles which ought to guide us nearly as much as it should be response to the concrete workings of God in the complicated web of events we call history.

The present administration is always talking about operating from the basis of moral principles. But principles and God aren't the same thing. God's will can only be understood in specific situations, not by starting with abstractions and trying to paste them to real life.

The question of whether to recognize Red China is a good case in point. To be sure, it is hardly a moral nation in many respects. But the real point is, do we truly want world peace or don't we? And if we do, recognition seems to be a step in the right direction because it ought to mean new friends in the rest of Asia and a chance to drive a wedge between Red China and the U.S.S.R. so that we could deal more easily with each.

In other words, there are many of us who feel that if God's will is now to be realized and the goal of peace is to be furthered, self-righteous moralism, and hysterical anti-communism ought to be put aside in favor of a policy that is definitely realistic.

JOHN P. GORSUCH,
Assistant Rector, St. Alban's Episcopal Church.
WASHINGTON.

"That's America to Me"

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks, I should like to have inserted in the RECORD the following poem by Mrs. Bettie A. LaVeck of Dearborn, Mich.:

THAT'S AMERICA TO ME

My country is a symbol of each living thing I see,
The blooming of a rosebud, the rustle of a bee.
The sun rising in the morning, the people that I see,
Just living here on God's rich soil that's America to me.

Friends in the factories work side by side each day,
Makes our lives enriched more than words could say.
Friendships in all walks of life, the price of this is free;
Just living here on God's rich soil that's America to me.

Our home whether a mansion or old and broken down,
If filled with love can be the happiest in your hometown.
A friend who offers assistance to a needy one I see
Just living here on God's rich soil that's America to me.

The joys we give each other make our lives complete,
It gives us courage for the burdens we all have to meet.
A kiss, a hug, a baby, a thief, a king I see,
Just living here on God's rich soil that's America to me.

The church in which we worship is crowded to the door
With a hundred shining faces I've never seen before.
A problem leaves the face of an unknown man today, even I feel relieved as I pray my God to thee,
Just living here on God's rich soil that's America to me.

Albert Gallatin

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. ANFUSO. Mr. Speaker, January 29 of each year marks the anniversary of the birth of Albert Gallatin, brilliant U.S. Secretary of the Treasury under Thomas Jefferson. Gallatin was born on January 29, 1761, in Geneva, Switzerland, the descendant of a family of watchmakers. Already then, as today, Switzerland was the center of a great watch industry which in our own day plays such an important part in United States-Swiss trade relations.

Gallatin came to America in 1780 and threw in his lot with the American patriots. After the establishment of the new U.S. Republic he embarked on a political career in which he served successively as a member of the Pennsylvania State Legislature, Member of the U.S. House of Representatives, U.S. Senator, Secretary of the Treasury and finally as U.S. Ambassador to Great Britain and later to France.

He devoted his life and work to many worthwhile enterprises, the most important of which were his advocacy of a system of free universal education, reform of Federal tax and budgetary policies, and the promotion of sound trade

relations with other nations. He also advocated liberalization of the immigration and naturalization laws.

As we offer our tribute today to Albert Gallatin, we pay our respects to the memory of a great American who laid the basic framework for policies which have helped to bring the United States to a position of preeminence in the marketplaces of the world. The ruling principle of his life was friendly commerce with other nations as an enduring promise of America's peaceful growth, and that principle is still a powerful factor in our continued growth and our leadership of the free world. The expansion of trade and commerce among the free nations is as vital today as it was in Gallatin's day.

Unfortunately, the present administration has shown a strong tendency to yield to the protectionists and those who seek to erect new barriers in our trade relations with the world. Such policy is against the liberal trade traditions of Gallatin. I trust that we shall return to the sound policies advocated by Albert Gallatin.

C. O. Wanvig, Milwaukee Civic Leader

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. REUSS. Mr. Speaker, one of the best known and most widely respected leaders in Milwaukee and Wisconsin is Chester Odin Wanvig, chairman of the board of Globe-Union, Inc.

Mr. Wanvig is not only an industrialist, but a civic and community leader, farmer, and philanthropist. Throughout his life he has placed great emphasis on the spiritual values which have traditionally been a vital part of America's resources—a source of inner strength for us as individuals and as a nation.

Under Mr. Wanvig's leadership, Globe-Union has contributed to the reaffirmation of our spiritual values by broadcasting, over radio stations in the 17 communities where its 22 plants are located, inspiring prayers delivered by Chaplains of the House and Senate. One is the Pearl Harbor anniversary prayer given in the House on December 7, 1943, by Chaplain James Shera Montgomery:

Almighty God, on the anniversary of the grimmest hour in American history, give ear to Thy words and consider our mediation; grant that our fellow countrymen may harken unto Thy voice: "Fret not thyself because of evildoers, neither be thou envious against the workers of iniquity." Through the dreary desert of suffering and sin, we pray for a highway for the march of all emancipated peoples. "Commit thy way unto the Lord and He shall bring it to pass."

Heavenly Father, universal is the hand of justice that holds the eternal scale. As we meet the challenge of today, grant that we may keep enthroned within, the spirit of humanity which is the merciful endowment of our Master. Allow us not to relax the divinity of our immortal souls nor treasure up wrath against any nation which forgets God. O let us labor for the advancement and the release of man from the chains of tyranny, and the promise of future days will assume for us fresh meaning and power in all the vicissitudes of this world. Inspire all to bring to this Chamber tithes of time, of energy, and of understanding. O come and reign above all treaties that the Christian precepts may be augmented in all lands and thus they will be brought into closer relationship with Thee and become the garden of our Lord. In the name of Him who is the Prince of Peace and the Son of Man. Amen.

Two others are Christmas prayers given by the late Senate Chaplain Peter Marshall, and by Senate Chaplain Frederick Brown Harris:

We thank Thee, O God, for the return of the wondrous spell of this Christmas season that brings its own sweet joy into our jaded and troubled hearts.

Forbid it, Lord, that we should celebrate without understanding what we celebrate, or, like our counterparts so long ago, fail to see the star or to hear the song of glorious promise.

As our hearts yield to the spirit of Christmas, may we discover that it is Thy holy spirit who comes—not a sentiment, but a power—to remind us of the only way by which there may be peace on the earth and good will among men.

May we not spend Christmas, but keep it, that we may be kept in its hope, through Him who emptied Himself in coming to us that we might be filled with peace and joy in returning to God. Amen.

Our Father God, amid all the bitterness and ill will of these days, we thank Thee for the gentle, balmy climate of the Christmastide. May the cynicism which has tarnished our faith be dissolved by the confident assurance that these clouds are lies and that the blue sky is the truth.

We would bow anew at the shrine of that One who didst come to a violent world and who is now remembered and adored, while the ruthless dictators are forgotten. In a world that is a neighborhood and must be made a brotherhood or we perish, join us to that saving minority that across the boundaries of prejudice, intolerance, and hatred extends the dominion of understanding and good will. In the Redeemer's name we ask it. Amen.

The presentation of these prayers serves to emphasize Mr. Wanvig's firm belief that the greatness of America is based on individualism which comes from religious faith—faith in the free man under God.

To give further insight into the philosophy of Mr. Wanvig, let me quote his own words:

Our economy thrives on competition. We continually strive to make better products—we continually strive to reduce costs. That in turn creates the typically American respect for the other fellow's work and ideas.

The quality * * * of all the products we manufacture walks into our plant every morning on two legs. Machinery and modern testing devices are necessary to insure quality, but the human element—in worker, engineer, and management—is still the controlling factor.

Attitude—how we think and how we feel about our work—determines the quality of our product. Quality can't be inspected into products. It can't be put on the surface. It must be built in. We make products by the millions—but they are used one by one.

We believe in the dignity of man, and the well-being of our employees has always been one of our major considerations. Years ago, long before we paid dividends to stockholders, we recognized our employees' contributions to our progress and shared with them the profits of successful years.

We believe in the Golden Rule and have unceasingly tried to practice it.

Despite the many demands on his time in the business world, Mr. Wanvig has given much effort in the service of his State and community. He has been a member of the University of Wisconsin board of regents, a trustee of Milwaukee-Downer College, and president of Milwaukee Country Day School. He is a member of the board of governors of Marquette University and the President's Advisory Committee at Marquette. He was one of the organizers of the Greater Milwaukee Committee, and is generally recognized as the founder of Junior Achievement in the Milwaukee area.

Mr. Speaker, the contributions made by C. O. Wanvig to his community, State, and Nation—and to his fellow men everywhere—are numberless. We need more men like him.

In Memory of Representative George H. Christopher

SPEECH
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1959

Mr. LANE. Mr. Speaker, GEORGE CHRISTOPHER came from a town that is close to the center of our Nation. It is not far from the spot where the trails fanned out, over which the pioneers ventured to open up the West.

He loved the land and he cared for it tenderly, and he was proud of the fulfillment that came at harvest time. And the rhythm of the seasons brought the harmony of nature's art and poetry and music to his heart.

GEORGE was a Missouri farmer, and a good one.

He was blessed with the native wisdom, and wit, and independent spirit that is so true to the American character.

Quiet, but plain spoken, he had the faculty of stripping away all sham and artifice to get at the root of an issue.

As I am a city Democrat, representing an industrial district, I liked to talk with GEORGE and learn the viewpoint of the agricultural Midwest, which is the "seedbed" of so much that is individual and self-reliant in our country's personality.

He was conscientious in representing his constituents, and in going beyond that to serve the Nation's interests. Since coming to Washington as a Member of the 81st Congress, he had served on the House Administration Committee, the Committee on Agriculture, the Interior and Insular Affairs Committee, and the Veterans' Affairs Committee.

When Congress adjourned, he went back home to the farm of 975 acres where he and the late Mrs. Christopher lived so many happy and work-filled years building the homestead that made

its wholesome contributions to the progress of the Nation.

There he replenished himself in the company of friends and neighbors who, beholden only to themselves and to God, looked themselves straight in the eye, and then made up their minds as freemen.

When GEORGE returned to Washington he spoke for them, and we, his colleagues were the beneficiaries of his practical knowledge and his homespun counsel.

Missouri has lost a distinguished son who served his people and his Nation well.

We, his fellow legislators in the U.S. House of Representatives, mourn his passing.

To his sons and daughters we send our sincere sympathy.

We pray that the memories of his kindness to them, and his devotion to our Nation, will comfort them in their bereavement, and inspire them throughout the years ahead.

Treatment Plant Construction Program

EXTENSION OF REMARKS
OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1959

Mr. BLATNIK. Mr. Speaker, a recent poll of the Nation's 52 State and territorial health officers shows that by an overwhelming majority—82 percent—they believe the current Federal sewage treatment plant construction grant program has resulted in stimulation of sewage plant construction. Their views are backed up by the facts which show that construction of sewage treatment works—the Nation's worst public works problem—has risen steadily during the course of the construction grants program.

Contract awards in 1957 rose to $351 million and are expected to reach at least $390 million in 1958. The 1952–56 average was $222 million. Total construction of treatment plants reached an all-time national high in 1958 with over one-third of the projects constructed in that year receiving Federal grants. Moreover, at least 35 States experienced their highest treatment plant construction levels in 1957 or 1958.

The results of this poll of the Nation's health officials shows that three-fourths of them favor doubling the authorization of construction grant allocations. These same officials, it must be remembered, opposed the adoption of this grant program when it was first proposed in 1956. But in overwhelming numbers they now favor the program and what is more recommend additional Federal participation. On this, too, they are well supported by the facts.

A recent survey of State and Territorial sanitary engineers indicates the estimated sewage treatment construction program of 40 States for the next 3 years could utilize approximately twice the Federal grant money authorized for the next 3 years under Public Law 660. According to this survey, the estimated cost of sewage treatment plant construction requirements for the next 3 years is approximately $540 million per year. The average annual Federal contribution to maintain this level of construction is estimated in the survey to be approximately $100 million per year, or twice the current authorized Federal level of participation.

Despite the success of the treatment plant construction program and its endorsement by State health officials the President has recommended that it be repealed. According to the President's budget message his administration supports programs necessary to stimulate greater State and local effort in areas of critical national concern but has consistently endeavored to strengthen our system of government by encouraging State and local governments to assume responsibility for many public needs which they can provide well without relying on Federal aid at all. To further this worthy objective the President would discontinue Federal grants for waste treatment works construction and adjust Federal revenue laws as recommended by the Joint Federal-State Action Committee so the States can assume full responsibility for these programs starting in fiscal year 1961.

What the President has done is pick what has been termed "the Nation's worst public works problem" by Fortune magazine and single it out for the budget ax on the pretext of strengthening Federal-State relations. He has picked a program that was enacted in the first place because it was needed to stimulate greater State and local effort in an area of critical national concern, namely, pollution control, and which has proved to be such a successful stimulant that over 80 percent of the Nation's health officers who 2½ years ago opposed it today agree that it has resulted in stimulation of sewage plant construction within their jurisdiction. The President's own adviser for public works,, Gen. J. S. Bragdon, has stated that:

> To meet our needs for water, conservation is the order of the day. We cannot manufacture this necessity of life. We must store it and use it more efficiently, learn to convert saline waters and find ways to improve the distribution of it. Most important of all, our rivers will have to be cleaned, and adequate treatment facilities installed to prevent upstream pollution. To accomplish this job, we need almost 8,000 municipal plants alone, and in all, some 17,000 facilities, public and private, to insure that all of the potential sources of pollution are adequately controlled.

Obviously, here is an area of critical national concern where State and local efforts have lagged the past 20 years making necessary the program now in operation to stimulate greater State and local effort. No wonder 48 out of 50 State health officers have come out in opposition to the President's recommendation to repeal the existing program. No wonder the President's own Water Pollution Control Advisory Board, in an almost unheard-of action, unanimously refused to endorse his recommendations.

Who agrees with the President on this issue? The Chamber of Commerce of the United States and the National Association of Manufacturers were his sole supporters when hearings were held on the subject last year by the Public Works Committee. I might add, Mr. Speaker, that I have never been able to fully understand the position taken by the chamber and the NAM on this issue. Water is essential to industry. By 1975 industry will be using 215 billion gallons a day, 62 percent of the Nation's water used will be in industry. To make a ton of steel alone requires 65,000 gallons of water. Industry has more at stake here than any other element of our economy and yet their national organizations oppose measures designed to assure that the quality of our water supply will be adequate for industrial as well as other uses. To encourage industry to join with others in combating pollution, I have introduced legislation today providing fast tax writeoffs for industrial waste treatment facilities which may be constructed in the future.

At the same time I have introduced a bill to increase the Federal grant program under Public Law 660 in order to further stimulate local effort to increase the level of treatment plant construction so that it more closely meets the proven needs of the country.

My bill would amend section 6 of the Federal Water Pollution Control Act by authorizing:

First. Grants for projects in the amount of 30 percent of the estimated reasonable cost thereof or $500,000, whichever is the smaller. Under existing law the maximum grant is 30 percent of the cost or $250,000, whichever is the smaller. Experience has shown that there has been less stimulation of construction in the larger communities subject to the $250,000 limitation than in those eligible for the full 30 percent grant. Because of this limitation, there is insufficient incentive to larger communities which are at the same time often major contributors to pollution. Increasing the maximum grant limit to $500,000 should tend to stimulate more projects from the larger communities, thus giving State pollution control authorities an opportunity to bring their programs into better balance by accelerating construction in the larger as well as in the smaller communities.

Second. Municipalities to join together to build joint treatment facilities with the amount of grant allocable to each community as if it were a separate project. Under existing law each project is limited to the maximum grant of $250,000 or 30 percent of the cost, whichever is the smaller. Experience indicates that if communities which join together could receive a larger grant the program would have a greater stimulatory effect on such communities. Often the construction of such joint facilities is the most economical and efficient method of providing adequate sewage treatment and is generally encouraged by consulting engineers and the States. This amendment would give the States greater latitude in determining the use of funds within their States and author-

izes an allocation to each municipality involved in a joint project its share of the estimated reasonable cost rather than limiting the project, as under present law, to a single maximum grant.

Third. Reallocation of grant funds from States not using funds because of lack of projects to States having projects approved for which grants have not been made because of lack of funds. Experience under the present act indicates that a number of jurisdictions have not been able to use their funds because of lack of eligible projects. On the other hand, many States have backlogs of projects considerably in excess of their Federal allotments. This amendment would permit a reallocation of funds from jurisdictions which cannot use them to jurisdictions having projects for which grants are not made because of lack of funds. This will stimulate additional construction in the States having the greatest demonstrated need.

Fourth. One hundred million dollars for construction grants each year for 10 years. Present law provides for $50 million a year for 10 years for Federal construction grants. Even this amount has resulted in tremendous plant construction stimulation, but it is not enough. The level of construction is reaching the $400 million mark, but our yearly needs are nearer $600 million. In order to stimulate construction up to this level it is necessary to restore the Federal construction program to amount I originally proposed in 1956 and which was cut in half. I said then that we were creating a program with one leg amputated before it had even learned to walk. On one leg the program is walking well but we need to restore the other leg so it can run the pollution problem right into the ground.

My bill also provides for the establishment of an Office of Water Pollution Control within the Department of Health, Education, and Welfare. At the present time the Federal water pollution control program is administered by the Water Supply and Water Pollution Control Program Section of the Division of Sanitary Engineering Services of the Bureau of the State Services of the Public Health Service of the Department of Health, Education, and Welfare. These men are doing a superb, dedicated job but the morass of the administrative framework within which they work cannot help but stifle and restrict their activities. The Committee on Public Works has stated explicitly that:

> It intends to watch carefully the progress and development of the national water-pollution control program and particularly the supporting role of the Federal Government.

In a committee report in 1956 it was stated:

> The committee believes that the Department of Health, Education, and Welfare should place a high priority on the objectives of the program authorized by the bill (Federal Water Pollution Control Act of 1956) and will diligently carry out its role in this Federal-State cooperative activity by providing a constructive program within an appropriate administrative framework.

Mr. Speaker, that appropriate administrative framework has not as yet been established by administrative action. Legislation is therefore needed. Control of pollution is part and parcel of the overall water resources problem. Waste carrying is an essential use of water. Pollution simply means that waste has built up beyond the water's capacity to carry it. Therefore, one of water's essential uses is curtailed and what is more its availability for other uses reduced at the same time. This affects industry, agriculture, fish and wildlife, and our health as well. The control of pollution is no longer concerned merely with the correction of sanitary nuisances but rather with the conservation of a great and precious resource—water.

The existing administrative framework within which the pollution control program operates must, therefore, be broadened and expanded so that the proper emphasis can be placed on all aspects of the problem—engineering, legal, research, construction, economic, and health. At the urging and by request of the Nation's great conservation organizations, women's clubs, and many others, and in the interests of good government, I recommend the establishment of an Office of Water Pollution Control within the Department of Health, Education, and Welfare so that an all-out attack, at all levels of government can begin against the pollution problem which threatens our health, reduces available water supplies and restricts economic growth and expansion.

The Plight of the Small Businessman in the United States

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mrs. GRIFFITHS. Mr. Speaker, the plight of the small businessman is well expressed in the following letter which I have received this day from a constituent of mine.

The first day of this session I introduced House Resolution 30 to investigate the cost of living. This letter points out the need for such an investigation. It can be surmised that when small businesses are gone, big business will price with little regard to supply or to cost.

The letter follows:

> I am a veteran of World War II, with a wife and two children. Nine months ago, I took out a second mortgage on my home and borrowed over my head to buy a little supermarket. Today, I'm on the verge of bankruptcy. I'd place the major portion of the blame on the A. & P. Tea Co. In the early part of November, they opened a store not too far from me. The other major chains; namely, Food Fair, Kroger, and Wrigley in order to keep their share of the business started a price war which makes it impossible for me and any small businessman to compete. As an example, A. & P. is advertising 50 pounds potatoes for $1.29. I paid $1.65 for the same package this week at the Produce Terminal. They're selling Land O' Lakes butter for 67 cents when it costs me 69 cents per pound. Large grade A eggs are advertised at 45 cents per dozen and they've been costing me 47 cents all week. Their meat prices are beyond comprehension for any type business operation to make a reasonable profit. I'm not asking for any special considerations for myself; but is there any way through legislation or investigation where this "monster" big business can be controlled? I'm writing this letter as a last resort. I've done everything possible attempting to make my business show a semblance of profit. If you as a representative of the small businessman cannot help me, I foresee in the not too distant future a society of big business and a working class. Recent mergers in every field of business and industry offer justification of my statement. Thank you for your attention.

National Science Academy

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. ANFUSO. Mr. Speaker, on December 31, 1958, the Washington Post and Times Herald published on its front page a story bearing this headline: "Ike Warned on Lack of Trained Men." The story began thus:

> President Eisenhower was told yesterday the United States is in danger of running low on trained manpower while the Soviet Union is driving for technical supremacy. The President's Committee on Scientists and Engineers said it is convinced the Nation faces a "grave problem in highly trained manpower during the coming decade."
>
> It expressed doubt that "present public agitation reflected a real understanding of our long-term need for scientists, engineers, and technicians."

Thus, nearly 16 months after Soviet Russia launched its sputnik and despite our own scientific achievements of the past year, we are still being warned by the President's Committee on Scientists and Engineers that we are facing a "grave problem in highly trained manpower" and that the American public still lacks "a real understanding of our long-term need" for scientists.

A year ago this month, on the opening day of the 1958 session of Congress, I introduced a bill for the establishment of a U.S. science academy. Its purpose was to help remedy the very shortage of trained scientists, engineers, and technicians about which we now hear and will continue to hear in the future, unless we take the necessary action now. What was true a year ago is even more true today, except that we have lost a whole year of time. This matter is therefore not only timely, but most urgent. I fear the problem may grow greater and graver by the month.

I have now revised my bill and brought it up-to-date. Today, I am reintroducing it and I am happy to report that our colleague from New York, the Honorable KATHARINE ST. GEORGE, has informed me that she will be pleased to be a cosponsor of the measure.

The bill provides for the establishment of a National Science Academy under the jurisdiction of the National Science Foundation, rather than under the Defense Department. The Academy is visualized as an educational institution emphasizing scientific knowledge and research, rather than as a military academy along the lines of West Point or Annapolis.

The purpose of the National Science Academy, as defined in the bill, shall be "to train selected men and women, to be known as science trainees, in the field of science or engineering for service as officers or employees of the United States." Specifically, this institution is to prepare young men and young women for scientific careers devoted primarily to the security of our Nation.

Highlights of the bill may be stated as follows:

Young men and young women, between the ages of 17 and 25, may be nominated as candidates for appointment to the National Science Academy by the President or by Members of Congress. Final admission to the Academy will be determined on the basis of qualifying examinations as prescribed and supervised by the National Science Foundation. Those who are admitted will receive a 4-year course of study, at Government expense, in which they will be trained in science, engineering, mathematics, and related fields.

Upon completion of the course of studies, the science trainees will be required to serve at least 5 years as science officers or employees of the U.S. Government, either with the Armed Forces or as civilian scientists and technicians in Government agencies. A limited number of foreign students from friendly countries may be admitted to the Academy, provided they pass a proper security check. The foreign students, however, will not be required to serve the United States as in the case of our own graduates. All those enrolled at the National Science Academy, including foreign science trainees, will receive a free education, housing, medical care, and other emoluments, and will be subject to established regulations of discipline, attendance, and so forth.

As far as location of the National Science Academy is concerned, no specific site is prescribed in the bill. It is merely recommended that the Director of the National Science Foundation shall establish a commission of five members to advise on the selection of a site. In the event there is no unanimity on the part of the commission, it shall submit to the director three sites, from which he is to choose one as a permanent location. Until this is done, however, the bill advocates the use of temporary facilities for the academy so that it may begin its operations as soon as possible.

In connection with a permanent location, I merely wish to express this view: I would prefer to see a site selected in an area which provides ample space for buildings, laboratories, and other needed grounds and facilities for an institution of this kind. Perhaps the most logical choice would be in an area which is not too close to any large urban center, an area which has not yet been built up and around which could be established in time a science city with major research facilities, equipment, and housing accommodations for the students, faculty, scholars, research people, and those serving their needs. In other words, to do what we have already done at our atomic research centers.

There is no way to estimate at this time the cost of establishing a National Science Academy, but Congress can appropriate certain sums for the acquisition of land, construction of buildings and laboratories, and other needs until the institution is ready to begin functioning, and thereafter a set sum can be designated each year on the basis of needs. Unquestionably this will require many millions of dollars, but it will be a worthwhile investment for the benefit of our country and it should not be any more expensive than providing funds for existing colleges to expand their present facilities.

As for the admission of students from friendly countries, this proposal is designed to help cement stronger ties with our allies, encourage them to develop the best scientific brains, and provide them with the opportunity of giving some of their students a thorough scientific background which should prove of mutual benefit.

Obviously, an institution of this sort must be established only under Government auspices for reasons of security, national needs, financing, attracting the best qualified students, and achieving the desired results. It must be provided with the finest scientific laboratories, and the top scientists in the country should be invited to teach at the National Science Academy. An educational institution of this kind would undoubtedly arouse considerable interest among high school students throughout the country and would serve to inspire many among them to pursue a career in science or engineering.

As to the question how a National Science Academy could be more helpful than existing colleges and universities, I should like to point out the following:

First. It would assure our Armed Forces and the U.S. Government with a constant and dependable flow of highly trained manpower, with scientists, engineers, and technicians, to undertake specific tasks and duties in any emergency. These people would be required to remain in Government service, in a military or civilian capacity, for at least 5 years. In this way the Nation would benefit from their services for having provided them with a free education and a career. Graduates from existing schools and colleges are under no compulsion to render such service to the Nation.

Second. It would create a great advantage for the United States by the fact that the scientists, engineers, and technicians trained at the National Science Academy would be geared toward problems of national security, scientific research for defense, and related problems.

Third. It would provide a great incentive for American youth to strive for a career in science or engineering and the development of scientific talent. This should serve as an excellent stimulus for the growth of scientific education. Many young people, who otherwise could not afford a higher education, would now have such opportunity on the basis of merit and scientific ability.

Fourth. It would strengthen the field of scientific education by training more people skilled in the art of communicating interest in science and increasing the prestige of science teachers.

Fifth. It would prepare scientifically trained and competent people with a broad knowledge of the humanities for participation in governmental functions of a civilian nature.

Mr. Speaker, over the past year we have been constantly reminded that Russia is outstripping us in the training of scientists and engineers and that she may be gradually attaining technical supremacy. Now this fact has been verified by the President's Committee on Scientists and Engineers. There is no need to stress the importance of accelerating and expanding our science education. By now this fact is clear to all.

The establishment of a National Science Academy, such as advocated in my bill, would help relieve the existing shortage of trained manpower in this vital field, it would encourage more profound respect for science and science teachers, it would stimulate young people to pursue a career in science to a greater degree than ever before, and it would have a beneficial impact on the welfare and the security of our country.

There is a great need for such an educational institution in the country today. The urgency of the times in which we live requires it. I urge all my colleagues to support this measure.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert at this point the article from the Washington Post and Times Herald of December 31, 1958, as referred to above:

IKE WARNED ON LACK OF TRAINED MEN—COMMITTEE FEARS NATION IS FACING A GRAVE PROBLEM

(By Fred S. Hoffman)

President Eisenhower was told yesterday the United States is in danger of running low on trained manpower while the Soviet Union is driving for technical supremacy.

The President's Committee on Scientists and Engineers said it is convinced the Nation faces a grave problem in highly trained manpower during the coming decade.

Among other things, it mentioned a drop in 1958 enrollments at engineering schools. It also spoke of the prospect of a smaller group of men in the most productive age bracket in 1965, attributing this to a dip in the birth rate during the depression of the 1930's and World War II.

In its final report to Mr. Eisenhower, the committee of educators, scientists, labor union, business and Government representatives urged the White House to take responsibility for coordinating and stimulating efforts by public and private groups to meet the problem.

This was the kind of work—in the non-Federal field—assigned to the committee when it was set up in 1956, about 19 months before Russia sent aloft its first sputnik.

The Committee said the sputnik launching had sparked greater public awareness of the American scientific manpower problem. But it expressed doubt that "present public agitation reflected a real understanding of our long-term need for scientists, engineers and technicians."

"A sudden swing of the pendulum of public opinion, such as has occurred during the past year, invites a counterswing when the initial momentum is spent," the report said.

Termed disturbing was a 13 percent decrease in freshman enrollment in engineering courses this year and a 4-percent decline in total undergraduate engineering enrollment.

"At the same time," the report added, "the Soviet Union is reaffirming its intention to surpass the United States in the fields of science and technology within the next decade."

Another factor bothering the Committee, it said, was that in 1965 the "lean generation" resulting from lower birth rates in the depression and war periods will provide the country's labor force with fewer men in the 25–34 age group.

This smaller group, the report went on, will have to help support (1) an over-all population growing at the rate of almost 3 million persons a year, (2) a standard of living depending ever more on technological advances, and (3) a cold war "which does not appear to be abating."

Committee Chairman Howard L. Bevis, president emeritus of Ohio State University, said in a letter transmitting the report that certain Federal actions are "welcome evidence of the Government's practical concern and its readiness to act."

In this connection, Bevis mentioned the new National Defense Education Act, aimed at spurring scientific-technical education, and expanding programs of the U.S. Office of Education and the National Science Foundation.

"The watchword now is 'follow through'," Bevis said.

Last weekend Mr. Eisenhower announced he is creating a new Federal Council for Science and Technology. This group is intended to achieve better planning of scientific programs supported by various Government Departments, and to reduce duplication in such programs.

In doing so, Mr. Eisenhower followed a recommendation by another advisory committee made up of scientists.

Heading the list of proposals by the President's Committee on Scientists and Engineers was the recommendation for White House coordination of efforts to develop and utilize trained manpower.

The report also called for continuation of programs launched by the Committee during its 33-month existence. They are:

Sponsorship of manpower utilization clinics with participation by industry, universities, and professional societies of scientists and engineers.

Organization of State and local groups to work toward the long-range improvement of elementary and secondary school education, with main stress on science and mathematics.

Development of adequate statistical data on the supply of scientists and engineers.

Development of guidance and counseling materials concerning science and engineering careers for high school students.

Fostering wider public understanding of the need for highly qualified scientists, engineers and supporting technicians.

Pay TV

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. VANIK. Mr. Speaker, good television is one of the rare and occasional free gifts of our free enterprise system. Last evening on the Columbia Network "Show of the Month" the television production "What Every Woman Knows," sponsored by Du Pont and starring Siobhan McKenna, was a superb 90-minute show with temperate advertising inserts. This was followed by a splendid bit of TV journalism in a production entitled "Castro's Revolution."

Shows of this type would dispel any interest in pay TV.

Priority for Starving Americans

EXTENSION OF REMARKS
OF
HON. JOHN M. SLACK, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. SLACK. Mr. Speaker, the development of our national affairs through the activities of the Congress occasionally produces such a great contrast between the issues under discussion and the immediate requirements of some sections of our population that it becomes necessary to pause and take notice of a paradox of our own creation. In recent days the United States has greeted two important visitors—Mr. Mikoyan, the Deputy Premier of the Soviet Union and Mr. Arturo Frondizi, President of Argentina. I recognize the need for our country to treat important foreign visitors with courtesy and good manners and to assist our friends in foreign lands to the maximum of our capabilities. The contrast between the discussions in these chambers at the time our famous visitors were at hand, and the things I have seen with my own eyes, in my own district, within the past few days, is so great, however, that is is necessary in defense of the principles of democracy and fair play on which this Nation was founded for me to bring certain matters to the attention of this House.

During the visit of Mr. Mikoyan we were advised through press reports that he was greeted with mixed emotions in several of our major cities and in five of them his party was showered with eggs. When Mr. Frondizi spoke before this House he paid us many compliments as a nation and told us a great deal about the misery of his native land, and about our share in the responsibility for the correction of that misery.

He said:

We cannot ignore the fact that millions of human beings in Latin America suffer from misery and backwardness. A stagnant and impoverished country cannot uphold democratic institutions. On the contrary, it is a fertile soil for anarchy and dictatorship.

Following the visits of these two men I took a trip myself, back to my own congressional district. The trip was planned as a result of numerous communications which I had received from businessmen, labor leaders and public officials describing in detail the economic disasters which had fallen upon the people who I was elected to represent. I visited the coal fields of the southern Appalachian area, much of which lies within my congressional district.

In the coal fields of my district there are over 30,000 unemployed receiving unemployment compensation and 40,000 who have long exhausted their unemployment benefits, and who have not been employed in a productive manner for 2 years or more. They and their families are subject to the degradation of living on the combination of charity and surplus agricultural commodities.

They have seen the number of employed miners in West Virginia decline from 125,000 in 1948, to 47,000 today, and they have no illusions about the future.

Their children exist on a skid-row diet of corn meal, rice and whatever else the surplus commodities warehouse has available. These children never have any meat, and have seldom seen a fresh egg during the past 2 years. They envy the children who are so amply blessed with good food that they can afford to throw eggs at foreign visitors. The parents told me that even today they only receive enough food for 3 weeks out of the month under all of the existing aid programs—that their diet contains only one-third of the calories and proteins needed to sustain life. So the children weaken a little, and their parents are condemned to watch these future citizens shrink in vitality and hope, day by day.

They cannot afford to worry over the race to control outer space, the competition for the minds and loyalties of men, or the role of American leadership in the free world.

As for their children; can you develop a nuclear physicist out of a child who had no shoes and was forced to quit school in the fourth grade? Will you draw tomorrow's space pilots from among these who have had no orange juice or milk or eggs for over a year?

These are not the people of India or the masses of Chinese I am talking about; these are Americans—strong and self-reliant and skillful in their trade. They are disciplined to work in teams, and are renowned for their courage in a realm of industrial activity which is very dangerous under the best conditions. When they have work to do, they arise in the morning and enter the mouth of a coal pit to spend the day underground, beset by the dangers of gas and cave-ins more hazardous than fire and flood—dangers which few people, including myself, would care to face as a daily ration.

Their situation is not new, it has been growing cumulatively for several years. What have we done about it? We have done nothing of any practical benefit. These miners are the victims of several circumstances—for one, a trade policy that whittles away their livelihood in exchange for doubtful gains in foreign popularity. For another, they are the victims of technological advances which replace the miner with the machine. There is no disposition here to argue against automation or mechanization in the coal fields. We cannot stop progress, and those of us with business experience know that mechanization is necessary for competitive reasons.

But the miners have been displaced through the operations of American industrial ingenuity to create a more competitive end product and a more attractive price for the consumer. In other words, mechanization has been in the general public interest, but the miner and his family are being destroyed. So, they have given up everything, either for theoretical advances in international good will on the one hand, or a public benefit through lower cost to the consumer on the other.

In return they have received nothing but the right to starve and to see their children die before their eyes. This is a situation which cannot be permitted to continue, and I say it is the responsibility of this Congress to return to them an opportunity to live like American citizents, to lend a hand in their economic reconstruction, to see that this Nation does not take away everything and return nothing from any body of its citizens. If we do not take care of our own in circumstances as dire as these, how can we expect to earn respect in foreign lands? If these conditions are permitted to continue in this area of industrial operation, what confidence will our own people in other areas have in us and our way of life? Automation and mechanization will sooner or later enter all types of industrial activity. The coal miner has been struck first and struck hardest, but he will not be the last to be driven to his knees by the random progress of science. Industrial progress has created among the miners a permanent disaster. This is not a natural disaster of storm or flood, but it is a disaster nonetheless, and cries out for disaster relief.

I realize that this is not the first time this matter has been brought to the attention of the House, but the situation grows worse every day, and there is no sign of strong interest or concerted activity on behalf of those affected. What is necessary to stir us to action? Is it necessary to fill the gallery with half-starved men and women? Is it necessary to have a repetition of some dreadful enterprise like the depression bonus march on Washington? Will we not take forthright action until the pot boils over and the starving thousands descend upon us to parade the coldheartedness of their Government before the leaders of the world? There have been bills introduced before this House—thousands of bills—covering a great variety of subjects, but no pending measure merits consideration ahead of the lives and hopes of those who have given up everything in the advancement of the public interest.

We have before us for consideration measures to aid distressed areas, to increase the flow of surplus agricultural commodities, to institute a program of coal research, and other proposals which will give both immediate and lasting relief to the people of the coalfields. They must get priority. A distressed-areas bill was passed by the last Congress and vetoed by the President. This time it must be passed with an overwhelming majority, sufficient to defy the veto threat implied in the President's message. If I could assemble the membership of this House in a single vehicle, and take you with me through the coalfields of my district, and allow you to spend a day looking at the sum total of human misery which has resulted from prevailing conditions, I doubt that there would be a single opposing vote for any measure which would better the situation.

The subject is not one for debate. There is nothing to debate. The last and best hope for these people rests in the power and authority of this Congress. They have seen Development Loan Funds established to assist the backward people of Asia, Africa, and the Middle East, with authority to spend $625 million for that purpose during the current fiscal year. At the same time they remember that a measure costing half as much, which would have given them hope and sustenance, failed of passage over a veto, and they were left with nothing.

The gaunt figure of the starving miner who stands idle is a mockery of the image of America as the land of abundance. If there is to be a showdown then, let it come quickly. Every day of delay means another day on which a 100,000 children face the morning on a breakfast of cornmeal and water, or with no breakfast at all.

I urge a quick consideration of the measures that will afford relief. I appeal to your generosity and sympathy. I challenge your native pride in the country we are all sworn to protect and defend.

The conditions that exist, left unattended, will brew the devil's broth of disloyalty and furnish fertile grounds for the disease of disbelief in our way of life.

It may be said that these are hard words, but this is a condition which defies words. Its solution rests solely in the source of all laws—the Congress of the United States. I appeal to you to make it your primary concern, even as it is mine.

Anniversary of Ukrainian Independence

EXTENSION OF REMARKS
OF
HON. JAMES C. HEALEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. HEALEY. Mr. Speaker, this week marks the anniversary of Ukrainian independence. Forty-one years ago the Ukrainian people proclaimed their independence for the first time after centuries of oppression and foreign domination. Unfortunately, their freedom was short lived, and for that reason we commemorate this date with sadness and sympathy for the plight of these courageous people, today the victims of Communist expansion and aggression.

This anniversary should serve as a reminder of the fateful enslavement of 40 million Ukrainians by Soviet communism, and we should pledge anew our efforts and hopes for the day when once again there will be a free and independent Ukrainian National Republic.

Address of Hon. James A. Farley, at the Luncheon Meeting of the Adcraft Club of Detroit, Statler Hilton Hotel, January 9, 1959

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks, I include an address given by the Honorable James A. Farley at the luncheon meeting of the Adcraft Club of Detroit on January 9, 1959. Mr. Farley's remarks will be of particular interest to members of the advertising profession:

ADDRESS OF HON. JAMES A. FARLEY AT THE LUNCHEON MEETING OF THE ADCRAFT CLUB OF DETROIT, STATLER HILTON HOTEL, JANUARY 9, 1959

I am speaking to you today as a businessman, and I am speaking to you as fellow businessmen. There are no sharp divisions among our businesses. Advertising depends upon production. Production depends upon advertising. One without the other would shrivel away. Living standards would drop to those of a century ago. And, unemployment would spread over the land.

As businessmen we deal with something called economics. And, the people who deal with economics are called economists; that is, some of them do. So, a businessman is an economist, too, although he may not have a Harvard degree.

Now I want to be understood to say that I have the greatest respect for professional economists. They can, and most of them do, help us who are on the practical end of things with the many problems which we must meet. Every sizable company employs them and profits by their advice.

But, there are a few economists who are not content to advise business and Government and then let the responsible managers make the decisions. They want to make the decisions themselves. Above all they want to tell the President and Congress what to do with and to business.

I have met a good many of these economists, not only in business but in Government, for I was, for nearly 8 years, doing my bit in Government myself. And, in the Post Office Department I had a pretty big business to direct. I met a good many of the economists who were in Washington in those years. Most of them I respected. I liked almost all of them. But, the thing that struck me was not only their lack of practical knowledge of the problems of business but the fact that they never were able to agree with each other. Some of us had to make the practical decisions and when we got to that we had to brush away all of the technical language and the four-, five-, and six-syllable words and apply that commonsense that experience had provided for us in our years in business before we ever went into Government.

Of course I was also in politics. And, in a way politics is a business, too. The only thing about politics as a business that is distinctive is that if you are honest there is not monetary profit in it. But, in business

honesty is not just the best policy but the only real policy. In politics the profit is not in material things but in the satisfaction of serving your country and your fellow man so that he will have a better way of life.

We hear a good deal of talk these days about the need for advertising censorship and regulation. I know of no field that needs regulation less or that has disciplined itself more. There is no governmental body whose wisdom could be as great or whose discipline could be as harsh as that of the open competitive market. If we stop to think about it, competition functions in much the same way as his majesty's loyal opposition or as a minority party. State an untruth, be it ever so small, and your competitor is quick to point it out and to force you to correct it. Here and there a fly-by-night may publish an exaggeration and before competition and the public have time to catch up with him he will be gone. But the permanent manufacturer who represents 98 percent of the products we live by has long since learned that truth and honesty in advertising are the only policy that enable him permanently to live with his public.

Politics and advertising have this in common, that they thrive best in a free society where both are subjected to the continual harsh light of publicity, claim and counterclaim, criticism and opposition. About the only difference I see between the two is that a politician is a little bit like a banker. A banker draws up a statement at the end of his fiscal year—a politician subjects himself to the approval of the public every 2 or 4 years, as the case may be. But with a piece of merchandise and with advertising every day is election day, and every product and every advertisement is continually and completely subject to the verdict of public opinion. In both cases it is truth and character that stand out.

If we look over the field of famous trade names, the ones that are permanent are the ones that have been truthful and honest, that year in and year out have given full value for the dollar. If you stop to think of the amount of faith the average buyer puts in the merchandise he buys in the American market today it is the finest possible tribute to the veracity of the American printed advertising word. If you look at the politicians the world remembers, from Washington, Jefferson, Jackson, Lincoln, and Cleveland down to our own day, it is not the clever and expedient whom we remember but those who were known in their day for their stubborn addiction to the truth.

I do not know what your concept of a politician is. Perhaps it is as erroneous as my own idea of an advertising man used to be. I used to think that advertising men were long-haired artists who dreamed up ideas. Perhaps you think a politician is an adroit character who spends his time glad handing in a smoke-filled room. But just as in advertising the harsh reality of sales results weeds out the opportunist in favor of the statesman who renders a public service.

Let me give you a definition of politics that I have carried with me for a quarter of a century, written by Andrew Oliver in Boston more than 150 years ago. It goes like this: "Politics is the most hazardous of all professions. There is no other in which a man can hope to do so much good to his fellow creatures—and neither is there any in which, by a mere loss of nerve, he may do as widespread harm. There is not another in which he may so easily lose his own soul, nor is there another in which a positive and strict veracity is so difficult. But danger is the inseparable companion of honor. With all its temptations and degredations that beset it, politics is still the noblest career any man can choose."

With the change of a few words that would be an equally good definition of advertising.

To carry the parallel still further, let me give you a list of 10 rules for the making of a successful politician, which I have set down for my own guidance. A politician must have a good personality. He must have what we call character. He must be a substantial human being. He must work hard. He must be able to get other people to work for him and with him. He must have native ability and must be able to see and use ability in others. He must be aggressive but not to the point of being offensive. He must have a feeling for what people want. He must be able to make decisions. He must understand the meaning of the practical compromise without loss of principle. Above all, he must be truthful. The man or the advertisement that does not tell the truth is distrusted and shunned, and rightfully so. The dog of untrammeled ambition is usually pursued by the rabbit of conscience.

In short, I find little difference in the rules for success—whether in advertising or politics or any other field.

To return to the economists who have been in government in past years, some of whom are still around, they are still writing books and articles. And, they still cannot agree among themselves. I am thinking now of several examples.

One of these has written a book which has had a lot of attention. In it he concludes that the American people are much too well off. They have not only all that they need but all that they want. And, also that they have a lot of things that they not only don't need but that they should not really want at all. They are just too darned prosperous.

Of course this is a long, long cry from the days when they were saying that one third of the people were ill clothed, ill fed and ill housed. But a lot of water has gone over the dam since then. And a lot of economists have gone over the dam too. But some of them still survive. One of them goes on to say, and this is not without importance here in Detroit, that the people are buying too many nice big automobiles while the Government is not building enough roadways and highways to accommodate them.

Well, we do have our traffic problems, we must admit. But, it is also true that we are spending, through Government, billions of dollars a year to solve these problems. And, that volume of construction, along with the big Federal program passed by Congress a few years ago, is going about as fast as it is humanly possible to go. But, you cannot build highways with money alone. It takes engineering and planning and the mobilization of workers and machinery. And, above all, it takes time.

But this economist is in a hurry, and so he would slow down the building of cars in two ways. He would take the money away from consumers by heavier taxes. The economists' term for taking the other fellow's money is "drain it off."

Then, he would have workers and producers work fewer days in the year and fewer hours in the week, and also have them work with less energy while they are working.

He is not talking about fewer cars alone. He would have fewer refrigerators, and cosmetics, and baby food, and television sets and telephones.

He doesn't mention Coca-Cola but I imagine he thinks we consume too much of that, too. Probably he believes that the refreshment people get from Coca-Cola makes them work harder. And, in his book that is bad, very bad indeed.

For most of this overconsumption and overproduction he blames advertising. He sees in advertising a sinister plot to make people want more than they need. And, in his catechism it is a sin to want more than you need.

We have heard a lot from people who call advertising waste. There are some who would have government tell every businessman how much he should spend and not spend on advertising. These people would have a government bureau determine in every individual case what percentage of its gross receipts should be spent for advertising. Thus they would have an army of bureaucrats going over your books and making your business judgments. Of course, this would take more Government money—and employ many people who would otherwise be making things people could use.

But, I have seen enough of government to know that there is waste in government, too. I have served with two Hoover Commissions and I have participated in many reports of those Commissions—reports which point out specifically where those wastes are and how they can be eliminated.

We are not stingy with Government services. As a nation we are spending very considerably more than $100 billion a year at the Federal, State, and local levels. This is a very big part of our national production. It is, I believe, big enough. What we need is to get our money's worth for what we are giving in taxes.

But, I am at a loss to know a simple fact. How does this economist expect to get the taxes to pay for more and more public spending if at the same time we are producing less and spending less and working fewer days and hours? Sometimes the expert misses the simple point of commonsense. In his theories he forgets his arithmetic.

But, to come back to advertising what are we getting for our money spent in the newspapers, magazines, television, and radio?

To begin with, are advertising budgets too large in proportion with our receipts from what we produce? I do not think so and I speak with some authority. To achieve their advertising objectives, the bottlers of Coca-Cola and the Coca-Cola Co. together have probably invested more money in advertising Coca-Cola than is invested in advertising any other product in commercial history.

The determination of the proportion of receipts which should go into advertising is a matter of business judgment. For there are stockholders to be considered and wages and other matters with which such a decision must be measured. No successful business has as its mission in life to make the advertising profession happy. It uses advertising just as it uses engineers and research and new designs and faster and more efficient methods of production. It uses advertising because it helps toward the ever-expanding service which it gives to the public.

From the standpoint of advertising, the employment in that business of brains, manpower, and creative effort means more money spent, more consumption of goods and more taxes for public services.

There is also the maintenance of real services under private auspices such as the dissemination of information, news, entertainment, by the newspapers, magazines, radio, and television. This means the enrichment of life for all.

We have just completed a 19-day newspaper strike in New York City. This should have been a great satisfaction for the economist I have been talking about. For, without any direction from the daily press Christmas customers had to wander blindly among the stores for what they wanted to buy. This meant extra expense, wasted time, and general demoralization. It also meant from $50 to $100 million in loss to the people affected by the strike. If this is the sort of thing that some of our reformers want they are lacking not only in commonsense but they are lacking in the ordinary decent consideration that one human being owes to another.

But, behind all this sort of talk of economic reform is another and more serious consideration. If we are to cut the pie between what is spent by private individuals and what is spent by government, who is to do the cutting? Who is to decide what the individual shall have and spend and what government is to have and spend? That, these reformers answer very simply. They are to have national planning. I may say that there were plenty of these around when I first entered government service in 1933. They are the "papa knows best" boys.

The millions of decisions made in a free economy by the citizens would no longer be the main factor in the movements of the economy. That decisionmaking would be in a small aristocracy in the government. And, in general, those people would have never met a payroll—not met the practical facts of life in business, or the professions, or as manual workers.

That sort of planning was tried in England and it failed. And, if it could not succeed in a small country like that how could it succeed in a vast country like ours.

For myself, and I am confident for you, the old rule of freedom of choice is best. Freedom for businesses to make their own business judgments with, of course, reasonable regulation to see that competition is kept wide open. And, freedom for the individual to make his own choice. That is economic liberty practically applied.

That has made us what we are as a nation. We are not perfect. We never should be. But, this system of ours has produced more for all, more of what makes for happiness, and culture, and peace, and order than any nation has seen in all history.

This is liberty, the last best value given to men on earth.

Anniversary of Birth of Albert Gallatin

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. MACHROWICZ. Mr. Speaker, today marks the 198th anniversary of a great American of Swiss birth, Albert Gallatin.

Albert Gallatin, brilliant U.S. Secretary of the Treasury under Jefferson, was born on January 29, 1761. He was descended from a family of watchmakers, and born in Geneva, ancient capital of the modern watch industry which today contributes so importantly to United States-Swiss trade. Sensing that a greater future would be found in the new Nation struggling for its independence, he landed in America in 1780 and threw in his lot with the American patriots. After the Revolution he entered a political career in which he was successfully Pennsylvania State Legislator, Congressman, Senator, Secretary of the Treasury, and Ambassador to Great Britain and France.

I wish particularly to remind my colleagues that Albert Gallatin, while a Member of the U.S House of Representatives was the founder of the great Committee on Ways and Means, of which I am proud to be a member.

His life was devoted to many enterprises, most important of which were the system of free universal education, reform of Federal tax and budgetary policies, and the promotion of sound commercial relations with foreign nations throughout the world. He said:

It is commerce which unites the nations of the civilized world. It is principally to commerce that we are indebted for modern civilization.

We all recognize that America's ties with the entire free world are now challenged by the powerful, divisive force of Soviet collectivism. To cope with this challenge we must revive Gallatin's principles on trade as a guide to our future action. We must renew and strengthen our commercial ties to what Gallatin called the nations of the civilized world. We can accomplish this vital task, only if Members of the House can approach their job in the spirit of the founder of the House Ways and Means Committee—the great Albert Gallatin.

Soviet Psychopolitics

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. HIESTAND. Mr. Speaker, under previous leave to extend my remarks in the RECORD, I include the final two articles by George Todt on the practice of psychopolitics by the Communist conspiracy. These articles were originally published by the North Hollywood, Calif., Valley Times. I wish to thank Mr. Todt and the Valley Times for permission to reprint this series:

AS BERIA PUT IT TO AMERICANS, V—AN ADDRESS BY BERIA TO AMERICAN QUISLINGS AT LENIN UNIVERSITY, 1936

"American students at the Lenin University, I welcome your attendance at these classes on psychopolitics.

"Psychopolitics is an important if less known division of Geopolitics. It is less known because it must necessarily deal with highly educated personnel, the very top strata of 'mental healing'.

"By psychopolitics our chief goals are effectively carried forward. To produce a maximum of chaos in the culture of the enemy is our first, most important step. Our fruits are grown in chaos, distrust, economic depression and scientific turmoil. At last, a weary populace can seek peace only in our proffered Communist state. At last, only Communism can resolve the problems of the masses.

"A psychopolitician must work hard to produce the maximum chaos in the fields of mental healing. He must labor to increase the personnel and facilities of 'mental healing' until at last the entire field of mental science is entirely dominated by Communist principles and desires.

"To achieve these goals, the psychopolitician must crush every homegrown variety of mental healing in America. Actual teachings of Freud, James, Eddy, and others among your misguided peoples must be swept away. They must be discredited, defamed, arrested, stamped upon even by their own Government until there is no credit in them and only Communist-oriented healing remains. You must work until every teacher of psychology unknowingly or knowingly teaches only Communist doctrine under the guise of psychology. You must labor until every doctor and psychiatrist is either a psychopolitician or an unwitting assistant to our aims.

"You must labor until we have dominion over the minds and bodies of every important person in your Nation. You must achieve such disrepute for the state of insanity and such authority over its pronouncement that not one statesman so labeled could again be given credence by the people. You must work until suicide arising from mental imbalance is common and calls forth no general investigation or remark.

"With the institutions for the insane you have in your country prisons which can hold a million persons, and can hold them without civil rights or any hope of freedom. And upon these people can be practiced shock and surgery so that never again will they draw a sane breath. You must make these treatments common and accepted. And you must sweep aside any treatment or any group of persons seeking to treat by effective means.

"You must dominate as respected men the fields of psychiatry and psychology. You must dominate the hospitals and universities. You must carry forward the myth that only a European doctor is competent in the field of insanity and thus excuse amongst you the high incidence of foreign birth and training. If and when we seize Vienna, you shall then have a common ground of meeting and can come and take your instructions as worshippers of Freud along with other psychiatrists.

"Psychopolitics is a solemn charge. With it you can erase our enemies as insects. You can cripple the efficiency of leaders by striking insanity into their families through the use of drugs. You can wipe out the outcries away with testimony as to their insanity. By our technologies you can even bring about insanity itself when they seem too resistive.

"You can change their loyalties by psychopolitics. Given a short time with a psychopolitician, you can alter forever the loyalty of a soldier in our hands, or a statesman, or a leader in his own country, or you can destroy his mind.

"However, you labor under certain dangers. It may happen that remedies for our treatments may be discovered. It may occur that a public hue and cry may arise against mental healing. It may thus occur that all mental healing might be placed in the hands of ministers and be taken out of the hands of our psychologists and psychiatrists.

"But the capitalistic thirst for control, capitalistic inhumanity and a general public terror of insanity can be brought to guard against these things. But should they occur, should independent researchers actually discover means to undo psychopolitical procedures, you must not rest, you must not eat or sleep, you must not stint one tiniest bit of available money to campaign against it, discredit it, strike it down and render it void. For by an effective means all our actions and researches could be undone.

"In a capitalistic state, you are aided on all sides by the corruption of the philosophy of Man and the times. You will discover that everything will aid you in your campaign to seize, control, and use all mental healing to spread our doctrine and rid us of our enemies within their own borders.

"Use the courts, use the judges, use the constitution of the country, use its medical societies and its laws to further our ends. Do not stint in your labor in this direction. And when you have succeeded you will discover that you can now effect your own legislation at will. And you can, by careful organization of healing societies, by constant campaign about the terrors of society, by pretense as to your effectiveness make your Capitalist himself, by his own appro-

priations, finance a large portion of the quiet conquest of the nation.

"By psychopolitics, create chaos. Kill our enemies and bring to earth, through communism, the greatest peace man has ever known."

Some fun, eh keed?

ONE ASPECT OF MENTAL HEALTH WORK, VI

Have members of the Communist conspiracy infiltrated themselves into the vast mental health program going on in the United States today?

That is a question which millions of Americans have been asking themselves over a long period of time.

One California State legislator, Senator Hugh P. Donnelly, Democrat of Turlock, made the forthright accusation in Los Angeles last July that mental health programs in our country are part and parcel of a long-range Marxist scheme to seize control—through cunning, treachery, and stealth—of the minds of our people. This in order to aid and abet the Soviet Union in its drive to a Red world government.

In saying this, I am sure we can all be certain that Senator Donnelly did not mean to impugn the motives or cast unpatriotic reflections upon the large number of dedicated American citizens who are helping to carry the water in their commendable struggle to alleviate the dread ravages of mental disease. I count myself in this category. I have nothing except admiration and respect for the 95 percent, or better, of those volunteers and professionals in mental health work who are motivated by pure humanitarianism and are Good Samaritans.

These are not the kind of persons to whom Senator Donnelly was referring in his blast at a conspiratorial few—hidden masterminds who may pull the strings unseen as they work behind the scenes—at Los Angeles last August. In fact, no responsible person wishes to do less than help the bona fide Good Samaritans achieve their worthy goals.

But nothing is more detrimental to their efforts than the considerable body of fear which has been built up in the United States by this time concerning the Kremlin's potential Trojan Horse technique in this field now and in the future. Is there anything to it?

Frankly, I do not know—at least, I am not sure. Let's put it that way. But I do know that there is a great amount of doubt about this engaging and controversial matter from one end of the country to the other.

Now, I submit that this subject of mental health is too important to remain obscured and hidden from the public's gaze for long. It may be time to put it on the table for public inspection.

In past columns, I have quoted at length from the official Russian textbook on psychopolitics and the infamous address of Beria, former head of the Russian secret police, to American quislings at Lenin University in 1936.

The odious implications are pretty obvious on the face of it all. And if they are true—then we have been laying back too long in our attempts to go to the bottom of the mystery. For Beria, although liquidated by his erstwhile pals in the Kremlin as of now, certainly spoke with the voice of Russian officialdom 20 years ago.

It is no question of a Hollywood film "whodunnit" to imagine that we have become the number one target of international spies and saboteurs on a grand scale by this time in our history. Such has been the fate of every nation which wore the imperial purple of world leadership in the past. And this will continue to be the case in the future.

Our very wealth and power attract the vermin who come here to undermine our Nation—at the behest of our most deadly opponent on the world stage. This isn't looking under the bed. Happens to be the facts of life. What should we do about it?

Back in August I suggested that the time is ripe in the forthcoming Congress to ask for this matter of mental health programs to come under the closest scrutiny—a first-class investigation.

In addition to this, I also think the Federal Bureau of Investigation ought to be brought into the case. The FBI's astute director, J. Edgar Hoover, has enough stature that he could perhaps do more than any other man, outside of the President and the Vice President, to keep this kind of ship on an even keel.

It would go a long way to restoring public confidence in the mental health programs if the President might request a bipartisan committee to shed light on this problem. And let the chips fall where they may.

As a former chapter president of the Sons of the American Revolution, I think all patriotic societies and citizens everywhere should join with one voice to make such requests of the White House and the Congress in the forthcoming year.

The aim shouldn't be that of looking for trouble—but to get the record straight for all concerned. Not the least of whom are the good Samaritans who are working their hearts out to bring assistance to those who have fallen. And to assist the latter by combing out the deadwood in the present programs.

The honest in heart would have nothing to fear from such an investigation. For the honest have nothing to hide.

Actually, none would suffer except the guilty—if such were to be found. Why not take a look and see for ourselves?

And while we are at it, why not ask this question, too: How is it that, in such a spiritual matter as mental illness may very well be, the church has indeed been so shut out of ministering to these sick and needy ones? Why have the men of God been kept at arm's length here? In any affliction of the spirit who may be more sorely needed by the patient than they?

State Senate Honors Korkosz Brothers

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. BOLAND. Mr. Speaker, the Massachusetts State Senate has adopted a resolution congratulating John J. and Frank D. Korkosz, of Chicopee, Mass., who designed and built the projector apparatus for the new Hayden Planetarium of the Museum of Science in Boston. Recently, I included with my remarks on the Korkosz brothers some newspaper articles commending them for their achievement. Under leave to extend my remarks in the RECORD, I include the following article from the Springfield Daily News of January 19, 1959, concerning the State senate resolution:

STATE SENATE HONORS KORKOSZ BROTHERS

BOSTON.—The State senate this afternoon is expected to adopt resolutions congratulating John J. and Frank D. Korkosz, of Chicopee, for their outstanding scientific achievements.

The resolutions were sponsored by Senator Maurice A. Donahue, Democrat, of Holyoke. The text follows:

"Whereas John J. and Frank D. Korkosz, brothers, of Chicopee, have designed and built the new projectors for the New Hayden Planetarium at the Museum of Science in Boston, and for the planetarium at the Springfield Museum of Natural History; and

"Whereas our solar system and its complexities have been made dramatically visible by the ingenuity of the Korkosz brothers for the benefit of all people who wish to view their creations; and

"Whereas the scientific research and contributions of these brothers have been hailed by scientists and astronomers the world over; and

"Whereas the Korkosz brothers projects have been utilized by the U.S. Air Force as a training aid in celestial navigation, and invaluable contribution to the safety and perpetuation of our great Nation; and

"Whereas Korkosz Day in Chicopee was officially proclaimed recently by the Honorable Walter M. Grocki, mayor of Chicopee, commemorating their services to science and their country: Therefore be it

"*Resolved*, That the Massachusetts Senate extends its congratulations to the Korkosz brothers for their outstanding accomplishments in the astronomical field; and be it further

"*Resolved*, That copies of these resolutions be sent by the clerk of the senate to Frank D. and John J. Korkosz, of Chicopee."

Inaugural Address by the Honorable J. Millard Tawes, Governor of Maryland, January 14, 1959

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. LANKFORD. Mr. Speaker, it is my privilege to commend to the attention of my colleagues the inaugural address of the Honorable J. Millard Tawes, the 59th elected Governor of Maryland.

Governor Tawes as Comptroller of the State of Maryland for the past 16 years has acquired a thorough and intimate knowledge of our State's financial structure. The people of Maryland are, indeed, fortunate to have as their pilot our most experienced State administrator who can be depended upon to chart the correct course for our State in the complex times that lie ahead.

His address follows:

INAUGURAL ADDRESS OF J. MILLARD TAWES, GOVERNOR OF MARYLAND, AT ANNAPOLIS, MD., JANUARY 14, 1959

I have just taken the oath of office as Governor of the State of Maryland.

This solemn ceremony has left me with a feeling of both pride and humility—pride in the consciousness that I now am a part of that succession of men who have been chosen to govern this State, and humble as men are likely to be when faced with a grave task and heavy responsibilities.

In taking office today, I have become the 59th elected Governor. And thus I take my place in a long line of Governors that goes back more than 180 years—to Thomas Johnson, who was sworn in as the first elected chief executive in 1777.

The responsibilities which now rest upon me I feel most deeply, and in all humility, I implore the support and the prayers of the citizens of Maryland who have given me the opportunity to serve them in this high office.

It is my own fervent wish that I may be able to discharge these obligations with courage, dignity and wisdom.

Each Governor, during his administration, confronts the peculiar problems of his day and era. Glancing back over the recent history of the State, we recall that Governor O'Conor's responsibility was to make certain that Maryland rendered the maximum contribution toward winning a global war. Governor Lane's big task was to restore State services and rebuild State facilities, which, through necessity, had been deferred during the war years. My immediate predecessor, Governor McKeldin, had the burden of guiding our State through a period of intensified growth in population and economic activity.

Now, with this inauguration, we are moving into a new era—an era which will produce new problems and new challenges and a period in which the people of Maryland will be called upon to make decisions of great consequence.

Firm courage in the face of these challenges must become the touchstone for the conduct of the Governor, the legislature, and all public servants.

The task of the legislature is not made any easier because of the overwhelming dominance of one political party. On the contrary the legislature must exercise unusual diligence to see that all shades of opinion are obtained and all points of view explored.

As I begin my task, I find comfort in the fact that Maryland is blessed with a devoted group of career public servants. Quietly and efficiently, they perform their duties. Many of them have served the State for long periods of time, and their intimate knowledge and experience will be utilized by my administration to the advantage of the public. These conscientious and loyal State employees deserve our appreciation; without their devotion to duty, no State policy can succeed.

I possess no special gifts of prophecy, but I predict, nevertheles ,that during the next 4 years we will witness an expansion of industrial and business activity such as never before has been seen in this State. Every report indicates that our population will continue to grow, and at an even faster rate. At the same time, we may expect the demand for services provided by the State to attain new peaks. Pressures will pile up for more highways, for more schools, for better hospitals and better prisons, for an improved welfare program.

I have no misgivings at all about our capacity to meet the demands as they arise. It is sobering, nonetheless ,to realize that within the last year our State approached a revenue crisis—a crisis in which we observed the demands for services overtake our ability to pay for them with established revenues.

In common with many other States, Maryland has reached a stage of development where great strides forward must be taken if we are to keep up with the times.

I conceive it to be the principal task of my administration to achieve these new standards and at the same time to preserve the financial integrity of the State.

I say quite frankly that there may be times when we find it impossible to reconcile requests for services with our ability to pay. In such an instance, clearly our alternative is to forego the service or to provide the additional revenues. As for my part, I am resolved to face the difficult choice with forthrightness and determination.

As I see it, this is neither the time nor place to discuss in detail the means of approaching our fiscal problems. That I intend to do later this month in my message to the general assembly.

I will confine myself today, therefore, to what I consider fundamental concepts—the basic philosophy from which I shall seek guidance during the next 4 years.

I offer you four fundamental principles which I believe to be essential to the conduct of a vigorous, progressive, and intelligent administration. I think of them as the four cornerstones of the structure I shall try to build.

The first is to look ahead. Matters of State no longer can be handled in a day-to-day manner, without plan or program. Gone, indeed, are the days when it was possible to think on a year-to-year basis. We must project our designs many years in advance to achieve the best results.

I think it is regrettable that in the past State planning to often has been no more than a pious hope, an expression of good intentions, ignored in practice after being paid dutiful lipservice.

The State of Maryland cannot afford the luxury of casual planning. I shall offer no program during my administration the end of which cannot be foreseen. It is my intention never to propose a course of action without a cautious exploration of all its aspects and all its possible consequences.

We must remain constantly aware that every move we make will have its impact upon our tax structure, upon the relationship of departments, upon the daily lives of the men, women, and children of Maryland.

The effects of our action fan out and expand as the years pass by. I conceive it to be the responsibility of this administration to weigh these effects and project them into the future as far as possible.

Likewise, it is our duty to determine the needs of the State 2, 3 or 4 years from now. This is a continuing responsibility and one that cannot be fulfilled by sporadic, independent surveys.

For all these reasons, I am placing "looking ahead"—that is to say, intelligent foresight—at the top of my list of fundamental principles.

A second precept I will call: "keep the public informed." In a democratic State, no program can be successful unless it is supported by the people, and the people cannot participate in a program effectively unless they understand it.

One of the great virtues of planning is that it gives the public the opportunity to examine measures well in advance of their initiation.

The State is confronted at every turn with demands for services which result inevitably in greater costs to the public. I consider it my duty, and the duty of every public official of the State, to do everything possible to remove any area of doubt or misunderstanding that may exist as to the effect of a proposed policy or program.

This administration and the people of Maryland will be called upon to make many difficult choices during the next 4 years. There is no magic formula to give us the things we want without cost or obligation.

When difficult decisions are being made, it becomes imperative that the Government keep the public fully and frankly informed.

I believe that the ultimate success of my administration will depend to a great extent upon the degree to which it takes the public into its confidence.

For this reason, it is my purpose and my aim during the next 4 years to heighten the public awareness of all the functions of State government, and by so doing, to create an atmosphere in which the Government assumes the role of a partner and coworker with its citizens.

The greater the interest and understanding of the people in the administration of their government, the better that administration will be.

A third principle upon which my administration will stand I like to call the principle of open mindedness. The era we are approaching will be one of rapid change. We see signs of this everywhere. Seventy percent of our citizens now live in urban communities, and this ratio will increase. New metropolitan areas will be created and existing ones will expand. New systems of mass transportation are being devised.

Traditional approaches to such things as education, public welfare, prison management, and many other State activities are being reexamined. Moreover, many State functions—because of our growing population—have outgrown old methods and techniques of organization and administration. New forms and new formulas must be devised.

It is my belief that in the interest of efficiency and economy—in the interest of good government in general—the State has a duty to make a continuous reappraisal of its traditional administrative processes and to remain constantly on the alert for new, better, and faster ways of getting the job done.

The quality of being alert to these new approaches and developments is what I mean by the term "openmindedness." An administration which is openminded will not hesitate to change or to do things differently from the way they were done last year or the year before.

As Governor, I will encourage—indeed, I will require—a reexamination by department heads of all their activities. I am going to count heavily upon this spirit of openmindedness to provide the formula for the solution of many of the problems ahead.

The final principle upon which I shall base this administration is confidence and faith. The day after election I made a statement in which I named as the three greatest assets of Maryland its bountiful land, its alert and vigorous population, and its unequaled heritage of freedom and tolerance.

We Marylanders are fortunate in the rich endowments of our State. As Governor, this knowledge will strengthen me in facing the tasks ahead. The opportunities for growth and development which lie before us are unlimited.

With faith and confidence in our State and its people, and with the help of Almighty God, we can look forward to an ever more bountiful and prosperous life for all our people.

Thank you.

The High Cost of Floods

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1959

Mr. DENT. Mr. Speaker, the recent floods in Pennsylvania again point up the seriousness of the situation in many parts of our great State.

Particularly at this time, the grave concern of all of us is the unreasonable amount of delay in the construction of the Kinzua Dam. The loss of personal property to the residents of this area is far greater than any benefits real or otherwise that might be derived from nonconstruction of this needed public work.

The attached editorial from the Pittsburgh Press gives damaging evidence of the need for this improvement. It is time Congress demands the immediate construction of the dam which was authorized 21 years ago.

The present Governor of Pennsylvania, David L. Lawrence, has worked for years for the construction of this project. As the longtime mayor of Pittsburgh, he pointed out time after time the seriousness of the situation. It is a sad commentary to have to spell out how right he was in the millions of dollars of damages caused by a negligent an inexcusable delay in carrying out the mandates of Congress.

Congressman KEARNS, who represents this district, informed me that he has again introduced legislation for the needed appropriations.

The editorial follows:

[From the Pittsburgh Press, Jan. 25, 1959]

THE HIGH COST OF FLOODS

What is the cost of the recurrent floods in western Pennsylvania's river valleys?

You can get a variety of estimates and educated guesses. Perhaps the best guide is contained in a report given Representative L. H. GAVIN, Oil City Republican, by Col. H. E. Sprague, then district engineer for the U.S. Army at Pittsburgh. It cited a flood survey made by his office some years ago.

"At the time of that report the average annual direct flood damages for the four major damage districts involved (Wheeling, Pittsburgh, New Kensington, and Kittanning) based on recurrence of natural flood stages of record and conditions and values as of June 1948, amounted to $10,034,000," Colonel Sprague said. "At present day price levels (1956) such direct damages would amount to approximately $15,600,000."

(The reader should note that this is an average every-year cost, and includes only direct damages, excluding such tangible values as loss of wages, business, and profits.)

The granddaddy of all floods, of course, was the devastating St. Patrick's Day flood of 1936. From Warren, Pa., on the Allegheny and from Braddock on the Monongahela to Moundsville, W. Va., this inundation did damages estimated by the Army engineers at $728 million (1956 prices).

Which brings up the next question, which is: How much damage would have been prevented if the proposed Allegheny River (Kinzua) dam had been in existence?

Colonel Sprague estimated 2 years ago that the total average annual benefits of that dam would be (January 1957, prices) $4,971,000, of which $4,093,000 would be in flood control, the balance in other stream control benefits.

He added that the dam would have prevented more than $4,500,000 in damages from the single flood of March 1956 in the Allegheny and Ohio Valleys. It may be assumed that the dam would have been at least equally effective in last week's flood.

The Kinzua Dam was first authorized by Congress back in 1938—21 years ago. It was deferred, delayed, and postponed for various reasons, some financial, some because of priorities assigned to other flood-control projects, and some because of the vigorous opposition of certain groups who just didn't want the dam to be built.

Had the Kinzua Dam been built in 1938, the cost would have been well below the more than $100 million now estimated, and at $4 million a year in flood benefits, the project would have paid for itself by this time.

There are other real benefits to be derived from flood protection besides those dollars-and-cents figures of the engineers. The additional safeguard given lives and properties is worth an inestimable sum.

More, the completion of this key and largest unit of the plan for western Pennsylvania's flood protection would constitute a major improvement for the Allegheny Valley from Warren to Pittsburgh and the Ohio Valley to Moundsville, W. Va. It would open the way to the long-delayed industrial development of the Allegheny Valley—a development which is bound to come some time and which would be hastened by flood protection.

By any account, the Kinzua Dam is an investment that would pay big dividends, in lives, properties, and prosperity. Congress should order construction started as soon as possible.

When Congress Looked Away, How the Speculators Did Play

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following articles written by Joseph R. Slevin, national economics editor of the New York Herald Tribune. Although Mr. Slevin's articles bear datelines of September 1958, they are most timely.

[From the New York Herald Tribune, Sept. 1, 1958]

FOUR HUNDRED MILLION DOLLARS LOST BY U.S. BOND SPECULATORS SINCE JUNE—EFFECTS TO BE FELT FOR MONTHS YET

(By Joseph R. Slevin)

WASHINGTON, September 1.—The Treasury Department sold $7,388 million of new bonds last June and the dust hasn't settled yet. It was the worst debacle in the history of U.S. Government borrowing. The bonds have been declining in value since the day the subscription books closed and they still were edging lower last week.

Individuals bought the bonds. So did banks, corporations, brokers, dealers, and insurance companies. Some bought the bonds as permanent investments. But an astonishingly large number bought the bonds for speculation. The real and paper losses of the buyers totaled almost $400 million when the Labor Day weekend began.

The loss is the largest that ever has been suffered by the buyers of a new issue of securities in so short a time. Every fresh decline in the bond market adds to its size.

SOME LOSE MILLIONS

The real dollars-and-cents losses are being borne by the speculators who bought the bonds to make a quick profit and, instead, have been selling them out at strapping losses. There are some individuals and syndicates who now count their losses in the millions.

The paper losses are on the books of the investors who bought the bonds for the 2⅝ percent interest that they pay, still have them, and plan to redeem them for 100 cents on the dollar when they mature on February 15, 1965. They will be hurt only if they are forced to sell at depressed prices before the bonds come due.

No one is wise enough to say how much of the drop was caused by the speculators overbuying the 2⅝s and then hastily dumping them when the market broke. The bond market was ready to turn down, and the skid in the new bonds has been accompanied by a steep slide in the prices of other Government securities. But there is general agreement among financial experts that the entire United States Government securities market has plummeted far more swiftly than it would have if the speculators had not moved in.

The magnitude of the speculative activity was staggering. The best guess now is that speculators bought more than $3 billion of Government bonds during the June refunding. That represents the difference between the $7,388 million total issue and an advance Treasury estimate that the true investor demand for the new 2⅝s would total between $3 billion and $4 billion.

"These guys must have thought they were playing with marbles," a leading investment banker said recently. Guys who had never found that they had signed up to take millions of dollars of Government bonds."

WILL BE FELT FOR MONTHS

The impact of the June fiasco will be felt for many months to come. It is a matter of profound national concern.

The market for United States Government securities has been disrupted and it has become measurably more difficult for the Treasury to finance the Government debt in a sound and orderly fashion.

The Federal Reserve System, which is charged with regulating the national money and credit supply, found its activities limited this summer by a need to be solicitous of the weakened Government securities market.

The persistent decline in bond prices has scared off the big Government bond houses that are supposed to make a market by buying, selling, and owning Government securities. They are reluctant buyers for they fear that further price declines—and further losses—are ahead. The new bonds plunged from a peak price of just over 100 13/32 on June 5 to a low of 93 28/32 last Friday—a drop of $6.54 in the value of every $100 bond.

Separate investigations of the June break are being made by the Federal Reserve and the New York Stock Exchange. Whether they can or will find solutions that will make it more difficult for the speculators to come into the Government bond market in the future remains to be seen.

There is a widespread conviction that it must not be allowed to happen again.

The damage to the market, to credit policy, to investors, and to the financial integrity of the country has been too great.

The full story of what happened has not been told and perhaps it never will be. But the major pieces now can be fitted together.

It is easier to single out those who played a part in the events leading to the collapse than it is to parcel out responsibility. Many people were involved. Many forces were at work. Some of the biggest corporations and banks in the country did things they intend never to go again.

But there is no one scapegoat.

The responsibility must be shared among:

Individual, corporate, bank, and broker-dealer speculators who unsuccessfully tried to make a killing in the Government bond market;

More than 100 leading corporations that supplied hundreds of millions of dollars to the speculators to finance their bond purchases;

Dozens of substantial banks that financed security purchases at little or no cost to the speculators;

A money broker who financed more than $500 million of the bond purchases by acting as go-between for the corporations and the banks on the one side, and brokerage houses and individual speculators on the other;

Brokerage houses, including stock exchange firms, that speculated in Government bonds for their own account and encouraged their customers to do the same;

Government bond houses and banks that sold securities to stock exchange firms on terms that permitted the buyer to delay payment until a date in the future;

The Federal Reserve System, which made money so cheap in pursuit of its antirecession policy that the speculative deals became tempting to corporations and banks that were in search of income;

The Treasury Department, which shared the general blindness about the events that were taking place and thus arranged the refunding on terms that tempted the speculators to make their play.

A minority caused the trouble—a minority of the corporations, a minority of the stock exchange houses, a minority of the investors.

The speculative fever burned its hottest in Wall Street, but it fanned out across the country and blinded the speculators and the lenders to the risks that they were taking.

It was a classic speculative surge. Hardened professionals and naive clerks all reached the same happy conclusion: the Government bond market could go only one way—"up"—and there was money to be made for the asking.

But they were wrong.

[From the New York Herald Tribune, Sept. 2, 1958]

BIG PROFITS MADE IN FEBRUARY PURCHASES LURED PLUNGERS INTO JUNE DEBACLE

(By Joseph R. Slevin)

WASHINGTON, September 2.—Wall Street now holds the "Gay Nineties" partly responsible for last June's big speculative purchases of the Government's new 2⅝ percent bonds.

The financial center is not talking about the colorful decade that ended the 19th century. Instead, it is pointing directly at a $1,727,000,000 issue of 3½ percent bonds—due in 1990—that the Treasury sold in mid-February.

These were the "Gay Nineties." They soared to a peak price of 107 10/32s during the weeks after they were issued. Speculators had been heavy buyers at the offering price of 100 and the big paper profits whetted their appetites for more when they looked ahead to the $9,550,000,000 refunding that the Treasury would have to carry out in June.

BUT ONE EPISODE

The "Gay Nineties" were but one glittering episode in a story of huge speculative profits that began when the Federal Reserve System abandoned its tight money policy in mid-November of last year. The shift to an antirecession, easy-money policy and the impact of the business downturn on market expectations led to the sharpest drop in interest rates—and the steepest rise in bond prices—in history.

That was when the professionals began to make big money.

They reaped enormous profits by buying outstanding Government bonds and holding them while prices rose. They made millions more by buying 3⅞ percent, 17-year bonds that the Treasury sold in December and 3 percent, 6-year bonds that it sold with the 32-year "Gay 90's" in February.

It was against this background of a pell-mell price rise and confident expectations of further increases to come that the speculators began to build their positions for the June refunding. It seemed certain that the recession would continue for many more months and that bond prices would continue to climb as interest rates fell. It didn't look like a gamble. The word went out: There's no risk. It's a sure thing. It's a free ride. Get on board.

Bond prices customarily are pushed to higher levels when business activity declines. The supply of money grows while the demand for funds weakens. People bid against one another to buy the available supply of bonds.

The biggest plungers—and the heaviest losers—are believed to have been a Miami, Fla., family group. They are known to have had close to $90 million of new bonds and there are some indications that their purchases were substantially larger. They held on to their bonds after the market broke in June, kept hoping that a fresh rise would get underway, and didn't begin unloading in earnest until August.

They sold many millions out at 96 cents on the dollar and sold millions more at 95. Their losses have been estimated at almost $5 million—and just last Thursday a dealer found evidence that they still were selling.

The Miami crowd, as they now are known in Wall Street, and other giant speculators could operate on a magnificent scale because a money broker arranged to give the speculators access to the idle cash of some of the country's biggest corporations. The speculators paid no interest, usually did not put up any money of their own, and gave the corporations temporary title to the bonds to protect the loans.

They called the deals repurchased agreements. Sometimes they did them with banks and called them buybacks.

A Boston broker arranged $73 million of loans for his customers through the money broker. A prominent oil industry official came to the money broker. So did the head of a Midwest brewery, the lawyer for a big mutual fund, a top officer of a big defense company, and many, many others.

Bank officers got caught up in the rush and in at least two instances they approached Government bond dealers for special credit arrangements. The big foreign agency banks in Wall Street helped to finance the speculators, and substantial foreign interests, including Greek shipowner money, joined the profit-hungry throng.

The speculative excitement spread during May from the big Government bond operators to brokerage houses and through them to thousands of little people who had never bought a marketable Government bond in their lives. The stock market showed signs of weakening and brokers talked up the rising Government bond market as a smart hedge against the threat of a stock market break.

Where $100,000 deals always have been looked on as small potatoes in the Government bond market, some brokerage houses pushed the bonds in $5,000 and $10,000 blocs.

Some asked margin. Others didn't. One novice speculator bought $1 million of the new bonds by putting up only $1,500—a margin payment of exactly three-twentieths of 1 percent. He sold out at a profit of $180 before the market broke. If he had waited just a little longer he would have lost $7,000.

The public had missed out on the gay 90's and the big profits of the winter and early spring. The public came in during the last days of May and the first days of June—in time for the crash landing.

Toward the end of June, about 10 days after the market broke, a preoccupied trader for one of the leading Government bond houses stopped at a cigar stand and absent-mindedly asked for "a pack of 2⅝s."

"How are they doing?" the clerk asked. "I've got a hundred of them myself."

Another major dealer received a call at about the same time from a man who asked the price of the 2⅝s. When the dealer said they were selling at 99½, the caller said he would like to sell some.

The big bond houses trade with other dealers, banks, and brokerage houses but don't usually trade with individuals.

"What's your name and how many do you have?" the dealer asked. "Five million," replied the caller and gave a name that the dealer didn't recognize.

"Who are you?" the puzzled dealer inquired.

"A used car dealer in Jersey City," the man replied.

PLUNGERS WAITED IN VAIN FOR RALLY

(By Joseph R. Slevin)

WASHINGTON, September 3.—Professional speculators, commercial banks, big corporations, bond dealers and stockbrokers got caught with the dress manufacturers, real estate salesmen, storekeepers, stenographers, and ribbon clerks when the Government's new 2⅝-percent bonds broke par June 19.

Some people got out in time, but most didn't. A few Government bond dealers had sensed that a change was coming and had been quietly reducing their inventories for some days before the market broke. But many spectators wouldn't believe that the turn had come and hung on to their bonds—hoping that the slump would be brief, hoping that a rally would carry the bonds back above par and at least let them get even.

The rally never appeared.

The 2⅝s were in weak hands. Too many 6-year 8-month bonds were owned by individuals and corporations who didn't want to own marketable governmental bonds, had no business owning them—and couldn't wait to get rid of them.

They were speculators. They were not investors. They had bought the bonds in the hope of a quick profit. Now that the bonds were going down instead of up, they wanted out.

Price changes in the Government bond market customarily are small and the speculators signed up for huge quantities of the 2⅝s in their attempt to make a profit. They had to buy in on little or no margin to get the leverage they needed.

A composite case in point would be a speculator of modest means who bought $1,000,000 of bonds on credit, made no down payment, and was startled to realize that he had, in effect, signed a pay-on-demand note for $1 million.

A speculator who dealt with one of the New York Stock Exchange firms that lived up to the N.Y.S.E. rules by charging the full 5 percent margin that the exchange requires would have had to put up $5,000 on a $100,000 deal.

He still had powerful leverage. A 1-point rise would have returned a $1,000 profit. That figures out to a 20-percent return on a $5,000 investment within a few short weeks.

It was a different story when the market broke. Every point decline meant a $1,000 loss to the small speculator who had $100,000 of bonds. It meant a $10,000 loss to the speculator who had $1 million of bonds.

SPECULATORS SELL

The speculators had no stomach for that kind of pounding. They didn't plan to keep the bonds for 6 years 8 months and couldn't have paid for them if they had wanted to. One after another, the speculators began to sell out.

Some of the largest corporations of the country contributed to the debacle by speculating heavily in the 2⅝s. Corporations normally invest their funds in short-term securities that mature in a year or less. They know they will need the money within a short time for taxes, dividend payments or equipment purchases and choose temporary investments that can be liquidated quickly.

But the 6-year-8-month bonds were too tempting. The corporate treasurers knew about the big profits that had been made in the Government's February issue of "Gay 90's" and they thought that bond prices still were rising.

Treasurer after treasurer threw caution to the winds and decided that he would buy the 2⅝s, hold them until they rose to a premium of 101, 102, or perhaps even 103, then kick them out at a profit and switch to the 1-year-and-under securities that he should have bought in the first place.

The 2⅝s didn't go up. Some corporations sold out at a loss and added to the pressures that depressed the bond market. Others still are carrying the 2⅝s on their books in red ink. It's a safe guess that many red-faced corporate treasurers have spent uncomfortable hours explaining their June gambling enthusiasm to company presidents and boards of directors.

The startling fact is that corporations directly and indirectly financed more than $1 billion of the speculative purchases of the 2⅝s. A Treasury survey shows that corporations—which had been expected to buy only a handful of the bonds—actually took $1,045 million worth.

The corporations didn't buy the entire $1,045 million of bonds for their own speculative operations. A sizable share—certainly many hundreds of millions—represents bonds that the corporations took for the individual speculators that they were financing through the repurchase agreements.

Corporations were tempted to speculate in the 2⅝s partly because they were unenthusiastic about a 1¼ percent interest rate that the Treasury attached to a 1-year certificate that it issued at the same time as the 2⅝s. The corporations normally would have gravitated toward the 1-year security to meet their short-term investment needs, but the Treasury survey reveals that they bought a relatively meager $570 million of the certificates while taking the incredible $1,045 million of intermediate bonds.

Commercial banks speculated heavily, too. They were expected to be substantial buyers of the 2⅝s since a 6-year 8-month bond is an attractive investment for many commercial banks. But the banks bought many more than they needed for their own portfolios.

The Treasury breakdown shows that commercial banks took $4,031 million of the 2⅝s. The bank takings alone thus exceeded an advance Treasury estimate that total subscriptions to the 2⅝s by all comers would total somewhere between $3 billion and $4 billion, and played a significant role in boosting the total bond issue to $7,388 million. Where the Treasury had expected to sell $5 billion to $6 billion of the 1-year certificates, it received orders for only $1,817 million.

The bank figures undoubtedly exaggerated the volume of direct bank speculation just as the corporate figures exaggerate the amount of direct corporate speculation. The bank total includes the 2⅝s that the banks bought for speculators who had arranged direct loans and for speculators who had arranged "buybacks."

Ironically, commercial banks from one end of the country to the other were steadily—and injudiciously—buying the 2⅝s during the delicately balanced mid-June weeks when the Government bond dealers were cautiously liquidating their own holdings.

The bank purchases helped give the Government bond market a deceptive appearance of stability in mid-June just as heavy speculative buying in May had made the market look stronger than it really was.

The commercial bank speculation didn't and directly to the downward pressures after the market broke because the banks kept their 2⅝s in preference to selling them out at a loss. Normally, though, the banks would have bought up some of the 2⅝s as they were released by the speculators. But the banks were overstuffed and wanted none of them. An important cushion was missing when the speculators began to unload.

Money Brokers Tap Idle Reserves of Firms, Banks To Play Market

(By Joseph R. Slevin)

WASHINGTON, September 4.—One day in late February a New York investment banking house called a prominent money broker and asked him to arrange a $30 million loan for an unidentified individual. The money broker quickly complied. It was the first of many such loans that ultimately led the money broker to set up the financing for more than $500 million of speculation in the Treasury's June issue of of 2⅝-percent bonds.

The initial deal was arranged for tax rather than for speculative purposes. So were a number of the other transactions that the money broker negotiated during the following months. But the method that he used was peculiarly well adapted to financing speculation in Government bonds.

The word spread rapidly and the demand for the loans mounted. The money broker arranged some deals for big individual speculators including the Miami crowd that bought about $90 million of bonds. Most of his deals were negotiated for members of the New York Stock Exchange and for other brokers who wanted financing for themselves or for their customers.

He wasn't the only money broker who participated in financing the June speculation, but he was the most active. He showed speculators how they could tap the huge reserves of idle corporate and bank money to play the Government securities market.

The money broker called his deals repurchase agreements when he made them with corporations and buybacks when he made them with banks.

Speculators liked the deals because they obtained millions of dollars of Government bonds without paying any interest and without putting up any money of their own.

Corporations and banks liked the deals because they held Government obligations as security and collected more interest than they could have obtained through conventional financing techniques.

The first $30 million deal set the broad pattern that the others followed. Here is how a typical repurchase agreement worked:

Acting on the instructions of the money broker, a big corporation with idle cash bought $30 million of 2⅜-percent Government bonds that were scheduled to mature June 15. The money broker agreed to buy the bonds from the corporation by the maturity date and contracted in turn to sell them to an individual or a brokerage house that had placed the original order.

POCKETS INTEREST

The corporation pocketed all or most of the 2⅜ percent interest that the bonds paid. Frequently it agreed in advance to accept only 2 or 2⅛ or 2¼ percent and the money broker kept the rest.

It was an attractive deal because the corporation received about twice the income it would have obtained by the traditional device of investing its funds in short-term Treasury bills. The bills yielded about 1 percent during most of the spring.

The money broker collected one thirty-second of 1 percent commission on the bond transaction.

The speculator was assured delivery of the bonds on the date that he wanted, at the price the corporation had paid, and at a cost of only the one third-second commission that he would in any event have had to pay a broker for buying the bonds.

Banks found the buy-backs even more lucrative than the corporations did. The interest they received from the 2⅜s contrasted sharply with the one-eighth to one-fourth of 1 percent that they could have obtained by lending their surplus "Federal funds" to other banks during the period in late May when the speculative fever was at its peak.

The wide spread in the interest rate structure was responsible for the strong appeal that the speculative loans had for both the corporations and the banks. The spread had developed in large part because of the aggressive manner in which the Federal Reserve System had been pursuing its anti-recession easy-money policy.

BIGGEST IS $84 MILLION

The biggest repurchase agreement that the money broker arranged totaled $84 million. It was negotiated with a mutual fund.

One corporation made $70 million available. Another provided $60 million. More than 100 other corporations and some 2 dozen banks provided substantial but lesser amounts.

The speculators used the money to have the corporations and banks buy "rights" to the new securities that the Treasury would issue in its $9,550 million June refunding. "Rights" are maturing obligations that the Treasury encourages investors to exchange for new Government securities. Some speculators chose the 2⅜ percent bonds that matured June 15 while others bought the 2⅞ percent notes that came due the same day.

Most of the wealthy individuals who originally came to the money broker for tax reasons stayed to gamble. They got caught up in the speculative excitement of late spring and failed to sell out in time to achieve their tax objectives.

One affluent citizen bought $22,825,000 worth of rights for tax purposes through a repurchase agreement. He acted on the advice of a prominent New York accountant who told him that $22,825,000 was the exact amount that he needed. He bought the rights at a premium and gave orders that they were to be exchanged for the 2⅝s, which then were to be sold out immediately.

But he heard that the 2⅝s were going up canceled the sell order, and finally sold at a heavy loss after the 2⅝s broke par.

DIDN'T SELL IN TIME

Another individual bought $25 million of the rights, then became more interested in speculation than in taxes and bought and additional $36 million—a total repurchase deal of $61 million. He didn't sell in time, suffered a substantial loss, and is mad as a wet hen at the money broker that he dealt with.

The tax plan was only for people in the upper brackets and only for people who had substantial losses on other investments.

Take the hypothetical case of a man in the 70 percent income-tax bracket who bought about $30 million of rights and paid 100$^{8}/_{32}$s for each bond. The premium payments of $^{8}/_{32}$s totaled $75,000. A taxpayer is permitted to deduct premium payments from ordinary income. This means the taxpayer could subtract the $75,000 from his taxable income. The saving for a man in the 70 percent bracket amounted to $52,000.

He still had to take two more steps. He had to convert the rights into the new Treasury securities and had to sell out the new securities immediately to get his money back.

The market was rising. The taxpayer assumed that he would be able to get back his $75,000 of premium money by collecting at least as big a premium on the new June security as he had paid on the rights.

But he would lose his tax saving if he had to pay a 70 percent tax on the premium that he collected. The scheme therefore provided for writing off the premium income against carryover losses that the taxpayer had suffered from unfavorable investments in previous years.

The market remained strong for a brief period after the tax operators converted their rights into the 2⅝s. But most waited too long to sell.

Money Broker Traded on Name To Back Half-Billion in Deals

(By Joseph R. Slevin)

WASHINGTON, September 6.—The Wall Street money broker who arranged the

financing for more than $500 million of speculation in the Treasury's June refunding didn't invent the techniques that he used but he polished them up and put them to work on a scale that had never been seen before.

Individual speculators and brokerage houses, who could not have swung the deals on their own, obtained interest-free, no-downpayment access to huge qualities of corporate and bank credit for speculating in the U.S. Government securities market.

BROKER'S GOOD NAME

The money broker got them the money by putting his own name instead of theirs on the repurchase agreements and buybacks that he negotiated with corporations and banks. He traded on his high reputation and solid credit standing to make deals that corporate treasurers and bank lending officers would not have made with his clients.

At the peak of his operations, he had commitments to buy more than $500 million of Government bonds from corporations and banks. Individuals and brokerage houses in turn had promised to buy the bonds from the money broker.

But people up and down Wall Street shudder today to think of what might have happened if the Government bond market break had been sharper than it was—and if a number of the speculators had reneged on their contracts with the money broker.

He lost a large sum of money but he met all of his commitments and disappointed some Wall Street bankers who had been confidently predicting that he would go under.

The New York Stock Exchange has been auditing the money broker's books and is conducting a wide-ranging investigation of his operations in an attempt to find out whether any of its rules have been violated. It began looking into the situation after the 2⅝s came on the market June 15. In early July it ordered him to liquidate $376 million of repurchase agreements and buybacks that he still had in force.

WALL STREET PLAN

The methods that the money broker used had been developed in the last few years by the big Government bond houses to finance their portfolios of Government securities at lower interest rates that they would have had to pay the Wall Street banks.

The bond dealers tapped corporations and banks all around the country, and one result was that corporate treasurers and bank lending officers felt at home in negotiating "repurchase agreements" with the money broker. They were working with a type of transaction they had come to know well.

The money broker, for his part, had been using the same devices on a smaller scale to finance tax-savings deals and elaborate arbitrage transactions for his clients. He had established a special place for himself as a clearing house for banks that wanted to buy and sell "Federal funds." On his biggest day his transactions fell just $30 million short of an even $1 billion.

Bank lending officers in large- and medium-sized communities all around the country knew him. Borrowers came to him, for he could obtain money much more cheaply than they could get it for themselves. Because of his dealings in "Federal funds," he always knew which banks had extra money they were anxious to lend.

It only gradually dawned upon the banks and the corporations that the deals they had made with the money broker were riskier than their customary transactions with the Government bond houses. Some lenders were less knowledgeable than they might have been. Others had been lulled by eager talk of a rising bond market and riskless transactions.

Those who came in at the beginning started out with one type of commitment and ended with another. But even so, they probably would not have become nervous if the bond market had not weakened.

JUNE REDEMPTIONS

The original "repurchase agreements" and "buy backs" covered the 2⅜-percent "rights" that matured June 15. Banks didn't fret about entering into deals secured by a Government bond that could be redeemed at par in mid-June. Neither did the corporations.

But when the speculators told the lenders to exchange the "rights" for the new 2⅝s, the character of the deal changed profoundly. Instead of holding riskless securities, the banks and corporations now had title to Government bonds that would not mature until February 15, 1965, and that would fluctuate in price.

The lenders had not thought to obtain a promise of collateral from the money broker to protect them against a decline in price. He in turn had not obtained margin from his clients for he did not consider them brokerage customers who would be subject to the stock exchange requirement of a five-point margin payment.

Bank examination officials maintain they are not disturbed by the buybacks since they know of no bank that suffered a substantial loss. Many bankers vigorously disagree. They consider it unsound banking to lend money on a 6-year, 8-month bond without at least 5 percent margin.

As the 2⅝s rapidly lost their premium value before breaking par on June 19, the lending officers of the big New York banks received call after call from the worried treasurers of big corporate depositors. Some had loans they could call on short notice. Others were committed for fixed periods such as 30 days. One corporation had agreed to hold $5 million of bonds until August 15 and $5 million more until September 15.

NEEDED COLLATERAL

The bank lending officers shook their heads and advised the corporations to demand collateral to cover the decline in the price of the bonds. The margin calls mounted. The money broker had to get collateral to cover his contracts. Banks and brokerage houses demanded more margin from their customers. Each day brought additional liquidation of the 2⅝s. Each day saw more speculators shaken out.

The heavy volume of corporate financing and the insistent margin calls were ominously reminiscent of the 1929 stock market crash. Billions of dollars of speculation had been financed by corporate call loans in 1929. When the market broke, the corporations demanded their money and touched off a torrent of distressed liquidation.

The dimensions of this summer's break were not comparable to the 1929 crash.

But the country has had a blunt reminder that it is dangerous to finance speculation through bank and corporate call loans that are protected by little or no margin.

[From the New York Herald-Tribune, Sept. 7, 1958]

"NO DOWNPAYMENT" SAID WALL STREET IN FINANCING OF TREASURY OFFERING

(By Joseph R. Slevin)

WASHINGTON, September 7.—Some of the big Wall Street banks and large Government bond dealers helped finance speculation in the Treasury's $9,550 million June refunding by carrying securities for their customers without a downpayment and without an interest charge. The chief beneficiaries were leading New York Stock Exchange firms. But other brokerage houses and some individuals obtained the 100 percent "loans" too.

The "free carries" were a departure from the normal operating practices of the few dealers and banks who made the generous credits available. They acted under pressure from good customers and because they had a chance to earn a comfortable return on a riskless transaction.

"It wasn't something we went after," a bank official said recently. "We only did it for the substantial houses. We were careful which stock exchange firms we did it with. They came to us."

What the banks and the dealers did was to grant their customers "delayed delivery" in selling them the 2⅜ percent and 2⅞ percent "rights" that matured June 15. A stock exchange house that bought, say, $5 million of the 2⅜s on May 15, didn't have to put any money up until it took delivery of its securities in June. Normal government bond market practice would have called for payment either the next day or on the second day following the sale.

Most of the delayed delivery contracts were made as the speculative excitement mounted from mid-May on. They called for delivery in early June for that was when the Treasury was expected to open its refunding books. A speculator who planned to exchange his "rights" for new Government obligations would have to act at that time.

$2 MILLION TO $5 MILLION BLOCKS

A substantial number of the delayed delivery sales of rights to the stock exchange firms were in blocks of $2 million to $5 million. A few were larger. One well-known member firm took more than $50 million of the rights from a bank under a delayed delivery contract.

The stock exchange houses eagerly sought the delayed delivery contracts for the same reason that they embraced the "repurchase agreements" and "buy-backs" that they arranged for themselves or through a money broker. Delayed delivery was one more way in which they could obtain "rights" without an interest charge and without a downpayment.

The banks and the dealers found the delayed deliveries tempting because they were able to sell the 2⅜s at the premium prices of mid-May while they continued to collect the 2⅜ percent interest until their customers took delivery in June. It was a shade less profitable for the dealers than for the banks since the dealers had to borrow money at about 1 percent to carry the rights.

Many dealers refused to make delayed deliveries. The refusal often meant a lost sale because the stock exchange firm then shopped around until it found a dealer or a bank that would give it the free credit it wanted.

"We said: 'No thanks,'" a prominent Government bond dealer recalled. We're not in the moneylending business.

The loan officer of one of the big financial district commercial banks said flatly: "We're clean. We didn't finance any of the rights. We had the answer from the beginning: 'No.'"

The delayed deliveries like the buy-backs seemed sound from a banking standpoint. The collateral was the best. The 2⅜s came due on June 15. If the buyer reneged, the bank could exercise the rights itself or turn in the maturing securities for cash. It could lose no more than the premium it would have collected if the deal had not fallen through.

NOT GOOD FOR UNITED STATES

But the easy credit deals contributed to the excessive speculation in the government bond market. What may have been good for the banks was not good for the country.

The Treasury closed its subscription books on June 6 and the people who had bought the 2⅜s on delayed delivery contracts elected overwhelmingly to exchange their securities for the new 2⅝ percent, 6-year, 8-month bonds. The dealers demanded payment but the banks extended the free carries for 10 days until June 16—the day when the rights were to be replaced by the

new bonds. June 16 was the exchange date because June 15 fell on a Sunday.

The additional 10-day delay pushed further into the future the moment when the speculators would have to arrange loans and put up margin to finance their bonds. At least one bank carried the new bonds for insistent customers to July 1—without interest and without a margin payment.

Brokers pressed banks for liberal credit terms and many banks and brokers carried the speculators with little or no margin partly because they were convinced that the market was rising and there was no risk—and partly because they were in competition with one another.

A broker who meticulously observed the stock exchange's 5 percent margin requirement was aware that he might lose a customer to another broker or to a bank that charged no margin. Money was easy. The borrowers held the whip hand.

Many banks financed the speculators through standard security loans but granted more liberal terms than they normally would have provided. Where one Wall Street bank, for example, held fast to its regular 3½ percent interest charge for street accounts, another planned to ask 2¾ percent but trimmed its fee to 2⅝ percent because that was the rate a big competitor charged.

ZERO TO 5 PERCENT MARGINS

Margin requirements in New York ranged from zero to 3 percent on the rights and from 2½ percent to 5 percent on the 2⅝s.

The Wall Street division of one major bank had a larger volume of loans on its books after the 2⅝s were issued than at any other time in its history. Significantly, the bulk of the loans were to stock exchange firms that had never been active in the Government securities market before. Like many others, the stock houses found themselves doing something new—and took a licking.

A large number of banks outside of New York financed speculators on as little as 1 or 2 percent margin. They usually made the loans through money brokers directly to individual speculators.

They loaned hundreds of millions of dollars to people they didn't know and they had some frantic moments trying to get hold of speculators in New York and other cities to raise additional margin as the market went down.

One worried out-of-town banker came to New York in late June carrying a three-page, single-spaced list of unknown New Yorkers to whom he had casually loaned an average of about $200,000 each on the new 2⅝s. Along with other bankers throughout the country he had thought the bond market would remain strong and his loans would rest quietly until they were paid off. To their dismay, the bankers discovered that they had acquired thinly protected, highly active Wall Street accounts.

[From the New York Herald Tribune, Sept. 8, 1958]

TREASURY AND WALL STREET DIDN'T KNOW THAT BREAK IN MARKET WAS AT HAND

(By Joseph R. Slevin)

WASHINGTON, September 8.—The mid-June break in the Government bond market and the steepness of the decline took Wall Street and Washington by surprise. They had known that trouble was brewing but they hadn't suspected that the situation was as grave as it proved to be. Top Government financial officials and some of the keenest bond dealers in New York only gradually abandoned hope that the drop could be held within narrow limits.

The ironical fact is that Government bond prices had hit their peak in April but the speculators didn't know it. They streamed into the market during May and early June to bet on a further rise in a market that had already started to drift lower.

The Treasury Department didn't know the turn was at hand. Neither did its expert advisory committees of top commercial and investment bankers. They came to Washington in the last week of May to advise the Treasury on the terms of its $9,550,000,000 June refunding and all of the discussions began and ended with an assumption that the market would remain strong.

KNEW OF SPECULATION

The bankers and bond dealers knew that people were speculating in the "rights" that matured June 15. But they had no notion that the speculation was as widespread as it was. Neither did the Treasury or the Federal Reserve System.

The advisory committees warned the Treasury that speculative demands would make it dangerous to include a long-term bond with the securities that it would offer in exchange for the "rights." But they stopped there. The Treasury accepted the committees' general recommendations and announced on May 29 that it would sell about $1 billion of 3¼ percent, 27-year bonds for cash and would give the holders of the "rights" a choice between 2⅝ percent, 6-year, 8-month bonds and 1¼ percent, 11-month certificates.

Speculators never had gambled by buying 6-year, 8-month bonds before. No one thought that they would now.

But the danger signs multiplied in the days that followed. The premium on the "rights" went up after the Treasury announcement. It had been expected to decline for it had been thought that the speculators would dump their "rights" once they found that the refunding package would not include a potentially lucrative long-term bond. Instead, they held tight. The rise in the price of the "rights" was a tipoff that the ranks of the plungers were growing.

THE ALARM RINGS

The subscription books closed on June 6 and on Tuesday, June 10, an alarm bell clanged loudly. The Treasury made public a preliminary finding that investors had taken about $7,250,000,000 of the new 2⅝s instead of the $3,000,000,000 to $4,000,000,000 it had anticipated.

But commercial banks were buying in the market and the price of the 2⅝s edged up 1/32 the next day. The dealers and the Treasury agreed that it would take several months but the market could absorb the extra $3,000,000,000 to $4,000,000,000 of bonds. The consensus was that the job was manageable.

Disquieting rumors circulated during the rest of that week. The speculators had to take delivery of the 2⅝s on Monday, June 16 and the market heard that a money broker had some commitments that he was finding it difficult to finance. On Friday, June 13 there were reports that he had asked that some deliveries be postponed beyond the Monday deadline.

The market became jittery. The 2⅝s slipped from a peak of 100$\frac{11}{32}$s on June 5 to 100$\frac{7}{32}$s on Friday, June 13. They dipped to 100$\frac{3}{32}$s on Monday.

People who had had "free carries" had to obtain bank loans and had to put up margin when they took delivery of the 2⅝s. Some sold out instead.

The money broker delivered $126,000,000 of the new bonds to his clients Many corporations had taken repurchase agreements on the understanding that they would get their money on June 16 in time to pay their quarterly tax installments. A number of speculators had mistakenly believed their interest-free, no-downpayment corporate credit arrangements would continue. Some reluctantly placed their bonds in bank loans. Others wouldn't or couldn't put up the margin that the banks were asking and they, too, sold out.

The 2⅝s slipped to 100$\frac{2}{32}$s on Tuesday and to par on Wednesday. The next morning the New York Herald Tribune reported from Washington that the Federal Reserve System has reached a major turning point in its antirecession drive and is slowing the pace at which it has been pressing toward easy money. The speculators leaped to the twin conclusions that the central bank soon would be shifting toward tight money and that a decline in bond prices was imminent.

The 2⅝s broke par. The general decline in the Government bond market was underway.

The Herald Tribune story triggered the decline. It had the impact that it did because it hit a nervous, speculative market at a time when business activity was beginning to improve and market expectations were shifting.

The recession was ending sooner than the plungers had anticipated. Speculative buying had helped bring about a record-breaking rise in bond prices after the Federal Reserve shifted to easy money last fall. Now the speculators started to dump their holdings and bond prices plummeted during the following weeks.

The market broke because business activity unexpectedly began to rise. It broke as dramatically as it did because it was shot through with speculation.

Each fresh report of an improvement in business activity made it seem more certain that higher interest rates and lower bond prices were ahead. Each new sell order from an individual or a corporate plunger aggravated the downward pressures.

When the New York Stock Exchange in early July ordered the money broker to liquidate $376 million of repurchase agreements and buy-backs that still were in force, it added to depressing influences that led the Treasury to buy up $589,500,000 of the 2⅝s from June 18 to July 9 in a vain attempt to stem the decline in bond prices.

Hindsight makes it plain that the Treasury should not have made an unlimited offering of 6-year, 8-month bonds to holders of $9,550,000,000 of maturing Government securities. It feared speculation in the 27-year bonds that it simultaneously sold for cash and it imposed stiff downpayment and allotment limits that kept most of the speculators out of the long bonds.

The $9,550,000,000 refunding would have been far harder to control since every holder of a maturing security had a right to one of the new Government obligations. But there were steps that the Treasury could have taken if it had known that the speculators were lying in wait. It could have offered only short-term securities for example, or it could have restricted the offering of 2⅝s to an amount that it was sure the market could digest.

But its suspicions were not aroused and it walked in with its guard down and its chin out. Even so, there is widespread agreement among market experts that the Treasury still would have come through unscathed if the speculators had not chosen to make their big play just at the time when people were becoming aware that the recession had ended.

[From the New York Herald Tribune, Sept. 9, 1958]

PLUNGERS CAN BE A PROBLEM AGAIN IF ACCESS TO EASY CREDIT IS LEFT OPEN

(By Joseph R. Slevin)

WASHINGTON, September 9.—Speculators raised hob with the bond market this year and they can do it again unless corrective steps are taken.

The plungers turned the Treasury's $9,550 million June refunding into the worst fiasco in Government financial history. The bond

market is wide open for another foray any time they care to get it started.

Speculative activity has become a major problem because the character of the Government bond market has changed profoundly in the past 10 months. It has become a market where prices swing widely and dramatically enough to attract mass speculation. It no longer is a market where all price changes are small.

Government bond prices rose at a record pace after the Federal Reserve System abandoned its tight money policy in mid-November of last year. They dropped almost as violently this summer when it became apparent that the recession was coming to an end. Professional operators aggravated the upswing by buying bonds and professionals and amateurs alike aggravated the downturn by dumping them.

PSYCHOLOGY CHANGED

Market phychology has changed. Investors now expect drastic price movements. When the market broke in June, investors stopped buying and withdrew to the sidelines to wait for prices to stabilize at new and sharply lower levels.

The odds are against another speculative binge in the near future. The speculators were badly burned when the market broke and all except the toughest professionals will be nursing their wounds for a long time to come.

Market conditions at the moment are unfavorable for mass speculation. Business activity is rising and the dominant pressures on bond prices during the coming months are expected to be in a downward direction—not in the upward direction that attracts the speculators.

A shakeout as violent as the one that took place this summer temporarily provides its own correctives. Corporate treasurers who have large amounts of cash locked up in 2⅝ percent bonds that are below par won't soon again gamble with short-term money by using it to buy bonds. Corporations and banks that financed the speculators through "repurchase agreements" and "buy-backs" will be more careful about the people they do business with—for a while anyway.

But even the most painful memories eventually fade. The plungers will become a problem again the next time a recession develops and a sharp rise in bond prices seems to be a prospect. Now that the speculators have found the way, they will come back.

Easy credit made their operations possible. If they are to be stopped, it will have to be made more difficult for them to obtain funds to finance their purchases of Government bonds.

SAME PRESSURE LIKELY

The opportunity for big profits would not have arisen if the Federal Reserve System had not made money so easy that corporations and banks were hungirily looking for loans. And the opportunity would not have arisen if easy money had not driven short-term interest rates down so far that the lenders were searching for a more attractive return than they could obtain from normal short-term investments such as 91-day Treasury bills.

The Federal Reserve made money cheap in aggressively pursuing an antirecession, easy-money policy. It was trying to restore liquidity to the country's financial structure and thus to prepare the way for a business recovery. It will be under pressure to follow the same course in another recession. Even if it decides to move more cautiously, money may still become cheap enough to support a heavy volume of speculation.

A more direct approach to the problem of controlling speculation would seem to be in order.

The most commonly heard proposal is that Federal margin requirements be imposed on purchases of Government bonds. Along with State and local government obligations, Government bonds now are exempt by statute from the downpayment and other credit regulations that the Federal Reserve Board maintains on stocks.

Margin requirements would not have deterred the corporate and bank speculators who used their own money last spring and paid for their bonds in full. But the need to post a downpayment doubtless would have deterred many of the individual speculators and brokerage houses that put up little or no margin to carry huge quantities of the "rights" that matured on June 15 and of the 2⅝ percent bonds that were issued in exchange.

LESS EAGER TO GAMBLE

An individual who had a "free carry" on $1 million of "rights" might have been less eager to gamble if he had been faced with a 10 percent margin requirement and had had to put up $100,000—or with a 25 percent margin requirement and had had to put up $250,000.

The downpayment requirements on stock were set at 50 percent in June and now are pegged at 70 percent.

Banks could not have made "buy-backs" without margin if Government bonds had been subject to the existing regulations. Corporate money perhaps could have flooded in through repurchase agreements under the present rules but the margin laws would give the board power to control the "repurchase agreements" if the exemption were repealed.

An across-the-board imposition of margin regulations on Government bond transactions would create difficult problems for the big Government bond houses. They have to carry large inventories of securities and would be severely hampered by a regulation that required brokers and dealers to put up margin when they borrow against Government bonds.

New York Stock Exchange specialists and odd-lot dealers are exempt from the present stock margin requirements. It has been suggested that the Government dealers could be treated similarly.

An exemption could be granted only if standards were adopted to distinguish the 10 to 16 houses that make a market in Government bonds from the dozens of other brokers who call themselves Government dealers but actually do no more than execute buy-and-sell orders for customers.

It has been proposed that the Federal Reserve Board be authorized to establish the criteria. Alternately, it has been suggested that the dealers be given authority to set up a self-regulating association that would lay down rules as the stock exchange defines and supervises its specialists and odd-lot dealers.

Other margin recommendations have been made that stop short of new legislation. One is that the stock exchange increase its present 5 percent rule to a higher figure—and see to it that it is enforced. One objection that brokers voice to this, as to many proposals for stiffening the exchange rules, is that it might drive customers into the arms of more lenient banks and nonmember brokers.

It has been urged, too, that the exchange make Government bonds subject to its net capital requirements and there are some indications that it may take this step. Two Government bonds houses are members of the exchange and presumably would insist upon special treatment that would enable them to continue to finance their inventories of Government securities.

The exchange has steadily broadened its net capital rules as abuses have developed. It made commodity futures subject to net capital requirements in 1946 and it brought in tax-exempt State and local government obligations in 1953.

Brokers could not have made some of the deals that they made in June if governments had been subject to the net capital rules.

The exchange says that a firm must have a net capital equal to 20 percent of its aggregate indebtedness and must have a minimum of $50,000. A broker who buys stock must deduct 30 percent of its value from his net capital. If he buys a municipal bond, he must deduct 2½ to 10 percent depending upon the bond's rating.

Enforcement of a comparable deduction for Government bonds would have limited the capacity of the brokers to take on bond commitments last spring.

NO COMPLETE ANSWER

The Securities and Exchange Commission has a similar rule that covers all brokers and dealers but the regulation does not apply either to Government bonds or to municipal securities. Both sets of obligations enjoy a statutory exemption from SEC rules. Repeal of the exemption would enable the SEC to subject Government bonds to its net capital requirements.

There is no complete answer to the problem of preventing excessive speculation in the U.S. Government securities market. But measures can be taken that will help to keep the speculators within bounds.

Last spring's speculative activity disrupted the market so badly that the Federal Reserve had to buy $1,090,000,000 of Government securities to support an essential Treasury cash borrowing during the mid-East crisis in late July. The Government can't afford to give the speculators another field day. The risks are too great.

Americans Traveling Abroad Can Be Better Ambassadors of Good Will

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. REUSS. Mr. Speaker, the task of giving the people of foreign nations a better understanding of the United States is a difficult and continuing one. Recently Mr. Elmer L. Winter, Milwaukee attorney and businessman, made a 7-week trip to Europe. On his return, he made a number of excellent and down-to-earth suggestions for using the abilities of Americans traveling abroad more fully in the role of good will ambassadors.

I submit for the RECORD an article from the Milwaukee Journal summarizing Mr. Winter's recommendations, and excerpts from a letter written by Mr. Winter to George V. Allen, Director of the U.S. Information Agency, on this important subject:

[From the Milwaukee Journal]

LET TRAVELERS TELL OF U.S. WAY, PLEA

Intensified effort to better present our American way of life abroad should be undertaken by the United States, Elmer L. Winter is convinced. Recently returned from a 7-week tour of Europe, Winter has proposed to the U.S. Information Agency that more of the 600,000 Americans who travel abroad each year, especially businessmen, be enlisted in spreading understanding of the American way of life.

Winter, an attorney and businessman, is president of Manpower, Inc., an international temporary help service with headquarters in Milwaukee. In an address last week before the Milwaukee Rotary Club, he described Europeans' interest in American business and how he believed American businessmen could help in creating better understanding of this country among foreign nations.

EUROPE ON MARCH

"Europe, through the Common European Market (a federation for economic reasons and trade, including France, West Germany, Belgium, Luxembourg, the Netherlands, and Italy) and through the vast strides made by the Germans since World War II, is literally on the march again," Winter declared.

"We in America had better do some hard and constructive thinking to determine how we can keep apace with Europe, as well as how we can match and stay ahead of Russia in the cold economic war that is going on today. * * *

"I say, that since we were able to utilize the skills, techniques, and manpower of business during World War II on such an effective basis, we should call upon business in this cold economic war to offer its services in assisting the Government in explaining more fully our way of life to peoples abroad."

Winter described the U.S. Information Agency as "one of our most effective fighting arms in this cold war." He said that he has suggested 21 areas where businessmen, service organizations, teachers, students, corporate foundations and other groups could be called in by the agency to develop programs for their members to better present the American way of life abroad.

CALLS TO ARMS

When a businessman applies for a passport, he suggested, he should be asked whether he would be willing to assist the Department of Commerce at foreign trade fairs, whether he would be willing to address students, business associations or trade groups while overseas, whether he would include visits to foreign industrial concerns on his itinerary.

These questions would assist in enlisting aid of American businessmen in presenting more fully our way of life, he explained. "This is a call to arms—not the arms of missiles, atomic submarines and rockets, but the arms of truth and integrity—to bring about better understanding between America and Western Europe," he declared.

The Common European Market will present challenge to the United States, including tariff barriers, and to meet the latter "we must expand our business operations abroad, open new plants in Europe and modernize our present plants," Winter said. His firm, he reported, has opened 10 additional Manpower offices in Europe.

"We must continue to expand our exports, but we must also increase the imports into this country," he added. "International business is always a two-way street. We must buy if we want to sell."

AUGUST 29, 1958.

Mr. GEORGE V. ALLEN,
Director, U.S. Information Agency,
Washington, D.C.

DEAR MR. ALLEN: I am deeply convinced that a far-reaching program should be developed whereby the American traveler in Europe will serve as a good will ambassador with specific duties and responsibilities.

In our struggle with Russia to beat them on the economic front, we, in my opinion, should utilize more fully the skills of the American businessman traveling abroad.

The program I would recommend to you for consideration is as follows:

1. Plan of close cooperation with Secretary of State, Passport Division, and Department of Commerce: I recommend that a joint program be developed, so that when an American businessman applies for a passport he would receive a questionnaire to be answered by him before going abroad. This questionnaire would contain the following types of questions:

(a) Would you be willing on your forthcoming trip to assist the Department of Commerce at trade fairs?

(b) Would you be willing to address trade groups in your field while you are abroad?

(c) Would you be willing to talk to students, businessmen's associations, graduates of business schools?

(d) Do you wish to visit foreign industrial concerns in Europe?

(e) Would you like to receive materials on how to present effectively the American way of life to people abroad?

(f) Would you like to have reports on political and economic conditions abroad?

(g) Do you wish to have materials on export and import, reports on doing business abroad, the European Common Market, etc.?

2. Program for foreign businessmen coming to America: I recommend that a plan be established whereby foreign businessmen will be asked by our foreign consuls the following questions before they come to America:

(a) Do you wish to visit American factories, schools, etc.?

(b) Do you wish to attend trade meetings, business seminars, chamber of commerce meetings, etc.?

(c) Do you want research material on American business, customs, the American way of life, etc.?

(d) Do you have family and friends in the United States? If you do not, would you like to meet Americans in their homes and visit with them?

3. Service clubs: I feel that the service clubs should be asked by your organization to tackle the problem of creating a closer relationship between the members of service clubs abroad and those in the United States. With proper advance planning, service clubs could do a more thorough and important job in giving visitors, whether they go to Europe or the European comes to America, a more complete understanding of the community being visited.

4. Chambers of commerce: Most chambers of commerce have a world trade committee. The chambers of commerce should be called upon by your agency to develop a program which will assist us in fighting the economic cold war.

5. The Chamber of Commerce of the United States, National Association of Manufacturers, and American Management Association: These organizations print a great deal of material for circulation among people in this country. It would be well, in my opinion, for these materials to be sent abroad and particularly to European businessmen who have a great desire to obtain research reports, management materials, etc.

6. Distribution of trade magazines: These magazines, after they are read by the subscriber, are, for the most part, thrown away. Most businessmen would welcome an opportunity to send on these magazines to businessmen abroad and to business colleges, students, etc. A program of exchange should be developed.

7. Committee for Economic Development: This organization has among its board of directors the leaders of American business. I urge you to call upon CED to work with your organization in developing a program for a better and more complete understanding between the peoples of Europe and the United States.

8. Foundations: There are many foundations, particularly the Ford Foundation, that I believe would be interested in a program of broader understanding between America and countries abroad. These foundations should be invited by your organization to bring together their collective thinking as to how this program could be implemented.

9. Cooperation with American firms having branch offices abroad: I would recommend that your organization call in the major American firms that have offices abroad. These major companies should be asked for their recommendations as to how a more complete program can be developed in indoctrination of representatives going abroad, transfer of information, interchange of publications, setting up of libraries abroad, etc.

10. Problems of doing business abroad: With the advent of the Common European Market many American businessmen recognize the need for them to open branches abroad.

Let's develop a program through your organization and the Department of Commerce of providing clear cut information which will encourage businessmen to go into the markets abroad.

11. Business colleges and business school associations: While we recognize that language barriers present serious problems, obstacles of this type can be overcome through proper training. Representatives of business schools should be invited by your organization to suggest ways and means for developing an interchange of ideas, technical teaching materials, teaching techniques, etc., with our friends abroad.

12. Foreign trade fairs: The Department of Commerce, in my opinion, has done an excellent job in presenting American business life to those visiting the exhibits at the trade fairs. However, this is a limited program and could well be expanded.

13. American Chamber of Commerce in Europe: I do not think sufficient information has been given to American businessmen traveling abroad as to the work of the American Chamber of Commerce in Europe. This organization should be requested by your office to develop a program, so that American businessmen traveling to Europe will use the facilities of these offices. Likewise, the American Chamber of Commerce in Europe can do a great deal to initially advise the people of Europe before they travel to America.

14. United States consul offices abroad: A similar program should be discussed with the State Department as outlined for the American Chamber of Commerce in Europe. I do not feel full utilization is made of our consular offices abroad, and greater emphasis should be placed on their work.

15. Film libraries: As a visitor to Europe, I found that the American movies very often poorly portray our American way of life. I would suggest that film library associations should be consulted for a program as to how we can expand the distribution of our American industrial films abroad.

16. Students going abroad: After seeing many of these young people abroad, I question whether they are always presenting in the best light the American way of life. A good solid training program should take place before these students go abroad. This could be developed through the schools, travel agencies, etc., that arrange for these trips.

17. Teachers traveling abroad: Arrangements should be made for them to meet teachers abroad, visit schools abroad, talk to student groups, etc. They should have an opportunity to study the European educational system and visit in European homes, so they, too, will learn we are living in a shrunken world and can pass this information on to their students.

18. Professional organizations in America: There are many professional societies that should be called upon for a suggested program as to how the members of their organizations can be helpful in developing a better understanding between the countries

of the world, particularly where these organizations operate on an international basis.

CONCLUSION

If we were in a shooting war, you would call upon every available resource to assist our Government. I maintain that the urgency is as great in the cold war we are presently engaged in and that organizations throughout America would rise to the challenge of developing programs for their respective groups which would aid in winning out, particularly on the economic front.

I know you agree we need desperately to accomplish two purposes. One, prepare our businessmen, teachers, students, etc., to do a better job of creating good will, imparting information, knowledge, etc., to the peoples abroad. Two, we must provide the forum and the material for Americans returning to tell their friends in America in group and association meetings, as well as across the back fence, the story of the peoples abroad—their hopes, their quests for peace, and their reliance upon America.

Most of us appreciate that the Russian system directs all of its efforts toward influencing people to the Russian way of life. I submit that we must be constantly alert to this struggle and direct our fullest attention and effort to the development of programs which will bring about a better understanding between America and the peoples of the world who are not committed to the Russian way of life. Action is required. There is no longer time for sweet sounding phrases and platitudes. I suggest that a call to action be sent out from your office to every organization that has the resources for meeting the serious problems facing us.

I have a deep conviction that time is running out and that action is required. Let us call upon the best minds and talents in the country to aid your agency in the furtherance of greatly needed improvement in our relationships with the peoples of the world at large.

Sincerely,

ELMER L. WINTER,
President, Manpower, Inc., Milwaukee, Wis.

Prayer for Legislators

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. REUSS. Mr. Speaker, the Pius X section of the Young Christian Workers in Milwaukee devoted much time last fall to studying and discussing the responsibilities and duties of public office. In the course of these studies, the Young Christian Workers came upon a "Prayer for Legislators" by the late Pope Pius XII.

I am indebted to Donna Saladino, secretary of the Pius X section, for sending me this prayer, and include it in the RECORD hoping that it may be a source of inspiration to this Congress and to legislators everywhere.

PRAYER FOR LEGISLATORS

Great and eternal God, Creator and Lord of all things, Supreme Legislator and Supreme Ruler, all power proceeds from You and depends upon You, and it is only in Your name and as a reflection of Your divine wisdom that those who must make laws determine what is just and unjust.

Therefore, we, the Christian members of this legislature, statesmen upon whom rests the weight of a responsibility which places us at the center of the entire Nation, implore Your help in a task that we intend to accept and fulfill for the greatest spiritual and temporal welfare of our people.

Grant that we may not omit any preparation or effort in the fulfillment of this high purpose. Grant us as well that objectivity and that healthy realism which will help us constantly to see clearly the course which seems best.

Grant that we may never stray from that sound impartiality through which we must be mindful of the welfare of all without unjust preference. Grant that we may never lack loyalty to our own people, faith in the principles we openly profess, or such greatness of spirit as is needed to keep ourselves above every possible kind of corruption and petty interest.

May our deliberations be calm, marked by no other passion than that which is inspired by a holy thirst for truth. May our resolutions be consistent with Your principles, even if the service of Your will should impose sufferings and renunciations upon us. May we strive, even in our lowliness, to imitate that rectitude and holiness with which You yourself govern and rule, for Your greater glory and the true welfare of human society and all Your creatures.

Hear our prayer, O Lord, in order that Your light may never fail our minds, that Your strength may never be lacking to our wills, and that the warmth of Your charity will always fill our hearts, these hearts which must love our people with such tenderness.

Withdraw from us every human ambition and every illicit craving for wealth. Instill in us a lively, deep, and ever present attachment to all that pertains to a sound social order and is in accord with the rules of right and equity.

And thus may it one day come to pass that, as a supreme reward, we may enjoy Your blessed presence for all eternity, along with all those who are entrusted to our care. Amen.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Federal Insurance on Bank Deposits Did Not Lead to Federal Control of Banking

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. JOHNSON of Texas. Mr. President, those who would timorously prevent the Government from marching into the future close their eyes to the fact that the doom criers of a quarter of a century ago lived to see the downfall of their dismal prophecies that the United States was plunging headlong into socialism.

Many of us remember the outcry that accompanied the proposal that the Federal Government guarantee the safety of bank deposits. But the threatened taking over of the banks by the Government never materialized, as was pointed out recently in a forthright editorial in the Rome (N.Y.) Daily Sentinel. "They were wrong on bank insurance," says the Sentinel, and proves it.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THEY WERE WRONG ON BANK INSURANCE

They said—25 years ago—that if the Federal Government undertook to guarantee deposits in the Nation's banks, the inevitable result would be complete Government control of banking.

They said that to insure deposits the Government would have to assume an unconscionable degree of control over banking loans and investments, having the effectual result of underwriting those banking functions too.

These fears and alarms are only faint echoes of the past as the Federal Deposit Insurance Corporation celebrates its 25th anniversary this month. In retrospect its creation now appears a major banking reform. In the 2 years prior to its authorization by the 1933 Banking Act 3,643 banks in the United States had failed. Estimates of losses to depositers—some eventually to be recouped—ranged from three-quarters of a billion dollars to as much as a billion and a quarter.

The original plan provided insurance for the first $2,500 for each depositor. The limit was raised to $5,000 in 1934; on September 21, 1950, it was increased to $10,000 per depositor. Inasmuch as about 98 percent of all deposit accounts have balances of less than $10,000, substantially all of such deposits are now insured. Of the Nation's 14,095 commercial and mutual savings banks, 13,383 now qualify for the Federal insurance.

The original amount of FDIC paid-in capital was $289 million. Federal Reserve Banks provided $139 million; the U.S. Treasury, $150 million. Congress has never made an appropriation to the Corporation.

The original capital has been repaid with interest from surplus accumulated from FDIC's assessments on insured banks at the annual rate of one-twelfth of 1 percent of their total deposits, less authorized deductions, and income from investments. Since 1950, FDIC has been returning to insured banks 60 percent of their annual payments.

Some 1½ million depositors in 438 sick banks have received payments from FDIC insurance in the Corporation's 25-year lifetime. More than $343 million has been paid out. The rate of bank failures now has dwindled almost to a standstill. In 1957 the FDIC had to shell out to depositors of only one bank.

Meantime, over the years, the banking business has prospered, though consolidations have reduced the total number of banks. But this trend is being offset by the mushrooming of branches. And the fear that Federal insurance for deposits would encourage recklessness on the part of bankers was replaced long ago by a feeling of confidence in the banking system almost inconceivable in those shaky days of the great depression.

A new play based on the Lincoln-Douglas debates will be welcome emphasis of the fact that not all differences in that era were settled with six-shooters.

Address of Hon. Herman E. Talmadge, of Georgia, Before Association of Cotton Textile Merchants of New York

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the address which I delivered on Thursday, January 29, 1959, at the annual dinner of the Association of Cotton Textile Merchants of New York held at Hotel Plaza in New York City.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Chairman Leslie, President Bell, distinguished guests and members of the Association of Cotton Textile Merchants of New York, thank you for affording me the privilege of sharing with you this significant occasion in your association's history. It is an honor for which I am deeply and humbly grateful.

This is a group with which I feel at home not only because of our common interest in the textile industry and its future but also because of the close ties which many of you and your firms have with my State of Georgia.

We in Georgia know how to appreciate the great industry which you represent.

Our State is the Nation's fifth largest producer of cotton textiles.

One out of every three Georgians employed in industry realizes his livelihood from a textile plant.

More than 85,000 Georgia cotton farmers look to the cotton textile industry as the principal market for the fiber they produce.

And, considering the wide dispersal of the industry and the hundreds of allied industries and businesses which it sustains, it is no exaggeration to say there is hardly a Georgia family whose welfare is not to some degree influenced by the cotton textile industry.

Therefore, I am particularly pleased to have this opportunity to express to you and your industry the heartfelt gratitude of all Georgians for the many contributions which the textile industry has made and is making toward the continuing economic progress of our State.

Georgians are looking with confidence toward a future of growth and prosperity limited only by the extent of our energy and imagination and it is a source of pride and inspiration to us to know that the textile industry shares our faith in a greater tomorrow and has cast its lot with us in laboring toward its realization.

The economic and social bonds between your industry and my State make it inevitable that what affects one affects the other.

When the textile industry prospers, Georgia prospers; when the textile economy is threatened, Georgia's economy is endangered, too.

That is why Georgians are sorely disturbed about what is happening to the cotton textile industry as the result of the asinine and unrealistic government policies and programs which have placed the industry and jobs of its employees in grave jeopardy.

Of all the Nation's major industries none is more deserving of favorable consideration in the formulation of governmental policy than the textile industry.

That is true not only because the Armed Forces rank textiles immediately behind steel in the order of priority of materials needed for national defense but, even more important, because no other industry so nearly epitomizes the American concept of free enterprise and competitive economy.

Since Samuel Slater built this country's first textile mill at Pawtucket, R.I., in 1790 and thus set in motion the American industrial revolution which transformed the United States from a frontier nation into a world power, the term "monopoly" has never been associated with the textile industry.

While the heavy industries were concentrating themselves in vast industrial complexes, the textile industry dispersed itself throughout the country in community-type enterprises of which no single company controls as much as 5 percent.

While the monopolies were seeking to control their wealth by channeling it through interlocking subsidiaries, the textile industry went into the open market to buy its needs and thus contributed to the establishment and expansion of independent allied industries in the best American tradition.

The result has been the development of a responsible and highly competitive industry which turns out superior products at minimum prices through efficiency, imagination and mass production—an industry so closely attuned to the general business cycle that it is a recognized bellwether of economic

trends—an industry which, so long as it was protected from unfair competition, prospered and contributed to the prosperity of all associated with it.

What has happened to the textile industry through no fault of its own is a shameful chapter in the industrial history of the United States. It is a sad commentary upon our national values and a ringing indictment of the poor judgment and callous indifference of our national policymakers.

The situation in which our Federal Government has placed the American textile industry is incredible to the point of disbelief to one not familiar with the facts.

But the record is as incontrovertible as it is shocking.

The United States has spent American tax dollars to help rebuild and equip the war-ravaged textile industries of our allies and former enemies and to establish new textile industries in undeveloped countries where wage scales are minute fractions of those in this country.

The United States has furnished the operators of those plants with complete information about even the most advanced management and production techniques developed by the American industry.

The United States has sold surplus American cotton to those countries at prices as much as 20 percent under those which the American industry must pay on the domestic market and, in many instances, has loaned the money with which the purchases were made and then bought the finished products for foreign aid distribution in other countries.

The United States has offered to finance the relocation of American textile plants to other countries and to insure them against loss or expropriation.

The United States has lowered American tariffs to the point and set import quotas so low that foreign textiles turned out with cheap labor and cheap cotton in new, modern plants built with American capital are glutting and destroying the markets for American textiles right here at home.

Those are the things which have been done to the American textile industry in the name of global goodness and under the guise of protecting the free world against communism.

In other words, it is the actual, if not officially expressed, policy of the Government of the United States that the American textile industry is expendable and should be forced to help finance its own liquidation.

What other conclusion can be drawn from policies and programs which require an industry and its employees to pay taxes to build, equip, and supply the plants of the competitors which are threatening to put it out of business?

It is a situation which prompts the question: Just how stupid can we get?

To my knowledge no other industry in the history of the world ever has been forced to compete for its existence under handicaps like those unilaterally imposed by American trade and foreign aid policies on the textile industry of the United States.

Because this country has taken the position of favoring foreign textile industries over its own, the list of advantages enjoyed by textile manufacturers in other countries over their American counterparts is staggering.

They can get their capital from the U.S. Treasury.

They can buy American cotton 20 percent cheaper and use borrowed American dollars to pay for it.

They can sell their finished products back to the American Government through so-called three-way deals under the foreign aid program.

They can pay wage scales which are one-tenth or less of the American legal minimum.

They can impose working conditions which would be illegal in the United States.

They can learn American trade secrets and production know-how merely by asking.

They can undersell comparable American products on the American market.

It is small wonder in the light of those facts that the American textile industry has lost markets equivalent to 10 percent of the national production and that, since 1947, 717 textile mills have closed their doors and 345,000 textile jobs have been discontinued.

It is a great tribute to the vitality and resiliency of the industry that it has been able to contain its losses within those bounds and that, even in the face of the almost insurmountable odds against which it must compete, it is now in the midst of a strong comeback.

Your distinguished president, Mr. Bell, very ably and graphically summarized the situation and position of the textile industry last month in his report on "Ten Years of Cotton Textiles—1948 to 1958" in which he stated:

"Unlike other sections of the American economy which have been favored with direct Government subsidies, financial and tax benefits or which have enjoyed large scale Government buying of their products, textiles have been made the ugly ducklings of the national barnyard. In consequence, textile people have become leading critics of a foreign trade policy which fundamentally discriminates unfairly against the American producer of textiles and apparel while at the same time it grants special privileges here to his foreign competitors and bounties abroad."

It is to your everlastihg credit that you have refused to be either discouraged by your plight or daunted by your high-placed adversaries.

Your persistent and consistent stand in defense of your rights has served to open the eyes of many heretofore complacent individuals. And I am encouraged to believe that the pressures being generated by your articulate and irrefutable criticism of the untenable policies of our Federal Government will assure their eventual modification to afford the textile industry the legislative relief and protection to which it is entitled and which it must have if it is to survive.

Without in any way minimizing the gravity of the problem or the effort necessary to bring about its solution, I am confident that—just as surely as was the case in the fable to which Mr. Bell referred in his well-phrased analogy—your days as the "ugly ducklings" of the American economy are numbered.

Although you have been rebuffed time and again when you have sought to present the merits of your case before the executive and legislative branches, you have the satisfaction of knowing that you have forced both to recognize the justice of your cause—the executive in negotiating the import agreement with Japan and the legislative in the action of the Senate in ordering a full-dress study of the problems of the industry.

As a temporary expedient, the executive agreement with Japan gave the industry some relief, but a limited unilateral arrangement which leaves the American textile industry at the mercy of a foreign government is no solution. Furthermore, the problem of low-cost foreign goods is not limited to Japan as is evidenced by snowballing apparel imports from the sweatshops of Hong Kong where the world's lowest wage scales prevail.

It is my resolute conviction that all American industry has a right not only to expect but also to demand that its national government by policy and statute give it unequivocal protection from indiscriminate foreign imports. That can be accomplished only through an effective system of tariffs and quotas sufficiently high to protect the investment of our industry and the jobs and living standards of its workers and to assure that all products of equivalent quality regardless of origin go into the American market place on a basis of competitive parity.

Let no one confuse the issue with the specious contention that America's position of world leadership in the struggle against international communism requires this country to divide up its domestic markets among the uncommitted nations of the world. The point at issue is not a question of foreign policy but rather a question of maintaining the vitality of our domestic economy. Trade is a matter of business and cannot be made a matter of international politics without disastrous results to business.

To any individual willing to take the time to think it through it obviously is far more important to the future of the free world that the United States sustain its solvency than it is to hand the remainder of the world readymade markets in this country at the expense of American industry. In dealing with the issue we must never lose sight of the fundamental fact that the only hope for the survival of all the free world is an economically invincible America and that the only sure course to American economic invincibility is through maintaining and strengthening—not betraying and destroying—our free enterprise, industrial economy here at home.

If the American textile industry were seeking special favors or preferential treatment, this might be a different story. But, as was so aptly stated by President Halbert M. Jones of the American Cotton Manufacturers Institute in testimony before the special Senate subcommittee studying textile problems last July, all the industry is seeking is "a recognition of the vital and important place which this industry and its employees occupy in our national economy and, as a result of this recognition, an assurance of fair and just consideration of our industry and our textile jobs in all of our relations with the Government and its policies."

I interpret that to mean that the textile industry wants nothing more—and nothing less—than to be treated like any other corporate taxpayer. Surely no fairminded and realistic individual could object to that and I am hopeful that the Senate study of your industry's problems will prove to be the beginning of action which will culminate in remedial legislation during the 86th Congress.

While I would not presumt to predict what form any such enactments might take, I do have some definite ideas about the points I think they ought to include if the textile industry and its employees are to receive the protection to which they are entitled. They are:

1. Amendment of section 22 of the Agricultural Adjustment Act to make it beyond doubt that its restrictions on imports apply to finished, as well as raw, agricultural products.

2. Strengthening of patent laws to prevent foreign pirating of American processes and techniques and to prohibit the State Department and the International Cooperation Administration from disclosing details about them under the foreign aid program.

3. Amendment of Public Law 480 to prohibit the importation into the United States of goods manufactured with commodities sold abroad under its subsidization.

4. Amendment of the Mutual Security Act to require that the International Cooperation Administration purchase in this country all textile products distributed under its terms.

5. Enactment of a new national farm program under which the farmer would be guaranteed his proportionate share of the

national income through compensatory payments and the textile and other agricultural-processing industries would be permitted to buy agricultural commodities at free market prices.

While I shall give my wholehearted support to all of those measures, as well as to any other reasonable and practical proposals which may be made for dealing with textile problems, I expect to concentrate my efforts in this area during the 86th Congress on seeking a new farm bill. My interest in so doing is not only to put the farmer back on his feet on a free-enterprise basis but also to help the textile industry and all other industries utilizing agricultural commodities regain their competitive position at home and abroad.

The present farm program has been a miserable failure by any yardstick. From the farmer's standpoint, it has reduced his income below the subsistence level and all but put him out of business. From the taxpayer's standpoint, it has increased his tax burden and the prices he has to pay for agricultural products. From the textile industry's standpoint, it has forced it to buy cotton at artificially high prices and thus priced its goods out of the world market and many areas of the domestic market.

My study of the problem has brought me to the conclusion that the only effective and permanent solution lies in freeing the farmer to plant and sell as he pleases and allowing commodity prices to seek their own levels under the law of supply and demand. It is my view that the most efficient and economical way under such an arrangement to make up the difference between the farmer's income and the minimum wage and collective bargaining advantages enjoyed by labor would be to pay him a compensatory payment on basic commodities consumed in this country equal to the difference between the market price and 100 percent of parity.

The beauty of such an arrangement is that it would cost the taxpayers $2 to $3 billion a year less and would put perhaps as much as $1 billion a year more in the pockets of the farmers. As paradoxical as that may seem, it would be the case because the high costs of administering the present bureaucratic program and of handling, transporting, storing and disposing of surplus commodities—the latter figure now running to more than $1 million a day—would be eliminated and every farm program dollar would go directly to the farmer.

I have embodied my ideas in a bill which I introduced in the Senate earlier this month. The overwhelmingly favorable response which I have received from farmers and consumers alike since I first set forth my plan last year encourages me to believe that it has widespread appeal and has the best chance of any proposal yet put forth of becoming a basis for agreement among the various farm groups in writing a new national farm law.

It is my hope that it will have the approval and support of the textile industry. I honestly think it could do more to help the industry than any other measure yet proposed because it would let you buy your cotton at the prevailing world price and would put an end to the utterly ridiculous present situation under which your foreign competitors are buying American cotton at subsidized prices of $35 to $40 a bale below its cost of production.

It is the only way of which I know by which our domestic farm economy can be restored and American textiles put back on the world market at competitive prices at the same time.

Certainly it is worth a try because, as I think you will agree, anything would be an improvement over the present patchwork of discredited and abortive farm laws.

The plights in which the textile industry and the farmer find themselves are perfect examples of what happens in nations which, to use the words of Thomas Jefferson, "have more machinery of government than is necessary."

With the exception of the external menace of communism, all of the ills and problems of the United States can be summarized in the one phrase—too much government.

The American economy is suffering from too much government.

We have 48-cent dollars and face the prospect of 10-cent dollars as the result of ever-broadening governmental policies and programs which are bankrupting our Nation and mortgaging our future.

American prestige abroad is suffering from too much government.

We have undertaken through various bureaucratic and paternalistic programs of spending and instruction to try to make the world over in our own image and as a result find ourselves despised and distrusted throughout most of the world and with less friends and dependable allies than before we started.

The American people are suffering from too much government.

The ever-encroaching arm of Federal governmental authority is embracing more and more affairs traditionally and constitutionally regarded as local matters and as a result the individual citizen finds himself with less and less voice in the conduct of his local government and its institutions.

I cannot bring myself to believe that the majority of American people approve of the philosophy that central governments must be all things to all men and do all things for all men.

To the contrary the mail which I receive from all sections of the Nation indicates to me that the rank and file of the populace are gravely concerned about the present course of our Nation and the consequences of pursuing it to its ultimate conclusion.

I believe the people of this country want to see the Federal budget balanced and the Nation's economy stabilized.

I believe the people of this country want the United States to cease doing for people in other countries what it either is unable or unwilling to do for our own citizens here at home.

I believe the people of this country want the Federal Government to confine its activities to those areas reserved to it by the Constitution and leave the management of all other affairs to local people on the local level.

I believe with Thomas Jefferson that: "The people may be misled or deceived for a time, but where the avenues of truth are open there men will learn to reject what is false and harmful. Where the people are well-informed, they can be trusted with their own government; whenever things get so far wrong as to attract public notice they may be relied upon to set them to rights."

Throughout the Nation there is a growing awakening to the dangers inherent in our country's present policies and a swelling voice for a recognition of the lessons of the past through a return to the fundamentals of constitutional, republican government.

I feel with all my being that the American people already would have expressed themselves in favor of such a return to fundamentals had they had a clear-cut choice at the polls.

I have faith in the desire and willingness of the American people to demand that their house be set in order and I believe that that desire and willingness is not far from making itself felt.

In a constitutional republic such as ours, the masses may not be immediately articulate; but once given leaders and leadership they are swift in making their wishes felt and known.

It is out of that abiding faith in the reason, good judgment, and commonsense of the great American public that I, in concluding, wish to address myself through you and this occasion to it about a matter which should be a source of grave concern to all persons who are interested in the education of all the children of this Nation regardless of their color or place of residence.

I speak of the chain of events which has resulted in the closing of public schools in various localities of the South and which, if allowed to run their full course, surely will result in the destruction of public education in the South.

Such an eventuality would be a tragic catastrophe which this Nation cannot afford under any circumstances to permit to happen at this critical juncture in our national life. Engaged as we are in a life-or-death struggle with the forces of world communism, this is no time to permit a constitutional controversy to rob the Nation of the minds and talents of a great segment of its youth by locking the doors of the public schools in their faces.

My friends, unless it is the wish of this Nation that we tear our country apart and destroy the schools of the South, action must be taken soon in the Congress of the United States to resolve the issue on a realistic, constitutional basis.

And I cannot believe there is any reasonably intelligent person who would contend that the use of Federal bayonets or the rearing of a generation in ignorance are either realistic or constitutional—and certainly not humane—solutions to the problem.

I have given long and serious study to this question and, recognizing that there are feelings as strong on the other side of the subject as mine are on my side, I have come to the conclusion that there is only one solution compatible with constitutional concepts to which all persons of all shades of opinion can subscribe.

That is the solution which I stood before the Senate on last Monday and outlined with all the sincerity of my being—that is, to amend the Constitution of the United States to give the people on the State and local level the right to determine for themselves the manner in which the issue will be solved in their localities.

This proposed amendment reads as follows:

"Administrative control of any public school, public educational institution, or public educational system operated by any State or by any political or other subdivision thereof, shall be vested exclusively in such State and subdivision and nothing contained in this Constitution shall be construed to deny to the residents thereof the right to determine for themselves the manner in which any such school, institution or system is administered by such State and subdivision."

Let me emphasize the language "the right to determine for themselves."

Such a provision in our Constitution would leave the citizens of each State and locality free to make their own decisions in accordance with local conditions and prevailing attitudes as to how and when their schools would comply with the Supreme Court's school decision.

Such a provision in our Constitution would prevent destruction of the public schools of the South and would end for all time any threat from any quarter of Federal control of education.

Such a provision in our Constitution would assure uninterrupted instruction for all the children of this country regardless of their color or place of residence.

Such a provision in our Constitution would permit either retention of the status quo or orderly change as dictated by the requirements of public opinion and make certain that whatever change might take place would be by the constructive process of evolution rather than the destructive process of revolution.

Such a provision in our Constitution would create a basis for unity throughout the Nation at a time when it is vitally important that we present a united front before our enemies.

I do not believe there is any parent in this country who could sincerely say that he or she does not believe in the fundamental fact that public schools are local institutions and, if they are to fulfill their role, must be operated on the local level by the parents of the children who attend them.

Neither do I believe that there is any parent in this country who is genuinely concerned about the future of our Nation and the education of our children who could not support such an amendment as I have proposed with a clear conscience and in complete consistency with his principles.

I presented my amendment in good faith. As a stanch adherent of the principle of local self-government and local self-determination, I have no qualms about submitting that or any other issue to the people of the United States or their elected representatives to be resolved by the democratic process.

The very basis of our form of government is, in the words of the Declaration of Independence, that it derives its "just powers from the consent of the governed." And it is to invoke that heritage to resolve the question of control of our public schools that I have proposed my amendment.

I appeal to all the citizens of America—particularly to the parents of school-age children—to let their views about what I have proposed be known to their Senators and Congressmen.

I am convinced that, if they will, the 86th Congress will vote to give the people of America the opportunity to amend our Constitution to assure for all time to come that they retain the fundamental right to run their schools on the local level in accordance with the wishes of the local citizenry.

The future of the United States rests in the hands and hearts of the American people.

Although we sometimes may be justified in feeling frustrated about the course and policies of our Government, we must never sell our people short nor discount their loyalty, courage, honesty, ability and sincerity of purpose.

They have demonstrated time and again their intense determination to meet and overcome whatever obstacles may confront them.

And, like Thomas Jefferson, I put my unswerving faith in them to continue to do so.

I thank you.

Dilemma of the College Student: Draft Dodger or Patriot?

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mrs. GREEN of Oregon. Mr. Speaker, among the many reasons advanced in opposition to the proposed extension of the present draft act is the increasing arbitrary impact of the draft upon the young men liable to service. The honored concept of a universal obligation, which served the Nation well during World War I and World World War II, has been replaced, in fact if not in terms, by a system under which the incidence of the draft falls only on a small group. Some of the problems arising from this are well described in an article by John C. Esty, Jr., which appeared in the Nation for January 10, 1959. Under unanimous consent, I include the article in the Appendix of the RECORD.

The article follows:

DILEMMA OF THE COLLEGE STUDENT: DRAFT DODGER OR PATRIOT?

(By John C. Esty, Jr.)

For the next few months, college seniors will be focusing their thoughts on how to find a proper place in a society which needs their talents desperately. The most frustrating barrier to this important process is the military manpower situation. Although the draft procedures are complex, it is not complexity that creates the problem for the students. The simple fact is that seniors are required to cope with Defense Department policies that are unimaginative, extemporary, unrealistic, and inadequate, even for military purposes. A few examples, drawn from my experience as military service adviser at Amherst, will illustrate the point.

I recognize him as one of our more alert seniors as he walks in and sits down in the chair by my desk. He has made a good record in college and holds great promise for a meaningful life. He comes right to the point: "I want to go to law school, but I think I should work for a year or two to get some perspective on law as a career. What are my chances of getting drafted during that time?"

This same question, this same slight frown, I have heard and seen hundreds of times. The reply is also the same. You'll probably get called within about a year after graduation. Wouldn't this be a good way to get some perspective and at the same time serve your military obligation?"

"Perhaps, but I'd hope to work in a law office, and, anyway, I want to get married in June. I don't want to drag my wife all over the country, especially when the housing is supposedly so bad around Army camps. What do you thing I should do? Go to law school right away and hope for deferment?

Shall I tell him he shouldn't get married? That married life for a buck private isn't so bad? That he should go right to law school to dodge the draft, even though he's not sure it's the right field for him? This would work, of course, but maybe it would be as much of a time waste as the Army. I'd better just pull out the stock answer: "Why don't you wait and see what Congress does, or perhaps there will be another Executive order changing the ground rules again. Better not make plans now."

The next boy is also a senior—and married already. He has a good job in the executive-training program of a large industrial firm. Now he finds his farsightedness and assiduity rewarded by the prospect of military service, which will upset hs plans completely. He wants to know if it's true that fathers are virtually draft free. When I confirm this, he shrugs his shoulders: "Well, we don't have any money and we thought we should wait on a family. But if fathers get out of military service, then I'll become a father."

Once during course registration—a time when our students typically make some attempt at relating their curricular choices to a future goal—a boy came to me with a neat scheme. Out of a generally versatile academic background, he was emerging with a clear talent in classical studies, perhaps headed for teaching or writing. This was the type of person a society must enlist to look backward and soak up the past, to carry along accumulations of wisdom, cultural tradition, and ethics; the kind who may not help to build missiles, but might help decide whether it's right to use them. He wanted to see the list of critical occupations for which draft exemption and reduction of reserve requirements are offered. He didn't find classical studies. He did find physics—and that's what he's majoring in.

Shall we call it lack of patriotism? Are these spineless or cynical young men of the silent, cautious generation, who don't care about their country? I think not. Listen to the Amherst Student editorializing on the campus visit of Marine officers recruiting for the platoon leaders course:

"We read daily how the intermediate range ballistic missile is now obsolete, how manpower is being slashed and draft calls are dwindling. Why then sacrifice 3 years and two summers to the USMC when, with a little effort and information, it is possible to fulfill a military obligation in less than a year, with a reserve commitment which can be waived for men that are entering critical-skills occupations in fields of chemistry, physics, geology, and foreign languages? It is possible to enroll in the Reserve Forces Act of 1955 6-month program in a rural area where there is no filled quota of reservists, go on active duty after graduation, and go to work with no reserve commitment except in case of war, when all reservists are called by act of Congress. The military obligation can be fulfilled more easily than by a 3-year hitch with the Marine Corps. A contribution to the security of our country can better be made in a research lab than by participation in obsolete field maneuvers at some obscure military outpost."

What particular lecture on American democracy and patriotism do you give to the boy who, having been dressed down for asking directly how to avoid the draft, wonders, "I see so many getting out of it, why should I be the one to go?" You point out that there have always been inequities in manpower conscription; that the burden of Korea fell at first on the reservists of World War II, and that this is why Congress changed from "selective service" (service by just those selected) to "universal service" (where everyone serves, at least in theory); that war has always consumed those most valuable to society in any sense. But he smiles and asks, "Is the senior who goes to graduate school just to get out of military service universal? Is the father universal? Is it universal to be the one sucker in four who gets hooked?"

And it's not just getting hooked that hurts; it's also staying hooked. Consider the story of the boy who applied for admission to us 5 years after graduation from high school. He had wanted to go to a challenging eastern men's college, but had no money at all. So he went to work as a patternmaker, which carried an essential skills draft deferment. For 5 years he put money aside for his education, spending some of it along the way on night-school courses, mainly to prepare himself even better for college. When he came to be interviewed, we found he was a boy of high ability and one highly motivated to work hard. We accepted him on the spot and offered him a partial scholarship to augment his own savings. It was the kind of case that makes an admission officer, in the midst of his harassment, feel the whole business is worthwhile.

The boy went home elated, quit his job, and enrolled in some summer-school courses we thought would help him in preparation for entrance in September. A week later he was on the phone—with his induction notice in hand. He was not eligible for student deferment, since he was actually not in college, so I counseled him to try the 6-month program. We would let him enter in February and there was a local Reserve unit where he could continue his 5½-year Reserve obligation. He followed this advice and came to us at midyear. His academic record has borne out our expectation; he has attended his Reserve meetings faithfully. Hear his dilemma:

"We have training meetings two evenings a week, since the unit is geared to the aca-

demic year; and we are then free during school vacations. The trouble is that I have to study hard—you know I'm on scholarship—and two evenings shot each week is a lot. I would apply for a waiver of the 48 meetings required per year in return for an extra 2 weeks of summer camp (2 weeks is required anyway), but then I don't get my summer job. A lot of men don't show up half the time and nothing seems to happen; I just don't dare. Do you know what we do at these meetings? We sit. We listen to a halting personal account of supply operations in the Panama Canal Zone, a lecture on military administration, or a talk on Pentagon organization. Sometimes we stand up and do a few column lefts and dress rights. I don't know what all this has to do with missiles, strategic warfare or even landings in Lebanon. And I've got 4 more years of it."

These are the kinds of stories and problems a collegiate military-service adviser hears day after day. The advice we must give adds up to something like this: don't plan—wait; become a father sooner than you had planned; go to graduate school even though you're not ready; pick your college major after consulting the draft-exempt list. Any dean or counselor who gives that kind of counsel would ordinarily be fired for incompetency, yet this is what the present military-manpower policies are forcing us to do. We had always tried to proceed from one cardinal principle of advice: do your planning now, as though there were no threat of military service; then see how the service best fits into your plans, and act accordingly.

This idea seemed to be useful during Korea and up to about 2 years ago. Then the effects of three major changes in atmosphere went to work on the side of confusion.

First, our students read regularly about the great shifts to technological-defense weapons, which are manned by engineers instead of by armies. The brush-fire argument for many divisions of standing infantry was undermined by the small number of men involved in Lebanon. They can't help but wonder why so many men, especially unskilled draftees, are needed. (Nor can I; my bias must be showing by now.)

Second, unlike 6 years ago, education seemed to have gained respectability so that, as the student editorial quoted earlier suggests, it should be as patriotic to develop one's mind and intellectual talents as to serve as clerk-typist in company headquarters. If Congress is willing to appropriate enough money for a National Defense Education Act (inadequate though it is, especially in strengthening public school teaching), doesn't it make sense to let intelligent people serve with their brains instead of their feet—and at no cost to taxpayers?

Finally, the most demoralizing shift in climate has been the manifest breakdown of the Selective Service System in maintaining any semblance of universality; that is, a sense of fairness as to who is drafted and who isn't. It is this aspect of military service which has led the Fund for the Republic, in a paper by John Graham entitled "The Universal Military Obligation," to question seriously the constitutionality of current manpower practices. Excerpted in numerous college newspapers, this paper clearly articulates the inequities which students feel as they try to plan their futures. The only course open to one charged with providing advice on military service is to point to the few fixed rules which may indicate some guide to planning. One simply answers four main questions in the minds of college students: What are the current obligations? What is the present status of the draft? What are the alternatives? What are the chances that all this will change?

The first obligation is that every male must register with the Selective Service System on his 18th birthday. Most colleges have some official designated as a local draft registrar for the convenience of students. Some time after registration, the registrant is required to fill out a questionnaire on the basis of which he is usually classified 1A by his local board. This classification means he is available for service until such time as he receives a deferment for academic, physical or other reasons. It is customary for students to hold the 1A classification throughout their college careers unless granted a student deferment by their local board (some boards grant deferments automatically). At the present time, students are rarely drafted much below the age of 23. A registrant is additionally obliged to inform his board of any address change (including college attended), any change of status, any plans to leave the country, and to carry his draft card at all times.

The law from which these obligations arise is the Universal Military Training and Service Act of 1951, extended in 1955 by Congress until June 1959. It requires all physically qualified males between the ages of 18½ and 26 to serve 2 years of active duty and 4 years' of Reserve duy—or some administrative equivalent such as 6 months' active duty and 5½ years' Active Reserve duty. Those who have received a deferment have their liability age extended from 26 to 35.

Currently any male who is physically qualified—apparently about 40 percent of any age group fails to qualify—and who is not eligible for deferment (as a student, as a father, as a person with dependents, as a ministerial or medical candidate) may expect to be drafted between the ages of 22 and 23. Doctors and dentists may be deferred because of their professional training, but they then become eligible for a special draft—or the alternative of accepting a commission for 2 years of active duty—until age 45. In most cases, it is possible for a student to complete 4 years of college untouched by the draft, but graduate school almost certainly requires deferment. The student deferment is still based on a student's score on the college qualification test and on his academic rank.

Even though receipt of a deferment technically makes a student eligible for the draft until he is 35, the Armed Forces are not interested in inductees over the age of 26. By Executive order, local boards are required to exhaust all of the men in each category in the following sequence:

1. Delinquents (i.e., legal draft dodgers).
2. Volunteers (in the order in which they volunteered).
3. Nonvolunteers, nonfathers between 18½ and 26 (oldest first).
4. Nonvolunteer fathers between 18½ and 26 (oldest first).
5. Men over 26.

Many draft boards are filling their quotas entirely from category 2, and the typical board is operating in category 3 at the 23-year-old level. The fact that these categories have been established to begin with, the fact that the age of probable drafting in category 3 is rising, the fact that the number of men in categories 4 and 5 is increasing dramatically, the fact that draft quotas are dwindling—all point to a huge and growing manpower pool with which the system cannot cope. The result is that more and more legally eligible men are escaping the draft, and the bankruptcy of the universal concept becomes clear.

Being drafted—or volunteering, to precipitate the issue—currently involves 2 years of active service in the Army, which for a college graduate holds fair hope of useful activity (in spite of the "round-hole-square-peg" stories). This is followed by a 2-year stint in the Ready Reserve, where active participation is supposedly enforced by the Reserve Forces Act of 1955, and a final 2 years in the Standby Reserve, which carries no special obligations except in case of general mobilization.

The first alternative to the draft which seems to occur to most college students is complete escape. The attraction of this avenue is directly proportional to the odds involved, which means it's looking better and better all the time. Aside from this unfortunate consequence of current policy, the most popular alternative seems to be the 6-month program. The main advantage is clearly the shortened active-duty time; the disadvantages are the long active-reserve period of 5½ years and the fairly useless nature of the total 6 years' activity. It is likely that before long this program will reach its saturation point; already seniors find that their local Reserve units have reached the allotted strength and can accept no more applications.

The second most attractive alternative, especially for those who want to be officers and are willing to give up an extra year or so for the privilege, would be one of the officer-candidate schools of the Navy, Marine Corps, or Coast Guard. After graduation, the candidate completes 16 weeks of training, 3 years of active duty, and some combination of Ready and Standby Reserve time for a total of 6 years. A similar program, the marine platoon leaders' course, substitutes two 6-week summer encampments during college for the post-college 16 weeks' training course, and commissions are awarded at graduation from college. Those seniors who might be interested in becoming aviation cadets are scared off by a 5-year active-duty commitment.

For some reason, there is great reluctance on the part of the Armed Forces to appoint officers directly on the basis of education, background, or civilian skills. When I went through officer-training school, the students came from three sources: direct appointment (my own category), ROTC, and appointment from the enlisted ranks. At the end of the course, the overall evaluation of each man—including military bearing, drill, leadership—was averaged for each source. The direct appointees, with no prior military experience, ranked significantly higher than the ROTC people and enlisted appointees, who followed in that order.

Various special programs for enlisted men create some interest for the college senior. Opportunities for specialized training—as at the Army Language School—are occasionally considered worth while enough to warrant spending an extra year of active duty. There is also the possibility of securing an officer-candidate school appointment directly from the ranks, although this is a real gamble. From time to time one hears of a special "quick opening" program of particular advantage for the college graduate, but these are announced softly and usually last only a short while, so capitalizing on them is a matter of luck.

The alternatives mentioned above are considered mainly by students whose college does not have a Reserve officers' training course (ROTC). Where such a program is available, the military obligations of those students not anxious to take a chance on the draft are comfortably attended to. But here again the dean, or military counselor, is placed in the position of advising boys to give up a fourth or a fifth of their college work just for the short-range assurance of knowing how and when they will discharge their military obligations. Typically, an ROTC student sacrifices the impractical or nonvocational courses, such as music appreciation and literature, which might have opened the way for years of leisure time richly and meaningfully spent; or political science, which might have engendered a greater sensitivity to the demands placed on an enlightened citizenry.

What are the chances that all this will change? The current draft law expires in June 1959, and Congress will have to act on new legislation this spring. It is apparent that the present situation will no longer be tenable after a few more months. Every executive action in the past 4 years has been directed at relieving the pressure of the manpower pool on the draft apparatus by creating more attractive alternatives. (Two years ago the Defense Department published a booklet, "It's Your Choice," listing more than 40 kinds of opportunities for military service.) Yet the monster grows each day. With the failure of these relief valves, the drafting age within category 3 will probably continue to rise until perhaps no one will be drafted except those who volunteer for service to avoid being drafted. The only way out of this paradox, under present law, would be to defer and exempt greater numbers, which would serve only to increase the present uncertainty and inequity. A particularly unfortunate aspect of the situation is the apparent unwillingness or inability of manpower officials to face these manifest breakdowns in the justification and operation of "universal" military service. Having talked with a number of these officials, directly and indirectly, I would guess that the Defense Department will simply recommend continuation of the present draft law.

I am aware that our military manpower policy has been criticized on the bases of unconstitutionality, inadequacy, waste, and expense. It should be. But about these grounds I am not especially informed, and can only grumble. I do know, however, of the draft law's effect on college students, and if they are considered to be an important segment of the society, then someone had better pay attention to their perspective. From that perspective, the status quo is absolutely unviable, the corruption of "universal" service is corrupting their sense of duty, uncertainty is making cynics of them, and their talents and training are deliberately turned from the service of their country.

It is not yet stylish to be unpatriotic, but the college student can't hold out forever.

Permanent Extension of Special School Milk Program

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. QUIE. Mr. Speaker, recently I introduced a bill to permanently extend a program which has great significance to the health of our schoolchildren—the special school milk program. I might add that this program also has a great bearing on the economic health of the dairy industry.

Congress has been appropriating the sum of $75 million a year for the maintenance of this program. Under the present utilization system in our schools, this appropriation is sufficient through fiscal 1959.

Beginning on July 1, 1959, however, there is need of an increased appropriation or the program will need to be curtailed.

The value of healthful milk to the diet of our schoolchildren can hardly be overestimated. This program insures that every American child, regardless of the financial status of his parents or guardians, will not need to be deprived of nature's most nearly perfect food.

I believe I speak for millions of schoolchildren and their parents when I say that this is one program of which Congress can be proud. Scarcely a year goes by when research does not uncover more evidence to bolster the contention of modern science that milk is a vital food for children and adults.

Milk furnishes the human body with 100 different nutrients—including a tremendous assortment of vitamins, minerals, fats, sugars, and high-quality proteins. It is a fact that milk is essential for three nutrients that many nutritionists advise in quantities larger than many people consume.

But it is for three inherent nutrients that milk is justly famous.

Milk provides mineral calcium which is needed throughout life for healthy bones.

Milk provides B-vitamin riboflavin which is essential for healthy skin and nerves which enables the body cells to use other nutrients carried to them by the blood.

And milk dispenses protein which is the main building-and-repair material of all tissues in the body.

Many people receive all too little of these three nutrients. It is of major importance that our children receive them, and the best way to insure this is to see that they drink plenty of milk.

This is why the special school milk program has a great stake in our country's future—because it deals with the bodily welfare of our Nation's youth. Every investment we make in the health of our schoolchildren will certainly result in a stronger America for the future.

Mr. Speaker, I urge favorable consideration of this legislation.

The Economics of Progress—Reform of Tax Rates and Methods

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. HERLONG. Mr. Speaker, on behalf of my friend and distinguished colleague on the Ways and Means Committee, the gentleman from Tennessee [HOWARD H. BAKER], and myself, I would like to call to the attention of the House companion bills, H.R. 3000 and H.R. 3001, which we introduced on Wednesday, January 21, 1959. These bills would reform Federal tax rates and methods to accord with the economics of progress. It is our conviction that this legislation should have priority over competing claims of all other Government policies and programs. We, therefore, urge its prompt consideration and enactment, and to this end solicit the interest and cooperation of our colleagues on the Ways and Means Committee, of all Members of the Congress, and of the executive branch.

The present Federal tax structure stunts economic growth since it both prohibits adequate capital accumulation and destroys capital once accumulated. We can no longer afford a Federal fiscal policy based only on short-term considerations, from fighting inflation in one year to fighting recession in another, while neglecting the root source of fiscal crises.

By removing tax blocks to progress, our bills would contribute more than any other possible Government action to our economic well-being and national security. In enabling the economy to grow much more rapidly and consistently than in recent years, these bills would:

Counter the challenge of Russian communism for world economic leadership;

Encourage other nations outside the Communist orbit to reorganize their tax systems to permit more rapid economic development out of their own capital;

Increase the supply and mobility of venture capital, thus insuring a rebirth of the American genius for the starting and development of businesses;

Provide new and better job opportunities;

Insure adequate revenues for military preparedness and all other necessary Federal expenditures;

Smother inflation with growth.

In introducing this legislative program, we call special attention to two matters. The first is that the revenue effect of comprehensive reform in tax rates and methods is so great that major goals can only be achieved by spreading out reductions over a number of years. The second is that any lesser program would still leave us far short of a sound tax system insofar as capital accumulation and economic progress are concerned.

We cannot correct the fundamental tax problem of our times by nibbles and bites.

Legislative proposals for thorough reform of the income tax rate structure over a period of years are not new. Such proposals were introduced in the 85th Congress—H.R. 6452, 9119, 9415, and 11461—and received overwhelming support from the witnesses who testified for broad tax reduction during the hearings held by the Ways and Means Committee just 1 year ago. These earlier bills were designed to deal only with the tax impact on accumulation of new capital out of current income. The new bills also would reduce the tax destruction and increase the mobility of capital accumulations, by deferring tax on gains of individuals from sales of long-term capital investments the proceeds of which are reinvested within the taxable year, and by reduction in the rates of tax on estates and gifts. The bills also would establish more realistic depreciation rules. Because of the revenue effect of these new provisions, especially those applying to depreciation, it has been necessary to set ultimate income tax rates under the legislation at 47 precent instead of 42 percent, as in the earlier bills.

CAPITAL AND PROGRESS

Mr. Speaker, the boldness of the challenge to free capitalism by the govern-

ment capitalism of Communist Russia was the story behind the news which launched us into the space era. Of all the steps to counter that challenge which may be taken in America, and in other free nations, none could approach in importance the reorganizing of tax structures in recognition of the inherent goodness of capital and its indispensable role in the preservation of freedom in the world.

Combined with man's energy, vision, and technological skill, capital is the source of all economic progress. Its beneficial effect starts with employment. The production of capital goods itself provides jobs. Then, these goods are used to increase the productivity of existing jobs and to create new production and new jobs.

Any tax method or rate which impedes the accumulation, use, or preservation of capital is a tax on human betterment and national strength. Our Federal tax structure must stand convicted of this fault.

By use of capital-destroying tax rates and methods we have prevented our economy from achieving anything like its potential for progress. This means we have fewer and less productive jobs than should be available. Our total production is far short of our national capability for progress and the standard of living of our people is correspondingly less than it should be. It also means that failure to effect fundamental reform of our tax structure quickly would put in jeopardy the industrial supremacy on which our national security depends.

The critical impact of destructive tax rates on the economic health and vitality of our economy has often been overlooked because of the persistent illusion that our economy has been continuously in the midst of a capital goods boom since the end of World War II. This illusion comes from looking at totals expressed in inflationary instead of constant dollars.

For a span of 60 years preceding the depression of the 1930's, our economy grew in the range of 4 percent a year. We achieved no net growth in the decade ending with 1939, and the using up of productive plant and equipment was much greater than replacement during the war years. Thus, at the end of World War II, we were faced with a deficiency in capital formation which had been building up for 15 years.

Despite this deficiency, total economic growth—measured in constant dollars of gross national product—averaged only 3.8 percent annually in the decade ending with 1957.

Moreover, there was a nearly 40-percent reduction in the rate of growth in the second 5 years of that period as compared with the first. Specifically, in the first 5 years ending with 1952, the growth rate averaged 4.6 percent, but in the second 5 years ending with 1957, the average slipped down to 2.9 percent. In 1958, we lost ground in the production of goods and services and much more in capital formation. While we are now in a period of recovery in production, there is a continued lag in capital formation out of which must come substantial future increases in production. In fact, even at present inadequate production levels, the evidence indicates that we are using up capital plant and facilities at a rate 20 percent or more higher than we are replacing them.

In contrast with our postwar experience, Soviet Russia has made spectacular strides in capital formation and total production in recent years. Published estimates indicate that total Russian production which, only a few years ago was less than 25 percent of ours, is now upwards of 35 percent and expanding at a rate in the order of 8 percent a year.

These growth rates were achieved before the recent announcement of Communist leader Khrushchev of a program of capital investment in the Soviet Union between now and 1965, which would equal their total investment in the 41 preceding years of the Communist revolution. One does not have to accept at face value Khrushchev's boast of burying us under an avalanche of production to recognize that the goal of Russian communism is fixed and unchanging. It is political domination of the world. Even if we had not been told so plainly, we would know that their aim is to accomplish such domination by using industrial strength to sabotage governments, to enter and destroy free markets, and eventually to control whole economies throughout the world.

Khrushchev stated that they would equal our production in 1970. Actually, the Russians would not have to increase their growth rate of 8 percent a year in order to equal our total production by 1980, if we grow on at an average rate of 3 percent. If our growth rate should further decline to an average of no more than 2 percent, with Russia's continuing at 8 percent, their total production would approximate ours by 1975.

There could be no excuse for our Nation settling for growth rates in the future of no more than 2 or 3 percent. The core of the problem is in capital creation. In the Soviet Union, capital creation has absolute priority over all other matters, in sharp contrast to the situation in America. It is past time that we gave top priority to removing the tax blocks to capital creation. Under a tax system which did not penalize the accumulation and ownership of capital, and which allowed full play to the natural incentives for capital use, there could be no doubt of our capabilities for much more rapid progress than in recent years. We should not be satisfied through the indefinite future with an average growth rate under 5 percent. Even at that rate, if the Russian economy should continue to grow at 8 percent annually, they would reach our total production before the end of the century. Actually, there is no reason why we should not set our sights on a growth goal of 6 percent or more. Despite the arbitrary methods by which capital is created in the Soviet Union, we need not fear the challenge of government capitalism if our free capitalism is released from punitive tax rates.

SPECIFICS OF REFORM OF TAX RATES AND METHODS AND UNDERLYING REASONS

Mr. Speaker, in regard to a tax system which grossly penalizes capital accumulation and restricts economic progress the words "tax reform" could reasonably and logically have only one meaning, namely, to relax its penalizing and restrictive effects. In preparing our bills we have necessarily limited the proposed reforms to one type of action, regarding five major tax areas, which we believe would be most beneficial to economic progress, job creation and betterment, and national security. There are many other proposals for tax revision which merit the description of "reform" because their effect would be to reduce tax restraints on economic growth. Those involving substantial revenue effect have not been included in our bills since this would be possible only by the exclusion of some or all of one or more of the reforms provided therein. We believe that proposals, essentially technical in nature, involving little revenue effect, should be handled in separate legislation.

In the following discussion we describe the reforms in tax rates and methods included in our bills, with explanation of underlying facts and reasons.

THE INDIVIDUAL INCOME TAX

Starting with January 1, 1959, there would be five annual coordinated reductions in all the graduated rates of individual tax, with the first bracket rate being reduced from 20 to 15 percent. With compression of the scale of graduation being the key to fundamental tax reform over the 5 years, the top individual rate would be brought down to 47 percent, from its present 91 percent. Specific examples of reductions in other statutory rates follow: $4,000 to $6,000 taxable income bracket, from 26 to 17 percent; $8,000 to $10,000 bracket, from 34 to 19 percent; $12,000 to $14,000 bracket, from 43 to 21 percent; $16,000 to $18,000 bracket, from 50 to 23 percent; and $20,000 to $22,000 bracket, from 56 to 25 percent. Appendix A shows the new rates for each year. Appendix B provides a means by which individual taxpayers can compute their tax liability at the end of the reduction period, as compared to present law.

The revenue effect of these reductions would be somewhat more than $2 billion annually, or upwards of $11 billion over the 5-year period, out of a total revenue effect for the legislation as a whole of about $17 billion. Nearly 60 percent of this $11 billion revenue effect—tax saving to the individual—would fall in the taxable income brackets up to $6,000, as shown in Appendix C; and 79 percent in the taxable brackets up to $18,000. Only 6 percent of the total would fall in the brackets above $50,000. Of course, the data for the lower brackets include tax savings on all income falling in such brackets, including that of taxpayers whose total income also places them in higher brackets. The table demonstrates the point, however, that there could be no further significant reductions in the lower brackets by foregoing part of the reductions in the middle and higher brackets.

The emphasis we place on compression of the graduated scale of individual tax rates reflects the fact that graduation is the worst saboteur of the economics of progress. While the most senseless and uneconomic rates are in the highest brackets, the steepest climb in graduation is through the middle and not the higher brackets. In fact, half of the total range of graduation—the 71 percentage points between the first rate of 20 percent and the top rate of 91 percent—is reached at the taxable income bracket beginning with $22,000, where the rate is 56 percent—basic rate of 20 percent, and graduated element of 36 percent.

The steeply graduated rates dull the incentives to earn higher income and to engage or invest in venturesome enterprises.

These rates drastically limit the accumulation of new capital in two ways. As income increases only a declining margin is available for saving. And, because of the impact on incentives, much less income is sought and realized in the middle through higher brackets than would be the case under moderate rates.

The high rates limit the investment potential even more than indicated by the immediate effect on capital accumulation. Savings of persons in the middle and higher income brackets are more likely to be invested in the risky or venturesome types of enterprise than are the savings of those with lower incomes. This likelihood would be greatly increased under moderate rates. Risk-taking investments always forerun opportunity for safer use of investment funds. Under sustained, higher level growth, which must be sparked and initially fueled by venture capital, there would be much greater accumulation and use of investment funds from all sources.

The limitation on total investment potential has its most severe effect as regards the starting of new businesses, and the expansion of small businesses once begun. Aside from the incentives to engage in business, or to make a business grow, the punitive tax rates make it impossible for the small business to secure venture capital from outside sources. The once prolific source of such capital, the successful person who was willing and able to invest in new enterprises, has been choked off by the punitive tax rates. When, under moderate tax rates, the successful are again able to accumulate substantial savings out of current income, we will find that they again will be interested in investing in such enterprises.

Moreover, even well-established businesses in the middle and larger size categories are often faced with an impossible problem of finding adequate new funds for expansion. All across the board, the steeply graduated rates of individual tax serve directly and indirectly to limit the accumulation of new capital funds so desperately needed to realize our Nation's potential for progress and security.

THE CORPORATION INCOME TAX, AND DEPRECIATION

Starting January 1, 1959, there would be 5 annual reductions of 1 percentage point each in the rates of corporate tax, and 5 annual reductions of 5 percent each in the maximum required length of property lives for depreciation on new plant and equipment as measured from an average of present experience.

The first 3 reductions in tax rates would apply to the normal corporate tax, bringing it down from 30 to 27 percent, and the last 2 reductions would apply to the surtax, bringing it down from 22 to 20 percent. The combined top rate would thus be reduced from 52 to 47 percent.

The revenue effect of the corporate rate reductions is estimated at $400 million annually, or a total of $2 billion over the 5 years.

The depreciation provisions, applied to new acquisitions of business plant and equipment, would supplant Treasury determination of property lives under Bulletin F by substituting six broad statutory classifications of depreciable property. In actual experience many taxpayers have used, with Revenue Service approval, shorter property lives than provided in Bulletin F, and the aim in the legislation is to measure the reduction in lives from average actual experience.

In practical effect, the new lives available for use in regard to property acquisitions in the fifth and succeeding years would permit an average increase of one-third in the rates of depreciation allowances. These increases would come on top of the liberal allowances in early years under the sum-of-the-year's digits and double declining balance methods, made available to taxpayers through the 1954 Revenue Code, and the extra first-year allowance granted to small business taxpayers in the legislation of 1958.

While the long-range effect of depreciation speed-ups is to defer and not eliminate tax liability, the short-to-medium-range effects are the same as that coming from any type of tax reform.

On the basis of rough data we have estimated the revenue effect of these depreciation changes at up to $600 million annually, or up to $3 billion over the 5-year period. It is estimated that approximately 75 percent of the tax savings would go to corporate taxpayers, and 25 percent to unincorporated business taxpayers.

Potentially, corporate profits are a major source of new venture capital. The potential derives from two factors: First, profits retained within a corporation increase the stockholder's equity and hence are venture capital; and, second, people who own stocks could normally be expected to invest a large part of dividend income in new equities.

In recent years the first factor has been negated in large part because of the overstatement of corporate profits due to inflation. This results because depreciation charges are stated in dollars of original investment, instead of in dollars reflecting replacement cost. The difference, which is subject to the tax on profits, has to be made up out of retained profits in order to maintain intact the present value of investment. Only the remaining profits are available for net new investment in plant and facilities. This problem is aggravated by the required spread-out of depreciation allowances over unrealistically long periods of time.

Under these conditions, it is understandable there would be advocacy of legislative action to compensate for the inflationary impact on profits by increasing depreciaton allowances to reflect replacement instead of orignal cost. Such a procedure, however, would run counter to the purpose of our legislation, which is to stop inflation, not compensate for it. There are other reasons why it would not be feasible to incorporate a replacement cost formula, namely: the revenue effect would be so large as to prevent any contemporary reduction in corporate rates, as well as some of the reduction in individual rates contemplated in our bills; the tax reduction dollars involved would go entirely to establish enterprises without improving the depreciation situation of enterprises still in the development and initial expansion phases; and it would leave unresolved and even aggravate the problem of excessive property lives.

On the other hand, reduction of property lives as provided in our legislation would contribute to forces for stopping inflation; can be accommodated by foregoing a reduction of only 5 percentage points in the corporate tax; would benefit enterprises in accordance with the rate of new investment regardless of preceding development; and would constitute a major step towards a permanent solution to the problem of excessive property lives which otherwise could become intolerable under the rapid advance of technology. Moreover, as additional tax reduction opportunities open up, this procedure may be readily expanded to accomplish a total reduction of say 50 percent in property lives which would mean a doubling of depreciation allowance rates. As a final point, when this procedure brings property lives down to realistic levels, there would be eliminated one of the areas of persistent conflict between taxpayers and the Revenue Service involving tremendous time and cost on the part of both.

As regards the second factor mentioned above, stockholder reinvestment of dividend income is now largely prevented by the steeply climbing rates of individual tax. This situation would be greatly improved under the moderate individual rate scale provided in our bills.

THE CAPITAL GAINS TAX

In accordance with the precedent already established on the sale and repurchase of homes, our bills make statutory provision for tax free transfer of capital by individuals, but not by corporations, from one investment to another when the transactions are completed within the taxable year, and the investments sold have been held by the taxpayer for at least 6 months. The result would be a deferral of tax on long-term gains until such time as the taxpayer disinvests. We have included this application of the roll-over principle in the legislation since the only possible justification for taxing at any time the proceeds from sale of a long-term investment is that the seller is disinvesting

with the intention of using capital gains as income for consumption purposes.

Recognizing that consideration of this kind of procedure for prospective effectuation could result in an inflationary buyer's market for securities and other producing properties, as present owners held back from selling in the expectation of tax deferral on later sales, we have set the effective date for this provision as of January 1, 1959. Data are not available from which the revenue effect of this provision can be systematically calculated, but it could not be too large because of the exclusion of corporate transactions and also some other types of transactions, such as sale of timber-cutting rights as distinguished from the property itself, now classed as capital gains. The total revenue effect might go as high as $1 billion, but conceivably could be as low as half a billion dollars.

Whatever the revenue effect, there would be a complete offsetting increase in the availability of new capital. A tax on a capital gain from investment is a tax on capital, and the existing supply of capital is diminished by the amount of the tax. Capital so destroyed must be replaced by new capital accumulated out of current income, before there is a net addition to capital supply for new investment.

In addition to decreasing the existing supply of capital, the fact of a tax on capital gains serves to reduce the mobility of capital, since it defeats the investor's judgment where the reasons for transferring capital from one investment to another do not outweigh the tax consideration. Capital immobilized in this way is described as locked-in. The result is particularly serious as regards new and small business since, other things being equal, it restricts movement of funds from ownership in well-established businesses to more venturesome enterprises involving the prospect of greater return. Thus, the capital gains tax serves to compound the prohibitive barrier of the graduated individual tax to the starting and development of business.

ESTATE AND GIFT TAXES

Instead of establishing a new formula for setting tax rates on estates and gifts, our bills would simply bring the top rate of estate tax down to 47 percent to coincide with the top rates of individual and corporate tax after 5 years, and consistent with the present relationship, reduce the top rate of gift tax to three-fourths of this figure, or 35.25 percent. All lower rates would be reduced in proportion. Thus, as set forth in appendix D, the estate tax rates would range by taxable brackets from 1.75 to 47 percent, compared with the present 3 to 77 percent, and the gift tax rates from 1.25 to 35.25 percent, compared with the present 2.25 to 57.75 percent.

These new rates would become effective on the day following enactment of the legislation. Because of the normal delay between the occurrence of death and payment of estate tax, the revenue effect of the legislation would not be significant in the first year. Thereafter, it is estimated the effect would be no more than $400 to $500 million annually.

Since a death or gift tax is a tax on capital these are but modest reductions in destructive rates. As with the capital gains tax, the net reduction of capital through estate and gift taxes can only be restored by withdrawals from new savings out of current income.

The high rates have been championed as a means for breaking up and redistributing the wealth represented in large estates. To the extent of the tax, however, capital is destroyed and not redistributed. Actually, the high rates have resulted in transfer of the bulk of many large estates to tax-exempt trusts and foundations. Instead of dispersing ownership, such transfers have created a new kind of concentration which, unlike individual ownership, is self-perpetuating.

In its competitive-free economy, operating under the protection of the antitrust laws, America does not face the social dangers of concentration of wealth which have plagued other less dynamic societies. The higher the rate of economic growth, the greater will be the diffusion of income and new wealth throughout the population.

Actually, exorbitant rates of estate and gift taxes are a major tax cause of the merger of family and other closely held businesses with larger concerns. They complete the blow initially dealt the formation and development of new businesses by the graduated income tax.

FISCAL ASPECTS OF LEGISLATION

Mr. Speaker, it is our opinion that reform of the tax rate structure is of such urgent, overriding necessity in the national interest that it must not be further delayed for any reason. We further believe there could be no question but that, with enactment of this legislation, economic growth over the next 5 years would be adequate to offset the revenue effect of the legislation with a comfortable margin left over. It is roughly calculated that each 1 percent annual increase in the rate of economic growth, as measured by gross national product, will produce a billion dollars in additional Federal revenues. It is also estimated that the revenue effect of our bills would average out at less than $3.5 billion annually, or the equivalent of revenue increase which would come from roughly a 3.5-percent rate of economic growth. Thus, if with enactment of this legislation economic growth should average 5 percent annually over the next 5 years, there would be an average annual surplus of revenue increase of at least $1.5 billion over the requirements for effectuating the reforms provided.

Nevertheless, we recognize that the case for enactment must stand up against two natural questions.

The first would involve the danger that Government spending would increase so as to encumber the revenue gain from economic growth, whether or not induced by tax rate reform. The second question would involve the matter of timing, namely, whether any legislation should be enacted effectuating tax rate reductions in advance of our achievement of budget balance with a surplus in sight.

SPENDING VERSUS TAX RATE REFORM

In regard to the first question, the fundamental purpose of forward scheduling of income tax rate reductions, and depreciation rate changes, is to permit business planning, including the starting and development of business, in the knowledge of a more favorable tax climate in succeeding years.

In addition, forward scheduling would set up competition against encumbering revenue increase with new spending commitments, thus greatly increasing the likelihood that specific tax rate reductions will be possible within the framework of budget balance. Moreover, as with the earlier bills, we have provided a safeguard in the form of postponement procedures to guard against a renewal wave of deficit spending.

Taking the President's 1960 budget estimate as the benchmark, the legislation provides that income tax rate reductions may be postponed after those to be effecuated as of January 1, 1959. Postponement would be made in the event of determination as of November 15 in any year that spending for the fiscal year is running in excess of $77 billion, and a state of budget unbalance is threatened.

In view of the clear case in the national interest for giving absolute priority to tax rate reform, we offer these postponement procedures with somereluctance but in the hope that they will continuously induce, on behalf of the executive branch and the Congress, the utmost discipline and prudence in regard to spending.

The legislation places the responsibility for initiating postponement in the hands of the President. Balance has been struck as between the Congress and the executive in the final exercise of postponement authority.

While the postponement procedures may be applied separately as between corporate and individual tax rate reductions, every postponement of an individual tax rate cut must be accompanied by a postponement of a corporate tax cut. The only limitation on this linkage is where the result would be to postpone a corporate reduction for more than 1 year.

The bill further provides that each scheduled reduction in either the individual or corporate tax may be postponed for only 1 year with the schedule of subsequent reductions also being moved ahead 1 year. Thus, if spending should not be kept under control, it would be possible to space out the income-tax cuts over a maximum period of 9 years without new enabling legislation.

INFLATION VERSUS TAX RATE REFORM

The second question, that of enacting tax rate reductions in advance of budget balance, stems from the belief that such action would be inflationary.

Putting the first income tax rate reductions, and depreciation changes, into effect on January 1, 1959, would have minimal revenue effect in fiscal year 1959, but perhaps $4 billion revenue effect in fiscal year 1960. In addition, expansion of the rollover principle in the capital-gains tax would have an effect on revenues in fiscal year 1960 of perhaps some-

where between $500 million and a billion dollars. It would appear superficially that these tax actions would unbalance the 1960 budget, on the basis of the President's estimates, by an amount over $4 billion, but such a result is problematical.

In the first place, the President's revenue estimates for fiscal 1960 have been made on the basis of recovery trends which have not extended to business investment in plant and equipment and which leave with us a nagging problem of unemployment. It is possible that expansion in the use of current production facilities will carry overall economic activity to a point of producing up to $77 billion in revenue, but such a level of production would not be long sustained in the absence of sharp revival in capital formation.

In the second place, even with the lag in rate of investment in plant and equipment, our economy under present tax rates is pressed to find savings out of current income adequate to meet current demand. It seems probable that any sharp set-up in the rate of business investment would be short-lived because of the inadequate rate of new capital accumulations.

Since we cannot continue to tolerate an inadequate rate of new investment, as this would in reasonable time prove self-defeating even insofar as Federal revunes and deficits are concerned, we come to the conclusion that a good beginning on tax rate reform is the first step to insure a positive closing of the deficit gap and then keeping it closed.

We cannot fight inflation by keeping the tax brakes on economic growth.

This conclusion may be further buttressed by two different propositions. The first starts with the fact that we would not now be running a deficit except for the lag in economic growth. Specifically, if in spite of existing tax rates we had been able to achieve economic growth at the historic average of 4 percent, instead of the actual average of 3 percent, in the 5 years ending with fiscal 1957, the revenue total in that year would have been some $5 billion higher or $76 billion instead of $71 billion. If such a trend had continued through 1958, revenues would have reached $80 billion, which would have meant a budget surplus of $8 billion in that year. If continued through fiscal 1959, the revenue total would be some $84 billion or $3 billion more than enough to balance the budget. Of course, if growth had been achieved and maintained through the present at a 4 percent rate, the budget would not now include expenditures which have been recession inspired, and the surplus would be greater than $3 billion.

The second proposition requires understanding of the forces for continuous or repetitive inflation. The deficit spending of World War II greatly boosted the money supply and was the principal force for inflation for several years thereafter. Contrary to general impression, however, total budget operations in fiscal years after World War II ended have not been a net contributor to inflation. Combining all Federal accounts, the Government actually collected from the people approximately $19 billion more than it paid out to them, in fiscal years 1947 through 1958. Even when the estimated cash deficit of over $13 billion for fiscal year 1959 is added in, a cumulative cash surplus from 1947 on of nearly $6 billion is shown.

This analysis is not intended to divert attention from the seriousness of budget deficits, nor of the obligation of the executive branch and the Congress to exercise the utmost restraint in budgetmaking and spending. It does, however, make us look elsewhere to identify the instigating forces for inflation in recent years.

Inflation in recent years has reflected the constant tendency of wages as a whole to increase faster than national productivity, thus forcing a constant increase in labor costs per unit of output. The current recession, and hance the current deficit, came when the inflation produced by increasing unit-labor costs overran money supply.

However, the increases in unit labor costs would have been less if increases in national productivity had been greater. It may be that the contemporary trend in wage increases would be too great under any circumstances, but we know that the American appetite for an increasing standard of living creates pressures for a steady increase in wage and salary rates.

Thus, while there is and will remain need for the utmost restraint by unions and management in determining general wage increases, to concentrate on this point without attention to the cause of inadequate growth in production and productivity would not solve the problem of inflation, or the recurring problem of recession, deficits, and then more inflation.

A great underlying force for inflation in our time is the continuing capital shortage, resulting in inadequate growth in production and productivity, and caused by punitive tax rates and methods.

For many years past, Federal fiscal policy has been based on short-term considerations from fighting inflation in one year to fighting recession in another, thus causing neglect of the problem of a revenue system dependent upon economically destructive tax rates. In retrospect we know this has been a self-defeating approach, resulting in repeated recurrence of fiscal crises stemming from retarded economic growth. Looking ahead, we can be certain that continuation of emphasis on short-range aspects of fiscal policy would be the most short-sighted of national policies.

If we will move now to enact comprehensive tax-rate reform, there is good reason to believe that the short-term revenue effect would be largely compensated for by a sharp upward trend in capital formation, and hence additional revenues, before the end of fiscal 1960. There could hardly be reasonable doubt that in succeeding years there would be full compensation, and in the long run we would be rid of the plague of recurring fiscal crises.

We must smother the forces for inflation with growth.

APPENDIX A.—*Individual tax rates*

Taxable income bracket [1] (thousands)	Present rates	Jan. 1, 1959	Jan. 1, 1960	Jan. 1, 1961	Jan. 1, 1962	Jan. 1, 1963

The Talmadge Farm Plan

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, February 2, 1959

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three editorials entitled "TALMADGE Offers a Farm Plan," from the January 22, 1959, issue of the Waycross (Ga.) Journal-Herald; "Talmadge Bill Planned To End Farm Problem," from the January 21, 1959, issue of the Pasadena (Calif.) Independent; and "Our Perspective of Talmadge Bill Was Wrong," from the January 28, 1959, issue of the Kinston (N.C.) Daily Free Press.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

TALMADGE OFFERS A FARM PLAN

Senator HERMAN TALMADGE has introduced a bill which he believes will help to put the Nation's hard-pressed farmers on the right road.

His plan is simple. It would abolish all present production controls and price supports and give each farmer a domestic marketing quota for major crops.

Farmers would get direct Government payments for sales within these quotas. The payments would be enough to cover the difference between market prices and 100 percent of parity.

As we understand it, the payments would not cover everything farmers sell—just the volume of crops included in the domestic consumption quota. His bill further provides that no individual farmer could get payments of more than $25,000 a year.

TALMADGE has estimated that the program he proposes would cost between $1½ and $2½ billion a year which is far less than present price support programs.

The Georgia Senator, one of the best informed men in Washington on farm problems, concedes that his bill is not the complete solution to the Nation's vexatious farm problems.

But he points out that the present farm program has failed and that a fresh start is needed and that perhaps his plan can be used as the basis for drafting a brand new national farm program.

Certainly his bill deserves serious consideration. Both the farmers and the taxpayers are due a better deal.

TALMADGE BILL PLANNED TO END FARM PROBLEM

The price support program was written to protect the farmer when the price of his crop dropped so low that he couldn't maintain a reasonable standard of living. It was meant to keep small farms alive, to avoid the wholesale exodus of the depression years by farmers to the Far West and the big cities.

The program has not only failed to halt the abandoning of small farms, but has cost the American taxpayers sums undreamed of when the original support program was written. This fiscal year the tab will be nearly $7 billion.

Instances where big wheat farmers receive upward of $100,000 a year apiece for crops the government can't use are a national disgrace. Various schemes to limit crops have proved an irritating, expensive failure.

Clearly, a new concept in Government farm welfare is necessary. The farm program must be brought back to its original

purposes if the Nation hopes to keep the national budget in line and to halt the fantastic buildup of food stockpiles, much of which is rotting in the bins.

Senator HERMAN TALMADGE, of Georgia, has suggested a bold new law which will give the farmers the protection they have been denied for the past 6 years without placing an intolerable burden upon the taxpayers.

The bill TALMADGE introduced would abolish present Federal farm programs and substitute direct Government payments for part of a farmer's output. All Government planting controls and price supports would be thrown out.

In their place, farmers would get quotas covering Government payments, but they would be allowed to grow as much as they wanted. Payments would be based on the difference between 100-percent parity and open market price. The system is similar to wool payments, which have been in effect for years.

For instance, a wheat farmer might be given a quota of 1,000 bushels. He plants 1,500 bushels and sells them for $2 a bushel on the open market. Established parity price is $3 a bushel. The Government pays the farmer $1,000, which is $1 a bushel (the difference between parity and market prices) times his quota of 1,000 bushels.

No farmer would be allowed to collect more than $25,000 a year.

TALMADGE estimates the cost of his plan at between $1.5 and $2.5 billion a year, considerably less than the present $7 billion.

The program may have serious flaws in it. We won't support it until we hear further argument about it. It may be less sensible than other direct-payment plans such as limited Government purchase of each crop.

However, the Talmadge bill is bold and it is designed both to save taxpayers money and to keep the little farmer in business without too much redtape, fuss, or feathers. We couldn't ask much more of any measure.

OUR PERSPECTIVE OF TALMADGE BILL WAS WRONG

In our issue of January 17 an editorial appeared under the title: "Who Pays Such Bills?" It referred to proposed legislation of Senator HERMAN TALMADGE, of Georgia, to abolish the present Federal farm programs and substitute direct Government payments to farmers for part of their output.

Since the article appeared Senator TALMADGE has been kind enough to send us a full copy of his speech on presentation of his bill, Senate bill S. 3963 which he introduced first in June 1958 and later the early part of this month. We find the bill is actually very much more practical and reasonable than we concluded with insufficient information of its actual contents and provisions.

In his address to the Senate when he introduced the bill Senator TALMADGE called attention to the fact that despite substantially increased Government payments the net farm income had shown a decrease in the 5 years between 1952 and 1957 of $3.6 billion.

Senator TALMADGE also points out that "farm production expenses increased from $22.6 to $23.5 billion yearly and it is estimated that the final total for 1958 will reach an alltime high of $24.5 billion or more. The spread between farm and retail prices has widened by $75 for each $1,000 spent for farm produce and the farmer's share of the market-basket dollar has dropped from 47 to 39 cents."

The Senator points out that "it is not strange that the Department of Commerce reported between 1950 and 1957 that 2,349,000 persons migrated from the farms of the Nation to compete for increasingly scarce jobs in urban areas."

The Senator suggests, and wisely, we believe, that the situation has "reached the point where it is essential for the future welfare of not only the farmer but also the taxpaying consumer that an entirely new approach to the solution of the Nation's farm problems be found." He emphasizes a number of pertinent points, including the desire of the farmer to return to a free-enterprise economy and a desire for a stabilized farm program. Experience of the past, he points out, is conclusive proof that those ends cannot be achieved through existing concepts.

The Senator says the only way to remedy the situation is to discard completely the present patchwork of discredited farm laws and start all over again.

He thinks that such a renewed program must have three fundamental objectives:

"1. To let the farmer farm;

"2. To guarantee the farmer his proportionate share of the national purchasing power; and

"3. To place American agricultural commodities back on the world market at competitive prices."

Senator TALMADGE goes further and says that he is convinced that desirable ends cannot be achieved "until the Federal Government is removed from the business of buying, storing, and selling agricultural commodities; until the responsibility for marketing the produce of our farms is returned to the farmer and private enterprise, where it belongs; until the farmer is free to plant and sell where he pleases; until the role of the Federal Government in agriculture is limited to paying the farmer the difference between the prices he receives for commodities sold for domestic consumption and 100 percent of parity."

The Free Press is glad to clarify its former comment.

This paper endorses 100 percent the contention that the farmer has been handicapped by the rules and regulations denying him the privilege of individual initiative in pursuit of his calling.

An Adequate Military Shield for U.S. Foreign Policy

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 2, 1959

Mr. HUMPHREY. Mr. President, the National Planning Association is a private research organization which has made a number of valuable studies of both domestic and international policy issues. Among current projects are those on security through arms control, the economics of competitive coexistence, and case studies of U.S. business performance abroad. Studies on the technical assistance program in Latin America have recently been completed.

The distinguished members of the National Planning Association committee on international policy represent agriculture, business, labor, and the professions. The recent statement by the committee on "An Adequate Military Shield for U.S. Foreign Policy" has received widespread attention.

I am pleased to invite the attention of my colleagues to the statement, which I feel is a thorough, objective, cogent analysis of one of the most critical problems facing the Congress and the Nation today.

Mr. President, I ask unanimous consent that the text of the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NPA INTERNATIONAL COMMITTEE STATEMENT ON AN ADEQUATE MILITARY SHIELD FOR U.S. FOREIGN POLICY

Last spring, the committee on international policy of the National Planning Association issued a statement on "A Positive Foreign Policy for the United States" which outlined the diplomatic, economic, and psychological measures required to reassert American leadership toward a better and more secure system of world order. While progress has been disheartenigly slow in improving the positive content of U.S. foreign policy, a more alarming deficiency now appears to threaten the military shield without which, under existing conditions, all of America's international efforts will be placed in dire jeopardy.

There is the very real possibility that, if present trends continue, the Soviet bloc will within a few years have a decisive military advantage over the United States and its allies. This frightening possibility arises not only from the intensified military development efforts of the Soviet Union but also from serious limitations and lags in U.S. defense concepts and programs. Past Communist behavior demonstrates that, in the absence of adequate military strength, it would be even more difficult—if not impossible—successfully to pursue the positive and constructive goals of U.S. foreign policy. Hence, this statement of the NRA international committee is focused on the necessity to achieve and maintain adequate military strength as one essential precondition for making U.S. foreign policy more effective.

Unless we are vastly mistaken, there is a profound and widespread uneasiness throughout the country about the way America's international affairs have been drifting in the global struggle in which the United States is engaged. In spite of many reassuring statements, the feeling persists that the position of the non-Soviet world, and notably of the United States, has been materially weakened by the inadequacy of its response to the ever-growing challenge of the Communist bloc. The longer this process is allowed to continue, the greater will be the national peril. The launching of the first sputnik came as a distinct shock both to the Government and to the public, and resulted in an intensification of U.S. military defense efforts. Unfortunately, this intensification seems to have petered out, and a new complacency appears to have settled on Washington. Once again, the defense of the budget seems to be mistaken for the defense of the Nation.

Before the Soviet Union's latest challenge to the freedom of West Berlin, it had been announced that the Armed Forces were to be cut again and that new appropriations for military defense were to be rigidly held within the limits set last year, although owing to rising costs this expenditure would provide even less in manpower and material. True, the latest Berlin crisis has produced some upward revisions of these figures. But, nothing yet suggests that there is any serious intention to make the major revisions required if the military strength of the United States is not to be dangerously deficient by the early 1960's.

There seems still to be little recognition of the fact that, desirable as a balanced or approximately balanced budget is in normal times, to seek it above all else in the circumstances of today may prove the prelude to disaster. For this is no peacetime budget with which the American people are presently concerned. It is a budget to insure the successful conduct of U.S. foreign policy

under the conditions of the cold war. And, although this would be far less burdensome than the budgetary exactions of a shooting war, it is a profound mistake to think that expenditures can prudently be held in the straitjacket which peacetime fiscal measures soundly conceived would properly impose.

The argument is often heard that the United States cannot afford even the present inadequate level of defense expenditures and that, if it is long continued, the American economy will collapse, thereby enabling the Soviets to triumph without war. Hence, it is concluded, the best defense against the Communist threat of world domination is a reduced and balanced U.S. budget. It is high time that the American people realized the dangerous fallacies inherent in this argument. As studies of the National Planning Association and other institutions have repeatedly shown, the United States could afford substantially higher budgetary expenditures if national economic policies were adopted which would enable the American economy to achieve more of its truly enormous growth potential. With an adequate rate of economic growth, the U.S. economy could afford a larger budget not only for increased military defense expenditures but also for the greater social capital investments necessary to sustain economic growth. With little less than national survival at stake, it would be a critical mistake to make a fetish of arbitrary budgetary limitations.

But the argument against adequate military expenditures contains another fallacy, even more dangerous. For, it must by now be obvious to every open-minded American that the successful conduct of U.S. foreign policy at a time when all the cherished values of western civilization are challenged as never before depends upon the adequacy of American military preparedness. If, through lack of foresight, the United States permits a further unfavorable shift in the balance of world power, it would inevitably encourage the intransigence of the Communist adversary; it would play into Soviet hands throughout the vast uncommitted areas of the world; and it would leave the closest friends and allies of the United States wondering whether this country had taken the full measure of the mortal danger to which the free nations are exposed—whether Americans are going to assume in time the burdens of sacrifice necessary to fend that peril off.

Mindful of all this, we feel that U.S. diplomacy and constructive economic measures will in a divided world be greater handicapped unless they have the full support of the will to prevail which only determined leadership backed by military strength can arouse. With considerable daring and at great risk, the Secretary of State has countered in recent years more than one move of the Sino-Soviet bloc. If, as we believe, appropriations contemplated for the military are inadequate, we can see the time approaching when a shift in power relationships will make the taking of such risks little more than a desperate gamble. This is a position which the United States must strive at all costs to avoid.

A formidable, resourceful, and unscrupulous antagonist has for the time being gained the advantage of the initiative. Probing ceaselessly for soft spots, the Sino-Soviet bloc keeps the United States constantly on the defensive. While it is true that neither the Soviet Union nor its Red Chinese ally has in the past year and a half gained the avowed allegiance of any nation previously outside the Sino-Soviet bloc, their influence in many areas seems in the ascendant, and the pressure they continue to exert is unrelenting.

The members of this committee are inclined to the belief that the Sino-Soviet bloc has at present as little desire as the United States to precipitate a general war. But quite apart from the fact that the Soviets recognize as does the West the utter devastation that such a conflict would involve, they are motivated by the belief that the world balance of power is moving inexorably against the United States and its allies. On this account, they look forward to a prolonged period of what they euphemistically call peaceful coexistence, during which they propose to consolidate their control over the vast areas now under their dominion, enormously increase their industrial and agricultural productivity, and gradually from an ever more secure base make further advances throughout the non-Soviet world by means of adroit diplomacy, by the skillful use of their growing economic potential, and by ideological penetration and subversion.

This presents for them an alluring prospect. The long-term objectives of the Soviet Union have in no sense changed nor has their view on the international outlook. Only recently in the "World Marxist Review: Problems of Peace and Socialism," published in 15 languages, the following occurs:

"No matter how bourgeois ideologists and their revisionist henchmen may try to embellish imperialism, the economic and political instability of the capitalst system grows more and more obvious. State monopoly capitalism, which evokes such raptures among the apologists of imperialism, only intensifies the anarchy of production, the hardships of the working people, the oppression and arbitrary rule of capitalism—as recent events in the economic and political life of the capitalist countries are once more showing. The inevitable result of the growing sharpening of the contradictions of imperialism will be to hasten its downfall. The present balance of forces on the world arena is more and more changing in favor of the peoples who are building socialism and fighting against the colonialists, in favor of the peoples who are defending the cause of peace, democracy, and national independence."

The strategy of the Soviet Union and its Red Chinese partner remains unaltered. The grand design is to draw into their orbit gradually ever more of the world's population. To this end, there will be a continuing effort to capitalize on that anticolonialism which is so easily kindled into resentment toward the West not only in the lands which still maintain a colonial status, but even in those nations which have recently emerged from it. Meanwhile, the Soviet Union and its Red Chinese partner will confront the free world with a succession of crises, hoping in this manner to undermine the smooth function of our system and eventually to bring about its inevitable collapse. When and if this program has met with its anticipated success, and the shift in world power in favor of the Soviet Union has become so pronounced that in their view the only alternatives open to the free nations will be surrender or annihilation, then the moment will have arrived when the Soviet Union will be prepared to implement the threat of thermonuclear war.

If in broad lines this proves to be the policy which the Soviet Union will continue to follow, it would at least have the advantage of affording the United States time to marshall more effectively than it has in the past all of those great elements of strength, spiritual and material, residing in nations and peoples deeply opposed to the realization of Soviet ambitions. We reject the view of world communism that its victory is inevitable. It is well to remember that the Soviet Union faces immense difficulties of its own. The Hungarian revolt evidenced dramatically the enormous vitality of the desire for national independence and for personal liberty. Ten years of the most intensive propaganda did not convince the Hungarian people that they were living under anything but a foreign despotism. And it is far too early to assume that in China the historic traditions of an ancient people will finally be extinguished by the latest moves of its Communist rulers. We continue to believe that, given time, the human spirit will emerge victorious over the forces bent on its enslavement.

But it would be folly not to recognize that the United States may be afforded far less time than is now optimistically anticipated. The unstable balance of terror which characterizes a bipolar world dooms the free peoples to a prolonged period of anxious uncertainty. Until more rational conduct can be brought to prevail once again in human affairs, the world will be constantly exposed to the danger that the holocaust of thermonuclear war may be set off either by accident or by design. For this danger, the United States is at present insufficiently prepared. The notion of a devastating surprise attack on a potential enemy is repugnant to the deepest instincts of the free nations. On this account, while realizing that the Soviet Union shares no such inhibition, the United States has placed its main reliance on deterrence. There was a time, not so long ago, when this reliance was justified by then eixsting military strength. The capability of the Strategic Air Command to inflict untold punishment upon an aggressor was so great that it was likely to remain unchallenged. The assumption was that no matter what the nature of an attack, the strategic air arm would still be able to perform its allotted task.

But the dismal fact is that unless the United States takes many measures not contemplated in its present military program, the moment is approaching when this assumption will have lost its validity. According to much expert testimony, if steps are not promptly taken vastly to strengthen American retaliatory capability, the Soviet Union in the not distant future will be in a position, by the use of intercontinental and intermediate-range ballistic missiles armed with thermonuclear warheads, to inflict so strong a blow on SAC bases in the United States and in Europe that retaliation by the United States would be held within limits acceptable to the Soviet Union. Just because such an eventuality as this is not inevitable, it is worth underscoring the fact that it remains within the realm of the possible.

It is in no sense ordained that the United States has to accept the possibility of such a development. The recent successful flight of an Atlas missile over its full range gives earnest of what U.S. military capabilities could be if adequate resources and efforts were devoted to their early realization. But, neither the present state of preparedness nor that contemplated for a few years hence under present programming will suffice. There are measures, at least in the planning stage, which, if promptly implemented, would materially increase the U.S. retaliatory capabilities likely to survive a surprise attack. Undertaken with courage and determination, they would greatly reduce the danger, although it would be idle to pretend that they can any longer remove it.

The measures proposed cover a wide spectrum and in their totality would undoubtedly be costly. On this account, they should be subjected to the most critical screening. But, certainly no doctrinaire attachment to fiscal orthodoxy should be permitted to stand in the way of the more promising choices. As the Committee on International Policy of the National Planning Association has stated on other occasions, where little less than national survival is at stake, budgetary considerations should yield to military necessities.

Until this view, with the sacrifices it may involve, has been accepted, the U.S. Government will remain hopelessly handicapped

in the conduct of its foreign policy. Once this view is accepted, however, new avenues will be opened for the development of a positive and constructive foreign policy. For far too long, the United States has allowed the impression to gain currency that in spite of its avowed dedication to the cause of peace with freedom and justice, it has not been willing to assume the burdens that the nature of world problems and of the Soviet challenge demanded. As a result, in spite of vaunted American strength, the United States has come to be looked upon more and more as an erratic and undependable associate.

This has done immense harm not only among our Western allies, but among the countless millions who would like to be friends of the United States. The damage is real, but it is not irreparable. Notice to the world that the United States was in the process of adopting policies and programs based upon a more realistic appraisal both of the peril to which Western civilization is exposed and of the problems of developing a better world order would have a heartening effect throughout the non-Soviet world. There has been little doubt about the broad purposes and objectives of American policy. The question that has created such concern is whether the United States has the wisdom and the determination actually to do whatever may be required to achieve those purposes and objectives.

It is the plea of the Committee on International Policy of the National Planning Association that this question now be answered by word and deed with a categoric affirmative. In the even, we would foresee an immediate and perceptible turn in the tide of world opinion. Confidence in the will and in the capacity of the United States successfully to meet the challenge of the times would be reawakened. It would be clear for all to see that while circumstances had obliged the United States to increase its efforts in the field of the military, it was embarking on this course as the surest way to avoid for all mankind the ultimate catastrophe of atomic warfare. Adequate military strength would provide the necessary shield behind which it would be possible to recapture the initiative in the cause of peace with freedom and justice. Then, by skillful diplomacy, the propaganda of truth, and constructive economic measure, the United States could again appeal effectively to the longing of men and women everywhere to escape from the vicious circle of competitive thermonuclear insanity, and to join in the great adventure of building that better world order which modern technology and science have brought within our grasp.

It would be too much to expect an early and favorable response from the Soviet Union. Yet the hope seems warranted that in the not too distant future the time would be ripe for a new approach designed to resolve many differences. For, in the light of the new American orientation, it will become increasingly clear that Soviet ambitions could not be realized at an acceptable cost. Deprived of the bright prospect which the leaders in the Kremlin see stretching before them today, it is just possible that they might be brought to cooperate with the free nations in the establishment of a tranquil world order from which the horror of thermonuclear war, if not of war itself, had been removed.

This statement has been formulated and is published in the continuing belief that the whole country and much of the free world as well are still prepared to follow imaginative, courageous, and great-hearted leadership from Washington.

Washington and Small Business

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the current "Washington and Small Business" column sponsored by the National Federation of Independent Business.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON AND SMALL BUSINESS

(By C. Wilson Harder)

A warning has been issued to small businessmen by the Federal Trade Commission against a loan racket.

The operation of this new hoax came some time ago to the attention of the field offices of the Small Business Administration and were reported in detail to George Burger, Washington vice president of the National Federation of Independent Business, when he recently made a field trip to visit all the SBA offices.

In operation, the scheme is somewhat as follows: Sharp operators ascertain in a given community which small businessmen are seeking a loan for operating capital, for expansion, or for some other purpose. For the hoax player's purposes, it is better if the businessman has so far been unsuccessful in securing a loan.

The gyp artist then makes it a point to inspect the business premises in such a way he is asked the purpose of his visit.

He then reveals that he is an inspector for a group of philanthropic organizations with ample money to loan and whose philosophy is that small business must be helped, and he is sure that a loan could be arranged for the business, usually naming a figure of about twice what the businessman is seeking.

Of course, there is a long and plausible explanation that a contract must be signed, and that this calls for a modest fee in advance in order to compete the formalities of getting the loan.

Usually, too late, and after nothing has happened on securing a loan, the victimized businessman finds that the contract he signed, states in very fine print, that the "con" man, in exchange for the advance fee in cash, has only agreed to recommend to legitimate lending agencies that the businessman is a fine fellow, has a nice business, and should get a loan.

Obviously nothing but a racket.

Small businessmen are advised to shy away from any stranger who wants any advance fees for securing a loan.

As a matter of fact, it is recommended that small businessmen seeking a loan first try their bank. If they cannot secure the aid needed from this course, they are advised to contact the nearest field office of the Small Business Administration.

This agency of the Federal Government will try to work out any possible solution for the individual problem, either by making a direct loan with Government funds, or sharing a loan with a private lending agency.

As a matter of fact, the SBA welcomes inquiries from small business firms on financing problems and is prepared to exhaustively study each case in an attempt to work out a solution.

In fact, in many cases, these studies have been so complete, that they have revealed valid reasons for a loan that had previously been overlooked by a bank loan officer with the result the private bank has gone ahead and made the loan.

But the official warning is, "Don't pay anybody an advance fee to get a business loan."

Review by Senator Fulbright of Walter Lippmann's Book "The Communist World and Ours"

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. JACKSON. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD a review by Senator J. WILLIAM FULBRIGHT of Walter Lippmann's book, "The Communist World and Ours."

The review, which appeared in the Washington Post of February 1, 1959, provides an excellent introduction to Mr. Lippmann's able and suggestive analysis.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

AS MR. K. SAID TO LIPPMANN

("The Communist World and Ours," by Walter Lippmann; reviewed by J. WILLIAM FULBRIGHT, chairman of the Senate Foreign Relations Committee)

No man has contributed more to the thoughtful considerations of the American scene than has Walter Lippmann during his long and distinguished career. He has a genius for extracting the essential threads of meaning from complex and confusing circumstances. In domestic affairs, his analysis often clarifies the abstruse and puzzling questions which arise from our complicated system of government.

This latest book in the field of foreign affairs from Mr. Lippmann's pen does not offer a cure for all the ills which afflict our relations with the U.S.S.R., but it does make some sensible suggestions regarding those relations. International affairs may not yield quite so readily as do domestic affairs to logical analysis, but understanding of statecraft and a feeling for the traditions of organized societies have produced in this instance, an interesting, a useful, and a provocative volume.

This work is divided into two parts, the first being the interview with Khrushchev and the second the author's own views and policy suggestions.

Mr. Lippmann's report of the interview is objective and matter of fact, but he conveys an interesting and lively impression of a powerful and ominous man. Khrushchev, he says, was quite relaxed and had none of the symptoms of a busy and preoccupied man.

In the anteroom to his office there were no guards, no people waiting, no secretaries carrying papers, no newspapermen, and there was none of the hustle and bustle which usually prevails in the outer rooms of busy and important officials. Under such conditions a man can think, and a man who directs a powerful nation with the ability and the opportunity to think can be a formidable and troublesome antagonist.

Khrushchev believes, says, Mr. Lippmann, that American policy rests on an obsolete estimate of the existing balance of military power, because our forward bases in Germany and Turkey cannot be defended against Russia's rockets. However, communism, according to Khrushchev, is not a danger as a military policy, but as an ideology * * *. We—the Communists—will cause you, the Americans, more trouble each year.

Under the new 7-year plan, the Communists expect to surpass the United States in per capita production. The United States, says the master of the Kremlin, is living the last years of its greatness.

One of Khrushchev's principal complaints against the United States was that we are contributing to the remilitarization of Germany. He warned that such a policy could well result in Germany being destroyed or more probably joining the U.S.S.R. in order to avoid destruction by nuclear missiles.

Perhaps the most significant revelations of the interview were Khrushchev's concern about German affairs and his confidence in the power and effectiveness of his missiles of intermediate range.

The cause of our bad relations with Russia, Mr. Lippmann says, is the suspicion each side holds that the other side intends to commit aggression. This suspicion arises from the belief that in the long run neither side can tolerate the other.

In spite of all the propaganda to the contrary, we do not inhabit one world, says Mr. Lippmann. But looking at the history of the globe, the truth, as I see it, is that there has never been one world, that there has never been a universal state or a universal religion.

So, he concludes, we should not approach this conflict as if it were a religious war in which the contending positions are absolute. Such a policy leaves no room for maneuver, for diplomacy, for statesmanship, or in short no hope for any solution except total war.

Mr. Lippmann is not without hope, that is, if we keep our powder dry and keep plenty of it, as he advises us to do. But we must find a way to provide adequate armaments without working ourselves up into a frenzy of threats and fear and without insisting that all the smaller nations of the world line up on one side or the other.

The main threat of the Communist states lies not in their clandestine activity but in the force of their example. Their example of material achievements has especial appeal to the underdeveloped peoples of Asia and Africa, an appeal not easy for us to meet. He suggests that the only convincing answer to this challenge is for the West to help India match the achievements of China without sacrificing her free society.

In Europe, the critical area of the movement, we should strive to bring about the withdrawal of the Red Army gradually and with prudent safeguards. I think, says Mr. Lippmann, that we are missing the bus as long as we fail to identify ourselves with the idea of bringing to an end, however gradually, the military occupation of the European Continent.

Such sentiments only a short time ago aroused a storm of protest. They may again, but the less we plunge ourselves into hysterics, the more likely we are to take good care of our affairs, wisely concludes the author of this succinct and penetrating book.

Frank Park Samford: Man of the South for 1958

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, February 2, 1959

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of remarks of Hon. Thomas W. Martin, chairman of the Alabama Power Co., upon the presentation of the Man of the South for 1958 award to Hon. Frank P. Samford of Birmingham, Ala., at a dinner given by friends of Mr. Samford at the Mountain Brook Country Club of Birmingham on January 20, 1959. The Man of the South awards are presented annually by Dixie Business magazine of Decatur, Ga., and its publisher, Col. Hubert F. Lee.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FRANK PARK SAMFORD: MAN OF THE SOUTH FOR 1958

(Remarks of Thomas W. Martin, Man of the South for 1946, at the dinner given by friends of Mr. Samford, Mountain Brook Country Club, Birmingham, Ala., January 20, 1959)

Mr. Toastmaster, Mr. Lee, Mr. Samford, members of his family, gentlemen, it is with a feeling of pride that I come before this important group to say something about the Man of the South for 1958.

At the outset, I want to express my cordial thanks to the toastmaster, Mr. Frank E. Spain, and to Col. Hubert F. Lee of Atlanta, editor of Dixie Business, for the honor and privilege of making this presentation.

The initiative for originating the plan by which flowers for the living are handed to them while they are still able to enjoy them came entirely from Colonel Lee. It has been carried forward by him for many years.

Obviously, time, effort, and dollars are involved in gathering the nominations, arranging the balloting, and supervising the awards. With Colonel Lee, it has been a labor of love. He has had no reward other than the consciousness that he has done something that makes life more stimulating and more interesting for those who live in the South.

When he began, he indicated that he would carry on his interesting work principally as a hobby, rather than as moneymaking enterprise. We owe much to him as a citizen of the South for giving of his time and means. Of course we like the name of his magazine, Dixie Business, which he founded in 1929 and of which he is the editor and owner. He thus shows himself to be a true southern gentleman with a feeling for tradition and a sense of the past.

It has been my fortune to be familiar with Hubert's work for a good many years. With one notable exception, men have been selected who in the opinion of others were worthy of the distinction of being the Man of the South. In looking over the records of these men, it is obvious that it was not the day-to-day business of the individual that brought him to public acclaim, but rather the things he did in religious, cultural, or other activities wholly outside his enterprise.

And, with respect to one of those selected, Colonel Lee said of him that he had a goodly heritage; but that that heritage did not consist of silver and gold, but rather in character and devotion to ideals. Thus we have an interpretation of the principles that have guided Colonel Lee.

Mr. Samford attended State Normal School in Troy, Ala.; high school in Montgomery. He received his bachelor-of-science degree from Alabama Polytechnic Institute in Auburn. He is a member of Alpha Tau Omega fraternity and Omicron Delta Kappa honorary fraternity. He was awarded an honorary doctor of laws degree by Howard College of Birmingham. Mr. Samford has been a member of the Southside Baptist Church in Birmingham for many years, is a deacon of the church, and has served as the chairman of the board of deacons from time to time.

Soon after graduation he entered the life insurance business with the Manhattan Life Insurance Co. of New York. When the Insurance Department of Alabama was created, he was the first deputy insurance commissioner, serving for 4 years. He was elected secretary-treasurer of the present Liberty National Life Insurance Co. in 1921, vice president in 1932, and president in 1934.

Mr. Samford is a director of a number of important enterprises, including Southern Bell T. & T. Co.; West Point Manufacturing Co.; Brown-Service Manufacturing Co. (Birmingham); Service Insurance Co. of Alabama (Birmingham); Malone Freight Lines (Birmingham); Birmingham Trust National Bank; Continental Gin Co.; Dixie Mills, Inc. (Ga.); Columbus Manufacturing Co. (Ga.); Equinox Mill (S.C.); Wellington Sears Co. (N.Y.); Cabin Crafts, Inc. (Ga.).

Outstanding is his work for education. He is a trustee of Alabama Polytechnic Institute, is president of the board of trustees of Howard College (Birmingham), and is a trustee of Southern Research Institute (Birmingham). I speak with some feeling and personal satisfaction for his support of the activities of the Southern Research Institute.

It was said over a hundred years ago by a great writer that:

"Kings, warriors, and statesmen have hitherto monopolized not only the pages of history, but also those of biography. I do not begrudge destructive heroes their fame, but the constructive ones ought not to be forgotten."

The growth of Liberty National Life Insurance into the 45th largest in the Nation constitutes a tribute, not only to Frank Samford and his associates, but to the enduring principles of every private enterprise, without which no progress is possible. Indeed, he and his company are truly constructive forces in our society of today.

Mr. Samford's counsel and support have been sought in innumerable worthy causes. His response has always been generous, wholehearted, and effective. His words, his deeds, and his attitude have marked him as a man of vision, wisdom, tolerance, and humanity. The social consciousness of American businessmen is one of the distinguishing marks of the American form of capitalism, a quality too little honored. Possessed of these qualities, we acclaim him as one of the most useful citizens of our time.

The reality cannot be escaped that Frank Samford has found that the good life is good for him who lives it, as it is good for those whom it serves. Such realities provide an illustration of what counts most in the mysterious adventure of human existence. It is clear anew that the major satisfactions come from concern and labor for others. They who give themselves to such concern find that they have come upon the source of the most precious values men know in living.

For example, Frank Samford recently caused to be erected on his office building in Birmingham a replica one-fifth the size of the Statue of Liberty at New York Harbor. That statue, as you know, was presented in 1886 by the French people to the people of the United States; and we who live in Birmingham look with pride upon this patriotic act of Mr. Samford's. The replica of this great statue will not only adorn his office building, but it will symbolize the spirit of a city—Birmingham.

In every field, art, science, industry, or religion—we have a legacy reaching back many centuries—to the man who first drew a picture on a cave wall; made the first wheel; fashioned the first instrument of metal; or raised his eyes in worship to the stars. The progress of civilization has been uneven, but every generation can add something, be it little or much, to this heritage of the past.

Let us remember that these great human advances have not been brought about by mediocre men and women. They were brought about by distinctly uncommon people, with vital sparks of leadership, such as Frank Samford.

And so with great pleasure I present to you, Frank Park Samford, the plaque which tells you of your selection as the Man of the South for 1958.

The Establishment of National Goals

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. PROXMIRE. Mr. President, reliable newspaper reports indicate that within the administration itself, that is, on the President's staff, there is fear that President Eisenhower may be moving too far in the direction of giving this country leadership. Sound fantastic?

Recently the New York Herald Tribune reported that the President's recent passing reference in his state of the Union speech to the establishment of national goals for this Nation shook up some members of his staff. They expressed fear that the recognition of where this country ought to be going, like in building schoolrooms, paying teachers, building homes, might lead to a public demand that the Government ought to do something to help us get there.

Mr. President, the Milwaukee Journal carried an excellent editorial recently that nailed this negative nervous Nellie fear for what it is. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OF COURSE, WE NEED GOALS

President Eisenhower's plan to create a study group to establish national goals got a lot of favorable support. But not, according to the New York Herald Tribune, from his own White House staff.

The staff didn't like the word "goals." And, the newspaper says, if the staff gets its way, the committee will confine its work to studying such areas as education, housing, natural resources, technology. And it will then suggest ways of advancing in each of these fields. But it won't set goals. Why not? Well, the Herald Tribune quotes a White House staff member to this effect:

"Suppose the committee said there ought to be 100,000 new schoolrooms or 1 million new homes a year and then they weren't built. Why everybody in the land would be demanding that the Federal Government step in and see to it that they get built."

This is something like asking your garage repairman to find out what's wrong with your car—but not to tell you in precise terms lest you decide to get it fixed. We don't need a study to tell us that the country can use more and better houses or that education could be improved. We know those things. What we need to know is the extent of the need and how to meet it.

Expect Best, Maybe Castro Will Deliver

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. YOUNG of Ohio. Mr. President, having read in the Indianapolis Star an excellent editorial by Holmes Alexander entitled "Expect Best, Maybe Castro Will Deliver," and noting that a reference is made therein to my distinguished colleague the senior Senator from Oregon [Mr. MORSE], I ask unanimous consent that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Indianapolis Star, Jan. 24, 1959]

EXPECT BEST, MAYBE CASTRO WILL DELIVER

(By Holmes Alexander)

WASHINGTON.—They still have a one-party system in Cuba—dictators. Batista made himself president. Fidel Castro appointed a stooge who in turn named Castro his military chief. Neither way is any way to run a republic.

If Cuba were as far away as Laos, the choice of dictators would be an academic, harmless game in the United States. But with Cuba only 90 miles off our coast and an economic dependent of American business, we had better stop playing games and start looking up remedies for offshore revolutions.

In the game of choose-your-dictator, some members of our press have regrettably followed their party line instead of the facts. One metropolitan paper around New Year's reached back to pre-Christian classical days to find an analogy of the bearded young hero riding to the liberation of his worshipful people. But let us draw the curtain of charity across these embarrassing extravagances. With Castro in and Batista out, the joint interest of both Cuba and the United States is to rescue Castro from the revolving door through which so many Latin dictators have come and gone. We should use him as a safe conduct to a constitutional government in Cuba.

STATESMANSHIP SPOTTY

American statesmanship has been spotty but with patches of excellence. We owe a lot to Senator WAYNE MORSE, of Oregon. He was the first of the liberal fraternity to point out that blood was flowing in Cuba and that this was more than a matter of whose ox was gored. MORSE deserves credit for arousing both public opinion and the State Department against the slaughter which temporarily has abated. All in all, the forbearance of the American Government has been worthy of our position as a major power and a mature country. True, Latin ways are not our ways, but until we have a perfect system at home we had better favor self-improvement over self-righteouness.

It's also a good idea, and fairly widely observed in the press and in Congress, to resist the temptation to shout Communist at every foreign event which goes against our interest. But it would be naive to forget Russia's fondness for fishing in troubled waters. Under the Batista regime, Russia agreed to buy some Cuban sugar. As a result Soviet merchant ships, chock-a-block with electronic reconnaissance equipment, have been cruising off our shores. We could be more indignant about this if American traders had not recently been so cordial to Soviet Deputy Premier Mikoyan.

But neither will it do to write off Fidel Castro and his ubiquitous brothers as agrarian reformers and innocent progressives. For instance, Time Magazine, July 8, 1957, carried a digest of a Fidel Castro speech, published at his own expense, in which he promised the following program should he become dictator of Cuba:

1. Nationalization of U.S.-owned power and telephone companies.
2. Confiscation of all wealth gained by corruption.
3. A drastic land reform.
4. Profit-sharing for labor.
5. Expansion of industrialization, public housing, rural electrification.

Our Foreign Cultural and Information Programs

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from La Gazetta Del Massachusetts of January 16, 1959. I think that this editorial identifies one of the ways in which our foreign cultural and information programs could have greater impact. The editor of La Gazetta Del Massachusetts, Mr. Caesar Donnaruma, has been one of the most effective editors in foreign language journalism in America, and his newspaper has always been one of the most constructive voices in Massachusetts.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IS THIS SOUND THINKING?

One of the most effective ways of offsetting the propaganda employed by Communists in their false diatribes about capitalistic America is through the use of American newspapers which are circulated in European countries where communism is a problem.

This is particularly true in the case of newspapers printed in foreign languages. People in countries where Communists abound are able to read. They are also

liable to believe what they read. Their opinions of the democratic way of life in America are more susceptible to the knowledge they absorb from American newspapers than to the claims of Communists that are disproved in these newspapers.

Many thousands of American newspapers are mailed every week to European countries. The Gazzetta is proud of a very large group of subscribers in almost every province in Italy. They spend money to subscribe to this newspaper. They are so dedicated to reading articles that appeal to them that when their papers are not delivered they are quick to protest.

To make it more difficult for these subscribers to American foreign language newspapers, the Post Office Department with the approval of President Eisenhower and the Congress has increased the postal rates on newspapers sent to Italy and other countries by 1 cent.

A cent is of no importance but to be forced to pay such an additional charge every week in the year is of far reaching importance. The money involved would not halt the wheels of the Post Office Department if it should be lost.

Money is not the issue. The real issue is that perhaps unwittingly, Senators and Congressmen and even Mr. Eisenhower himself, have never considered the importance of the American foreign language press in contributing to the defeat of communism in countries into which the United States is continuing to pour billions of dollars of the American taxpayers. It seems that there is too little thought given to one of the best sources of propaganda that the United States possesses. Perhaps the men in Washington are too concerned about big problems to even think of the far more productive little problems. They should wake up.

William T. Evjue Wins High Honor From Government of Norway

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. PROXMIRE. Mr. President, in his lifetime of dedicated public service as a crusading liberal newspaper editor, Mr. William T. Evjue, editor and publisher of the Capital Times, of Madison, Wis., has been widely honored. Last week, he was awarded another high honor of which I am sure he is especially proud.

King Olav V of Norway has conferred on Mr. Evjue the Knight's Cross, First Class, of the Royal Order of St. Olav. This is the highest honor which the Norwegian Government awards to civilians of this country. It is a rare and coveted honor.

Mr. Evjue has always been proud of his Norwegian descent, and those who know him agree that his nationality may, indeed, be given a share of credit for the qualities of tenacious courage and dedication to public interest which have won him recognition as one of the Nation's leading liberal crusading editors.

Mr. President, in recognition of the high honor Mr. Evjue has earned, I ask unanimous consent that an article from the Capital Times of Tuesday, January 27, 1959, and an editorial from the Wisconsin State Journal of Madison, Wis., be printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Madison (Wis.) Capital Times, Jan. 27, 1959]

KING CONFERS HIGH HONOR—NORSE MAKE EVJUE KNIGHT OF ST. OLAV

William T. Evjue, editor and publisher of the Capital Times, was informed today that King Olav V of Norway has conferred upon him the Knight's Cross, First Class, of the Royal Order of St. Olav, the highest Norwegian honor awarded to civilians in the United States.

In a letter to Mr. Evjue, Helge Akre, consul general of Norway in Chicago, invited Mr. Evjue to come to Chicago to receive the decoration and to lunch with the consul general.

The honor includes the St. Olav medal and a certificate signed by King Olav V.

Consul Akre pointed out today that the Knight's Cross, First Class, of the Royal Order of St. Olav, is very seldom given to citizens of the United States. He said that he recalled only four or five similar presentations during the time he has been consul in this country.

Upon the death of a recipient, the medal must be returned to the King of Norway, who retains ownership, Consul Akre explained.

He stated that this highly merited award is made to those civilians for services on behalf of Norway in this country, and services furthering the ideals, heritage, and culture of that land.

Consul Akre compared the Knight's Cross, First Class, of the Royal Order of St. Olav, to the Legion of Honor of France.

The Order of St. Olav was founded in 1847 by King Oskar I as a general order of merit, both military and civilian. It is given in reward for services rendered to king and country or to art and science.

The order is named after Olav Haraldsson, King Olav II of Norway, national hero and patron saint, who was canonized as St. Olav in 1164.

Olav, who was born about 955, fought with the Danes in England and was a member of the Jomsborg Vikings. After years of sea roving led him to Normandy, Spain, and the Holy Land, he returned to Norway in 1016 and defeated Earl Sweyn, the virtual ruler of Norway. Olav established peaceable relations with Sweden and Denmark and soon achieved a greater measure of power than any of his predecessors. He spread Christianity throughout the kingdom and reorganized the Government of Norway.

HONOR TO WILLIAM T. EVJUE

[From the Wisconsin State Journal]

The Wisconsin State Journal takes pleasure in adding its congratulations to the many directed to William T. Evjue today.

King Olav, of Norway, has conferred the Knight's Cross First Class, of the Royal Order of St. Olav, highest Norwegian honor awarded civilians in the United States, upon the editor and publisher of the Capital Times.

Mr. Evjue richly merits the distinction for his services on behalf of Norway in this country, which the award recognizes.

The ideals, heritage, and culture of Norway always have found a place of endearment in his newspaper, and his personal columns of reminiscences of early-day Norwegians and their communities in Wisconsin, and his accounts of his travels and visits among them have brought delight to many of his readers.

And his faithful reporting of church dinners in the lutefisk season has made him practically the official guide to good feasting and fellowship for all nationality groups who have him to thank for an introduction to the old country delicacy.

The St. Olav Knighthood is rarely given to citizens of this country. It is all the more significant, then, that Mr. Evjue is the third distinguished citizen of Madison to win it in recent times.

The late Albert G. Schmedeman, four times mayor of Madison and later Governor of Wisconsin, was similarly decorated by the late King Haakon while he was U.S. Minister to Norway from 1913 to 1921.

And the same King bestowed the honor on Prof. Einar I. Haugen, chairman of the department of Scandinavian languages at the University of Wisconsin.

Another pleasant point is that the man who has honored Mr. Evjue himself was honored here when, in 1939, the then crown prince received an honorary degree from the University of Wisconsin and a commission as honorary colonel in the 105th Cavalry, Wisconsin National Guard, from Gov. Julius Heil.

Labor Reform Legislation

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials from the Washington Post and Times Herald dealing with the subject of labor reform legislation, one of January 25, 1959, and a second one of January 29, 1959. I also ask unanimous consent to have printed in the Appendix of the RECORD, an editorial from the New York Times of January 30, 1959, as well as a column by Arthur Krock published in the Times that day on the subject of labor reform.

It seems to me that the pressing need in the field of labor legislation is for internal reform and democratization of unions. While I recognize that some amendments to the Taft-Hartley Act are necessary and useful, it appears possible that the Congress may again concentrate its energies on arguing the merits of Taft-Hartley amendments and delay essential labor reform legislation.

There being no objection, the editorials and article were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, Jan. 25, 1959]

QUESTION OF PACKAGING

Senator KENNEDY has shown good judgment in introducing his revised labor reform bill early in the session and in moving promptly for committee action. In general it is a good bill. Whether or not it would "virtually put Mr. Hoffa and his associates out of business," as Senator KENNEDY claims it would certainly put more squeeze on the racketeers in the ranks of organized labor than they feel today. The chief question about Mr. KENNEDY's bill is not whether it looks in the right direction but whether it goes far enough—or, to look at the matter from a different angle, too far.

In general, the bill would strike at corruption within unions by requiring detailed disclosure of their financial operations and of any transactions by their officers which might involve a conflict of interest. It seeks

to give workers control over their unions by requiring secret-ballot election of officers or of delegates to the conventions, at which officers are chosen. Numerous specific safeguards to prevent undemocratic procedures would be written into the law, and the Secretary of Labor would be authorized to institute court action to upset improper elections and to substitute therefor honest elections supervised by his Department. Various safeguards would also be set up to prevent the use of trusteeships for exploitation of local unions and concentration of power.

Mr. KENNEDY has tried to draw a distinction between his reform bill and the larger task of overhauling the Taft-Hartley Act—a task which he promises to undertake later in the session, with the aid of a committee of experts. There is much to be said for this two-package approach. All the efforts of the last decade to achieve a comprehensive overhaul of Taft-Hartley have gone down to failure, carrying urgent reforms with them, although it must be remembered that the relatively mild Kennedy-Ives bill died in the House last year but this was partly because it was regarded as not strong enough.

In any event, Mr. KENNEDY has blurred the logic of his argument by including in his bill several Taft-Hartley changes that would normally go into the second bill. These are provisions to eliminate the no-man's land in the jurisdiction of the National Labor Relations Board; to ease the bargaining problems in the construction industry; and to give replaced strikers the right to vote in representation elections. If these amendments are to remain in the bill, Secretary Mitchell will have a strong case for including also his proposed reforms dealing with blackmail picketing and abuse of the secondary boycott. The indications are that Senator MCCLELLAN will also introduce a bill including some of the stiffer reforms that Senator KENNEDY wishes to avoid.

Undoubtedly the two-package approach is more likely to result in prompt action. But when all the sweetening is added to the first package the incentive to load it also with the stiffer reforms becomes irresistible. We think Senator CASE of New Jersey is right in suggesting that the Taft-Hartley amendment be shifted to a second bill.

[From the Washington Post and Times Herald, Jan. 29, 1959]

ONE TO ONE ON LABOR REFORM

President Eisenhower sought to contrast his complete and effective labor reform proposals with a piecemeal program (doubtless the Kennedy bill), but actually there is a striking similarity between the two. Eleven of the twenty points in the President's message to Congress yesterday are very similar to provisions of the Kennedy bill. Several other provisions of the rival programs are in partial agreement. It should not be difficult for the labor committees to write satisfactory legislation on the basis of these recommendations.

The areas of greatest agreement are on the reporting of labor union finances and procedures, the regulation of trusteeships, the requirement of secret-ballot elections, and the correction of several defects in the Taft-Hartley Act. Both programs would also eliminate the no-man's land in the regulation of collective bargaining. But the President would authorize the States to intervene in cases where the effect on interstate commerce is slight and the NLRB does not function. Senator KENNEDY would direct the NLRB to assert its full jurisdiction, except that it might relinquish local cases to State agencies operating under laws similar to the NLRB.

The major differences between the two proposals lie in their treatment of picketing and secondary boycotts. The Kennedy bill would outlaw shakedown picketing—the use of pickets to extort payoffs from employers. The President would strike at all varieties of blackmail picketing with the general objective of preventing unions from coercing employers beyond the scope of legal and legitimate collective bargaining. This is a favorite weapon of the Teamsters Union. It has been widely used in support of racketeering, and we think the President is right in saying that provisions against it belong in the antiracketeering bill.

It is also clear that the Taft-Hartley Act provisions on secondary boycotts need to be overhauled. The existing experimental provisions leave unions free to coerce and destroy employers who are not engaged in any labor dispute. There is danger, however, that if Congress brings this controversial item into the antiracketeering bill the whole measure may again go into the discard instead of onto the legislative books. The first consideration should be the enactment of an effective reform bill, and this means it must be acceptable to a majority in both Houses as well as to the President.

The next step might well be an attempt to agree on what should go into the initial reform bill and what should be left for later discussion. The administration could give up its demand for a single bill in return for assurance by the congressional leaders that a second labor bill devoted chiefly to changes in the Taft-Hartley Act would be brought to a vote on the floors of both the Senate and House.

Certainly both sides will have to yield in some measure if the national demand for reform legislation in this sphere is to be met. One item that the administration ought to abandon in any event is the meaningless and mischevious gesture of extending the non-Communist oath required of union leaders to employers as well. On his part Senator KENNEDY could greatly enhance the attractiveness of his two-package approach by confining the first "package" to the most urgent anti-racketeering reforms and leaving to the second "package" the sweetening (Taft-Hartley changes sought by organized labor) which properly belongs with a more detailed overhaul of the existing law.

LABOR UNION REFORM BILLS

[From the New York Times, Jan. 30, 1959]

The overwhelming demand of the public, supported by the AFL–CIO that dictation and corruption by union officials be outlawed in this country may now be thwarted again by partisan politics and irrelevant issues. Two competing measures are now before Congress, where there should be only one—and a bipartisan one at that. They are the Kennedy bill, cosponsored by 11 other Democratic Senators, and the bill introduced by Republican Senator GOLDWATER, based on the President's labor message to Congress.

But a striking feature of these bills is their wide agreement on ways to democratize and purify unions. Both require full reporting and disclosure, policed by the Secretary of Labor, on such matters as organization and governing procedures, financial operations and transactions that involve a conflict of interest. Both require the administration of union funds soley in the interests of the members, backed by punitive sanctions. Both call for a secret ballot, free of coercion, in periodic elections of officers; freedom to run for office, with a ban on the use of union funds to support any candidate, and minimum standards for trusteeships of local bodies. Incidentally, why not require a majority vote of all members involved to validate a strike?

Bipartisan support for a measure along these lines should not be too difficult to mobilize. The main trouble is that the two bills differ widely—both as to what is in them and what is left out—in such matters as picketing, secondary boycotts and the jurisdiction and operation of the National Labor Relations Board, which call for amendments to the Taft-Hartley law. And not only are the differences between the bills extremely hard to reconcile, but the problems they deal with are controversial in themselves—which intensifies the differences.

But, after all, these are matters that primarily involve the power and external relations of labor unions, not how they manage their own affairs. Doesn't this mean that amendments to the Taft-Hartley law should be made through a separate and carefully considered, overall measure? They seem like excess baggage which might well be temporarily jettisoned now for the sake of reaching the main and immediate objective: greater democracy, honesty and efficiency within American labor unions.

[From the New York Times, Jan. 30, 1959]

IN THE NATION—PROSPECT OF COMPREHENSIVE LABOR BILL

(By Arthur Krock)

WASHINGTON, January 29.—Democratic Senators KENNEDY, of Massachusetts, and ERVIN, of North Carolina, have offered to Members of Congress an easier solution than the administration's of a political problem very common at the Capitol. This problem is, how to respond to the public need and the promptings of conscience for some legislative curbs on union labor at this session without incurring the resentment of labor leaders who can express it effectively at the polls.

The Kennedy-Ervin bill strikes at many, though not all, of the roots of union corruption, with legislative correctives which cannot be either safely or soundly opposed by labor leaders. The administration measure does this also, perhaps a little deeper. But it includes curbs on flagrant misuses of organized labor's special political power, such as the secondary boycott, that have been widely employed to nullify the Bill of Rights.

THE OPPOSING CONCEPTS

These are omitted in the Kennedy-Ervin bill on this representation: (1) The paramount necessity of American society is to penalize the appalling union corruption which has been revealed by the McClellan committee of the Senate; (2) amendments to the Taft-Hartley Act, which the administration measure proposes with respect to secondary boycotts, should, as a matter of parliamentary strategy, be dealt with in a separate bill because they are controversial; (3) if these are combined with the anti-corruption curbs, opposition will be invoked that may result in no labor legislation at all at this session.

The opposing concept of the administration bill is this: (1) Corrective labor legislation is very difficult to attain anyhow, particularly in a Congress composed of many members who attribute their elections to union support; (2) if two separate legislative packages are submitted, No. 2, because it wil ideal with industrial controversies, including the secondary boycott, will have far less chance of passage than if combined with No. 1, which is generally endorsed by labor, management, and the public.

WEAKNESSES IN KENNEDY BILL

Senator KENNEDY's position has several weaknesses. Although he would separately legislate Taft-Hartley amendments, his bill includes a few. These are all favored by organized labor, and may fairly be classified as "sweetening" of the anticorruption dose on the evidence of a statement by a labor witness before the subcommittee yesterday. He said that, if these amendments are stripped from the Kennedy-Ervin bill, his group would certainly reconsider its support of the remainder. The third weakness is implicit in the much milder correctives

of blackmail picketing in his measure as contrasted with those proposed by the administration. Finally, the long stalemate in Congress on basic labor correctives makes an unpromising prospect for a separate and deferred measure on which powerful union leaders could and would concentrate their attack.

If this opposition prevailed at the current session, only the most naive could expect it to be overcome at the next, which will occur in the presidential election year.

SHORTCOMINGS NOT EXCLUSIVE

The weaknesses in the administration's draft are also patent. The fundamental source of the excessive power of union labor in the economy is its special group immunity from the antitrust laws. A basic source of its political power are the devices with which unions circumvent the Federal law that forbids them to use their funds as political contributions. The administration bill ventures no correction of either.

There is, of course, a practical consideration which supports the Kennedy-Ervin approach. This is that any progress toward curbs of the excessive power of the unions is worth making; that the Kennedy-Ervin measure provides this, will surely be approved, but may fail if amending it as the administration proposes leaves organized labor with the choice between all or none.

This consideration appeals to many Members of Congress who cannot be fairly accused of timidity or tagged as pawns of the unions. And naturally it appeals to others: Those for whom it is politically safe to vote for the Kennedy-Ervin bill but not for the administration supplements; and those who, welcoming progress in the field of industrial relations, sincerely oppose the curbs in the administration's draft.

Need for Labor Legislation

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a recent column by Mr. Victor Riesel. This column gives a convincing demonstration of the need for action this year by the Congress on a bill such as the Senator from North Carolina [Mr. ERVIN] and I have introduced.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

INSIDE LABOR

(By Victor Riesel)

WASHINGTON.—Miami's sunny real estate has not seen its last tycoon. A fellow by the name of Jim Hoffa has just put $4 million into the refurbishing of the Everglades, a residential hotel on the mainland. It is some distance from the Gold Coast's motel row where the Teamsters already have put $1,250,000 into a sandlot drive-in palace called the Castaways. All this is atop some $4 million in a west coast housing project and some $12 million in million dollar deposits in as many Midwest banks.

So when Senator JOHN KENNEDY says he has a law to put Hoffa out of business—it's a pretty big business, for there are other millions I've not listed here and tens of millions more in welfare funds still available. Some experts put these funds at a billion dollars for Hoffa's dollar diplomacy.

But Senator KENNEDY's proposals are big enough to contain even Hoffa.

This antiracketeering bill will get more kicking around than an English soccer ball. But if it survives as the minimum law we, the people, get this year, this is how KENNEDY believes the public can win this final conflict:

There are nine main assaults on racketeering. KENNEDY's most dramatic proposal calls for the summary dismissal of all exconvicts from their union posts. This means that any union leader anywhere with a long police sheet which has a conviction for arson, larceny, extortion, narcotics pushing, mayhem, or any other major crime must be dropped from his post the moment the Kennedy bill becomes law. If the ex-convict stays in office, the Justice Department can automatically move in, demand his ejection and bring criminal proceedings against the union leaders. The union itself can also be fined heavily.

No union official ever will be able to draw dues money for yachts, homes or major items like convention hotel bills without everybody getting a real X-ray look at his personal accounts. Kennedy's bill calls for full public disclosure of all salaries, expenses and other disbursements of every single official and employee who receives more than $7,000 annually from a union. This will include virtually every paid national and local labor leader.

In the past, the looting crowd has been able to cover up by passing bylaws enabling leaders to hide or destroy union books each year. If the Kennedy bill passes, it will be a Federal offense, punishable by a 5-year jail term and heavy fine, to steal, deface or destroy union records.

Believe it or not, embezzlement of union funds is not a Federal offense. Under this bill, it will be illegal to steal union funds. That's progress. Imagine having to fight to pass such a law in the Congress of the United States.

Under the bill, the rank and file can go into a State or Federal court and sue the till thieves for recovery of union money even if the union itself does not act to recover the stolen funds. This means that a rank-and-file committee can ask the court to turn boats, cars, country homes, furniture, and even clothing back to the union if officials simply paid for the comforts out of "expense" accounts or just lifted union dues.

There are other powers for the rank and file. If they believe there's been a crooked election, the bill gives them the right to ask the Secretary of Labor of the United States to investigate. He would have subpena powers. He could seize all records affecting the election (any records for that matter). He would then have the right to set the election aside—whether a local or an international union was involved.

The proposed law would give him the power to call new elections. He could see to it that no intricate union statute kept any member from voting or running for office so long as his dues were paid on any day of the month, not just on the first of each month as is called for in the Teamster bylaws.

There are six specific rules against any union official, who earns more than $5,000 a year, buying into companies which deal with his labor outfit, thus causing a conflict of interest. There are proposals against union loans to officials of more than $1,500; proposals against employer loans to union men, and proposals against the use of picket lines for extortion.

If we, the people, get all this written into law this year, some of our heartaches will have been worthwhile.

The West Puts Its Brand on Congress

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. MURRAY. Mr. President, as all of us know, the distinguished junior Senator from Oregon [Mr. NEUBERGER] is one of this Nation's most capable writers, as well as one of the most able and conscientious Members of the Senate.

Further proof of the Senator's perceptiveness as a writer appeared yesterday in the New York Times magazine, which published Senator NEUBERGER's article entitled, "The West Puts Its Brand on Congress."

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD Senator NEUBERGER's article, from the February 1 issue of the New York Times magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WEST PUTS ITS BRAND ON CONGRESS—SOMETHING NEW HAS BEEN ADDED TO POLITICS: THE PRESTIGE AND POWER OF THE FAST-GROWING WEST.

(By RICHARD L. NEUBERGER)

After he had sent Lewis and Clark on that first westward trek across our land, Thomas Jefferson visioned a vast commercial empire in the realm the great explorers had discovered. Their reports to him told of virtually limitless riches in pelts, timber, fisheries, deep harbors, minerals, and valleys ripe for homesteading. And so Jefferson foresaw for the American West a mighty role in the burgeoning nation. Yet it is doubtful that even our buoyant third President, with his dreams of Western expansion and success, could have imagined the influence and prestige that the West holds in the nascent 86th Congress—and will hold perhaps in the sessions of Congress for many years to come.

Two factors have combined to make the West far more prominent and influential on Capitol Hill than ever before. One is a national migration that has moved steadily and inexorably toward the sunset rim of the continent during the past 2 decades. The other is a renewal, after a hiatus of almost half a century, of the historic process of adding States to the Union.

But what is the West? After all, a place as rooted in the East as the University of Michigan has an alma-mater song that refers to its athletes as the champions of the West. By comparison, Capt. Meriwether Lewis, on his journey of high destiny, felt he had reached the real West when he glimpsed peaks nearly 3 miles high notching the distant horizon. The West has been defined more explicitly by one of its foremost chroniclers, the late Bernard DeVoto, as "the huge and fateful area extending from the eastern ramparts of the Rocky Mountains to the shores of the Pacific Ocean."

Today this area consists of twelve immense States—Montana, Wyoming, Colorado, New Mexico, Arizona, Utah, Idaho, Nevada, California, Oregon, Washington, and Alaska—covering nearly half the land mass of the Nation. It includes teeming metropolis and lonely upland in its span from ocean strand to glacial summit.

Alaska, of course, is the latest addition—the first new State since Arizona was admitted in 1912. Inevitably the next new

State, and probably soon, will be Hawaii. Its admission to the Union will change the geographic definition of the West, but it will assuredly be considered part of the West, especially since its shares many of the social dilemmas and climatic and crop conditions of its principal contact on the mainland, California.

The political growth of the new West can be seen at its sharpest in the House of Representatives. Between 1940 and 1950, the West gained eight seats in the House because of population increases. People are traveling westward to operate aircraft plants, to staff military bases, and to produce and test the original atomic weapons. According to the latest estimates from the Bureau of Census, the West will qualify for an additional nine Representatives when the next congressional reapportionment occurs in 1960. Most of these will accrue to California, which in recent years has passed Illinois, Ohio, and even Pennsylvania in population, and by 1965 is expected to challenge New York's supremacy as the most populous State in the Union.

As for the Senate, the West now occupies 24 out of the 98 seats. When Hawaii becomes a State, western membership will increase to 26 out of 100. This will mean, for example, that western Senators will outnumber those of the Solid South by eight.

What will the new West do with its aggregate of political power? Will it act as a bloc? Is there, for example, a western stereotype in the Senate, as we have come to think of one for the Senators from the South and even the East?

Mention of southern politicians often conjures up pictures of men hostile to civil rights legislation, proud of the TVA, fervently in favor of price supports on cotton and tobacco, and proficient at dramatic and flowery oratory. The typical Member of Congress from one of the great cities of the East is regarded as an ardent sponsor of civil rights, an opponent of restrictive immigration laws, and frequently friendly to such broad causes as urban renewal and public housing.

Western Senators, however, cannot be so easily characterized. They share no uniformity of experience or antecedents or political views. The two new Members from the fledgling State of Alaska, to cite a case in point, are E. L. BARTLETT, a former prospector for gold in Alaska's foaming creeks, and ERNEST GRUENING, a former editor of newspapers and magazines in New York City. Senator CARL HAYDEN, of Arizona, known as the silent Senator, rarely speaks from the floor, while Senator WAYNE MORSE, of Oregon, is famous for his feats of oratorical endurance.

The very name Montana creates visions of cowpokes and six-shooting frontier sheriffs, but Montana's popular junior Senator, MIKE MANSFIELD, is a former professor of oriental history who specializes in scholarly studies of foreign policy. The West claims the Senator of longest tenure, HAYDEN, now in his sixth successive term, and the Senator of youngest age, FRANK CHURCH, of Idaho, 34.

Western Senators include Protestants, Catholics, Mormons, and Jews. They range from Arizona's BARRY GOLDWATER, critic of labor unions, to JAMES E. MURRAY, of Montana, their defender; from WALLACE F. BENNETT, of Utah, foe of public power, to Washington's HENRY M. JACKSON, its advocate; from WARREN G. MAGNUSON, of Washington, proponent of 90-percent price supports on basic crops, to CLINTON P. ANDERSON, of New Mexico, an adherent of the flexible scale for farm commodities. While Senator JOSEPH O'MAHONEY, of Wyoming, warns against business monopolies, Senator GORDON ALLOTT, of neighboring Colorado, calls for Federal action to suppress monopolies in organized labor.

There is no clear western position on civil rights, one of the most heatedly discussed issues of our era. This was evident during the bitter Senate debate in the summer of 1957 when southerners succeeded in having a crippling jury-trial amendment added to legislation which sought to assure southern Negroes access to the ballot box. Twelve of the twenty-two Senators then from the West answered to their names in favor of the amendment, while 10 western Senators opposed it.

Not even on such a regional issue as the great water-power site at Hells Canyon, along the Oregon-Idaho border, is a so-called Western viewpoint discernible. Every Democratic Senator from the West voted for Federal development of the mile-deep chasm; all the West's Republican Senators favored a private utility company. This was almost exactly the same partisan division that prevailed on the issue among Senators from other parts of the country.

The West's sheer immensity and geographic and economic diversity prevent a monolithic point of view. A Senator from Los Angeles or Portland has totally different pressures upon him from those affecting a Senator from Pocatello or Carson City. As a member of Oregon's Legislature, I had sponsored one of the early State fair employment practices acts in the Nation. But in the Senate I soon discovered that some of my colleagues from other Western States—particularly those from the States that lie behind the battlements of lofty mountain ranges—had had little or no local experience with this issue.

A Senator from California, where thrive such specialty crops as lettuce and asparagus and citrus fruits, thinks differently on agricultural matters from a Senator whose home is Montana, where upland wheat and other grains are the all-important farm commodities. In the Southwest the fundamental problem is lack of water for drinking and irrigation, but in the Northwest flood-control projects are needed to hold back the Columbia's rampant freshets.

In the vital realm of foreign policy, the West is riven by many points of view. Geographical diversity is a factor here, too. Some of the world's finest harbors dot the Pacific seaboard—Puget Sound, the mouth of the Columbia River, San Francisco Bay, San Pedro Bay. Congressmen from these areas are receptive to reciprocal trade. They know that accelerated overseas commerce means jobs for their stevedores, sailors, and warehousemen. They support foreign aid and other instruments of internationalism.

On the other side of the trade issue, representatives of the mountain States are often conscious of the economic impact of imports on the ores, sugar beets, and finished minerals produced by their constituents. During the last session of Congress, the administration proposed generous subsidies for certain ores such as lead and zinc in an effort to win the support of some western Senators for continuation of the reciprocal trade program.

It has been regarded as inevitable that the West's increasing strength in Congress will bring about a dilution of the great political power long wielded there by the South. The only challenge to southern domination of Senate committees, through the holding of key chairmanships, comes from western Senators of lengthy service such as HAYDEN, of Arizona, and MURRAY, of Montana. Nor can it be overlooked that the President pro tempore of the Senate is not a southerner but Mr. HAYDEN, who first came to Capitol Hill as a House Member almost 47 years ago. No southerner would think of challenging him for this honor.

Yet westerners and southerners are not necessarily arch rivals, as some seem to assume. If there is a prevailing western viewpoint on economics, it is that too much of the country's manufacturing is concentrated in a few Eastern States. The South shares this attitude. Despite the financial vigor of the California colossus, the West in general needs new industrial payrolls; so does the South. Too many of the West's natural resources are hauled out as raw materials, rather than processed by native industries. The South murmurs against the same inequity.

Oregon's timber industry complains that the structure of national freight rates tends to make prohibitive the local manufacture of lumber into finished products. Southern sawmill owners voice an identical protest. A Western Democratic Senator, looking at the swift reaches of the Columbia and Colorado Rivers, has many of the same thoughts as his Democratic colleague from the realm of the Tennessee and its surging tributaries; each hopes that cheap kilowatts in abundance will lure new manufacturing payrolls to his State.

Thus, the expanding strength of the West in Congress may not be so distressing to the long-dominant South as has been predicted, particularly in the field of economic legislation.

Despite the lack of a Western stereotype, are there some policies which Congressmen from the West may be expected to promote with special diligence? I would say such issues fall into a few categories:

1. Water. During the past quarter of a century, the Federal Government has spent more than $10 billion to develop Western water resource projects. This pace will probably be accelerated in view of the West's new numerical strength—although Western Republicans and Democrats may continue to split over the question of Federal powerplants versus private-utility dams.

2. Recreation. The West is the scene of many of the country's outdoor marvels—Yosemite, the Grand Canyon, Crater Lake, Yellowstone, Mount Rainier, and Mount Hood—and tourist trade is a key part of the economy of most Western States. Westerners in Congress are certain to unite behind requests for additional appropriations to be spent in the national parks and national forests.

3. Transportation. The West needs better roads, especially in its sparsely settled farming and timber areas. Western Members of Congress will favor acceleration of the Federal aid program on interstate and secondary highways.

4. Hemisphere relations. The West is highly conscious of its neighbors on the North American continent. Mexico shares tourists, rivers, and wetback migratory laborers with such border states as California, New Mexico, and Arizona. Off to the north, Oregon and Washington and Montana seek a mutual agreement with Canada for joint use of the still untapped Columbia River water power. Alaska's Senators desire a similar pact on the Yukon.

5. Credit and monetary policy. Tight money has not been popular in the West. Traditionally, the West has sought low interest rates in order to encourage expansion. Residential housing, crucial to the logging and lumber industries of the Pacific Northwest and northern California, relies on abundant and cheap credit. Higher rates of interest contribute to more expensive public works projects. All of these things may make the West a factor in opposing tighter Federal controls over interest and credit.

Despite these common causes, western Senators and Representatives enjoy a far wider latitude on major issues than do their counterparts from other regions, who are often blocked by local prejudices and conclusions. Elections in the South and East can turn for or against a candidate on a single issue. I do not know of any one political question that alone could determine the fate of a major candidate in a Western State.

The West is, in effect, a genuine third force in the Congress, capable of entering new alliances and adopting untried positions. Its

bargaining power is enormous if only because its allegiance cannot be forecast. In the elections of 1958 westerners triumphed who advocated a firm stand on Quemoy and Matsu, but so did those who called for recognition of Red China.

As the newest American region (I have talked with pioneers who remember the Indian wars), it perhaps is fitting that the West is the least strapped by political straitjackets. When the West is older, its ideas will jell and harden; strong voting blocs may materialize; spokesmen in Senate and House may be handcuffed by phobias. But now the West is young.

Statement by Chief Justice of the New Jersey Sup.eme Court, on Recent Resolution of the Chief Justices Association

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. WILLIAMS of New Jersey. Mr. President, a recent resolution of the Chief Justices Association condemning the Supreme Court, which was passed in Pasadena, Calif., August 23, 1958, has caused considerable comment. I believe the views stated by Chief Justice Weintraub, of the New Jersey Supreme Court, will be of interest to the entire Senate. I ask unanimous consent that these views be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Chief Justice DETHMERS. The Chair recognizes Chief Justice Weintraub, of New Jersey.

Chief Justice WEINTRAUB. Mr. Chairman and members of the conference, I am confident that every member of this conference has carefully considered this important resolution and has reached, as I have, a firm view with respect to it. I sense that the resolution will attract a spanking majority. I doubt that extended debate will add very much. I speak simply because, in the light of the importance of the matter, I should state the reasons why I cannot join in the resolution. May I say to members of the committee who prepared the report that my difference of view certainly does not suggest any personal criticism. I am just one lawyer differing with another.

I place no institution, office, or public official beyond full and frank public criticism. Nor do I question the right of any member of this conference, at least in his capacity of private citizen, to express his disagreement with the work of the Supreme Court. But I do question the wisdom, and indeed the propriety, of a joint pronouncement by this conference of Chief Justices, assembled as it is in an official or quasi-official capacity. I doubt that it is within the proper function of this conference to issue what in essence is a blast, devoid of any specific recommendation as to any specific matter. More importantly, in my judgment, the criticism and characterizations in the report are unwarranted.

As I read the report it laments the readjustment of power and authority between the National Government and the States and then belabors the Supreme Court for its role in the process.

I agree that John Marshall would be astounded by the present scene. This, I believe, is most fortunate, because if the present scene were such as to appear at all familiar to him, our Nation would be a third- or fourth-rate power, if indeed it would exist at all. The report itself acknowledges the inexorable sweep of scientific and economic events which have dictated the readjustment of responsibility and power, events which have led the States themselves to look to Federal authority for the solution of problems beyond their abilities.

I am sure that if the Federal Government would abandon its many programs of local assistance and release to the States the sources of revenue gathered for those purposes, my little State—small in acreage but large in population, industry, and tax remittance to Washington—would profit greatly. Yet I would not urge so provincial a view, because the welfare of the several States and Territories is single and indivisible. For the same reason, in all matters involving the relationship between the Nation and State, the rights of a single State must yield to Federal needs. And for the same reason, in international matters it is today unthinkable that any State may possess the power to pursue a course of action or inaction which may embarrass or jeopardize the well-being of the entire Nation.

Such is the background against which the Supreme Court must resolve the issues before it. Its horizon is different from ours. We may lament the course of history and even weep in its wake, but let us not suppose that we can, by resolution, stay the current of events.

The report assails decisions of the Supreme Court in two areas: interpretation of acts of Congress and interpretation of Constitution, especially the 14th amendment.

The report cites a number of decisions as to many of which it is adversely critical.

I assume it is not intended to obtain a vote in this conference upon each of those decisions. I should be surprised if some 50 justices could, upon careful consideration, be unanimous as to any of those decisions and I would be amazed if unanimity were achieved as to the basketful. And although each of us might venture a curbstone view with respect to the cases cited, I doubt that we would assume responsibility for a public pronouncement without consideration of the record, briefs and arguments presented in each case. We would want the benefit of the same material with which the Supreme Court was favored in those matters.

Hence we can only deal with the generalized conclusions and criticisms which appear in the closing portion of the report.

With respect to the interpretation of acts of Congress, the Supreme Court is contending with a well-known phenomenon, legislative ambiguity. I think it enough to say that if the Court has incorrectly divined the legislative intent, correction is within the easy reach of the authors of the ambiguity.

As to its work in the interpretation of the Constitution, we may of course readily disagree. But our disagreement should be tempered by our understanding of the inherent difficulties of the constitutional interpretive process. It would hardly be a justifiable criticism to say the Supreme Court engages in a process of evaluation and judgment. The Constitution does not offer a literal, definitive answer to the awesome problems which confront the Court. One may read the commerce clause, the due process clause, the equal protection clause, a thousand times and still not detect the slightest clue to the proper decision. The answer must be found elsewhere. The constitutional framework, as we all know, is a mere skeleton expression of governmental power and individual rights. The actual contours of those powers and rights must be determined in the context of changing conditions, by a process which is more than a mere mechanical application of a constitutional phrase to a set of facts.

We may of course disagree with the nine gentlemen at Washington. Lawyers have always disagreed with each other and always will. But while we may register disagreement, we cannot justly impute to members of the Supreme Court anything less than conscientious devotion to duty as they see it.

And hence I disapprove strongly of what to me is the essense of the report—the charge that the Justices of the Supreme Court have violated the duty of judicial self-restraint in constitutional areas, the suggestion that their behavior has been such as to raise considerable doubt that we remain a government of laws and not of men. I have no doubt whatever that the Justices are men of conscience and honor, that they respect the rule of law, that none would set himself above the law or seek to arrogate power or responsibility which he believes is not his.

It is one thing for a judge to say that he disagrees with another; it is something else to impute to that other a violation of the basic standards of judicial behavior. I find no bill of particulars within the report which in my view supports the charge and I know of no facts that would sustain it.

I think it unfortunate that the prestige of the conference of Chief Justices should be placed behind so serious an indictment. I think it unfortunate that there should emanate from this conference a document which will surely be misunderstood and so readily lends itself to misuse by anyone who tilts with the Federal Government. Any man or group of men who choose to place themselves above constituted authority or to flout basic rights as the Supreme Court authoritatively finds them to be, will surely claim comfort and support in the sweeping reflection upon the Supreme Court in the report.

Reduction of Ferry Fare Increases Granted to Erie-Lackawanna-New Jersey & New York Lines

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the township committee of West Milford, N.J., concerning reduction of ferry fares granted to the Erie-Lackawanna-New Jersey & New York lines.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas there is at present pending before the Interstate Commerce Commission, under dockets Nos. 32840 and 32532, applications for the reduction of ferry fare increases granted the Erie-Lackawanna-New Jersey & New York lines; and

Whereas it is to the best interest of citizens of the township of West Milford in the county of Passaic that said ferry fare increase be reduced: Therefore be it

Resolved, That the township committee go on record as petitioning the Interstate Com-

merce Commission by this resolution to grant the reductions requested.

Introduced January 2, 1959.

Approved January 2, 1959.

CHESTER A. PULIA,
Mayor.

Attest:

GEORGE F. ECKHARDT, JR.,
Township Clerk.

No Double Standard in Code of Ethics—Philadelphia Inquirer Commends Senator Keating

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 2, 1959

Mr. SCOTT. Mr. President, the Philadelphia Inquirer has published a thoughtful editorial about a measure introduced by the junior Senator from New York. It was a personal pleasure for me to read these comments about my longtime colleague. I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO DOUBLE STANDARD IN CODE OF ETHICS

Most Congressmen are strong for a code of ethics—for others. They favor regulatory measures to curb influence peddling—so long as they are not included.

That's why we think the move to enact legislation on ethical practices in Government, though badly needed, won't get far in the 86th Congress.

It isn't that the majority of Members of the House and Senate are involved in backstairs deals in favoritism. They just don't like having this sort of law aimed at them.

The newest effort to set up a real Government code of ethics is about to come up for hearings before the House Antitrust Committee. It would apply to all officials and employees in the executive branch and to persons doing business with the Government.

The proposed code would provide for dismissal of Federal employees and cancellation of Government contracts, loans, grants, or permits for violation of its provisions. It is plain that the Bernard Goldfine-Sherman Adams-vicuna coat theme has figured in some of the Committee's deliberations.

But Senator KENNETH B. KEATING, New York Republican, says this isn't enough and we agree with him. He urges legislation barring Congressmen from using their official position to obtain unwarranted privileges or exemptions.

It is right and proper to prohibit influence peddling with the Federal Communications Commission, the Federal Trade Commission and all myriad agencies of the Government. Why, then, should not Members of Congress, some of whom have been revealed as parties to influence deals, be included?

As KEATING says, "We cannot afford to take a holier than thou attitude. There should be no double standard in Government morality."

Senator KEATING is exactly right and we hope he sticks to this line. Let us have a code of ethics that covers all the Government agencies and those who do business with them—and, in addition, all Members of House and Senate.

A Commendation of the Texas Board of Education by the Houston Post

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, February 2, 1959

Mr. YARBOROUGH. Mr. President, the Texas Board of Education has approved that State's participation in the new National Defense Education Act program.

The board acted on the recommendation of the Hale-Aikin School Study Committee, which last October reversed an earlier decision, and recommended that Texas participate in the new program. I praised the committee's decision at that time and I now highly praise the action of the board.

I had the privilege of being a coauthor of this National Defense Education Act, which provides for loan scholarships, teacher institutes, college fellowships, stepped-up vocational education program and other aids aimed at overcoming America's lag in some educational fields.

From students came sputniks, from education came Explorers. Today's pupils will plan tomorrow's peace.

Mr. President, as a further extension of my remarks, I request unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in one of Texas' finest daily papers, the Houston Post, for Monday, January 12, 1959, under the heading "Defense Education Plan Approved." The Houston Post has served the cause of education well. It has crusaded to improve Houston's public schools; it has supported school lunch and vocational educational programs, and has now endorsed Texas participation under the National Defense Education Act of 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEFENSE EDUCATION PLAN APPROVED

The State board of education has acted wisely in approving participation by Texas in the new National Defense Educational Act program despite personal dislike for Federal aid to education by some members of the board.

The board's action is permissive. The final decision on participation is left to the individual school districts. Those that wish to receive Federal Government aid may do so and those that prefer to do without it are not required to take the proffered money. Congress has authorized the allotment of $8,893,152 to this State for various phases of the national defense education program.

Jack Binion, Houston attorney, who headed a board committee on Texas' participation, said he thought the Government is trying to do something good for the country through the aid to education program. He commented that he had not noticed the people of the State breaking their necks to raise teachers' salaries or to spend money for educational improvements, although educational improvement is generally favored.

The major fear of those who oppose Federal aid to education is that it may lead to Federal control of education. Binion pointed out that Texas already is getting Federal aid by the millions and their is no Federal control.

The board's action was in line with its policy of allowing local districts to operate their schools with the least possible State control. For those districts which want the Federal aid, the board will act only as intermediary in obtaining and disbursing it. The money should be of great help to school districts which cannot now afford adequate science courses.

The World Is Adopting America's System

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 2, 1959

Mr. THURMOND. Mr. President, the observation that Russia and other Socialist-type countries have been adopting the American system has been made by many writers in recent years. The ably edited Columbia (S.C.) Record reiterates this in one of its January 30 editorials, entitled "World Is Adopting America's System."

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the Appendix of the RECORD, as follows:

WORLD IS ADOPTING AMERICA'S SYSTEM

Enterprise all over the world is increasing and improving. And most of it is in the pattern of the world's most successful enterprising Nation, the United States of America.

It is virtuous to welcome and commend such progress outside of the United States, but it would be naive and shortsighted to overlook the certainty that this worldwide enterprise will have a strong impact upon our own.

The United States is already finding itself in an international competitive situation which is markedly different from that in which we, for so long, were so much ahead in productive and distributive enterprise. Our competitors were limited to only a few nations, even the best of which rated below us.

Now Arthur Larson, a former White House aid, has written a book on the subject entitled "What We Are For," portions of which appear in the current issue of Fortune magazine.

Mr. Larson has given this world economic awakening a name—enterprise democracy. He says it is being applied even in Soviet Russia, and that in recent years people everywhere "have been moving in the direction of what we are for." Mr. Larson reports an inevitable development of such enterprise in Russia. The Soviet leaders were compelled to adopt private enterprise methods and incentives to increase their lagging production. And he also reports that in the sciences the Russian leadership has found that freedom of thought, ordinarily poison to Communists, is essential.

"Not only freedom of thought," Mr. Larson writes, "but also independent economic power will continue to grow in the Soviet Union. Eventually we may see the crucial combination—substantial economic power joining political power—in the hands of large numbers of individuals with independent ideas, and the ingredients of evolutionary

change toward a freer regime will be at hand."

There is good and bad news in this forecast by Mr. Larson. A joining of the sort of political power which exists in Russia today with increased production could create a force perilous to the whole world. But if Mr. Larson should be right in his prediction that it would mean a beginning for a freer regime, that could conceivably be good news.

In any event, the United States may be facing such competition from the spread of its own process, enterprise democracy, as to have formidable effect in this country.

The race is on, and the most encouraging factor on our side is that our team is deeper and more experienced in the know-how of enterprise democracy.

Even more critical would be some basic change in our system, such as too much nationalization, as to set us back in our own successful formula for enterprise and success. That could possibly mean others would proceed, with our own idea, while we would be denied its full force. Nationalization is the opposite of free enterprise.

The Missile Gap

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, February 2, 1959

Mr. ENGLE. Mr. President, I should like to call to the attention of the readers of the CONGRESSIONAL RECORD an editorial and an article by Joseph Alsop which appeared in the Washington Post on Monday, February 2, relating to the current missile controversy. Both pieces contain some sharp observations regarding the administration's unrealisic attitude on the missile gap. I ask unanimous consent to have these items printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

MISSILES BY THE NUMBERS

The testimony of Secretary McElroy and other defense officials about the country's missile preparedness would be more impressive if there were not unhappy memories of very similar arguments nearly a decade ago. For budgetary reasons the administration is proposing a missile program that in future numbers will fall far behind the Soviet capability, with the explanation that a balance of delivery methods will assure American superiority. Much of the same sort of case was made for the $12.5 billion defense budget on the eve of the Korean war.

Now, to be sure, there is a vast difference between a $12.5 billion budget and the $41 billion proposed for the next fiscal year. A number of able and sincere men have devoted their energies to weighing the various demands in the budget. They would not consciously sell the country short. Moreover, there is good evidence that American missile development, as contrasted with quantity production, is coming along well, even ahead of schedule. It is reassuring to learn that funds have been released to permit maximum work on the Air Force solid fuel Minuteman—though why this fact could not have been disclosed earlier is an unanswered question.

But fundamentally the defense program remains a big gamble. The validity of the decision to accept a possible 3–1 numerical lag behind the Soviet Union in intercontinental missiles depends upon the assumption that other means of delivery—intermediate missiles and strategic bombers—would not be neutralized and would be adequate to break through enemy defenses in the event of war. There seems to be a concerted effort to play down intelligence estimates of Soviet capabilities, particularly in intermediate missiles; and there seems to be an accompanying tendency to discount possible improvement of Soviet defenses. Recent history is unfortunately replete with instances in which this country has underestimated the Soviet Union.

Obviously, it would be presumptuous to say that one fixed sum would assure an adequate defense program and that anything short of it would be insufficient. The military power of the United States will be formidable by any analysis. Nevertheless, there is serious question whether a decision not to keep pace with the Soviet Union in certain basic elements of strength—plus the lack of any conspicuous effort to build up limited war forces—might not diminish the effectiveness of the deterrent and invite enemy risk taking in the future.

Some of this apprehension is detectable in the statements of members of the Joint Chiefs of Staff. Whereas the Chiefs agree that funds are sufficient for the next year, each member seems to have a reservation about the future. The cumulative effect of the failure now to provide for replacement of ships and planes and for modernization of the Army could sap future effectiveness. It is impossible to avoid the conclusion that security is being shaped to budgetary edicts instead of the budget being shaped to security requirements.

If the administration were investing heavily in other items related to the overall struggle there might be some justification for added risks in defense. A strong case can be made that, provided that the basic deterrent is maintained, the most pressing challenge is in economic development for the emergent countries of Asia, Africa, and Latin America. But here too budgetary myopia afflicts the program.

The new mutual security report for the first time breaks down economic aid country by country. It emphasizes how pathetically inadequate have been American efforts in areas of the greatest challenge. Yet the administration has been unwilling to ask for long-term capitalization of the Development Loan Fund and has cut back its own recommendations. There is no attempt to ask for even 1 percent of the American gross national product for economic help, although this is a bare minimum. To do less than enough to make possible an economic breakthrough in countries like India is to engage, really, in waste.

It would be wrong to accuse the administration of lack of faith. It has altogether too much faith of the wrong kind—a sort of Micawberish hope that something will turn up and things will come out all right. What is lacking is another kind of faith, faith in the maturity of the American people to accept the hard facts of the challenge and willingness to respond to leadership in approving the measures, including more taxes if necessary, to assure that the country will do what it is capable of doing.

THE MCELROY GOSPEL

(By Joseph Alsop)

By studying last week's testimony by the Defense Department leaders as scholars study the Bible, you can now discover the strange mainsprings of the Eisenhower administration's decision to accept inferiority to the Soviets in ballistic missiles.

The clue to the mystery lies in budget pressures, plus the great difference between the liquid-fueled missiles the first generation and the solid-fueled missiles of the next generation.

In brief, liquid-fueled ballistic missiles cannot be kept fully ready to fire. Their minimum reaction time is a quarter of an hour or rather more. Even by maintaining a costly fuel alert, in other words, these missiles cannot be fired within less than 15 minutes of the first warning of the enemy's attack. Because of the same fueling problem, bases for these missiles are also very costly. The expense is further increased by a wide margin, if the bases are "hardened" in order to protect the missiles on their pads against anything but a direct hit.

These characteristics make liquid-fueled IRBM's and ICBM's much more suitable for a nation that can attack first and by surprise, like the Soviet Union, than for a nation like the United States, that has vowed not to attack first. If the necessary money is spent to disperse and "harden" the launching sites, liquid-fueled Atlases and Titans in sufficient quantity can certainly even up the ICBM balance between this country and the Soviet Union. But Atlas and Titan are interim weapons, which will certainly have to be replaced as soon as possible.

The planned replacement is the solid-fueled Minuteman missile. Minuteman will hardly be able to carry as heavy a warhead as the more powerful liquid-fueled Atlas and Titan. But the solid-fueled Minuteman missiles will be cheap to produce in quantity. Having built-in fuel, they will have zero reaction time and their launching sites can even be made mobile, for greater protection.

For the United States, therefore, the second generation of ICBM's is immensely preferable to the first generation, except for one tiny fact. Atlas missiles can be obtained now, and Titan missiles can be obtained soon. Minuteman missiles, in contrast, will hardly be available in operational quantities until 5 years from now, and the delay may be considerably greater than this.

All these facts are so important because the Eisenhower Defense Department has never been able to get used to the idea of disposable weapons. This is certainly odd, in a country that invented the disposable facial tissue, and in a Defense Department reshaped and still dominated by that great man, Charles E. Wilson, who is such a strong advocate of the disposable automobile. Nonetheless, Wilson also rebelled, and his successor, Neil McElroy, still rebels against the basic need to maintain force-in-being by purchasing weapons now that have to be replaced later.

This being the psychology, the Defense Department is buying very few liquid-fueled missiles now, and waiting to buy a lot of solid-fueled missiles later. The result, inevitably, is acceptance of heavy inferiority in missile striking power, at least until the distant date when the Minuteman missile will become available in quantity.

This lighthearted treatment of the missile gap has in turn been justified by two devices which would cost the greatest executive his job, if he used them while still in private business. In the first place, the missile gap has been made to seem very much less dangerous by comfortably downgrading the opposition. To be sure, the comfort of General Motors would not be long-lasting if General Motors' production and pricing policies were based on the belief that the people over at Ford were a bunch of slack-twisted incompetents. But this is the best parallel for the Defense Department method of judging Soviet missile capabilities.

In the second place, the dangers of the missile gap have been further obscured by the simple act of cooking the defense balance sheet. The comparatively useless IRBM's being sent to our NATO allies are counted on the balance sheet as major assets, the far more numerous and immeasurably more useful Soviet IRBM's are not

counted at all; or, if reluctantly mentioned under senatorial pressure, the Soviet IRBM's are not put down on the debit side of the balance sheet. Other examples of this interesting practice might also be cited.

If American newspapers would print something comparable to the grimmest Biblical commentary, chapter and verse could also be cited to prove all the foregoing that may seem incredible. But for present purposes, this is commentary enough on the McElroy gospel. It remains to examine the risk, the allegedly calculated risk to which the McElroy gospel exposes the United States and the free world.

The Mikoyan Hoax

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an article entitled "Facts Spotlight Mikoyan Hoax," written by George E. Sokolsky and published in the New York Journal-American of January 21, 1959.

I have placed this article in the RECORD as a further means of alerting the American people to be aware of the true aims and purposes of the Soviet propaganda campaigns of which the Mikoyan visit is an open move. The people of the United States need to be made constantly aware of the new Soviet offensive, which the Kremlin boldly states will bring about their control of the world without the need of a hot war or a cold war. I for one do not intend to stand idly by and witness any such eventuality.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FACTS SPOTLIGHT MIKOYAN HOAX
(By George E. Sokolsky)

The Mikoyan hoax is bound to disclose itself because too many persons have willy-nilly become involved in it and therefore it is no longer secret that as far back as last November, the State Department was busily at work softening up small groups on a local level to be nice to Russians. There is also some evidence that Dag Hammarskjold was interested in the project and one wonders why he would interfere in the internal affairs of the United States or any State or city thereof. Hammarskjold is an alien here whose job is to run the United Nations which is an institution for speech cultivation situated on the East River in New York City. Beyond that he ought to mind his own business and when it is suggested that he approve or disapprove something in or about the United States, he is not minding his own business and his intervention is not appreciated.

Slowly the evidence is coming to me of the activities to have Americans meet Russians as a softening-up process, undoubtedly part of the people-to-people movement, except that involved were not people but a Russian official and soft-minded businessmen who for an eighth of a buck forget dignity, honor, and the glory of their flag. The Russians must be roaring with laughter at how they can take these people in, particularly those who arrange the special affairs and those who during November and December held private dinners in quiet places to be let into the secrets of grand diplomacy.

If Joe McCarthy were alive and heading a Senate committee, some of the arrangers of these parties would be summoned to explain their activities, but today, the Russians can play their games and nobody looks askance at improprieties, except perhaps John Foster Dulles who will have to transfer some personalities in the State Department from a soft desk in Washington to Mongolia or Tibet or some other uncomfortable place.

In a word, although we have been led to believe that Anastas Mikoyan came here as a tourist and walked about the streets for a day of two until he was recognized, it is now incontestable that as early as the first fortnight of November, arrangements were already being made to soften up Americans to welcome Russians with whom ordinarily these people do not associate.

WELL-PREPARED FUNCTIONS

The result in New York was seen in well-prepared dinners and luncheons and receptions for Anastas Mikoyan, none of which could have been arranged spontaneously on the scale and magnitude which the city witnessed.

The Economic Club of New York dinner, for instance, was held in the Grand Ballroom of the Waldorf-Astoria. The seating list shows about 1,000 diners and gives the tables itemized all except tables 89 and 114 which are for "see information desk," probably for some who do not care for a permanent record of their attendance. The seating list shows who sat at each table, but does not diagram the dais, although that is usual custom. Their names do appear in the alphabetical list.

As I look through this list, I see no names of important public officials but the banks are numerous. For instance, the Bank of America had table 52; Bankers Trust Co., table 6; Hanover Bank, tables 22 and 23; Irving Trust Co., table 43; and so it went. General Dynamics Corp., which sells submarines and airplanes, had a table. There was a table for a Standard Oil Co., but it does not say which one. It could be that these banks and others who were present attend all Economic Club dinners. It could also be that some came out of curiosity to see what an Armenian bank robber become statesman looks like. But it cannot be, in the circumstances prevailing in New York, that this dinner appeared spontaneously without long and painstaking preparations.

It is not the dinner that is important; it is the attempted hoax on the American people that Mikoyan came as a tourist and had no other purpose than to look at his old friend known as Smiling Mike, the Russian Ambassador. That is untrue, and the proof that it is untrue is beginning to take form.

The Welfare Lullaby

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. THURMOND. Mr. President, there are many able editors of smalltown newspapers in South Carolina. One of these, Tom O'Connor, of the Allendale County Citizen, reprinted in his January 30, 1959, edition an editorial written by him 10 years ago, entitled "The Welfare Lullaby." This editorial is even more appropriate today than it was a decade ago, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE WELFARE LULLABY
(By Tom O'Connor)

There has been a lot of talk lately of security, the protection of the people from want and care all through the days of their living. Plans are extant for systems of governments that promise to do just that. All, say the planners, shall be adequately fed, clothed, and housed, no matter what the circumstance. The fat shall get the same ration as the lean and the rich shall have no more than the poor.

Such systems sound fine on paper, but in practice, where they have been tried, they have led the people down unhappy roads to more want and more care than had been the lot of the sturdy individual pitting his wit and his strength against chance and destiny.

Many persons in this country today give promise of being advocates of such systems. The word security is on many lips, the dream of a life of freedom from the struggle for bread finds many adherents. Most overlook that it is a dream. A thing that fades with the dawn of reality. Most overlook these facts, the longing for security is immature, it is based on impossible premises, actually born in the childish game, "Suppose." With an equal share of everything no one has anything. Most business is founded on personal ambition and initiative, doomed under socialistic and welfare states of being.

With an incentive only to stand quietly in line to get the monthly welfare check, men soon deteriorate and the check is far from enough to supply the simplest wants of most men. What then is, and has been the outcome of these planned states? The answer is aggression. Unable to supply their people with needs for daily existence, the planners have had to reach out to take from others what they cannot provide with the best of plans.

Actually, there is no security. Perhaps Nature intended there should be none. Men are tired of the dog eat dog aspect of life. But until man becomes a creature far different from what he is today, the game of "Suppose" can best be left to the nursery, where the dreamers, with a certain sharp sense of reality, content themselves with what is at hand.

Until the day when man's material wants can be met without the aid of the plowshare, the lathe and the loom, and the saw, it should be the aim of man to better himself against the future betterment of his lot.

The social planners sing a lullaby, such as the wee ones sing when the day grows old and the comforting bottle is at hand. It sufficies for a while but even the children will be up and doing on the morrow. So, pray, shall we all.

Education and Freedom

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. JACKSON. Mr. President, Admiral Rickover, who has already played an outstanding part in strengthening our

national defense, is now making a provocative contribution to the debate over the adequacy of our Nation's educational effort.

I ask unanimous consent that there may be printed in the Appendix of the RECORD a review of Adm. H. G. Rickover's book, "Education and Freedom," by Arthur Bestor. This review appeared on page 1 of the New York Times Book Review of February 1, 1959.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

HOW SHOULD WE RETOOL OUR SCHOOLS?—A HISTORIAN AGREES WITH ADMIRAL RICKOVER'S PROPOSALS

(By Arthur Bestor)

The problems of the world—today, our problems—will tomorrow be our children's problems. Are we equipping the younger generation to deal effectively with them? This is the central question in education—a perennial question, which every adult generation must, in a sense, answer anew, taking into account the changes that may have occurred in the nature of the world's problems.

In the great debate now going on over the adequacy of American education, both sides take off from this same starting point. Defenders and critics unite in believing that the public schools should prepare young men and women for the world in which they are going to live. The debate is over the kind of education that will do the job. Parents and citizens should keep the central issue in mind, for efforts are frequently made to obscure it.

Professional educationists in the United States often claim to be the only group interested in preparing young people for contemporary life, and they accuse their scientific and academic critics of wishing to turn back the clock. This completely misrepresents the position of those who are anxious to reemphasize intellectual discipline in the public schools. One of the most distinguished spokesmen for the latter point of view, Adm. Hyman G. Rickover, states the matter with complete clarity in his latest book, "Education and Freedom." Through "bitter disappointment," he writes, we have come "to the realization that America's predominant educational philosophy is as hopelessly outdated today as the horse and buggy."

The educational philosophy that Admiral Rickover considers outdated is the one that takes life adjustment for its central aim. The result, he charges, is substitution of know-how subjects for solid learning and the widespread tendency of schools to instruct pupils in the minutiae of daily life. His own alternative is concisely stated: "English, foreign languages, mathematics, sciences, history, geography—these are the subjects which must be mastered. They are the intellectual tools that enable us * * * to understand the complexities of today's tense and uncertain world. Those who do not have the mentality to master all these subjects need the same kind of intellectual fare, only less of it."

The issue is squarely joined. How completely opposite the two positions are can be neatly shown by a single sentence that Admiral Rickover quotes from an educationist source. The sentence describes a situation that Admiral Rickover would obviously consider sound. In actual fact, the sentence appears in a pamphlet published by the Association for Supervision and Curriculum Development of the National Education Association as a description of the situation which that association prides itself on having helped to destroy: "Physicists wrote the text on physics; literature was selected and interpreted for high school pupils by college professors; mathematicians decided on the order and content of arithmetic texts; and so the experts dominated the content of the curriculum."

The question, be it remembered, is which kind of education will best prepare young men and women for the task of the immediate, foreseeable future. Professional educationists argue that they alone are competent to answer the question. They insist that no one but an expert in pedagogy possesses the kind of information and experience necessary to reach a sound judgment. The arrogance of this argument is bad enough, but what destroys it utterly is its manifest illogicality.

Who, after all, is an expert on the nature of the intellectual problems that are posed by the technological world of today and tomorrow? Is it the professor of education, employed to teach teachers how to teach, and perhaps engaged in research on the ways of adolescents? Or is it the scientist constantly engaged in solving the problems that arise along the advancing frontiers of knowledge or the professional man, actively applying new ideas to practical affairs? Merely to ask the question is to wipe out the educationist's claim to expertness on the question before us.

No one is better qualified than Admiral Rickover to assess the intellectual demands that the future is certain to make, for his pioneer work on nuclear powerplants for the Navy has brought part of the future into actual being. Generalizing from his experience in these development projects (including that which produced the *Nautilus*), he writes: "Whatever the world of tomorrow may turn out to be, one thing is certain. Greater mental effort will be required of all mankind." Military considerations are not necessarily uppermost in the author's mind. Some of his most telling passages picture the need for a prompt and intensive technological effort to stave off the collapse of civilization through exhaustion of fuels, metals, and other natural resources.

Given the intellectual needs of contemporary society, Admiral Rickover reaches the conclusion (inescapable to this reviewer's way of thinking) that the first duty of American schools is to develop in all children—talented, average, and below average—the highest level of intellectual competence of which they are capable. The author intends every word to be taken literally. He believes that even below-average students are capable of far greater intellectual effort than American schools usually call upon them to make, and he proves the point by citing the achievements of pupils of like ability in Russia and other countries.

Though defenders of the educational status quo will no doubt call this a book of negative criticism, it is, in fact, crowded with positive suggestions, attesting Admiral Rickover's sincere and intelligent concern with the improvement of American schools. Almost the first of his specific suggestions, one should note, is phrased as follows: "An immediate step in solving our educational problem is to increase [teachers'] salaries drastically."

Of most concern to him is the education of the talented, because the waste of their abilities exposes the Nation to the most direct and immediate danger. A rigorous program in the basic intellectual disciplines, with a minimum of electives and a maximum of continuity, is his prescription for the top 15 or 20 percent of the population in intellectual ability. Special accelerated tracks for these students in the high schools he considers indispensable. And in his most publicized proposal he urges the setting up of 25 demonstration high schools throughout the country to show the acceleration possible for talented students under subject-trained teachers in a strictly academic environment with a lengthened school year.

Such an experiment might well be a *Nautilus* for American education.

The Best Is Yet To Be

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of a broadcast made by Joyce Roberts, the public relations director of the pineapple companies of Hawaii, over the Aloha Broadcasting System in Hawaii. I do so, Mr. President, for the reason that the script contains some very excellent excerpts from an article entitled "The Best Is Yet To Be" prepared as a guest editorial in the Hartford (Conn.) Times by Mr. Sam Pryor, the distinguished vice president and assistant to the president of Pan American Airways. Many of my colleagues know Mr. Pryor because of his distinguished achievements in aviation and also as a former Republican national committeeman from the State of Connecticut.

I hope that Senators will take the time to read Mr. Pryor's comments about the constructive approach rather than what I have constantly decried as the derogatory approach to the potential of America in its progress under this administration.

There being no objection, the commentary was ordered to be printed in the RECORD, as follows:

THE BEST IS YET TO BE

(By Joyce Roberts)

Good evening ladies and gentlemen. This is Joyce Roberts speaking.

Do you sometimes find yourself wondering a bit about this land of ours—these United States of America—and her future, and our future, in this troubled world?

Do you sometimes wonder if maybe this dream of freedom come true—if maybe this dream of freedom come true is going to disappear as a dream, after all—and not continue as the new and real revolutionary way of life that it has been for nearly 200 years?

It would not be surprising if you did sometimes wonder, for if we would listen only to all the attacks made on us, on our country and its leaders and institutions and on our many groups of people, we might get to thinking that nothing is right, and everything is wrong.

From without, there are those who attack our system of government, our prosperity, our good intentions toward other peoples.

From within, there are those who also attack our system of government, who would destroy confidence in our courts and system of justice, and would undermine our own confidence in our own Government.

And even within the great and overwhelming majority of Americans who have unquestioned allegiance to this idea we call America, even within this group we hear charges and countercharges that might lead one to ask, Where is the unity of purpose and ideals that any people must have for growth and progress?

Is labor a reckless force whose growing power is to be feared, and whose leaders are not to be trusted?

Is management, are business leaders, as shortsighted and selfish and opposed to social progress as some labor leaders charge?

Are all public officials and would-be public officials either so poorly equipped or so morally weak that we can neither expect any-

thing from them nor place any hope in our future?

During these times when we as a people are faced with a challenge of world leadership unknown in history, and our shortcomings at home and abroad are so magnified by election-year oratory that it may seem there is nothing good, it might be a good idea to stop a moment to look at the other side of things.

And this is what a recent visitor to Honolulu did in one of the finest brief articles we have read for some time—a short article entitled "The Best Is Yet To Be"—written by Samuel F. Pryor, Jr., a national and international leader in aviation. Mr. Pryor is vice president, assistant to the President and a director of Pan American World Airways, as well as a director of several other large American corporations—and incidentally he is also a director of the Boys Club of America.

A former Republican national committeeman from Connecticut, Mr. Pryor was in charge of Wendell Willkie's eastern headquarters during the 1940 presidential campaign.

On his return from a business trip for Pan American to Australia, Tahiti and Fiji last month, Mr. Pryor stopped in Honolulu at which time this article, The Best Is Yet To Be was reprinted by the Honolulu Advertiser following its original appearance as a guest editorial in the Hartford (Conn.) Times.

And here is why Mr. Pryor says, the best is yet to be.

And now we are quoting Mr. Pryor.

"When I was a student at Yale, William Lyon (Billy) Phelps, the great professor of English literature, was of world prominence.

"Billy's cardinal philosophy was best expressed in the words of his favorite poet, Robert Browning—'The Best Is Yet To Be,' which very words happen to be on the sundial in my garden," says Mr. Pryor.

"If Billy were here today," he writes, "I am confident he would again look optimistically into the future and repeat those words.

"Never at any time in our history was there a greater truth. Never before has any civilization enjoyed the blessings and the standard of living which are now so synonymous with America.

"My business, continues Mr. Pryor, taking me into 67 countries of the world, allows me to see this at first hand with my open eyes.

"The future holds so much more for all of us, if only all of us can realize that we have in our power to create—if only all of us will recognize that the cries of a defeatist's economy—the preachings of the gospel that America is finished—are the voices of false prophets.

"Recently a group of economists—noted Mr. Pryor—gathered together and took a conservative look at what America can be like 10 years from today.

"Here are some of the things they say can happen:

"America will have a population of 175 million people—14 percent higher than in 1951.

"There will be over 67 million people in our labor force—an increase of more than 3 million people over 1951.

"America will produce goods and services worth $380 millions—16 percent higher than in 1951.

"Consumers will spend around $255 billions, up $50 billions over 1951.

"Business will spend about $27 billion to improve its plants, its products, and its services, $4 billions more than in 1951.

"And—continued these economists—the average man will work about 40 hours a week, as compared with 44 hours in 1951—depending on how much money is invested in new tools for him, how well he uses them, and how much incentive he is given to use them well.

"The output per man-hour can be worth $2.70, in contrast to $2.24 in 1951.

"Concluded these economists, Americans may have disposable personal income, after providing for the necessities of life, of $260 billions, as against $233 billions in 1951.

"Then," continued Mr. Pryor, "from my own knowledge of international air travel, I predict that with the reduced fares the number of Americans going abroad will double shortly. They now number 2 million. By 1962 international air travel time will be cut in half. For example, London will be but 6 hours from New York. With more world travel will come more world understanding.

"On every side," continued Mr. Pryor, "pessimists are being disproven, as the industrial and labor teams of America works new miracles. We are told that there is almost no lid to the growth of the fabulous chemical industry, that new fibers will completely revolutionize the textile industry, that the use of byproducts of oils has barely scratched the surface, and that equally staggering growths can be expected in the fields of medicine, electricity, metals, transportation, and food, to mention only a few.

"What all of this can mean to human happiness is staggering to contemplate," says Mr. Pryor.

"But a big element in realizing this vision still remains. It is not material. It is spiritual.

"It is not whether America has the sense and the courage and the foresight to do this job.

"The question is, Do we have charity toward and understanding of our fellow man?

"Let's realize that we are not members of separate teams, but one team.

"Let's realize that you and I can't do it alone—that America has enough for all of us.

"If we increase our productivity, keep ourselves informed, maintain our Defense Establishment, and exercise our franchise to vote, we will preserve our two-party system, our American form of government, the finest Government on earth, and can look with confidence to the future.

"Instead of saying, 'Down with labor. Down with management. Down with the farmer. Down with everyone who doesn't see it my way,' let's try:

"Up with labor.

"Up with management.

"Up with the farmer.

"Up with everybody who wants to help build a happier country.

"Up America.

"The best is yet to be."

So concluded Samuel Pryor.

Yes, never before has any civilization enjoyed the blessings and standards of living which are now so synonymous with America and so much a part of us.

And yet, as Mr. Pryor says, if we will but realize this, and realize, too, that we are not members of separate teams, but of one team, and say, "Up with everybody who wants to help build a happier country," then the best is yet to be.

This is Joyce Roberts speaking. Goodnight.

The Need for Moral Strength

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. THURMOND. Mr. President, columnist Constantine Brown, in the January 30 edition of the Evening Star, and our own Senate Chaplain, Dr. Frederick Brown Harris, in the February 1 edition of the Sunday Star, discuss the need for moral strength at this time. These two columns are worthy of the consideration of all leaders in Government, and I ask unanimous consent that Mr. Brown's column, entitled "When Moral Strength Counts" and Dr. Harris' article "The Moral Thermometer" be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

WHEN MORAL STRENGTH COUNTS—BELIEF IN RIGHT CAUSE AND WILL TO RESIST HELD CRUCIAL WEAPONS AGAINST ENEMY

(By Constantine Brown)

Politicians and technicians who gauge the capabilities of this country against a Soviet onslaught are talking in terms of how many of this and that America has as compared to Russian and how many of that this the Bolsheviks have in contrast to the United States.

Facts and figures are produced for news-eager people, indicating that in some phases of armament we are far ahead of our enemies, while in others we are well behind. But nobody—despite the existence of a great bureaucracy in the psychological warfare divisions—is willing to point out that moral stamina, the conviction of a whole people that they are fighting a worthy cause, has anything to do with final victory, either in a conventional or nuclear war.

The governments which initiated the last two world wars suffered crushing ultimate defeat despite their enormous military and technical superiority. The German military machine in World War I was far better than that of the allies. So were most of the German military leaders. Yet ultimately the German armies were crushed because the Western allies, backed by American intervention in 1917, had enough moral stamina to continue the fight until the aggressor was defeated.

The Nazi forces in World War II were so much better trained, equipped and inspired to establish the millennium that it appeared to superficial observers after the fall of France that a quick victory was inevitable. The collapse of France was not due, however, to the Nazi tanks and Stukas, but principally to the education the French people had received in the three years before the outbreak of hostilities that the Nazi armies were unbeatable.

France's fall was due also to the Communist subversive elements in the French forces (before the fall of France, Stalin was Hitler's ally) which created confusion and panic in the ranks. Another contributory factor was that a number of officials in sensitive positions were either Communists or fringe Communists. One of these was Pierre Cot, Minister of Air, who managed to give France only five planes a month when the Germans were producing several hundred. And lastly, the weak governments which had succeeded each other since 1934 had become soft on nazism and actually believed it was possible to coexist with Hitler.

France, too, enjoyed a Mikoyan visit from Nazi Foreign Minister von Ribbentrop, who was wined and dined by the French Government and French industrialists who were anxious to enter into partnership with the big German industries. No wonder that France collapsed from lack of stamina rather than the blows of Hermann Goering's air armadas.

The air attacks against the British Isles were far more disastrous and costly than those against France. They continued without interruption day and night for many months. But the British were morally better prepared to withstand Hitler's attacks. Brit-

ish politicians, too, had made the fatal error of believing in coexistence with dictators. And Britain had been caught napping and was not prepared to defend herself. But the Communist infiltration before the war was negligible. The people believed in national honor (regarded as jingoistic trash by the increasing number of crytoliberals all over the world) and put up a desperate resistance when everybody believed they would have to surrender.

In 1950 the South Korean armies showed what stamina means in resisting aggression. They were practically annihilated in the early stages of the Communist attack. They were reorganized, and after we equipped them the Korean fighters became as good as our own veterans of the last war, while the people themselves stood unflinchingly the brunt of hardships.

The American people have been served large doses of figures about how far advanced the Russians are in rocketry. They are told daily about devastations which a Soviet onslaught would inflict on this country. And they are told by Khrushchev and Mikoyan as well as Americans awed by these two characters that coexistence on Moscow's terms is preferable to resistance. But few remember that it takes more than the latest destructive weapons to destroy peoples whose fiber has not been weakened.

THE MORAL THERMOMETER

(By Dr. Frederick Brown Harris, Chaplain of the U.S. Senate)

George Washington warned that morality cannot be maintained without a genuine religion.

Morality is the fair flower of religious convictions and experiences. But there is a great gulf between what has been called "churchianity" and Christianity. Long ago Mark Rutherford had that difference in mind when he referred thus to a certain man, "Oh he is a miserable cur; for 40 years he has attended church regularly until he thinks that church going is everything and meanness is nothing." By "meanness" he meant practices in the realm of common decency which violated accepted moral standards.

A great deal of so-called discussion about religion these days has to do with churchianity rather than Christianity. There is, of course, much in present-day church statistics at which we rejoice, but the vital question growing out of the reported church prosperity is what is it doing to raise the moral temperature outside the church. The fact is, that while the church thermometer is on the rise, the moral thermometer is dropping. Certainly it takes no alarmist to point to the gang wars on the steets of our great cities, lighting up the awful problem of juvenile delinquency which only accentuates parental delinquency and the tragic breakup of the American home; the really appalling increase in consumption of beverage alcohol with the frightening personal catastrophes to which any preacher or social worker can testify, to say nothing of the colossal cost in loss of life and crime. All this seems to be more and more accepted as a part of American life, poisoning every aspect of it, and this at the very time that Russia, seeing the danger, is using its regimented authority to discourage such excessive drinking.

Then, there is the unbelievable condition revealed by gangster control of certain crucial labor organizations, as unscrupulous leaders feather their own nests from the dues of the toiling millions and threaten to control the Nation's transportation arteries by underworld methods.

A national radio program holds up in lurid light the alleged growing practice of utilizing sex, and the degradation of womanhood, as an allurement to clinch business deals. And now an actress, having publicly torn to shreds her marriage vows, is given a star role in a picture with "happiness" in its title. Thus is this woman featured as a movie queen, glorified for teen-agers as fit to entertain the American public. So low sinks the moral thermometer in these times when the survival of our way of life is at stake. The list of degradations could go on and on.

But not only in these flagrant examples of the breakdown and the breakthrough of moral bulwarks, but in the ordinary practice of many, in the day-to-day transactions with their neighbors, there are unmistakable evidences of moral sag. Said a prominent lawyer recently in a luncheon conversation: "I find that things have come to such a pass that nowadays when you remind people that what they are doing is not exactly ethical by the old standards, they simply shrug their shoulders and reply, 'Well, by those old rules perhaps what I am doing may not be morally correct, but it's legally right, so what.'"

And so a lack of personal honor has seeped into public life, commercial life, even sports life, to a degree that is ominously disturbing. The primary consideration is, can I get away with this? Rather than, is it right?

A recent article in a nationally read magazine had for its caption, "Are We Becoming a Nation of Chiselers?" The chiseler is one who studies the rules, not to follow them but to dodge them. The chiseler's guide is not conscience—it is anything he can get away with.

In the colleges today are those who will soon be at the wheel of American business life. By what standards are they running their lives now? A recent survey at the University of Pennsylvania showed that 40 percent of the undergraduates freely admit to frequent cheating. The surveyors noted that these chiselers often admitted it with no apology or sense of wrongdoing. In a western university a 21-year-old coed argued that the sort of cheating which is dubbed "cribbing" is simply "collaborating."

The annual cost of shop-lifting in America is pretty close to a billion dollars. Eighty percent of these thieving operators are not professionals, just light-fingered mothers and sisters out of decent homes.

America with its sagging morals needs to listen most to a wise prophet of old who formulated a timeless principle. He enunciated a law which is as valid for our towering-skyscraper age as it was for that ancient nomadic tent-drawing day. That law of the tent is, when you lengthen the cords you must strengthen the stakes. If you neglect this procedure you are heading for calamity, catastrophe and collapse. It is impossible to go on majoring in length if you forget the correspondingly vital matter of strength.

With the supporting stakes of our glittering civilization bending and breaking, the chief danger to America grows out of a pathetic and tragic trust in length without strength, in goods without good, in commercial maneuvers rather than in ethical sanctities. That is the danger to which Edna St. Vincent Millay points with alarm as she saw the tremendous energy of this dynamic day constantly pulling the straining ropes out to wider expanses as the moral thermometer was going down. Here are her warning lines:

"Above the world is stretched the sky,
No higher than the soul is high.
* * * * *
And he, whose soul is flat—the sky
Will cave in on him by and by."

Mikoyan's Espionage Into Our Industries During World War II

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Monday, February 2, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an article entitled "How Mikoyan Got U.S. Secrets," written by George Todt, and published in the Valley Times, San Fernando Valley, Calif., of Saturday, January 24, 1959.

Mr. Todt discloses many revealing facts about Soviet Deputy Premier Mikoyan's days during World II as chief of Soviet espionage into our war industries. I found this well-written commentary to be so informative that I have asked that it be printed in the RECORD as an additional means of bringing it to the attention of the American people.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW MIKOYAN GOT U.S. SECRETS

(By George Todt)

"The advanced state of Soviet technology today is due more to Soviet success in espionage than it is due to their apparatus, good as it is." (Lt. Gen. Arthur Trudeau, Chief, Army Research and Development, 1958.)

Actually, one of Comrade Anastas I. Mikoyan's chief duties during World War II was to serve as chief of Soviet espionage into our war industries.

His main spy headquarters was located in Washington. It was called the Soviet Purchasing Commission.

Some years after the war had ended, a former member of SPC—Victor Kravchenko—gave some pertinent testimony before the House Un-American Activities Committee. Here is what he said, in part:

"The Soviet Purchasing Commission during the war had more than 1,000 employees. Some of them came to the United States as simple engineers, but in reality they were in top positions in industry or in scientific research. Some came as civilians, but really they were officers of the navy or artillery or tank troops or the air force. * * * On the seventh floor of the SPC, behind the iron door at 3355 16th Street * * * there was a special department of the NKVD. * * *"

Kravchenko told of one order from Mikoyan in 1943 which stated, "that we had to find out all secret information about industrial development in the United States, and especially the military industry."

These boys, under the present Deputy Premier of the Soviet Union, did right well at their job, too. For Mikoyan was the Russian counterpart of our own (?) Harry Hopkins, and apparently these gentlemen had a thriving partnership arrangement that really flourished—at least for Moscow.

This might have never come out except for the fact that an American major named George Racey Jordan got nosy one day and pried into supposedly immune Red diplomatic pouches inside some airplanes which our pilots were ferrying to Alaska, there to be picked up by Russian pilots and continued on their Eurasian journey.

What Jordan discovered when he sneaked a look at the Red loot made him start talking to himself. Included was a letter in

longhand from Hopkins to Mikoyan, formulas for the atom bomb, and materials for its manufacture. His subsequent protests to Washington went unheeded.

One well-known atomic authority, Dr. Medford Evans, said:

"It is possible that U^{235} and plutonium, the nuclear components of the atomic bomb, have been systematically diverted from Oak Ridge, Hanford, and Los Alamos in sufficient quantities to charge perhaps 20 atomic bombs."

All of which gives us some small idea of just how effective Comrade Mikoyan was when he was here in our country before.

In fact, he was so outrageously successful in obtaining any and all of our secrets he wanted, including the atom bomb, that a new light has been thrown upon nuclear scientist Robert J. Oppenheimer's reluctance to help in the creation of the even more deadlier hydrogen bomb.

What Dr. Oppenheimer told the Atomic Energy Commission's Personnel Security Board in 1954 was essentially this: If we built a hydrogen bomb, Russia would build one—but if we did not build the thermonuclear device, the Russians would not construct it, either.

Essentially, Dr. Oppenheimer may have been implying that the Reds couldn't steal from us what we did not make; and that if we didn't make a hydrogen bomb, the Reds wouldn't have a model to steal away from us for later mass production purposes.

If this was the way that Dr. Oppenheimer figured it, he may very well have been right.

There is more and more evidence being uncovered which amply demonstrates that the Russian scientists have been wizards at copying the work of others—but with very few scientific firsts of their own.

Their best agent in the securing of our most priceless industrial and military secrets has been—Anastas I. Mikoyan, who is only one notch removed on the Red totem pole from "Mr. Big," himself. He is a very competent and efficient Bolshevik workman.

Some day he might even become the Soviet Union's headman. Who knows?

The Greatness of Lincoln

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, February 2, 1959

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a sermon entitled "The Greatness of Lincoln," delivered by Rev. Richard S. Emrich, Bishop of Michigan, in the Washington Cathedral on January 11, 1959, in connection with the Lincoln sesquicentennial celebration.

The sermon—learned, eloquent, and moving—was preached at a special service in Washington Cathedral inaugurating the Lincoln sesquicentennial celebration. The service, in which the Bishop of Washington participated, was attended by the Vice President of the United States, Hon. RICHARD M. NIXON, members of the Lincoln Sesquicentennial Commission, and a large congregation.

Hon. Ralph Bunch and the senior Senator from Kentucky, members of the Lincoln Sesquicentennial Commission, read the Scripture lesson for the service.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

THE GREATNESS OF LINCOLN: A SERMON BY RICHARD S. EMRICH, BISHOP OF MICHIGAN, PREACHED IN THE WASHINGTON CATHEDRAL, JANUARY 11, 1959, IN CONNECTION WITH THE LINCOLN SESQUICENTENNIAL CELEBRATION

My friends, I count it one of the privileges of my life to speak to you on this occasion. I do not know any more about Abraham Lincoln than most of you here, and I know far less than some of you; but I will affirm that I love the man, and that wisdom and the grace of God have come to me through him.

Our text is the well-known statement of our Lord, "By their fruits shall ye know them."

It is common knowledge that when one stands too close to a mountain range, one cannot see which mountain is the highest and towers above the rest. It is only at a distance that a true perspective is gained, and the great peak can be distinguished from the foothills. So it was that some who lived close to Lincoln could not see his greatness, and failed to see which speech was great at Gettysburg. So it is that we, 150 years after his birth, are able to see that no American is greater; that he was the grandest figure on the crowded canvas of the 19th century; that he represents the America we love as does no other man; that he abides and grows greater with the years; that there was in his simple figure an olympian quality, a nobility and a grandeur; that he was of God; that it is fitting and proper his kneeling statue should be in this cathedral; and that all of this greatness is revealed in the mood approaching religious awe which we feel when we visit his memorial. One hundred and fifty years since his birth, and the outline of his figure, towering above his contemporaries, becomes clearer with the distance.

As preparation for this occasion I read with care his letters and addresses, trying to enter his mind and spirit that I might see his greatness from within and in some small manner understand it. The purpose of this address, and I hope of the whole sesquicentennial celebration, is that we may so understand him that something of his greatness will rub off onto our poorer natures.

There are, of course, some aspects of his figure which we will never understand, and at which we can only wonder. Trying to understand his strange combination of sorrow and jest, of loneliness and wit, is like gazing into a great forest: you can see so far, and then there is hidden mystery. Or how was it, to take another example, that in the midst of an age in which histrionic and florid oratory was the style, a man arose—with 1 year of formal schooling, poor, self-taught—who used language as clean, chaste, and a simple expression of his thought? From what mysterious spring did he drink that he would not, could not, fit into the oratorical pattern of his day? And how was it that he who did not strive for beauty yet achieved it? We can never comprehend him, grasp him, wrap him up in a neat package; but we can from his writings see the broad outline of his greatness.

But, it is not enough to say that he was wise, moderate, merciful, forgiving, humane, a thinker of the first rank, and because of all these virtues the saviour of the Union. We must try to go deeper than that, into the fabric of his mind and spirit, to see why he was these things. He looked at the world in a certain way; he reasoned in a certain manner; and then from the basic unity of his person the specific virtues arose. Great character is not a series of disconnected virtues—like a picket fence—but the great trunk of a tree that organically spreads out its strong branches.

Why was he so great? Why does the poet say that his deep spirit broods over this Nation? Why, a few short years, after the most bitter of partisan struggles, was he accepted as a nonpartisan and unifying figure? Let me share with you my poor analysis, in which I have been helped by other men, and ask that you continue it in your own thoughts.

I

First, we live in a world where men tend to have their thoughts determined by their immediate interests and surroundings. They are white and think white, rich and think rich, easterners and think eastern. The tragedy of history is not simply that men are prone to obvious evil, but that they put their virtues and nobility at the service of their party or little group. Their virtues serve a limited perspective and a parochial imagination. How few Russians there are, for example, who are able to see the aspirations, interests, and fears of America—and vice versa? The result of this is enormous group egos that clash self-righteously with each other.

But occasionally, very occasionally, there appears a man like Lincoln, who mysteriously rises above background, self-interest, and even his age to think and speak for all men. He viewed the world in the deepest perspective, and had constantly about him the Olympian outlook. (See Richard Weaver, "The Ethics of Rhetoric.") The Lincoln Memorial catches this; but you can see it also in his photographs with their homely grandeur and the faraway look in the eyes.

But most of all we can see this grand perspective in what Lord Charnwood calls the "arresting and simple beauty" of his language. "Fourscore and 7 years ago our fathers"—the faraway look back across the long years to the founding of the Nation. He deals with the Founding Fathers systematically and at length in the Cooper Union address that, knowing where they came from, his listeners may know where they are. Some men were violently from Massachusetts or South Carolina, but Lincoln had to say "brought forth on this continent" with a great sweep of thought. And then in the same address there is the faraway look into the future, "The world will little note, nor long remember, what we say here." Or again with the great perspective, "I shall do nothing in malice. What I deal with is too vast for malicious dealing." Or again, with the Olympian outlook above section or partisanship, "In the present Civil War it is quite possible that God's purpose is something different from the purpose of either party." Or, again, the great inclusive view, "As I have not felt, so I have not expressed any harsh sentiment toward our southern brethren. I have constantly declared, as I really believed, the only difference between them and us is the difference of circumstances." Or, again, going beyond America he states the meaning of America for all history and time, "* * * that sentiment in the Declaration of Independence which gave liberty not alone to the people of this country, but hope to all the world, for all future time."

It was from this perspective that the other virtues came. This is the trunk, and the other virtues are the branches; for, if you have a true and great perspective, you know that you are only one actor in a vast drama—and humility is born. And, knowing the greatness of the cause and feeling the travail of a whole continent, you are willing to bear suffering and apologize if only the great cause may go forward. On October 24, 1862, he wrote to General McClellan with very human irritation, "I have just read your dispatch about sore-tongued and fatigued horses. Will you pardon me for asking what the horses of your army have done since the Battle of Antietam that fatigues

anything?" That is a temper like yours and mine. But 3 days later the great perspective rises again. Yours of yesterday received," he writes to McClellan. "Most certainly I intend no injustice to any; and, if I have done any, I deeply regret it."

II

Second, there was something truly remarkable about his method of reasoning. We all know that this self-educated man went deeper than most men, and that after a century much of what he said is still strangely fresh. Why is it, as Richard Weaver says, that he is more quoted than the more intellectual Jefferson or the academic Wilson? What can we learn about his method of reasoning?

Well, he was not corrupted by the modern advertising assumption that the average mental age is 12 years, or by a trust in promotional tricks that make all things trivial. He respected the people, and, as Herndon said, would not think of cheating a man out of his vote any more than he would cheat him out of his money. For his own sake and for his hearers he liked to boil a matter down to a terse statement. "I could not sleep, although I tried to, when I got on such a hunt for an idea until I had caught it; and when I thought I had got it, I was not satisfied until I had repeated it over and over again until I had put it in plain language enough, as I thought, for any boy I knew to comprehend. This was a kind of passion with me." Herndon says that his opponents were afraid of his condensation. This means that Lincoln never threw a battery of arguments at people, like a scattering shotgun. He went to the essence of the matter; or, as he said, he liked to come at a question like a surveyor, from the north, south, east, and west until he had focused it. And then this essence was passed on to the people. "We won't break up the Union, and you shan't." "* * * of the people, by the people, and for the people." "* * * to do the right as God gives us to see the right." "Slavery is a violation of eternal right. We have temporized with it from the necessities of our condition; but as sure as God reigns and schoolchildren read, that black foul lie can never be consecrated into God's hallowed truth." These essences of a clear mind soaked down into the public consciousness until he was able to carry the people with him. He was, says Lord Charnwood, "free from ambiguity of thought or faltering of will."

But Herndon says another thing that brings us still closer to the secret of his power, and reveals the effect of his speaking. "All opponents dreaded his originality of idea, his condensation, definition, and force of expression; and woe to the man who hugged to his bosom a secret error if Lincoln got on the chase of it." Or again, "He was the strongest man I ever saw, looking at him from the standpoint of reason and logic. He came down from that height with irresistible and crashing force." Why? Well, partly the condensation we have already mentioned, but more profoundly the fact that he based his arguments on a definition of the nature of man, the nature of government, the nature of a nation, the nature of the war. This is why we quote him.

If you argue from expediency, your words will disappear in the sand; for the circumstances, upon which your expediency is based, will change. You will be clever, but not necessarily wise. But if you argue from the nature of man, from definition, your words will remain; because human nature does not change. Definition implies a general view which goes beyond the immediate circumstances. Definition requires courage, for you have committed yourself. Definition, based upon the nature of man, is reverent reasoning; for you are asserting the given fact, the final fact, the grain of the universe. So, slavery is attacked at dead center as contrary to the grain of the universe, corrupting the nature of the slave and the slaveholder. The facts of human nature, he believed, could be observed. It is God's decree which can never be reversed.

Is free government strong enough to survive, or must it always be smashed by a minority?—That was the basic question about the nature of free government which was being tested by the war. Or how, with the Father of Waters flowing through the middle of this Nation, do you divide it north and south? The nature of a continent, the nature of man, the nature of government, the defined nature of the war. And because he went in his reasoning to the one essential fact as distinguished from the peripheral and secondary, because he went to the argument behind which there is no other argument, his words endure. And some of them came out with thunder and finality. As Lord Charnwood said, he learned to reason with Euclid and to feel and speak with the authors of the Bible.

III

Finally, we consider the mystery of his religious stature which includes, of course, all we have said so far. This mystery is simply that of his total person. Formal education is good and necessary, but he was wise and profound without a formal education. Church membership with its means and Grace and nurturing fellowship is good and necessary, but he was a saint in politics and a man of God without Church membership. Just as in a lonely way he educated himself, so in a lonely way by reading the Scriptures and by profound meditation he nurtured his soul. "By their fruits shall ye know them"; and his good fruits reveal he was a good tree. If any man, freed from self, seeks the common good, he is a converted man, said William Temple—by that test he was a converted man. As a young man he was a sceptic, but the trials of his life drove him to God. He became a prophet bearing God's righteous and reconciling word to his people. While the church is as necessary for mankind as is the school, we must always recognize that "The wind bloweth where it listeth," and not try to domesticate the Almighty. We must, at the same time, recognize that in church attendance and Bible reading he did receive the water of life.

I first sensed his tremendous religious stature when his life helped to open up for me the meaning of the Beatitudes, which Senator COOPER read in the second lesson this afternoon. "Blessed are the merciful:" kindness and mercy were in the fabric of his being. "Blessed are they who do hunger and thirst after righteousness"—"Beyond and above all skill, says the editor of a great newspaper who heard him at Peoria, "was the overwhelming conviction imposed upon the audience that the speaker was charged with an irresistible and inspiring duty to his fellowmen.

"Blessed are the pure in heart": purity of heart is, apart from selfishness, to will one thing, that God's will be done and the good of all the people be served. "Blessed are the peacemakers". "Blessed are ye when men shall revile and persecute you, and say all manner of evil against you falsely for my sake". "Blessed are the poor in spirit," for, knowing their own need, and not arrogant in spirit, they turn to God in their need. "Blessed are they that mourn"; if you truly love men, you must mourn when they die in battle. Sorrow is the other side of the coin of love.

"Blessed are the meek"; meekness is the opposite of self-centered pushiness. It is to be so centered in God's great purposes that one's own little ego is out of the picture. Lincoln refused to be angry when McClellan snubbed him, even insulted him. He wrote to General Grant," . . . When you got below and took Port Gibson, Grand Gulf, and vicinity, I thought you should go down the river and join General Banks, and when you turned northward, east of the Big Black, I feared it was a mistake. I now wish to make the personal acknowledgment that you were right and I was wrong. Sincerely, Abraham Lincoln." "Blessed are the meek."

Before closing with three passages in which we will listen to Lincoln's own words, consider this description of how it appeared to those who heard him. "As soon as he lost thought of himself in his subject his voice and manner changed; deeper notes, of which friends record the beauty, rang out, the sad eyes kindled, and the tall, gaunt figure with the strange gesture of the long, uplifted arms, acquired even a certain majesty."

1. He said about a Negro slave, "In some things she is certainly not my equal, but in her natural right to eat the bread that she has earned with the sweat of her brow, she is my equal, and the equal of Judge Douglas, and the equal of any man."

2. He said, "I know there is a God, and that he hates injustice and slavery. I see the storm coming, and I know that His hand is in it. If He has a place and work for me—and I think He has—I believe I am ready. I am nothing, but truth is everything. I know I am right because I know that liberty is right, for Christ teaches it, and Christ is God. I have told them that a house divided against itself cannot stand, and Christ and reason say the same; and they will find it so. Douglas don't care whether slavery is voted up or voted down, but God cares, and humanity cares, and I care; and with God's help I shall not fail. I may not see the end; but it will come, and I shall be vindicated; and these men will find that they have not read their Bible aright."

3. He said, "When * * * you have succeeded in dehumanizing the Negro; when you have put him down and made it impossible for him to be but as the beasts of the field; when you have extinguished his soul in this world and placed him where the ray of hope is blown out as in the darkness of the damned, are you quite sure that the demon you have roused will not turn and rend you? What constitutes the bulwark of our own liberty and independence? It is not our frowning battlements, our bristling sea coasts, our Army and Navy. These are not our reliance against tyranny. All of those may be turned against us without making us weaker for the struggle. Our reliance is in the love of liberty which God has planted in us. Our defense is in the spirit which prized liberty as the heritage of all men, in all lands everywhere. Destroy this spirit and you have planted the seeds of despotism at your own doors. Familiarize yourselves with the chains of bondage and you prepare your own limbs to wear them. Accustomed to trample on the rights of others, you have lost the genius of your own independence and become the fit subject of the first cunning tyrant who rises among you."

Praise be to Thee, O God, for thy servant and prophet, Abraham Lincoln.

Ten Points Deserving Consideration

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 2, 1959

Mr. THURMOND. Mr. President, in South Carolina editorials frequently are published in many of the newspapers around the State under the byline "The Spectator." In the most recent column

by the Spectator he lists 10 points well worth considering. There was a time when no one would question any of these points. I should like to think that such will soon be the case again. These 10 points were sent to the Spectator by Mr. G. R. Battle of West Columbia, S.C. I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the 10 points were ordered to be printed in the RECORD, as follows:

TEN POINTS

1. You cannot bring about prosperity by discouraging thrift.
2. You cannot strengthen the weak by weakening the strong.
3. You cannot help small men by tearing down big men.
4. You cannot help the poor by destroying the rich.
5. You cannot lift the wage earner by pulling down the wage payer.
6. You cannot keep out of trouble by spending more than your income.
7. You cannot further the brotherhood of man by inciting class hatred.
8. You cannot establish sound security on borrowed money.
9. You cannot build character and courage by taking away a man's initiative and independence.
10. You cannot help men permanently by doing for them what they could and should do for themselves.

The Flying Wheels Visit Washington

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. HOSMER. Mr. Speaker, last evening one of the most exciting basketball games of the year was played at Bethesda Naval Hospital gymnasium. Yet not one of the players is able to walk, let alone run. This was a game of wheelchair basketball, played by brave young veterans who carry on almost normal lives despite the loss of the use of their limbs.

Their story has been well told by John B. Old as follows:

BEST YEARS OF THEIR LIVES
(By John B. Old)

Paralyzed veterans by definition are fine young Americans who will never walk again. They're paralyzed from the waist down. Most of 'em are victims of an enemy bullet in the spine. Others are victims of polio or tragic accidents. All served their country gallantly.

Many are continuously bedridden. Others find themselves chained to wheelchairs for the rest of their life, compelled to return periodically to VA hospitals for checkups and medical attention.

Their incentive to live isn't the same as most people—or so you might reasonably assume. Not so with the courageous members of the Flying Wheels, all-star wheelchair basketball squad of the Long Beach, Calif., Paralyzed Veterans Association.

They're out to prove to themselves, to their less fortunate bedridden PVA brethren, polio victims everywhere and the world at large that the years to come should not be wasted in self pity or vain regrets sitting on the sidelines of life. They're going to be participants.

The agonies of the souls which all hopelessly crippled young veterans must have suffered can only be imagined. What gutty guys like the Flying Wheels are doing today takes more courage, in a way, than they were called on to display against the enemy.

Although their mode of living is limited, they have but one code: "Ability, not disability, counts." Wheelchair basketball is doing much to keep that spirit alive and contagious.

It all started early in World War II at the now discarded Birmingham VA hospital, Van Nuys, Calif. Hunting a way to inspire bedridden patients, Bob Rynearson of the recreation department hit upon the idea of wheelchair basketball—played just like able-bodied teams do with only slight variations—such as two pushes on the wheels, while the ball rests on a player's lap, is the equivalent of a dribble.

Occasionally a veteran would wheel down to the gym. On the court self-confidence was bolstered. Returning to his ward, he'd brag of his shooting—a direct challenge to ward mates to get out of bed. As the competitive spirit lurks in the heart of every American youth, many accepted. Later more and more. For most of the paraplegics it was their first real inspiration to get out of bed, back into the American competitive way of life, if only to beat a bunk mate.

Once on the court they gained physical benefits far and beyond the reach of calisthenics. A new and hopeful mental outlook was born. They bit heavily into the challenge to excel, found they were no longer cognizant of their handicap. Now all wheelchair basketball players love crowds—especially when backward fellows with similar handicaps are watching. Their brilliant court play is inspiring proof positive: "Ability, not disability, counts."

Because of its proven value, wheelchair basketball is now played wherever PVA groups assemble. Unfortunately for the southern California group, there is no other VA paraplegic center west of Kansas City. Hence these annual coast-to-coast, nonprofit, noncommercial tours. The Flying Wheels want to meet and beat the best wheelchair teams in the country.

Hail to the gallant crusading Flying Wheels.

An excerpt from Veterans' Administration Technical Bulletin TB 10–503, page 36, paragraph 5, reveals:

The importance of competitive games for physical and psychological rehabilitation of paraplegics must not be forgotten. These games maintain the musculature in good condition, improve coordination, and put to severe test the paraplegic's ability to balance as in a fast basketball game conducted from wheelchairs.

The mental goal achieved by such competition is a loss of self-consciousness and a gain of self-reliance.

It is medically desirable that tournaments be regularly arranged between the several paraplegic centers in the Veterans' Administration.

Dr. Ernest Bors, medical chief, paraplegic section, Long Beach Veterans Hospital, observes:

Having witnessed the very beginning of the athletic rehabilitation of paraplegic patients, I am impressed with the beneficial effect wheelchair basketball has on the morale and on the physical well being of the paralyzed veterans.

Successful rehabilitation of the severely disabled person is contingent upon the mental approach. It is evident that the self-consciousness of patients, who are bound to use a wheelchair, has been greatly relieved by competitive performances before spectators. Good muscle function, so vital to the patient with a spinal cord injury, is obtained through participation in wheelchair basketball.

The patient's desire to play wheelchair basketball makes his mental and physical rehabilitation a voluntary pleasure.

In 11 coast-to-coast wheelchair basketball tours and 3 national championship trips, the Flying Wheels have amassed the amazing record of 86 victories, 29 defeats in 115 intersectional games. They have averaged 35 points per game, a remarkably high percentage.

Their best years were in 1948, 1950, 1953, 1955, and 1958.

The Long Beach, Calif., PVA All-Stars have accounted for three national championships—in 1948, 1955, and 1958. In 1948 they were named U.S. champions by the Helms Athletic Foundation of California.

In 1958, the Flying Wheels, after capturing the Pacific Coast Wheelchair Basketball Association title, registered nine straight triumphs without a loss on their 11th annual transcontinental tour. Then they traveled to Rantoul, Ill., where they eliminated the St. Louis Rams, 50 to 28; the Brooklyn Whirlaways, 58 to 40, and the defending champion Pan-Am Jets, 51 to 42, to win the national championship.

The record: 1948,[1] won 12, lost 1, national champions; 1949, won 7, lost 4; 1950, won 10, lost 1; 1951, won 3, lost 6; 1952, won 3, lost 3; 1953, won 9, lost 1; 1953,[1] won 1, lost 2; 1954, won 5, lost 4; 1955, won 9, lost 0; 1955,[1] won 3 lost 0, national champions; 1956, won 6, lost 3; 1957, won 5, lost 3; 1958, won 9, lost 0; 1958,[1] won 3, lost 0, national champions. Totals, won 86, lost 29.

The 1959 Flying Wheels team members are the following:

No.	Position	Name
10	Guard...	Roger Latham: Korean war veteran (Air Force), staff sergeant, gunner. Born in Mount Vernon, Ohio, Apr. 30, 1930. Graduated from military academy in Woodstock, Va. Attended VMI, SVC, and Long Beach State College. BA degree in psychology. Letterman in college wrestling and also won letters for football and baseball in highschool.
11	Forward.	Esker Hester: Korean war veteran (Air Force). Born in La Mesa, Tex., Aug. 16, 1930. Moved to Hollywood, Calif., at age of 16 and graduated from Hollywood High. Studied accounting at UCLA. Spent 4 years in Air Force, a navigator. Hobbies include chess and bridge.
12	...do.....	Chauncy Durand: World War II veteran, (Army). Born in Rochester, Minn., Dec. 6, 1926. Graduated from Rochester High after playing football and ice hockey. Attended Rochester Junior College and studied business administration. Also attended a trade school for instruction on radio and television repair. Choe Chee is his nickname.
14	Guard...	Gil Ortiz: World War II veteran (Army). Born in Anaheim, Calif., Sept. 30, 1924. Lived in Chandler, Ariz., greater part of his life. He was a high school letterman in basketball, football, and baseball. Studied journalism at Long Beach State. Hobbies run from hunting to fishing. He was voted all-America third-string guard at national tourney, 1958. Spider (long arms) is his nickname.

[1] National championship tournaments.

No.	Position	Name
15	Guard	Dean Traxinger: Korean war veteran (U.S. Marine Corps), corporal. Born in Memphis, Minn., Feb. 18, 1933. Graduated from St. Louis Park High School. Attended Minnesota Business College and studied accounting. During high school days was active in basketball, football, and baseball. Dean has been married 5 years.
16	Forward.	Frank Behunin: Korean war veteran (Army). Born in Fillmore, Utah, Mar. 16, 1931. Graduated from Provo High School, Provo, Utah, and won his letter in basketball. His hobbies are archery and wood carving. He also has done some outstanding work with the Artesia, Calif., Boy Scouts. He is married and has a daughter.
20	Center..	Gene Atkinson: Korean war veteran (U.S. Marine Corps). Born in San Francisco, Sept. 16, 1928. Graduated from Balboa High School. Letterman in high school football and also played sports in service. Gene is single.
21	...do.....	Ray Mitchell: World War II veteran (1st lieutenant, Army). Born in Kansas City, Mo., Aug. 24, 1921. Attended Kansas City High School. Holds bachelor of science degree at UCLA in personnel management. Also master of business administration. Hobbies and sports include swimming, water and wheelchair basketball, football and "rooting for the Dodgers." He is married, the father of 2 boys. A veteran of wheelchair basketball world.
22	Guard..	Ronald Rynders: Korean war veteran (Navy). Born in Van Nuys, Calif., Oct. 4, 1931. Attended Van Nuys High School where he won letters in track and basketball. Contracted polio in 1956. During war won battle ribbon and 3 battle stars. Also awarded Korean Presidential unit citation. He is now in private business in the appliance and furniture field. Is married, father of a girl.
——	.....	Tom Culp (coach): Korean war veteran (staff sergeant, U.S. Marine Corps). Born Aug. 5, 1932, in Akron, Ohio. Graduated from Akron West High School. Was a letterman in basketball, football, and golf. Attended Long Beach City College where he studied prelaw. He is now a director for the Lakewood, Calif., Recreation Department. Tom is single and this is his 1st Flying Wheels' coaching assignment.
——	.....	Russ Churchman (assistant coach, trainer): Korean war veteran. (Navy). Born in Hardin, Ill., Mar. 17, 1933. Graduated from Hardin High and was letterman in baseball and basketball. Served 4 years in Navy—a yeoman 2d class in the Pacific and Korea areas. Attended Long Beach City College. He works for the Lakewood, Calif., Recreational Department as a director. Is married and has a little girl.
——	.....	James E. Smith (manager): World War II veteran (Army). Born in Brockton, Mass., Mar. 12, 1927. Graduated from Brockton High School. This is Jim's 2d year with the Flying Wheels. He is president of the Pacific Coast Wheel Chair Basketball Association.

Able-bodied personnel accompanying the Flying Wheels are the following:

Coach, Tom Culp, Long Beach, Calif., Recreation Department.

Physicians, Dr. Martin Hansen and Dr. Peter J. Rocovich, both of Queen of Angels Hospital, Los Angeles.

Trainer, Russ Churchman, Long Beach, Calif., Recreation Department.

Publicity director, Sam Schnitzer, Los Angeles Examiner.

Tour director, John B. Old, Los Angeles Herald Express.

All traveling expenses for this tour—and last 5 years—paid by the Los Angeles Evening Herald and Express through the courtesy of Mr. David Hearst, publisher; and Mr. George Hearst, business manager.

Expenses for the first seven coast-to-coast tours were raised by John B. Old through personal solicitation of his friends.

Korean-American Proxy Adoption

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a press release issued by the Presbyterian News Bureau entitled "Korean, American Church and Welfare Leaders Endorse Proxy Adoption."

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

KOREAN, AMERICAN CHURCH AND WELFARE LEADERS ENDORSE PROXY ADOPTION

SEOUL, KOREA.—Proxy adoption as currently provided for under American congressional legislation is an essential element for any real solution of the Korean-American orphan problem, according to strong statements made here by Korean and American representatives from a dozen interested agencies now at work in that phase of Christian and secular relief and welfare operations in Korea.

Meeting in a seminar held under the auspices of Korea Church World Service, the participants took strong exception to representations by visiting International Social Service Director William Kirk, who insisted that proxy adoption should be eliminated as a valid procedure under future orphan legislation. Kirk, currently touring ISS branches in Asia, proposed that only orphan placements arranged by professional graduate social workers in long-established welfare agency programs be accepted as acceptable, sound practice.

Dr. G. H. Rue, M.D., well-known Seventh-day Adventist director of the Seoul Sanitarium and Hospital, was the first of those present to confirm the fact that present independent programs are moving the overwhelming majority of mixed-blood orphans, and have piled up a record of impressive success—including a replacement figure comparable to that found in more time-consuming professional programs.

"We do our own work," Dr. Rue said. "We find that it works very satisfactorily, and we've had no trouble at all."

To answer why the Seventh-day Adventist orphan-placement program does not make use of the services of the professional welfare agencies at work in their area, Dr. Rue stated that the main reason was because "it takes forever and a day."

Mrs. Oak-soon Hong, director of the Child-Placement Service of the Korean Government, added that her own organization had found it necessary to use proxy adoption to move orphans because of the large number of professional welfare agencies in the United States which refuse to release home studies to any other agency except International Social Service. There was general agreement that commonsense home studies based on the judgment and opinion of pastors and a broad base of mature individuals already thoroughly acquainted with the prospective adopting home weer essential in order to cope with Korean conditions under which professional agency delays often lead to serious illness or death for the mixed-blood orphan.

Two representatives—Mrs. Wilbur Bacon, Korea director for Pearl Buck's Welcome House program, and Miss Marion A. Shaw, Methodist leader in orphan welfare work for Korea—backed up the professional welfare concern for home studies conducted along traditional time-consuming lines, but spoke out strongly for proxy adoption as the sensible way to expedite the process once child and home have been matched.

Only fireworks of the seminar developed when the visiting International Social Service director charged that already hundreds of Korean-American orphans have been so badly placed by the five non-ISS agencies that they have undergone abuse and described their detailed followup programs which have protected each child and resulted in happy second placements for the approximately 1 percent of Korean-American orphans who failed to become satisfactorily integrated into their new homes.

Independent observers from missions not directly engaged in adoption programs joined in emphatically to say that they felt they could not credit Kirk's allegation because they had personally followed large numbers of children through the independent programs to their new homes and had found nothing but happy adjustments. Miss Olivette Swallen, longtime worker in home visitation for the United Presbyterian Mission, stated, "I positively know that very, very few have been changed. It's been a very, very small number, and altogether there are hundreds and hundreds—thousands—of children sent from this country to happy homes."

Major statistics as brought out in the seminar included:

Agency (in alphabetical order):	*Orphans moved from Korea*
American Soul Clinic	13
Child Placement Service, Ministry of Health and Welfare, Republic of Korea	[1] 508
Holt adoption program	1,070
International Social Service (no statistics)	([2])
National Catholic Welfare Service	[3] 23
Seventh-day Adventist	[3] 23
Welcome House	21
Total reported	1,800

[1] Through June 1958 only.
[2] ISS estimate, around 200; Korean Government estimate based on issuance of orphan passports, ISS, around 50.
[3] In 1958 only.

GTA Daily Radio Roundup

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the GTA Daily Radio Roundup broadcast by the Farmers Union Grain Terminal Association on January 15, 23, and 30, 1959.

There being no objection, the text of the radio broadcasts were ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP OF JANUARY 15, 1959

Do you remember those $10 hogs back in the fall of 1955? That was a disastrous price. But farmers had to sell. You don't just turn off the machine, stack hogs in a warehouse, and wait for a better price.

So farmers sold, took their beating, and readjusted production programs. Hundreds of thousands gave up hog raising in disgust or cut way down on their herds. No businessman can sell at a loss for long and stay in business.

As soon as the hog glut was flushed out of the market, prices started climbing. In the meantime, the administration in Washington had been busily trimming price supports on grain and, of course, cash prices weakened, too. Again, farmers couldn't turn off the growing crops, so the country became flooded with cheap feed grain. What to do with it? Well, hog and cattle prices were perking up, "so let's throw this cheap feed into more and more cattle and hogs and take another price gamble."

Now, all this isn't done in a day. It takes 5 to 6 months to feed up a hog to market weight and around 2 years for a beef cow. With the wild fluctuations on the wide open livestock markets—who can guess the price that far ahead?

It's a multibillion-dollar gambling game and farmers have no choice but to keep rolling the dice.

Now it looks like we have again arrived at the jumping-off place for hog prices. At least that's the opinion of economist Francis A. Kutish of Iowa State College. He warned the other day that the hog market could get rough in the late February-March-April peak marketing period. It seems that fall production of pigs in 1958 was up 17 percent over 1957. In South Dakota alone the jump was 49 percent, as we see by the South Dakota Farmers Union paper.

And on top of that, another pile-up of 16 percent is expected when spring pigs are farrowed, beginning in a short time.

So the Iowa economists tell farmers to market fall pigs in the next 30 days, as fast as they reach 210 to 220 pounds. It sounds to us that he is telling farmers to unload before the price bust. That's the advice of Francis A. Kutish, Iowa State College economist. We're just passing it on for what it is worth to you as individual farmers.

Well, we don't pretend to be livestock marketing experts but we do note that Glenn Long, manager of Farmers Union Marketing Association, is warning of a general slump in livestock prices, too.

The tragedy is that farmers can't do much about it now except maybe to plow under little pigs and cows—and that goes against just about everything farmers have always believed in. They believe in abundance and fair prices to consumers. They don't believe that food production should teeter on the verge of scarcity just to hold up prices. Farmers have said so time and again through their organizations like Farmers Union, and through their cooperatives like GTA. All they ask in return for this abundance is fair prices and a fair return on their labor, investment and management. Legislation to smooth out the free-wheeling—roller-coaster prices that are so ruinous to farm business management. And that's why more and more farmers are organizing and cooperating—GTA—the co-op way.

GTA DAILY RADIO ROUNDUP OF JANUARY 23, 1959

For many years now certain groups have been attacking the cooperatives that you farmers built. They say your co-ops don't pay taxes.

The truth is just the opposite. Every year the co-ops in the United States, from your hometown to the big cities like St. Paul, pay out many thousands of dollars in taxes. The same property—and real estate—and special taxes that any other business pays.

The only tax that the co-ops do not pay is the income tax that corporations pay on their profits. And why not? Because the earnings of a co-op belong to the people who do business with it and they are returned to these people in cash or securities.

Now, nearly all farmers know that. But many city people do not. It always comes as a surprise to them when they find out that co-ops are big taxpayers. In many communities, GTA or the local co-op is the biggest single taxpayer.

So on January 19, when President Eisenhower said in his budget message that corrective amendments to the laws on taxation of cooperatives will be transmited to the Congress shortly, farmers were not concerned because they are willing to pay their fair share of taxes and they believe that their privately owned, taxpaying co-ops are paying their fair share.

There was some talk in Washington that the Government could get $50 million a year more from co-ops. But Alfred D. Stedman of the St. Paul Pioneer Press says in a newspaper article that co-op leaders he has talked to agree that the Treasury's proposition is plainly not a revenue measure but a move to block future cooperative growth. Some doubted that it would yield any substantial revenue at all.

Roy F. Hendrickson, executive secretary of the National Federation of Grain Cooperatives, headquartered in Washington, says that co-op friends and even some of their enemies consider the Treasury proposal to be extreme, unfair, and punitive. It would force co-ops to pay a specific minimum interest rate and dictate the terms of their obligation to members. It would also reduce the ability of co-ops to expand services and activities that have been voted by members.

What is the treasury co-op tax proposal? It says that co-ops can keep their earnings for only three years despite the wishes of members. And they would have to pay 4 percent interest. At the end of 3 years it would all have to be paid out in cash no matter whether the co-op needs the money to grow and expand, or to carry on operations that have been ordered by the farmers.

And this, of course, is a drastic change from the historical treatment of cooperatives. The former Senator Robert A. Taft, a conservative and a Republican leader, said in 1951: "It is true that cooperatives may be able to accumulate reserves and build facilities from those reserves. But again, if the farmer is to have his fair bargaining power in the marketplace he requires physical facilities and there is no place where he can get the necessary capital except from the operation of the cooperative itself." That was Senator Taft's statement.

Unless there is strong co-op protest to the President's co-op tax plans, they could be railroaded through Congress. So it is up to co-ops and their farmer members to make themselves heard in Washington.

GTA DAILY RADIO ROUNDUP OF JANUARY 30, 1959

The most amazing thing about President Eisenhower's farm ideas is the fact that they are absolutely inflexible. They are rigid as a steel pole, and they haven't changed even a little bit since he named Mr. Benson as his Secretary of Agriculture back in 1953. The President, way back then, began demanding lower flexible farm price supports, and he did it with inflexible singlemindedness.

Almost every farmer in America, however, remembers the Eisenhower "Golden Promise" of full parity income for farmers. It was made in the 1952 campaign at Kasson, Minn., and repeated at Brookings, S. Dak. But by 1953, the golden promise was broken.

So the farm ideas that the President laid before Congress Thursday came as no surprise to farmers. They are Secretary Benson's ideas. The President apparently endorses them 100 percent. The very program that the President calls excessively expensive (and it is, both to farmers and taxpayers) is the handiwork of his Secretary of Agriculture.

Now even the big newspapers, and many important Republicans, are admitting that the President is wrong. The newspapers are full of criticism of the farm message—coming from both sides of the political fence. Just about any criticism you want to make already has been voiced by some top-ranking Republican or Democrat or farm leader.

One says the farm message is "conceived out of a desire to punish farmers for the sins of the Agriculture Department." Another says: "A plan to reduce farm prices 25 percent, and that's 100 percent wrong." You'll be hearing plenty more, too.

It has been obvious for some time now that Secretary Benson has been trying to put his hex sign on wheat. St. Paul newspaper writer Al Stedman says that "A terrific farm fight looms in Congress to head off a cut of 10 to 39 cents or more a bushel in Federal wheat price supports next year—and further cuts later." And he's right. The President called for wheat prices "competitive with corn and other feed grains." That would mean about $1.30 a bushel for wheat in 1960.

It's either that, the President indicated, or ironclad production cuts, along with lower price supports, down to about $1.43 a bushel. And either way, the wheat farmer would find that he must get along on less money. That's no choice.

Is there an alternative? Well, one suggestion that sounds reasonable is this: Farmers who are asked to cut way down on production should be given decent prices, on a parity yardstick. Be paid a living wage. How do you think that would work? Right for the moment, on the sunny side of the barn, there is the fact stated by GTA General Manager M. W. Thatcher. He said that Congress will decide this year's farm legislation, not Secretary Benson. And we note that Senate Majority Leader LYNDON JOHNSON backs that up with a promise of new and better legislation.

But while you are waiting, don't forget that your cooperatives are on your side, both at home and in Washington. Patronize them, because they work for you, GTA—the co-op way.

Social Welfare Work

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, January 29, 1959

Mr. JOHNSON of Texas. Mr. President, on a recent tour of the Far East, Dr. Frederick M. Lange, executive vice president of the Dallas County Community Chest Fund, Dallas, Tex., delivered to audiences in Delhi, India, an outstanding address on social welfare work.

Dr. Lange, for many years an outstanding national leader in the American Community Chest movement, addressed the Delhi School of Social Work and the Indian Conference of Social Work.

I am informed that this address will cover slightly more than two pages in the CONGRESSIONAL RECORD, at a total cost of $216, but so well does it examine

the operations and ideals of community social welfare work that I believe it should be brought to the attention of the Congress and the people of America.

I ask unanimous consent that the text of his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SOCIAL WELFARE WORK

(Address delivered by Dr. Frederick M. Lange, executive vice president, Dallas Community Chest Trust Fund)

Under our Government we have a broad system of social insurance called social security participated in by all employed persons. Also almost all citizens carry life, accident, and hazard insurance with commercial firms. Further we have programs of financial assistance, some of which are under the joint auspices of our National and State Governments and some given by our local city and county governments. In general, our governmental social services are related to the need for financial assistance and medical care caused by misfortune, handicapping accidents, unemployment or old age. Many of our specialized social services, particularly in relation to personal and family counseling, child care, health education, research on various diseases, and preventive services are financed privately. In the latter our churches play a very significant part.

As you can see, in the United States of America most of our leaders as far as possible, try to get things done through private rather than governmental means. There is a conviction that we should not ask government to take on programs which can be carried effectively by private individuals or private organizations. Our community leaders resist the tendency to unnecessarily centralize authority in the National Government. If governmental help is necessary they do not ask the State to do what the local government could do, and they do not ask the National Government to do something which the State government could do.

Although our leaders made every effort to provide constructive and essential social services for individuals and families, they have a strong belief that these services should be given in such a way that they will encourage people to help themselves as much as possible. They have a conviction the social services should be given in such a way that they will restore and preserve the personal independence, responsibility, and initiative of the individual and his family.

In your kind invitation you suggested that I tell you about the work of the community chest. This is a complicated story and I will try to do it in general terms. You may wish to ask questions about specific matters later on and I will be glad to elaborate on any phase that interests you. Many of our voluntary agencies are older than the governmental services, many of which came into being during the widespread economic depression in the 1930's. Many of the national governmental agencies were created at that time because large numbers of persons were out of work and the need mounted so rapidly that it was not possible for private organizations to finance all the necessary help.

Every large American city has a very large number of private welfare organizations, each devoted to a specific area of service. In my community there are at least 75 such private organizations. To understand this complex situation some explanation is necessary. The main reason we have so many organizations in the field is because so many private groups are interested in and doing such a great variety of things. Their services touch the lives of everyone regardless of economic or social position. Welfare services in the United States of America are not confined to services for the indigent. A good example of this is the tremendous amount of money spent on research, public education, and case finding in regard to almost every known disease. We have many services classified as welfare services in which all economic groups participate. For instance, the Community Chest raises funds to support our Boy Scouts, Camp Fire Girls, Girl Scouts, Young Men's Christian Association, and Young Women's Christian Association. Boys and girls from the very high income families participate in these activities in exactly the same way as do children from homes where for various reasons the income may be modest. In certain programs some of the participants pay and some do not. The knowledge of who pays and who does not is kept confidential and is known only to the administrative office. As far as participation in the program is concerned, everyone is on an equal footing and treated alike.

In addition to the fact that our social services are for everyone, we have many agencies in the field because social work in the United States of America is specialized. Through constant studies our professional workers have learned a great deal and have developed skills which enable them to give more effective help. When a worker specializes, he gets to know more about his field and has greater competence, but they also must have a knowledge of the entire field.

Because of the number of these organizations, it is essential that there be some place where they all can come together, so that they can plan their many activities cooperatively and coordinate their programs. As you can readily understand, unless this is done there would be chaos and waste. Every large American city, therefore, has an organization called a council of social agencies or a welfare council. Representatives from all these organizations, both governmental and private, together with interested citizens, come together to plan their part in the total effort. The result is that these organizations are made aware of what social services are needed most in their county, and they are encouraged to give those services with as little duplication as possible. Although this coordinating and planning council works with all organizations, it is financed by voluntary gifts through the community chest.

I am telling you about the work of the council of social agencies before I tell you about the community chest because in this way I believe that my later remarks will be clearer. In addition to working and planning with representatives of all the agencies in our county, the council is constantly making studies concerning changes which need to be made as a result of changing social and economic conditions. The council also keeps the general public informed about what is being done, and also about what needs to be done in the future. The council on the basis of experience knows that an effective overall social welfare plan in any city must include a variety of basic social services. If more money than necessary is spent on one problem, this can mean that another problem, perhaps equally important, may be neglected. Too much of one service or too little of another upsets the balance and can make for inefficiency. Although this planning and coordination through the council is voluntary and not prescribed by government, it is remarkably effective. When the council recommends that a new service be created or a service changed or discontinued, the recommendation is usually followed because it is generally accepted that the recommendations are based on study and experience and in the best interests of the total community.

In an effort to generalize the many complex problems and services in a large city, some communities, including Dallas, classify the numerous social services into four large categories:

First. Those problems and services directed toward what we call economic needs. In other words, directed toward those individuals and families who cannot provide minimum living essentials for themselves because of some misfortune. This usually means food, shelter, and clothing.

Second. Problems and services related to health and health education. These services are directed toward everyone. Those who cannot afford to pay for essential medical care receive it free. Others pay in accordance with their ability depending upon their income, based on a scale developed by the council of social agencies called the standard family budget which is developed by expert homemakers. Much service and treatment is available from social agencies which is not available anywhere else.

Third is the area which we call counseling services. This area concerns casework, counseling, psychological testing, guidance and psychiatric services for individuals, including children, who have emotional or personality problems which are causing difficulties. Here again these services are for everyone.

The fourth area of service is the recreation, group work, informal education field. This includes community centers, clubs, scouting, and group activities for all ages but especially for young people. We have learned that providing opportunities for creative play and enjoyment is a necessity, not a luxury. Experience of such national groups as our National Recreation Association has indicated that constructive group activity is essential not only to good physical but also to good mental health.

I want to say a word of caution about the four areas of service which I have mentioned. I have greatly oversimplified a complex picture for the sake of brevity.

July 1956, I appeared before a group of social welfare leaders in Stockholm, Sweden under the auspices of the control committee representing 16 private business associations in Sweden. The members of these associations contribute to separate appeals by voluntary philanthropies approved by the committee. Last year they gave 47 million kroner for the support of Swedish voluntary agencies. I was pleased when my remarks at that meeting were printed and made a permanent record of our National Government in the CONGRESSIONAL RECORD of the United States of America. The Swedish leaders were most interested in one particular aspect of my remarks, the fact that so much of the private social work activity in my country is carried on by nonpaid volunteers. This fact seemed to impress them most of all. In our total private welfare effort there is a low proportion of paid professional workers to nonpaid volunteers. We have several organizations where just one or two professional workers have several hundred volunteers to call upon to help get the agencies' work done. We have a very large number of volunteers who contribute their time working in hospitals, thus freeing the professional and technical staffs from doing many of the nontechnical chores. Another typical example is our group programs where a few well qualified professional workers recruit and train large numbers of volunteers to carry on the bulk of the program.

This same thing is true of activities directed toward financing private social services. Thousands of interested citizens volunteer their time in soliciting funds during the intensive campaigns. This participation on the part of nonpaid volunteers not only helps to lower costs but also builds up a strong interest in the social services on the part of the citizens. For these reasons you can see that social services in my country are truly for everyone and supported by everyone.

I cannot overemphasize this fact since it is so important. Because everyone benefits from these services and helps support them, it removes the old fashioned idea that social

services are an act of condescending charity on the part of those who have financial means toward those in the lower economic group. In our city social service is, "Many in one, for all." This is consistent with our democratic way of life.

Because so many citizens are involved in supporting these activities, it is impossible for anyone to tell exactly how many there are. I can only give you these examples and estimates. For instance, in one campaign for funds on the part of a health agency 20,000 citizens in my city actively participated. I believe it would be conservative to estimate that at least 75,000 citizens in Dallas are engaged in some form of nonpaid volunteer activity in our social service organizations. This does not include doctors, lawyers, and other professional groups who give millions of dollars of service free, contributing thousands of hours both day and night.

One of the most notable developments in this field in the United States of America is the community chest. This is the part of the total picture which I know best since I have been engaged in work related to social service for the past 25 years and have been a director of the Dallas Community Chest for the past 13 years. However, I come here realizing that what will operate successfully in my country may not necessarily work successfully in another country. I can only tell you what we do and leave the judgment of its values to you.

Of course, I have not come here as a missionary trying to convince you that our plan is the only one. I am certain that as leaders in this field in India, you have given considerable thought to these matters and that you have evolved an approach to your problem which is related to your particular needs and conditions. My only reason for going into detail about the plan which we use in the United States of America is to give you an opportunity to compare your methods with ours. This meeting will also give me the same opportunity and enable me to go back with new knowledge.

Because we have a great many voluntary welfare organizations their financing through private contributions is a large task. Many years ago each of these organizations collected its own funds by making separate appeals to the population. It was realized many years ago that this pattern of each one asking funds separately was inefficient. Gradually more and more of these private organizations came together and had one large appeal during the year for the benefit of all. The first American attempt at such a cooperative appeal for charitable purposes took place in the city of Denver in 1887. However, this venture was not permanent. The first cooperative appeal which is generally regarded as the first community chest was organized in the city of Cleveland in 1913. This method of raising funds for private welfare organizations has been very successful and has spread rapidly. According to United Community Funds and Councils of America, last year about 2,000 American cities used this method and the movement has spread to Canada, Hawaii, Australia, Cuba, the Philippines, and South Africa. Funds raised this way in 1956 for use in 1957 totaled more than $379 million, and represented contributions from over 26 million individuals and companies. This total effort was carried on by over 3 million volunteer citizen workers and supported the programs of over 21,000 private welfare organizations.

It is easy to understand why this method of fund raising is increasing in popularity. It allows the volunteer solicitors to concentrate on a single campaign instead of separate campaigns for each agency. It relieves the director and workers of the agency of the responsibility for raising their own funds and so enables them to concentrate on performing needed service. It helps the contributor because he knows that each organization which will receive money has been thoroughly studied by the citizen leaders in the community chest. Because the cooperative campaign is larger and more inclusive, it has an appeal to all people at all levels.

These cooperative fund-raising efforts in the United States of America have various names, many are called community chests and generally include only local agencies. An increasing number of local community chests are taking in more nationwide organizations and are becoming known as united funds. The prime purpose is the combining of many appeals on the part of private organizations into a single campaign. The success of this movement is not accidental. We believe that its success is due not only because it conserves funds and effort but because it builds public confidence in the work of the organizations. It helps the people to understand better not only the need for these organizations but to understand how their many activities are interrelated.

These large cooperative appeals can be made dramatic enough to gain the interest and support of the very top leaders in the community. Because of the inclusiveness and size of the appeal, more citizens can be enlisted as volunteer workers. This inclusiveness enables people and organizations of different faiths and backgrounds to work together. Through these efforts in the annual appeal an ever-increasing number of citizens have a more informed outlook about welfare matters and become the leaders of our total welfare effort. This is possible because they learn about the relationship of the voluntary agencies to the governmental agencies and therefore have a better understanding of both.

I would like to tell you how this plan works in my home county of Dallas. The Dallas Community Chest, which includes 35 local welfare agencies and 2 nationwide voluntary agencies that give services locally, has made significant strides in recent years. For instance, in 1948 we raised $1,470,000. In 1957 we raised $2,619,448. This is an increase of 78 percent. In 1948, 105,000 persons contributed. In 1957, of the 336,000 employed in Dallas County, 205,000 persons contributed. This is an increase of 94 percent. Remember we are talking of voluntary giving.

The Dallas Community Chest has an overall board of directors composed of 105 men and women. These people come from all walks of life. The board of directors, elected by those who give at least $1 to the fund, sets the general policies of the community chest, while many of the important day-by-day decisions are made by a 16-member executive committee. The small year-round paid staff of 15 members carries out the policies and decisions of the board and executive committee. As representatives of the overall community, these people vouch for the efficiency and integrity of the community chest operation. I cannot overemphasize the fact that all significant community groups are represented.

This citizen participation is further strengthened by the fact that each of the 37 member agencies of our community chest, operating a total of 105 centers of operation, has a board of directors of its own. There is a total of 670 board members serving with the member agencies. Agency board members help operate their agencies and also are expected to work in the chest campaign. This broad citizen interest is further strengthened by an additional 6,000 citizens who volunteer to work in the central fund-raising efforts. Each of these volunteer workers learns much about the work of the agencies and becomes an informed spokesman for them. It is their community chest and the agencies are their agencies. This whole project is carried on with the philosophy of "Many in one for all." Put in another way, when we help people who need us, we are helping everyone, and what hurts the general welfare hurts everyone.

To some degree our success depends upon our year-round public relations program. All publicity media are used. Television is being used more and more. Agencies are encouraged to use constructive human interest stories for publicity purposes. Each agency always states in its publicity that it is a member of the community chest. Periodically, we have public relations clinics, when agencies are given ideas of how better to interpret their services to the general public. In all of this the chest receives invaluable help from a publicity committee made up of outstanding public relations and advertising people in Dallas who give their time free. People who help in these ways become active partners in this enterprise.

In the actual solicitation of contributions every encouragement is given to make the giving convenient and fair. The total campaign organization is divided into divisions according to the major grouping of contributors, based on their type of business and ability to give. In this we have the cooperation of many business and labor union union leaders; for instance, the worker can pledge an annual amount of money and have this amount deducted from his regular pay check in monthly installments. At the employee's request the firm he works for will handle the deduction and send it to the community chest office. In our community, most salaried workers are encouraged to give 1 day's pay as a fair share while people with higher incomes are encouraged to give on a more generous basis. Their giving or not is a matter of conscience and election on their part.

A speakers bureau composed of informed volunteers gives talks before civic, professional, and employee groups explaining these matters. In all of this we have the encouragement of our National Government since under our income tax regulations a corporation may make tax-free gifts for charitable purposes up to 5 percent of profits. Individuals can make tax-free gifts of 20 to 30 percent. There are so many aspects of our operation that I can only pick a few to describe in detail.

One more factor which requires attention relates to the activities of our appeals review board. All fund-raising efforts for charitable purposes in Dallas must be licensed by the city government. In this way time of the campaign is designated also, so that several campaigns are not carried on at the same time. In addition, the leading business and industrial people in Dallas have a committee called the campaign screening committee. This group works closely with our Council of Social Agencies, and studies the need for the proposed campaigns before they contribute to them. As you can see, this helps the essential welfare efforts by discouraging the unessential ones.

Another of the many important aspects of our work is the way in which we determine the annual overall amount which is needed for the operation of the combined agencies of the chest for the coming year. This is the amount which we call our annual campaign goal. The community chest receives monthly financial reports and monthly activities reports from each member agency. This makes possible year round study and budget control and trends are noted quickly.

Each spring outstanding local citizens are appointed to serve on what we call the citizens budget committee. It would be impossible for 1 committee to review the budgets of all 37 chest agencies. Therefore, the committee is divided into four groups and each agency is assigned to one of the four budget groups, depending on its field of service.

The board of directors of each chest agency every year studies its own program in view

of future financial needs. Then each board of directors draws up a proposed budget which it believes its agency will need during the coming fiscal year beginning November 1. In June, a committee from each agency personally appears before the community chest budget committee to explain and justify the request for future funds.

During these conferences staff of the community chest and also of the Council of Social Agencies are present. The chest staff has at its finger tips data concerning previous expenditures of each agency, for each of the many individual items which comprise the total budget. Staff members of the Council of Social Agencies whose overall job is to know the work of all the many welfare groups in Dallas, are available during the discussions for consultation.

This procedure is used with all chest agencies, regardless of how much or how little of the agency's total income comes from the chest, and how much is derived from charging fees for its services, or from other sources. Several chest agencies in Dallas receive only a small proportion of their total income from the chest. On the other hand some agencies receive all of their funds from the community chest. This is so because, depending on the nature of service, some agencies can charge fees while others cannot. Some agencies have been able to supplement their chest income by receiving grants from foundations and trusts; still other agencies receive part of their funds from the community chest and part from the local government. The scrutiny of each budget item is the same regardless of the sources of the funds.

A good example of an agency which receives funds from a variety of sources is the Dallas Child Guidance Clinic which provides psychological testing and psychiatric services for emotionally troubled children. That agency is currently receiving support from six sources: the community chest, fees from clients, the Texas State Department of Health, the Dallas public schools, a local private foundation, and a private statewide foundation. The budget of this agency is handled in the same way as the budget of the Neighborhood Recreation Association, a small community center which receives all of its operating funds from the community chest.

The campaign goal for the year is based upon information provided by the budget committee. An additional amount must be added and earmarked as a reserve for necessary unforeseen expansions during the coming year. Also, an amount must be added as a reserve for emergencies and an amount for uncollectible pledges and shrinkage. I can go into more detail about this in the question period if you wish.

Each agency is immediately notified of the action taken on its particular budget request. Should the agency feel that its request was not given proper consideration, that agency can return to the budget committee for a rehearing. Although in Dallas the chest raises over $2½ million, the total expenditures of the chest agencies are close to $6 million. This means that for an investment from voluntary contributions of $2½ million the chest agencies are providing $6 million worth of service to the community.

The budgeting process is an important part of not only financing, but planning for welfare services. The chest budget committee made up of outstanding local citizens represents the persons who use the agencies' services and who contribute to the cost of the services. It includes people of all races and religious backgrounds, housewives, salaried workers, union labor officials, professional men, career Government men, and leaders of business and industry. It is important to clarify that although these people are identified with these various groups, they do not come as official delegates. They come as citizens and are free to act as individuals. For instance, the man or woman from industry or labor does not speak officially for their organization nor do they commit their group but because they are leaders in their field their opinion is highly regarded. This is consistent with our democratic way of life. However, the benefits of this budgeting system are greater than giving representation to people who use and pay for the services. Through this close review of each agency's budget, citizen leaders get to know a great deal about their community.

The budgeting process pledges to the community that the funds which the community chest collects for the agencies is vitally needed and is being spent wisely. Also, the budget committees learn very quickly that the various agencies could provide more good services than current funds can support. This means that the budget committees must choose and approve only those expenditures which they feel are important. Because of this they can tell the general public the necessity for, not only attaining the current goal, but the need to raise more money in future years, so that additional services can be given. It is democracy at work through public education and voluntary commitment.

I believe you will agree with me that the process which I tried to outline contributes much to our community life. It is far more than merely a check on the validity of the agencies' request. It not only keeps fund raising costs low, it not only makes for greater efficiency, it not only helps to keep balance among the many various types of social services; but it has educational, social, and spiritual values.

Many of our people say that the byproducts of the community chest fund raising efforts are just as important as the direct results in terms of money; for instance, our business firms tell us that working in the chest campaign is excellent leadership training for their young executives.

Working together for a common unselfish goal is basically a spiritual experience which cuts across all religious and denominational lines. We never lose sight of this fact. Participation by clergy of all faiths is emphasized. Many of the campaign meetings are led by outstanding spiritual leaders and the efforts of the volunteers and the significance of the money raised is constantly translated into spiritual values.

We are convinced that the democratic way of life is best. We are convinced that the quality of our democracy depends upon our standard of values, which in turn depends upon the quality of our religious life. We know that our community chest efforts gives our people an opportunity to put their religion to work. Through this work they dedicate themselves to the finest in life. There is no question in our minds but that this program, hand in hand with the church, strengthens the foundations of our lives. This truly is our concept of many in one for all.

Thank you very much for your interest and attention. I shall be happy to try to answer your questions.

The Farmer, the Public, and the Government

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 2, 1959

Mr. HUMPHREY. Mr. President, I note with increasing frequency the publication of statements and reports and speeches on the situation of farmers that put this situation into the clear light of objective examination. Apparently, more and more people are able to see through the smokescreen of propaganda put out by the Secretary of Agriculture and other officials of the administration and by those who expect a huge volume-low price farm economy to increase their profits.

At the 57th Annual Farm and Home Week Convocation on the St. Paul campus of the University of Minnesota recently, Lauren K. Soth, editorialist for the Des Moines (Iowa) Register and Tribune, spoke out some home truths on the relationships of the farmer, the public, and the Government.

I ask unanimous consent that Mr. Soth's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FARMER, THE PUBLIC, AND THE GOVERNMENT, AN ADDRESS BY MR. LAUREN K. SOTH, EDITOR OF EDITORIAL PAGES, DES MOINES REGISTER AND TRIBUNE, TO THE 57TH ANNUAL FARM AND HOME WEEK CONVOCATION, ST. PAUL CAMPUS, UNIVERSITY OF MINNESOTA, JANUARY 15, 1959

It's human nature that your difficulties seem less burdensome when you observe your neighbor facing greater hardships than your own. When you're in the hospital you feel much better if you see someone across the hall in worse shape.

In the interest of this kind of therapy, it might be a good idea for Americans to compare their farm problem with that of the Soviet Union. In these cold war days, we are making comparisons with the Russians all the time—on progress in atomic energy, space satellites, intercontinental missiles, and so on. Some of these comparisons don't make us very happy. But just take a look at the farm problems of the two countries and you'll get a real lift.

The Soviet Union needs a great deal more farm production; it needs more meat, eggs, milk, and other high-quality protein foods; and it needs higher output per man in farming to release more people for work in Russian factories and offices. Dictator Khrushchev knows very well that industrial expansion will be limited by the productivity of agriculture. Since Stalin's death, the new Khrushchev regime has been promoting agricultural research and education, offering incentives to farm people to produce more, granting more freedom of initiative to farm managers, and in other ways driving for a more productive agriculture. A large number of Russian farm delegations have been sent to the United States, Canada, and other countries to pick up ideas on better methods.

In the United States, our farm problem is having too much rather than too little. In spite of efforts by the Government to hold farm production in check, farmers are continuing to turn out more than we can possibly use. Nearly everybody in the United States is well fed, and Secretary Benson is trying hard to ship more of our grain, livestock products, cotton, and other farm products overseas. Still, the stuff keeps piling up. We have more than a year's supply of wheat ahead. We could stop producing wheat for a full year and not run any serious risk of shortage, either for ourselves or our normal foreign outlets. Feed-grain supplies have been building up, and farmers now are beginning to convert more and more of these feed supplies into pork, beef, chicken, and other livestock products. In the next few years, livestock farmers will face a serious crisis of low prices and low

net incomes. Overabundance of American agriculture is proving to be a chronic, and certainly an unsolved, problem.

Since Ezra Benson seems unable to prevent farm surpluses and Vladimir Matskevich, the Russian minister of agriculture, seems unable to prevent farm shortages, it has been suggested that the happiest solution all around would be for us to trade secretaries of agriculture with the Soviet Union. I suspect that this idea would have some support both in the United States and in the Soviet Union.

Joking aside, Americans ought to consider their farm problem in the light of the Russian farm people, which is a much more common one in the world than our own.

Our kind of farm problem, overproduction, is a serious one for farmers, to be sure. But from the general public point of view, it is not a problem at all, it is a mark of magnificent achievement. The American people have no worries about being short of food. Agriculture is not a limiting factor on economic growth in this country.

Yet many Americans seem to have the idea that farming is a horribly inefficient industry, heavily subsidized and mismanaged by the Government. One even hears talk like this from the highest echelon of the U.S. Department of Agriculture. It is not surprising, therefore, that many ordinary city dwellers think they are victims of a greedy farm pressure group, with rich farmers getting large handouts from the Government.

What are the facts? Is it true that the American people are being gouged by farmers? Is the public paying too much for the food abundance, the food security, it receives from farmers?

First, let's look at the cost to the public in the form of taxes. The U.S. Department of Agriculture budget is one of the largest nondefense items in the Federal budget. In recent years it has amounted to from $5 billion to $7 billion a year. This huge sum often is labeled as a farm subsidy, and despite attempts by some farm leaders to put the facts straight, the myth still lives on.

The greater part of the Department of agriculture budget goes for general services which are of benefit to the entire population, not just to farm people. These services include scientific research, education, grading of farm and food products, market reporting, the U.S. Forest Service, soil conservation work, and a great many other activities. The budget also includes such things as the Rural Electric Co-operative loans, which are being repaid on schedule and can hardly be lumped off as a subsidy.

The benefits of agricultural research and educational activity go to consumers very promptly. The purpose of these public programs is to improve agricultural efficiency; and their effect is to increase total farm output, thus bringing down prices of farm products and the cost of food. I want to say more about the whole Federal-State program of farm research and education later. But let me move on now to the subsidy question.

In the last 25 years the Federal Government has been trying to protect agriculture against the effects of its own abundance—by price supports, direct payments for making acreage adjustments, putting land into soil conserving uses and so on. How much have these subsidies amounted to? According to the Department of Agriculture's calculation, the cost of programs for stabilization of farm prices and income never amounted to as much as 1 billion dollars a year until 1955. In 1955, it amounted to $1.4 billion, in 1956 $1.9 billion, and in 1957, $3.3 billion. The 1958 figure may be still higher, but it will be a long way from the $7 billion often labeled as farm subsidy. But even these Department of Agriculture figures on cost of farm income supports are somewhat misleading.

The $3.3 billion for 1957 include more than $600 million loss to the Commodity Credit Corporation from sales of farm commodities to foreign countries. There is a question whether this loss should be called farm subsidy or foreign aid. The CCC also lost $171 million in 1957 from the sale or donation of farm products in this country, including distribution in the school lunch program. Is this general welfare program all to be charged as subsidy to farmers? In our public accounting, we should make allowances for some of these dual-purpose programs.

The cost of farm price and income support programs has gone up sharply in recent years, though price support levels have been lowered. Why is this? Part of the reason is that the CCC has been taking its losses on commodities accumulated in earlier years. Also, crop production has been unusually large and market prices of major crops have dropped. So CCC has had to put out more cash to provide price support even though the guaranteed levels are lower.

The reason why price supoprts cost the Government so much money is that farm production controls have not worked. The drive to improve farm technology, spurred by Federal and State research and educational programs, has been a far more powerful force in American agriculture than the acreage allotments and other efforts to limit output.

Or, to say this the other way around: If farm production controls were effective, market prices of farm products would be above the support levels. So the cost of farm income supports would not appear in the Federal budget. Instead it would appear in the price of food, and the public would pay all of it in the food bill instead of partly in the tax bill. That's the way tariff subsidies are paid, of course; they don't loom up in the Federal budget.

One more point should be mentioned. A sizable proportion of the cost of farm programs consists of payments to private warehousemen, exporters, and other handlers of grain, dairy products, and cotton. In recent years, these charges have been from $⅓ to $½ billion annually—out of a total cost of $2 to $3 billion.

No one should assume that all the money for farm programs goes to farmers.

The price supporters and storage operations are ever-normal granary or stabilizing operations with wide variations in costs from year to year. So, to get a more accurate picture of what the programs have cost the taxpayer, CCC losses should be averaged over a period of years. For the 10 years through 1957, they averaged just under a billion dollars a year. If you take the entire 25 years of such programs, the cost averaged about $600 million a year. In the war years, CCC actually showed a profit on grain and cotton acquired during the late 1930's.

So much for the cost of farm income support programs to the taxpayer.

The public also has had to pay somewhat higher prices for food in certain years than it would have paid without the programs. Undoubtedly, food prices would be lower today if the Government had not removed a portion of the supply of some farm products from regular commercial markets.

Whatever this cost has been during periods of accumulation of surpluses, it should be balanced against the effects of the stabilization programs to reduce food costs in periods of short crops and in wartime. Over the last 25 years, the cost to the consumer certainly has been small.

When these programs began back in the early thirties there was great fear that the consumer would be injured. A consumer's counsel was established in the Department of Agriculture to guard the public interest. This fear that a giant farm monopoly, established through Government, would gouge the consumer proved to be unwarranted.

In fact, the American consumer has done very well under the farm programs. The proportion of his income spent for food has declined steadily. It's true that people buy more packaging, more precooking and other services with their food. But they spend relatively less for the food itself than they did before the farm programs began.

Another way to assess the effect of the farm programs is to look at income per person on farms, compared with the average income of nonfarm people. The average income of farm people, including money value of house rent and food and fuel consumed on the farm, was about half the average income of city people in the midthirties. Farm income per person today still is about half of nonfarm income per person. Farm income rose during the war relative to nonfarm income, but it has declined in the last few years. So farm people are no better off compared with the rest of the population than they were in the mid-thirties. This surely indicates that the farm programs have not resulted in great transfers of income from the general public to farmers.

When the farm programs began in the thirties, it was also feared that progress in farming efficiency would be stopped. Controls, it was said, would stifle farmers' initiative. Farm income would be so high, moreover, that too many people would stay in farming—and necessary population adjustments would not be made. This criticism of farm programs is still being made. It's nonsense. Farm production and marketing controls have not stifled initiative, and they haven't prevented change.

Farm production efficiency has continued to rise very rapidly—more rapidly in recent years than productivity in nonfarm industry. Moreover, people have been leaving farming in droves. Since 1940, about one-third of the entire farm labor force has left agriculture. This is a terrific adjustment, and it is still going on.

A good case could be made, I think, that the net effect of acreage changes under the allotments, plus incentives for better land use through conservation programs, plus the reduction of uncertainty through price supports, have advanced the overall efficiency of U.S. agriculture, increased total output, and lowered food costs to consumers.

Far be it from me to defend all the farm acreage allotments, price support, and other programs. Many of them have been ill-conceived. The price supports on a few basic crops have been a clumsy way of trying to protect farm income in a period of overabundance. Acreage controls haven't worked well and have led to some distortions in production. We need to be looking for better ways of stabilizing farm income.

But the present programs have been better than nothing. Without them, farm people would be much worse off than they are today. It is only with these programs that farmers have been able to hold their own in the great advance in national income of the last 20 years.

In examining the farm income support programs of the last 25 years, we ought to put them in perspective. These programs of price support, acreage allotment, and direct payments are comparatively minor in the whole picture of Government intervention in agriculture.

The really big Government programs are in research and education. And they have been going on for almost 100 years. The Land Grant College system of experiment stations and extension services has had far more impact on agriculture than any of the so-called subsidy programs of recent years.

For nearly a century the American people have been pumping new technology into agriculture. They have been urging farmers, in effect, to produce more and to produce more efficiently. And farmers have responded. This has been an extremely important factor in the general economic progress of the United States. Why is it that it takes only about 10 percent of our working population to produce food and fiber when it takes about 25 percent for Europe and about 40 percent for the Soviet Union?

It isn't just that we have good land and a free enterprise system. It is in large measure the result of a deliberate public policy of promoting farm efficiency, Government intervention in agriculture on a massive scale. The land grant colleges, the Department of Agriculture, the county agent system, the high school vocational agricultural teachers, all these are a part of it. In recent years the Soil Conservation Service also has helped push farm technology forward.

This vast program of farm research and education has been good for America. Farm leaders, Government farm officials, and farm educators have been remiss in not explaining to the public who it is that benefits from this effort to make farming more efficient. In recent times farmers as a group actually have suffered because of the advances in technology which have stimulated total farm output. The reason is that prices of farm products decline more than enough to offset the lower costs. The highly inelastic demand for food makes a big farm output sell at a far lower price than a small output.

If agriculture were using the methods of 1940 today, the country as a whole would be much poorer. But farmers would be much richer. Prices of food would be far higher, and Mr. Benson would have no surpluses to worry about.

Let me reemphasize the issue here. We have had a consistent public program, socialistic program if you like, to increase farm output. When the results of this policy show up in surpluses and low prices, it seems hardly fair to tell farmers they must make the necessary adjustments on their own in a free market.

What are the policy choices then?

One choice is to adopt a free market policy all the way. This would mean greatly reducing the public investment in research, education, soil conservation, reclamation, and so on, as well as ending price supports.

This policy would impose a drastic adjustment on agriculture, with low prices and and incomes for some years ahead. But eventually a balance would be reached and farm prices and incomes would rise. The cost to the present farm population and to future generations of consumers from such a policy would be a high one indeed. No one would seriously consider the reckless course of dismantling all the public facilities for encouraging more efficient farming.

Another choice is a real production control program for agriculture with quotas in bushels and pounds. This would give farmers some bargaining power and would raise income. But it would also require tight discipline and limited entry into farming. It would be difficult to enforce. It might slow down the advance in farm technology. From the public viewpoint, this also would be a costly and undesirable choice.

A third choice would be to continue and improve present government programs to support farm income. Even if these programs cost the taxpayer a considerable amount of money, and even if they create difficulties in handling surpluses, this choice is preferable to an elaborate control system. The total cost to the public, considering the price of food and the technical progress of the farm industry, would be much lower.

As is so often the case in difficult public policy problems, the middle way turns out to be the most desirable way.

One Hundredth Anniversary of the Birth of Victor Herbert

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Monday, February 2, 1959

Mr. O'MAHONEY. Mr. President, this year all America is celebrating the 100th anniversary of the birth of that great Irish-born, German-bred, and American-adopted musician, Victor Herbert. Creator of numerous operettas and two grand operas, symphony conductor and virtuoso, Herbert is especially remembered today for such perennial melodies as "Ah, Sweet Mystery of Life," "Kiss Me Again," "Sweethearts," and "Indian Summer." A generous friend to his fellow composers, Herbert was one of the founders in 1914 of the American Society of Composers, Authors and Publishers—ASCAP—which is dedicated to the proposition that no composer of music which has ever found its way into the hearts of Americans shall ever want for the necessities of life—nor that composer's widow and children.

Hugh Mulligan, talented writer for the Associated Press, has condensed Herbert's colorful career in a short article which I commend to the attention of the readers of the CONGRESSIONAL RECORD as an excellent summary of Herbert's character and accomplishments. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, Feb. 1, 1959]

VICTOR HERBERT'S ANNIVERSARY RECALLS HIS LOVE OF QUIET

(By Hugh A. Mulligan)

Victor Herbert, born 100 years ago today, never lived into the age of television. He was lucky.

Although he would have enjoyed writing for it, he would have abhorred listening to it, especially if the neighbors had a set and insisted on playing it into the wee hours.

A musician all his life, the composer of 43 operettas, 22 grand operas, and innumerable concertos, suites, ballets, and other pieces, Herbert asked only one thing of the world: quiet.

But the world was reluctant to comply. Sometimes it seemed that all the forces of man and nature conspired to torment the artist in his atelier. Rag pickers blew bugles in the streets below his window. Ferry boats and switch engines intruded on his musical musings with unscored horn solos. Children shouted, trolleys clanged, cattle mooed and bleated on their way to the big stockyard on the corner. And invariably the little girl next door decided to take up the piano right in the middle of one of his most intricate stage compositions.

In desperation, the volatile Irishman once had double doors installed in his upper Manhattan studio and hired the U.S. Gypsum Co. to do a thorough soundproofing job—this in a day when even opera houses lacked such acoustical refinements. Two weeks later a music professor moved into the adjoining apartment with five grand pianos, two violins and an octet of young lady students who came for sorely needed voice lessons.

"His caterwauling all day long is driving me crazy," cried the exasperated composer. "We hear it before breakfast and it doesn't stop until quite late at night, but if the music were any good we wouldn't mind."

Herbert informed the soundproofing firm it could go whistle for its money outside his double door. He would hear them all right, he fumed, but he wouldn't come out to pay. He successfully defended his stand in a celebrated court battle, then tried unsuccessfully to have the board of health dispossess his musical neighbors as a public nuisance.

This predilection for peace and quiet may seem strange for a man who once directed America's biggest brass band, conducted the great Pittsburgh Symphony Orchestra and spent most of his life creating noise—thrilling, melodious noise that still echoes down the years whenever an orchestra plays "Kiss Me Again," "Indian Summer," "Kiss in the Dark," "Sweethearts," or any of the dozens of other great tunes that flowed from his fertile imagination.

But that's the way the "Prince of Operettas" was. He could build a summer home at Lake Placid in the Adirondacks, buy up the houses on each side to make sure the tenants had no pianos and then spend his afternoons playing the cello with a little band down in the village square that had the butcher playing flute, the blacksmith on cornet and other tradesmen sitting in as their time allowed.

To him music was a happy, gregarious way of life, filled with good friends, good wine, good food, good cigars. But it was a way that brooked no interference.

Herbert is best remembered for operettas like "The Red Mill," "Babes in Toyland," "Naughty Marietta," "Eileen," "Mlle. Modiste," and "The Fortune Teller." People forget that in his day he was considered the world's greatest cello virtuoso, an accomplished musician who did all his own orchestration, was an intimate friend of Tschaikovsky, Dvorak, Liszt, Richard Strauss, and played a major part in the development of American music.

The American Society of Composers, Authors and Publishers (ASCAP) was founded at his famous gourmet's table in Luchow's restaurant on 14th Street in Manhattan. He remained a member of its board of directors until his death in 1924. In a historic test suit involving his music, he battled all the way to the U.S. Supreme Court to win royalty payments for composers.

Fritzi Scheff, Vernon and Irene Castle, Helen Hays, Peggy Wood, Elsie Janis, Gus Van, Fay Bainter, Marilyn Miller and a host of others won critical acclaim in his productions. A second generation of Herbert fans arrived in the thirties with the Nelson Eddy and Jeanette MacDonald movie versions of his works. And now a third generation is being mustered by television spectaculars and hi-fi recordings.

United States Is Now Ahead

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following text of an article which appeared in the November 14, 1958, issue of U.S. News & World Report. This article presents a very thorough and encouraging picture of just where the United States stands in comparison with

Russia in all areas of rivalry. It would appear from this article that the United States is today, despite all of Russia's boastful claims, still the No. 1 world power and is expected even to widen her lead in the future.

UNITED STATES NOW AHEAD—WILL IT GAIN MORE IN WEAPONS? ATOMIC POWER? SCHOOLS? SCIENCE? INDUSTRY?

Is Russia threatening the U.S. position as No. 1 world power? Hardly. Despite gains, Soviet Russia still lags far behind in practically everything. It's a primitive nation by U.S. standards. But are the Communists gaining, closing the gap? Take a look at the record.

Signs grow that the United States today is ahead of Soviet Russia in all fields of rivalry and still is gaining.

The lead—lost sight of when sputnik I went into orbit—is in diplomacy, in science, in schooling, in weapons, in industry, in well-being of people, in freedom of the individual.

Recent events signal the American lead over the Soviet Union.

In the Far East, around Quemoy, Communists pulled back from war when challenged.

In the Arab world, Egypt's Nasser, Soviet ally, is being checked in his drive for an empire in the Middle East.

In Europe, France is taking a sharp turn to the right. Communist parties in all of the countries of Western Europe are steadily losing strength.

In space, United States has three satellites in orbit; Soviet Russia, one. United States has probed 80,000 miles toward the moon; Soviet Russia, only hundreds of miles. United States, with its X-15 rocket plane, possesses the only manned vehicle capable of flight into space.

WHO'S REALLY SECOND-RATE?

Those are a few outward signs of inner trends that shape the course of affairs in the world of today. In that world, United States-Soviet rivalry is basic.

A claim is being made at this time that the United States today is a second-class power, reduced to a status below that of Communist Russia.

All evidence points to the contrary conclusion: United States today is the world's No. 1 power; Soviet Russia the world's No. 2 power—its only real strength resting upon arms.

FORCE ON ONE SIDE, FREEDOM ON THE OTHER

A simple measure underlines that conclusion. The measure being applied is this:

Soviet Russia, at home and within its empire, is dependent upon armed force to keep its people in line. Force alone holds the Communist empire together. Remove force, and the whole structure topples.

The United States, on the contrary, lives free from fear. People are not afraid of the Government. Government does not live in fear of the people. Allies of United States remain allies by choice, not allies held by armed force.

Fear is found to represent the basic weakness of the Soviet Union—fear of people on the part of Government; fear of Government on the part of the people.

It is against that background that other measures of strength and weakness are being applied now to United States and Soviet Russia.

IN ARMED MIGHT, A DECISIVE LEAD

To the world, the arms race is a measure of who is ahead. Let Soviet Russia gain the lead, and she'll chance World War III, aim for her goal of world rule. Keep a U.S. lead, and Soviets will stop short of a showdown.

The United States lead in weapons, in thermonuclear explosives, and ability to deliver them, is regarded by military officials as decisive at this time. Thel ead, as the military sees it, lies in these fields:

Bases

The United States and its allies have more than 400 U.S. air and missile bases ringing the Soviet Union. At sea are a score or more of mobile air bases and missile bases. One false move by Russia, and her destruction could follow.

Bombers

Russia is far behind United States in jet bombers. The major Soviet effort in long-range striking power is concentrated on ballistic missiles. United States today, in bombers, possesses the means to destroy Soviet Russia.

Aircraft carriers

The Communists never entered this race. In these ships is another powerful U.S. striking force.

Long-range missiles

Neither United States nor the Russians possess at this time operational missiles of ballistic type with 5,000-mile range. Russia may be slightly ahead in development work. She has a rocket motor more powerful than the United States has. But United States today possesses operational long-range air-breathing missiles, and Russia possesses none.

Other missiles

In medium-range missiles, United States and Russia are described as nearly neck and neck, but with United States ahead. With overseas bases, medium-range missiles suit United States best. In antiaircraft missiles, United States is ahead. In air-to-air missiles, United States is much ahead. In battlefield missiles, United States is ahead. In ship-borne missiles, United States is far ahead.

Submarines

The Soviet Union is ahead in numbers of submarines. However, United States possesses, and Russia lacks, nuclear-powered submarines capable of operating indefinitely under water. Atomic submarines soon will provide capability of launching medium-range missiles to strike most of Soviet Russia.

Atomic weapons

United States, with a long head start, is well out front with specially tailored atomic and thermonuclear weapons of all types. Russia, to date, is testing cruder-type bombs of great power, described as "dirty" because of heavy fallout of radioactive material.

Ground armies

Here the Soviet edge in terms of divisions of troops is great. Reliability of Soviet and satellite armies in event of trouble is described as "uncertain." Satellite armies proved highly unreliable during Hungary's anti-Communist revolt of 2 years ago.

As of now, American military officials describe the U.S. lead in the arms race as "impressive."

THE TRUTH ABOUT THE RACE TO SPACE

But what of space? Isn't the Soviet Union far ahead in the race to conquer space? Will the one who wins that race control the world?

The answer informed officials give is this: Sputniks are not weapons. They are objects tossed into space and placed in orbit. The time when space will become a major battlefield is so remote that nobody need now become excited about it.

Even so, who is ahead in space exploration? The answer:

Earth satellites

United States has successfully launched four; Soviet Russia, three. The Communists have launched the largest satellite; United States, those capable of producing the greatest variety of scientific information. Russia showed that she possesses rocket motors with a thrust greater than present American motors. Today it's a toss-up in the satellite race but with United States moving ahead fast.

Moon shots

In October, when a U.S. space vehicle first went 8,000 miles toward the moon. Soviet scientists conceded that the Americans were far ahead in that type of space probe.

Space ships

In the X–15, United States possesses the nearest thing to a man-piloted space ship, capable of traveling under its own rocket power. Capt. Iven Kincheloe, before he was killed in a jet accident, piloted an earlier test plane to the very edge of space and, briefly, experienced the sensation of weightlessness. No other nation is even close to the United States in this race.

Balloon exploration

Again United States is ahead.

Space exploration is in its early stages. United States is at least equal to the Soviet Union in this experimental field. Every indication is that it is pushing ahead, now that a race has started.

KHRUSHCHEV CHOOSES BRAWN OVER BRAINS

Now about education. One year ago, when Sputnik I orbited the earth, a furor arose over the quality of U.S. education.

All the youth of Soviet Russia was pictured as feverishly busy studying mathematics and physics. Engineers were pouring out of colleges, scientists being developed on a mass-production basis.

A big backdown

Today, what do you find? The goal of 10 years of schooling for all in Russia is being abandoned by Nikita Khrushchev, Soviet dictator. An eighth-grade education is to be considered good enough for the average Soviet youth. Manual labor is set as the highest goal.

But let Khrushchev explain the reforms that he is making in education.

Under the new Khrushchev school system: The great majority of Soviet youths will leave school and start work at age 14 or 15. By American standards, Soviet Russia will exploit child labor.

Said Khrushchev in Pravda, Soviet newspaper, to Russia's youngsters: "You will get what amounts to a high school education not through present-day schools, which are divorced from life, but through a network of evening or correspondence courses."

Work all day and go to school at night, that's the new offer. There is a further promise of on-the-job training for youths who show special skills.

Why not a high school education for all? Said Khrushchev: "Everything indicates that it would not be advisable, at the present time, to make high school education—in its present form—universal and compulsory.

"The majority, having completed high school and received their diploma, turn out to be unprepared for life. They don't know where to go from there."

Said Khrushchev, too: "A number of high school graduates are reluctant to go to work in factories, on collective farms and on state farms, and some of them even regard such work as degrading. Our society raises people who do not respect physical labor and are out of touch with life. We cannot put up any longer with such a bad situation."

A paradox

The Soviet dictator is not impressed by Soviet schools, as some American educators profess to be.

Khrushchev told parents of Russia: "If a child studies badly, some parents will tell him: 'If you don't do well in your studies, you won't get into college; you'll go to the factory as an ordinary laborer.' Some people use physical labor as a kind of scarecrow with which to frighten the children. This

is insulting to working people in a socialist society.

"Although college entrance examinations do exist," Khrushchev said, "it must be admitted that to get into college it is often not enough to pass the examinations successfully. The influence of parents also plays a large role. Young people who are trying for college often say that, after they are through competing among themselves, there begins a competition among their parents, and it is this competition that often decides everything.

"We cannot close our eyes to the fact that there are few children of workers and peasants in our colleges and universities," Khrushchev added. "In Moscow colleges and universities, for example, only 30 to 40 percent of students are children of workers and peasants.

"Some of our agricultural colleges have their own farms, but at these farms the animals which the students are supposed to study are cared for by laborers. What kind of aristocratic setup is that? Under this kind of system a student who comes to the farm is scared out of his wits when a cow shakes her head."

That is higher Soviet education as Khrushchev describes it.

A democratic shift

Now there is to be change. In most colleges and universities, students will hold down full-time jobs during the first 2 or 3 years. They will go to school and study outside working hours. In the concluding period there will be full time for study—"except for the necessary practical training."

Khrushchev said in Pravda: "This system will be democratic since more nearly equal conditions will be created for all citizens: Neither the position of parents, nor the exertions of these parents will free anyone from productive labor. Secondly, this system will constitute a wonderful school for the raising of all youngsters in the spirit of the heroic traditions of the working class and of the collective-farm peasantry."

Better than the American system? Most educators say: Definitely not.

Behind the switch

Why the sudden change in Russia? Reasons being given are two:

1. A labor shortage plagues Soviet Russia. School changes will free 2.5 million to 3 million for work each year.

2. Educated youths are found to be politically unreliable. Soviet periodicals are sprinkled with references to incorrect attitudes and activities of students. Khrushchev's idea: Break up campus life, and nests of unrest are removed.

FORMULA FOR PROGRESS: STEALING OF SECRETS

Where, then, does this leave the Soviet Union in the field of science? The answer, it seems, is this: Far behind United States except in a few fields related to war.

In rocket-motor development, the Russians are equal to United States, if not ahead. In nuclear physics, the Soviet Union is far advanced, but United States is still out front, as many Russian scientists themselves admit. The main Soviet textbooks in advanced nuclear physics are American books translated into Russian.

In the whole vast field of chemistry, Soviet Russia is not even in the race. The Soviet government is seeking to buy equipment and know-how from United States in order to break into the chemical industry.

Medical backwardness

In another major field, that of disease-combating drugs, the Soviets are far behind. Soviet medical research is still wrestling with the problems of overcoming epidemics of diphtheria, scarlet fever, and other diseases which were virtually licked in the West decades ago.

Of science in Russia, Lieut. Gen. Arthur G. Trudeau, the U.S. Army's Chief of Research and Development, said this:

"The advanced state of Soviet technology is due more to Soviet success in espionage and subversion than it is to their scientific apparatus, good as it is."

And what do Russia's scientists themselves think about the relative standing of United States and Russian science? For an answer, listen to academician A. I. Berg, one of the Soviet Union's leading scientists. At a meeting called to celebrate the launching of the first sputnik, Berg stated:

"Hardly any of us thinks that American scientists and engineers are lagging behind us from the point of view of science and technology."

Atomic Power: The Standing

It is somewhat the same story in the development of atomic power.

Soviet Russia has the world's largest single reactor for development of electric power. The United States, however, has over 80 atomic-power test reactors in operation or in various stages of development—a program whose scope has been officially described as "not approached by any other country."

Other countries, in fact, are now beginning to turn to the United States for the purchase of such reactors.

An even more impressive lead has been established by the United States in the use of atoms in industry. More than 1,300 U.S. firms are now using atomic tools for such processes as gaging the thickness and density of products, testing metal castings and weldings, etc. The use of radioactive isotopes for improved production techniques is saving U.S. industry $500 million a year.

United States is making important advances, too, in putting the atom to work in medicine. Radioactive isotopes are used to diagnose or treat the ailments of about 1,000 Americans each year.

In spite of all the talk, U.S. science still seems well ahead of Soviet science.

LAND OF MUD HUTS AND VILLAGE PUMPS

Or measure strength with other yardsticks. Success of a nation or a system may be judged by the well-being of its people.

Apply that measurement, and what do you find? Russia a first-class power?

Diet

In Soviet Russia, basically the diet is cabbage soup, coarse bread, potatoes. Meat is scarce.

Shelter

One room to a family is standard in major Soviet cities. Mud huts or log cabins are home for rural families.

Clothing

Quality is poor, price high, style standardized, colors are dark and drab, a subject of comment by visitors from the West.

Plumbing

Fewer than half of Soviet cities have public water supplies; fewer than one-fifth, a sewage system. Apartments offer usually courtyard water pumps and outdoor toilets.

Privacy

Largely nonexistent. A kerosene stove usually is shared with other families. Bathrooms, where provided, are shared with several families.

Refrigeration

Largely nonexistent. Modern kitchens are unheard of. Electric power is little used in homes except for limited lighting.

Travel

Highly restricted. Police permits are required. Private cars are a rarity. No really modern highways exist in the whole of Soviet Russia. Air travel is unavailable to the general public.

Family life

Difficult. Half of Soviet Russia's working force is made up of women. In United States it is one-third. Women do much of the heaviest manual labor in Russia; almost none in United States.

Use any standard for measuring the well-being of people, and United States is far ahead.

WAR ECONOMY VERSUS ABUNDANCE OF PEACE

Why is Russia so far behind United States in good things enjoyed by the people? The economy of Soviet Russia is strictly a war economy. A bare subsistence is offered the civilian. The economy of United States is overwhelmingly a peace economy. The military is required to get along on a small fraction of the Nation's total effort.

Apply the measure of national effort going to military and nonmilitary purposes, and you get a further answer to who's ahead.

With United States operating at about 80 percent of capacity, the military is getting what $40 billion will buy. The civilian economy is enjoying the product of $400 billion in national effort.

For each $1 going to the military, $10 is spent to satisfy the needs of civilians.

Straining at every seam, the Soviet Union, officials estimate, is able to provide the equivalent of $40 billion of goods and services for the military. This leaves some $130 billion for the civilian economy.

For each $1 going to the military, a little over $3 is spent to satisfy the needs of civilians.

For U.S. citizen, $1,700

In United States, the $400 billion being spent on civilian needs is divided, approximately, as follows: $110 billion for capital investment and $290 billion for goods and services. These goods and services are shared among 170 million civilians. The average American citizen enjoys the equivalent of over $1,700 each year in goods and services.

For Red citizen, $350

In the Soviet Union, the $130 billion being spent on civilian needs in divided, roughly in this fashion: $60 billion for capital investment and $70 billion for goods and services. These goods and services are shared among some 200 million civilians. The average Soviet citizen enjoys the equivalent of $350 each year in goods and services.

If a system's success is measured in well-being of peoples, the United States today is far ahead of Soviet Russia.

WHY RUSSIA NEEDS 52 MILLION FARMERS

Or apply another measure—the efficiency of agriculture, which is basic.

It requires the labor of 52 million workers on farms in Russia to provide food for the population. That leaves 58 million individual workers for all other occupations, including the military. In Russia, nearly one-half of a labor force of 110 million persons is engaged in agriculture.

Even so, the diet in Soviet Russia is wholly inadequate by American standards. Farms in Russia produce nothing like the abundance and variety of crops produced by U.S. farms.

There are 6 million persons working on American farms. That leaves 63 million workers available for all other occupations, including the military.

In the United States, less than one-tenth of the Nation's labor force is engaged in agriculture.

With fewer than 1 worker in 10 employed on a farm in the United States, the American diet is greatly superior to that of Soviet Russia. At the same time, an immense surplus of foodstuffs exists in the United States after large amounts are exported.

Facts reveal in drastic fashion the superior efficiency of American farms and factories when compared with those of the Soviet Union.

FOR RUSSIA'S CITIZENS: SHACKLES OF FEAR

In terms of rights of the individual, there is no real basis for comparison between the United States and Soviet Russia.

Freedom of speech

In the United States short of libel or obscenity, the individual is free to write or to say what he pleases. In Soviet Russia the right of simple criticism is denied the citizen if that criticism is directed at the Government. Boris Pasternak, Soviet poet and novelist, is vilified for moderate criticism of the Soviet system in a novel, "Dr. Zhivago," which was awarded a Nobel prize. Mr. Pasternak finally refused the award.

The vote

An iron dictatorship rules the Soviet Union. In the United States voters choose those who rule them and those who make policies.

Freedom of person

Secret police are an ever-present threat in Soviet Russia. The individual who is accused of a crime against the state can be imprisoned indefinitely. There is no right of habeas corpus. There is no guarantee of free trial.

Right to strike

Strikes are illegal in the Soviet Union. In the United States, there is no real limit upon the right of workers to strike if dissatisfied.

Travel

The American citizen can travel without restriction within the United States and with no real restriction outside the United States. The Soviet citizen can travel within the Soviet Union only after receiving official permission. Only the most carefully screened Soviet citizens are allowed to voyage outside Russia. Wives and children are seldom permitted to make trips abroad with husbands. The families stay home as hostages.

Work books

In the United States every worker is free. In Soviet Russia, every worker must carry a work book. On the job, this book is held by his manager. The boss can tie the worker to his job by adverse reports in his work book.

The meaning of all this? Simply that it is a basic measure of the strength of two systems. In the United States, the individual is trusted and enjoys rights that are firmly protected. In Soviet Russia, the individual is feared and enjoys no rights that cannot be taken from him at the slightest whim of a boss or a Government official.

ON WORLD FRONT, CLOSING OF RANKS

Against that background, who is ahead today and gaining in the field of diplomacy and world influence?

Once more there is a thumbnail method of measurement that helps to provide a clue. In recent years there has been a contest between the United States and Soviet Russia in providing aid for nations that are regarded as friendly.

Apply that measurement, and here is what you find:

U.S. aid

In the years since World War II, U.S. taxpayers have given nearly $70 billion in aid to other nations. Most of that aid has been in the form of gifts.

Soviet aid

In the years since Soviet Russia began to challenge the United States in the field of foreign aid, loans in the amount of $1.9 billion have been promised. Of that amount, $1.5 billion is economic aid through loans, and $400 million is in military aid through loans. Less than one-half of these loans has been drawn against by those to whom they were made. Practically all Soviet aid must be repaid. Moscow doesn't go in for gifts.

In every year since the end of the war, the United States has dispensed, on the average, about $5 billion in foreign aid—or more than twice the amount of the entire Soviet foreign aid program.

If size of aid is a measure of strength in alliances, the United States is found to be far ahead of Soviet Russia.

Glance around the world today, and signs of gain on the part of the United States are becoming impressive.

France

A strong government under Gen. Charles de Gaulle is prepared to limit the power of Communists in that nation. Communist influence is on the decline.

Great Britain

The Conservative Party government, under Prime Minister Harold Macmillan, is strengthening British ties with this country. The British Labor Party, inclined to try to play off Russia against United States is reported to be losing popular strength.

West Germany

An ally of increasing importance to United States. Strongly anti-Communist.

North Mediterranean

Spain becoming stronger. Italy's Communist Party divided. Greece and Turkey are firm allies of the United States.

In the Pacific

South Korea, Japan, Formosa and the Philippines all are firm allies. Communist strength is not great in any of them.

South Pacific; Indian Ocean

South Vietnam, Thailand, Burma, and Pakistan are all in strong hands, firmly anti-Communist. Indonesia, flirting actively with communism not many months ago, has cooled off. Nehru's India is increasingly concerned about the aims of Communist China.

In recent months, United States has made gains in the world.

Now glance at the Soviet side, in this contest in the world.

Eastern Europe

Armed forces of the Soviet Union continue to be needed to hold down the people and support Communist regimes. The flight of people from East Germany continues on a broad scale. Revolt simmers everywhere.

Red China

There are signs that the Soviet dictatorship is not happy about the new drive by Chinese officials to speed industrialization by putting a large share of the population into communes—a form of slavery. Mao Tse-tung, Chinese dictator, is reported to feel that dictator Khrushchev is an upstart who has no real claim as a revolutionary.

Middle East

Soviet Russia has managed to get a foothold in the Middle East. But Moscow's friendship for Egypt's Gamal Abdel Nasser, for example, has not solved all Nasser's problems. Aid from the Soviet Union, while continuing to flow in the form of loans, has been insufficient to do the things Nasser wants to do at home and abroad. The Egyptian dictator is not getting the financial support that he had expected from oil-rich areas of the Middle East.

When Khrushchev looks around, as American appraisers see it, he has little reason either to be confident or to be happy. At this time, things are not going his way, in the opinion of these appraisers.

OUTLOOK IS FOR UNITED STATES TO WIDEN ITS LEAD

How does it all add up?

The answer, at bottom, as the facts disclose, is the one that follows:

The Soviet Empire rests upon force and restless peoples. Within that empire are vast amounts of territory and, in spots, an extremely high density of population. At the same time, resources are not what they might be either from the point of view of quantity or of proper location for efficiency. The Soviet system, based upon decisions reached by a few planners, is an inefficient system.

The United States is an immensely powerful Nation, possessed of a highly efficient industrial and agricultural system and with ready access to the richest markets of the world. Available resources appear limitless.

Today, based upon all the evidence, United States is far ahead in the world and still gaining. That lead and the gains can continue, officials say, barring colossal mistakes of judgment. Big war does not enter into the picture as it is developing for the future.

Need for Flood Control

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to call to the attention of my colleagues an article which appeared in the Pittsburgh Press on Thursday, January 22, 1959.

Once again we are reminded of the ravages of the uncontrolled rivers and the ensuing floods. If the flood-control projects already approved by the U.S. Army engineers had received the necessary appropriations by the Congress and the administration, thousands of persons living in the Allegheny River Valley would not have had the horrifying experience of the recent floods, as well as the millions of dollars in losses to property and the lives of our people.

The article follows:

FLOOD STRESSES NEED FOR KINZUA DAM—MISSING LINK WOULD HAVE HELD WATERS AT BAY IN WARREN, OTHER TOWNS

Thousands of persons living in the Allegheny River Valley were suffering again today because of the missing link in Pittsburgh's flood-control system.

Forecasters were predicting a record-breaking flood in the upper reaches of the river which is expected to crest above 18 feet at Warren, where the water touched 18.4 feet in March 1956.

River experts pointed out that if the Kinzua Dam above Warren had been built as planned back in 1937, flooding along the banks of the stream would have been negligible.

They recalled estimates made following last year's flood by Col. Howard E. Sprague, district Army engineer at Pittsburgh.

"Construction of Kinzua Dam could have cut that 18.4-foot crest at Warren to 8.9 feet, well below the 13-foot flood stage," Colonel Sprague said. "Any damage to the town would have been averted."

During hearings on the dam, the engineers estimated that 2 to 6 feet would be cut from flood stages at Oil City, Franklin, Pittsburgh, and Wheeling, depending on where the floodwaters originated.

The rapidly rising waters of the Allegheny today were lending new force to the colonel's arguments.

He noted that the 10 flood-control dams in the Pittsburgh area already have prevented $250 million in damages since they were built.

"This is twice their original cost of $114 million and their economic benefits are just beginning to be felt," Colonel Sprague said.

Construction of the proposed 180-foot-high Kinzua Dam, the engineers estimated would control about 22 percent of the runoff from the entire Allegheny River Basin and eliminate the last major flood danger in the western Pennsylvania area.

The Army experts said 10 feet could be cut from Allegheny flood stages in the Pittsburgh district by the dam.

Construction of Kinzua has been held up by the opposition of the Seneca Indians, whose Allegany Reservation north of Warren would be partially flooded. The case currently is being appealed to the U.S. Supreme Court.

So far Congress has appropriated $2 million for preliminary work in connection with the $101-million dam but the President's budget submitted last week asked for no new appropriation.

The previous appropriations carried the specification that no money should be spent for construction until the Senecas' suit was settled. Consequently only a small fraction of the original money has been spent so far on surveys and planning.

For Better Courts

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared recently in the Rockford, Ill., Morning Star, entitled "For Better Courts":

In an address before the Chicago Bar Association, Illinois Supreme Court Justice Charles H. Davis, of Rockford, offered a meritorious blueprint for improvement of the Illinois court system and the administration of justice by legislative action and amendment of rules of the State supreme court.

Justice Davis called for immediate court revision through legislation providing for creation of adequate supervisory powers in the judicial branch of government to be administered through an administrative officer of the supreme court, with power of assignment over judges of any court of record; elimination of courts of record in cities, villages, and incorporated towns and absorption of their personnel into the circuit courts; increase the number of judges of the circuit and superior courts if necessary; revision of the probate act to require that all appeals from probate court rulings be taken to the appellate or supreme court, thereby abolishing an intermediate review by the circuit court; transformation of the offices of justice of the peace and police magistrate from a fee basis to a salary basis; use of impartial medical testimony in resolving medical issues in civil litigation; amendment of the civil practice act to permit the use of a jury handbook, rather than to require the court to give all instructions to the jury at the conclusion of a trial.

The provision for elimination of city and village courts of record would not apply to the municipal court of Chicago.

Justice Davis would amend supreme court rules to permit either party to a lawsuit to require the trial court to grant a pretrial hearing and to require the bar to expand its list of trial lawyers.

All of the recommendations made by Justice Davis are designed to expedite litigation, streamline the judicial process, and generally improve the workings of justice.

These recommendations merit the earnest consideration of the legislature, the judiciary, and the bar. Illinois State Bar Association is preparing legislation providing for some of these improvements. It is recognized that necessary revision of the court system can be accomplished by legislative action.

Who's Overseeing the Oversighters?

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, January 28, 1959

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by the Honorable J. Sinclair Armstrong, entitled "Who's Overseeing the Oversighters?" Mr. Armstrong is leaving the Government service, and his address is predicated on considerable testimony before the Oversight Committee of the House. Therefore, I ask unanimous consent for its inclusion in the Appendix of the RECORD.

Mr. President, I am informed by the Public Printer that the estimated cost of printing the manuscript is $263.25. I believe the address has a bearing on certain pending questions. Otherwise, I would not ask that it be printed notwithstanding the cost.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHO'S OVERSEEING THE OVERSIGHTERS, AN ADDRESS BY J. SINCLAIR ARMSTRONG, BEFORE THE SECTION ON ADMINISTRATIVE LAW OF THE BAR ASSOCIATION OF THE DISTRICT OF COLUMBIA, AT THE MAYFLOWER HOTEL, WASHINGTON, D.C., NOVEMBER 6, 1958

In early January 1957 the chairman of the Committee on Interstate and Foreign Commerce, Representative OREN HARRIS, of Arkansas, dropped in the hopper the resolution by which the House of Representatives authorized that committee to make investigations and studies into matters under the jurisdiction of certain of the so-called independent regulatory agencies. This was the now well-known House Resolution 99, and it included authority to investigate and study the adequacy of the protection to investors afforded by the disclosure and regulatory provisions of the various securities acts.

In discussing the resolution on the floor, the Speaker, Representative SAM RAYBURN of Texas, with obvious pride, mentioned that during the time he had been a Member of Congress every board and commission except the Interstate Commerce Commission had been set up, many of them from the Interstate and Foreign Commerce Committee. He particularly mentioned the Securities and Exchange Commission and certain of the Federal securities laws. He said, referring to the chairman of the committee, Representative HARRIS, "I trust that the gentleman will set up a subcommittee, and I think under the broad authority of this resolution he has that authority to go into the administration of each and every one of these laws to see whether or not the law as we intended it is being carried out, or whether a great many of these laws are being repealed or revamped by those who administer them."

Replying, Representative HARRIS mentioned that it was his intention to set up a special committee to investigate the administration of the laws as intended by Congress which come under the jurisdiction of the Interstate and Foreign Commerce Committee. "As the resolution indicates," he said, "many of these agencies come under our jurisdiction. They are established as arms of the Congress and appropriately report to the Congress."

Representative WILLIAM L. SPRINGER, of Illinois, a member of the committee, stated: "I think the committee ought to go back through the years from the time that the law was first put into effect to determine what the trend has been over that period of time. That is perfectly within the jurisdiction of the Committee on Interstate and Foreign Commerce. I think the House would like to know, because the agencies which are under the Committee on Interstate and Foreign Commerce cover almost every facet of business in America today. If that is done and done properly, you could have a study and it would have a good effect, not only so far as this particular committee is concerned but upon business generally."

Thus was set in motion, at the beginning of the 1st session of the 85th Congress, the now famous Subcommittee on Legislative Oversight.

We might pause for a moment to consider just what "legislative oversight" means. In 1946, by the Legislative Reorganization Act, Congress established various standing committees and assigned to them the duty to exercise continuous watchfulness of the execution by the administrative agencies of the laws.

Responsibility to exercise continuous watchfulness of the execution of the Federal securities laws by the Securities and Exchange Commission was assigned to the Committee on Banking and Currency of the Senate and the Committee on Interstate and Foreign Commerce of the House. Pursuant to the Legislative Reorganization Act of 1946, the Securities and Exchange Commission had made regular biennial presentations at the opening of each Congress to the House Committee on Interstate and Foreign Commerce, or to its standing Subcommittee on Commerce and Finance, of its programs in administering the Federal securities laws.

Also, throughout 1955, a whole year before the establishment of the Legislative Oversight Subcommittee, the Commission had presented to the Subcommittee on Commerce and Finance of the House Committee on Interstate and Foreign Commerce the programs and problems of the Commission in the light of the drastically changed conditions of the securities markets which confronted the Commission as a result of the tremendous increases in the marketing of new issues of corporate securities, in trading on the exchanges, and in trading in the over-the-counter market, and the consequent development of abuses and enforcement problems. Particular emphasis was placed on the penny uranium stock boom, and our efforts to improve the administration of the exemptive regulation for issues of small size.

During the spring of 1956, the Commission developed its proposals for legislative changes that would be needed to assist the Commission in better coping with these problems. They were submitted to the chairman of the Committee on Interstate and Foreign Commerce, the late Representative J. Percy Priest, of Tennessee, in May. There was not time for the committee to take them up before adjournment, but early in August, right after adjournment, the chairman assured me that these legislative proposals would have the prompt and early consideration of the committee at the beginning of the 2d session. Unfortunately, in October Representative Priest passed away, and the great support which he gave to the work of the Securities and Exchange Commission, during his tenure as a senior member and finally chairman of

the committee, was thus unfortunately withdrawn.

Another most unfortunate change in personnel of the committee was the retirement from Congress of Representative Arthur W. Klein, chairman of the Subcommittee on Commerce and Finance, to become a Justice of the Supreme Court of the State of New York. Justice Klein had been a member of the commission staff earlier in his career, and understood and supported the work of the Commission superbly.

In February 1957, at the opening of the 1st session of the 85th Congress, I met with the new chairman of the committee, Representative HARRIS, in his office, to explain to him the importance to the work of the Commission in protecting the investing public of an early hearing on the Commission's legislative proposals. Unfortunately, no such hearing was accorded either by the committee itself, by the standing Subcommittee on Commerce and Finance, or by the newly formed Legislative Oversight Committee.

After House Resolution 99 was passed, it occurred to me that the assistance of the Speaker, whose great interest in the securities laws was well known, could be enlisted. So I obtained an interview with him a few days later, in his office, and urged him to consider promptly action by the Legislative Oversight Subcommittee of the Commission's enforcement problems, particularly in light of the uranium penny-stock boom and the boiler-room fraudulent, high-pressure sales boom, with all the staffing and budgetary implications of these. I also requested consideration of other aspects of the Commission's legislative program. The Speaker indicated to me great interest in the problems of the Commission which I described to him in this meeting. Unfortunately, no progress in the way of a hearing with the committee or either of the subcommittees resulted from my meeting with the Speaker.

Thereafter, in March 1957, Representative PETER F. MACK, JR., of Illinois, who was the chairman of the Subcommittee on Commerce and Finance, invited a discussion with me of a case with which the Commission was then dealing. Some of you may remember that Representative MACK took considerable exception to my testimony last June before the subcommittee on this subject, as he seemed to feel that I regarded his inquiry about this case as improper in some way because I compared it with inquiries from White House staff members about cases. I think the record should be perfectly clear that I do not regard inquiries by Members of Congress about matters pending before the Commission as improper, any more than I regard the White House staff as barred from inquiring into the status and progress of cases pending in the agency.

At any event, in this meeting with Representative MACK I again pressed the urgency of consideration by the committee, or any of its subcommittees, of the Commission's legislative program. Unfortunately, no continuous interest or watchfulness was shown by Representative MACK for the Commission's programs and problems.

Neither the committee nor any of its subcommittees considered the Commission's legislative proposals during 1957 in the 1st session of the 85th Congress. Nor did the committee nor any of its subcommittees take these matters up in the 2d session in 1958. I think this constitutes a very clear failure by the committee of Congress, which has a statutory duty to exercise continuous watchfulness of the execution of the Federal securities laws, to discharge its obligation and duty to Congress and the public. The committee did not exercise continuous watchfulness at all after 1956. It was solely for the purpose of calling as wide public attention to this as one individual could that I brought this sorry record of lack of attention to serious problems in the securities markets to the attention of the Legislative Oversight Subcommittee in my testimony before the subcommittee in June of this year.

I do not propose to spend any time this noon on the record up to now of the Legislative Oversight Subcommittee itself, other than to say that it is only just beginning to deal with fundamental problems confronting the Commission in the Commission's effort to carry out the basic purposes of investor protection embodied in the Federal securities laws.

The subcommittee circularized the Commission on the question of whether members were being unduly traveled or entertained by the regulated industry. That was a good thing for the subcommittee to do, because it is always well for Congress to keep a close watch on standards of behavior of officials in the executive branch. But it was hardly a major effort in carrying out the purpose, which I read a moment ago, expressed in House Resolution 99, or of the duty of oversight expressed in the Legislative Reorganization Act.

Also, the subcommittee concerned itself at great length, and in my opinion unfairly and unduly, about alleged pressure brought to bear by the White House staff in particular cases. The record made before the subcommittee has conclusively demonstrated that there was no pressure brought to bear by the White House staff in any case before the Securities and Exchange Commission. The record also shows diligent efforts by the Commission to enforce the law, under staffing handicaps and in hard-fought litigation. I think it is perfectly obvious from the record that had there been pressure brought to bear it would have been resisted by the Commission just as we resisted congressional pressure.

In passing, I might say that the number of congressional inquiries during the 4 years I was a member of the Commission exceeded by many hundredfold the number of White House inquiries. I think the subcommittee has done a grave disservice to the confidence of the public in the administration of the law by independent agencies by creating the impression in the public mind that members of independent agencies are automatically susceptible to pressure from the White House, any more than they are susceptible to pressures from Congress. The Securities and Exchange Commission during the 4 years I served on it was entirely free of any susceptibility to pressure from the White House, Congress, or anyone else, including the securities industry. I also think that the subcommittee has done a grave disservice to the public by attempting to create the impression that because agencies, such as the Securities and Exchange Commission, are independent they are under the administrative control of Congress. This they are not. The laws by which these agencies were created, as well as other basic laws enacted by Congress, such as the Budget and Accounting Act and the Administrative Procedure Act, make it perfectly clear that these agencies possess executive and quasi-judicial powers, as well as quasi-legislative powers. Under our Constitution, it is the function of Congress to write the laws, not to administer them. The designation of these independent agencies as arms of Congress is a convenient colloquial description. However, it is completely at variance with the concept under which the Securities and Exchange Commission and the other so-called independent agencies operated during their early years, when their close collaboration with President Franklin D. Roosevelt was well known. After all, the famous Humphrey case on the tenure of Commissioners arose from the unwillingness of one Commissioner to truckle to the White House, as a result of which President Roosevelt attempted to fire him without cause. To call the Commission an arm of Congress does not validly carry the legal conclusion which the subcommittee has attempted to create, that these agencies are or should be independent of the executive branch of the Federal Government.

So much for the record of the Legislative Oversight Subcommittee to date. I recognize that the subcommittee, and particularly its new chairman, Representative HARRIS, have had unusual problems, to say the least, both among its members and its staff, with which to contend. Every encouragement should be given to the subcommittee and to its new chairman, Representative HARRIS, to get on to the important work that lies ahead in carrying out the purpose of House Resolution 99 and the duty of continuous watchfulness imposed by the Legislative Reorganization Act. I am personally hopeful, as I have been in times past, that this is going to go ahead in the next Congress. I am hopeful that the chairman of the subcommittee and the Commission will soon address themselves to the Commission's problems and its legislative programs. I pledge to Representative HARRIS my personal support and cooperation if there is any help and assistance which I can give the subcommittee in its consideration of these important legislative proposals and problems of administration of the Federal securities laws.

Let us look for just a moment at what some of these legislative proposals are and why they are needed.

First, I would like to speak of the Commission's study pertaining to the desirability of the registration of unlisted securities of certain companies having large public investor interest. In the winter and spring of 1955, the Senate Banking and Currency Committee conducted a so-called friendly study of the stock market. The only legislation which came out of this study was the reintroduction of legislation which the Commission had earlier recommended back in 1947 and 1950 of a bill which would extend the financial reporting, proxy and insider trading provisions of the Securities Exchange Act of 1934 to companies which, by reason of the broad distribution of their securities and their failure to have registered them under the Exchange Act and listed them for trading on a stock exchange, were exempt from these provisions of the Exchange Act.

During 1955, our Commission made the first full, complete and factual study to determine the companies which might be affected by this bill, the extent of their compliance with the applicable financial reporting requirements of the Commission, and their practices in soliciting proxies. About 1,200 corporations were affected, having estimated assets in excess of $35 billion. Serious deficiencies were found, particularly in the proxy soliciting material, and in 1956 the Commission endorsed the enactment, with some minor changes, of this legislation. Unfortunately, the Senate Banking Committee under the chairmanship of the bill's sponsor, Senator J. W. FULBRIGHT, of Arkansas, more or less lost interest in the proposal, and my personal efforts to have it considered by the House Committee on Interstate and Foreign Commerce also failed.

In 1957, the Commission made a similar study in regard to the practices of insurance companies which were exempted from the original bill. Toward the end of the last session, the Banking Committee amended the bill so as to reduce its coverage and reported it to the Senate, but no legislative action was taken.

The Commission expressed the opinion that this bill would provide additional protection to investors in securities in which there is a broad public investor interest, and which are sold and are traded in the interstate securities markets, by requiring disclosure of the business and financial facts pertaining to the corporations issuing them,

and that it would strengthen the protections against fraud afforded to investors. In my opinion, there was a sorry lack of legislative attention to one of the most important financial studies ever made by the Commission.

Next, let me refer to the so-called technical amendments proposed by the Commission. These resulted from the most exhaustive legal study of the statutes which the Commission administers that has been made since 1940. The proposals were designed to strengthen the jurisdictional provisions of the statutes, correct certain inadequacies, and, most important, to facilitate criminal prosecutions and other enforcement actions. As I mentioned, they were first submitted in 1956 and again in 1957. During 1957, in order to facilitate the work of any committee of Congress which might take up these problems, the Commission obtained approval of the respective Senate and House committee chairmen to circulate the proposals to the public and hold hearings on them. Thus, in a sense, the Commission did some of the committee's work for it in advance.

After the Commission had held hearings and conferences in the winter of 1957, and had considered the testimony and written comments received, the proposals were redrafted and revised and, as I mentioned, again submitted to Congress. No hearings were held nor was any action taken.

I was delighted to read in a talk which the present Chairman of the Commission, Edward N. Gadsby, delivered just a few weeks ago that the Commission presently intends to reexamine these legislative proposals in the light of comments which have been made since their introduction. He said: "It is reasonable to predict that the proposals will be reintroduced in substantially the same form in the 1st session of the 86th Congress which is scheduled to convene on January 7, 1959."

I would just like to mention briefly several things which these legislative proposals, if enacted, would do to aid the Commission in its enforcement work. The proposals to amend the Securities Act of 1933 would provide more workable administrative procedures and more time within which to conduct investigations in connection with registration statements for new issues, would clarify the jurisdictional basis of the civil liability provisions of the statute, would make clear that showings of past violations were sufficient basis for injunctive relief, and that aiders and abettors may be responsible in administrative proceedings, and would extend civil and criminal liability to documents filed with the Commission under the exemptive regulations as they now are when filed under registration provisions.

The proposals to amend the Securities Exchange Act of 1934 would make it a violation of Federal law to embezzle money and securities entrusted to the care of an exchange member or a registered broker-dealer, would make the status of an exchange member or a broker-dealer doing business through a member or a registered broker-dealer basis for Federal jurisdiction, would clarify and strengthen the provisions relating to manipulation and the financial responsibility of brokers and dealers, would authorize the Commission to regulate the borrowing, lending, or holding of customers' securities by a broker-dealer, would make it clear that attempts to purchase or sell securities are covered by the antifraud provisions of the statute, and would make various other improvements.

These are just a few of many important and necessary changes which Congress should consider making in these laws if the Commission is to continue to serve the investing public in today's active securities markets.

In 1953, and again in 1957, the Commission amended and strengthened the rules relating to the disclosure provisions of its exemptive regulation relating to the sale of small issues of securities, that is, issues not in excess of $300,000. These are exempt from the full registration provisions. In the light of these protective improvements in the exemptive regulation, the Commission recommended to Congress that the Securities Act of 1933 be amended to provide for an increase in the exemptive amount from $300,000 to $500,000. We believe that this would be beneficial in facilitating the attraction of new capital, particularly new equity capital, to small business enterprises. The difficulty of small business today to attract new equity capital is one of the serious problems of our economy and one to which a number of committees of Congress have from time to time addressed themselves.

The proposed increase in the exemption was unanimously passed by the Senate in 1954 but blocked in the House by the opposition of Speaker RAYBURN himself. Similar bills again passed the Senate in 1958. I believe it is high time that the committee considered favorably this effort on the part of the Commission to facilitate the freer flow of vitally needed new capital to small business.

In addition to the Commission's legislative program, there are a number of rulemaking problems with which the Commission is attempting to deal. I was delighted to read in Mr. Gadsby's address, to which I referred a moment ago, his statement that, "The Commission may legislate by adoption of rules only within the framework of the powers entrusted to it by the Congress. It may not add to the statutes by rule, but it has the statutuory duty to implement them. The remedy for an inadequate statutory delegation of powers is by amendment of the statute and not through the adoption of rules."

The Commission has adopted a number of rules which, in my opinion, are very much in need of legislative scrutiny. I do not intend to dwell on this at length, but one of the most important of these is the so-called no-sale rule under the Securities Act of 1933. The rule in effect provides that the registration and prospectus requirements are inapplicable to securities issued in connection with mergers, consolidations, reclassifications and transfers of assets between corporations. The rule does not purport to provide an exemption from the antifraud provisions of the act.

The statutory construction embodied in this rule was developed in the early days of the Commission, and in 1956 we concluded that the rule should be reconsidered. Various revisions have since been proposed. I have spoken on this subject at length, particularly in a talk which I gave before the Illinois Society of Certified Public Accountants in June 1957.

Suffice it to say that, as an interpretive rule, I consider it to be an incorrect interpretation of the statute. The terms "offer" and "sale" are specifically defined in the statute to include every contract of sale or disposition of a security for value, and every attempt to dispose of a security for value. That definition in my opinion applies to the solicitation of stockholders' votes for a plan of merger or like transaction which will involve the issuance or exchange of securities for value, and the solicitation of such votes in my opinion is an attempt to dispose of a security or interest in a security for value.

Moreover, elsewhere in the statute certain other exchanges are expressly exempted from the registration provisions. Furthermore, the exemptions from the registration provisions of the statute for certain types of securities and certain transactions are broader than the exemptions from the antifraud provisions of the act. Thus it is clear that Congress was perfectly capable of stating what exemptions it intended and what it did not intend.

The no sale rule has the practical effect of adding a substantial category of transactions to those expressly exempted from registration. I believe this is unsound as a matter of statutory construction. Congress did not give any power to the Commission to add to the classes of securities exempted by the act, except in one instance not here relevant. This problem is urgently in need of legislative correction. No matter what rule the Commission may now adopt modifying the present no sale rule, careful lawyers will inevitably be reluctant to advise clients to rely on it.

Unfortunately, the existence of the rule provided a loophole through which securities involving millions of dollars were issued and sold in promotions freed of all Commission interference during the boilerroom resurgance of 1955 and 1956.

Another most important phase of the Commission's enforcement program, which I believe urgently needs staffing and follow through, is the program of inspection of registered investment companies. Investment companies have shown striking growth since the act was passed in 1940. From assets with market value of $2.5 billion that year, their assets increased to $15 billion in 1957. This enormous pool of public investors' funds is subject to virtually no State or other Federal regulation, and, because of staff inadequacies, not until 1956 did the Commission ever consider any program of regular inspections. That year, because of the rapid expansion of the industry, we projected an inspection program for 1957. However, because of staff lack only six inspections could be completed. This is obviously totally inadequate in view of the size of the industry and the possibilities for abuse.

The mutual fund business is probably the most important single segment of the capital market through which the savings of millions of individual American citizens are invested. The financial integrity of this segment of the market is vitally important to these millions of small investors. The danger of this large industry suffering abuses by the inability of the Commission to perform even the most elementary of supervisory functions called for by its present statutes could result in tragic consequences.

The Legislative Oversight Subcommittee should carefully review the Commission's legislative authority over investment companies to determine whether it is adequate in the light of present day circumstances and market conditions to protect the investments of the multitude of citizens in whose interest this Commission was established.

Such a program should be supported by responsible segments of the investment company industry, because the whole industry could suffer loss of public confidence by abuses which might occur in a few mutual funds which in themselves were of no great importance.

Finally, I invite the consideration of the subcommittee to the Commission's enforcement problems in the light of the entirely new conditions which prevail in the securities markets today. Conditions at present require a most vigorous and accelerated program, including new measures of enforcement, for at no time in the history of the Commission has activity and public participation in the securities markets been so great. For example, the dollar volume of securities registered increased 94 percent from $7.5 billion in 1953, to $14.6 billion in 1957. The market value of all stock on all stock exchanges increased from $111 billion in 1950, to over $262 billion in 1957. The dollar volume of securities traded on stock exchanges rose from $17 billion in 1953 to $34 billion in 1957. The number of holders of shares in publicly owned corporations is estimated to have increased from 6½ million persons in 1952, to over 8½ million by 1956.

Unfortunately, a substantial segment of the public again appears to believe, as it did in the roaring twenties, that it is possible for the unskilled to reap large and quick profits in the securities markets. An increase in the number of uninformed and unsophisticated investors, and an increase in their willingness to purchase unknown and speculative securities, has increased the opportunities for illicit profit in illegal or fraudulent sales of securities. The problem of boiler rooms, the problem of sale of unregistered securities based on claimed exemptions, the evasion of registration requirements through the no sale theory, which I mentioned above, and problems in connection with promotional stock, particularly in new insurance and financial ventures in some parts of the country, have all drastically increased the work of the Commission in enforcement. Also, for reasons which I have recently discussed in the Virginia Law Review, State blue sky law administration is almost completely ineffective in protecting the public in today's predominantly interstate securities markets.

The Commission's efforts to cope with this problem by increased broker-dealer inspections and civil and criminal action in the courts have met with considerable success, but they are limited by staff and budget. Fortunately, the Independent Offices Subcommittee of the Committee on Appropriations of the House, under the able leadership of Representative ALBERT THOMAS of Texas, has taken a genuine interest in these problems and, indeed, has provided the only effective forum for the Commission in the House during the past few years.

As a matter of fact, back in 1955 at the request of the Independent Offices Subcommittee of the Committee on Appropriations of the House, the staff of the Library of Congress made a study of the work of independent agencies with a view to determining whether they were properly carrying out their functions, which in my opinion made a real contribution to the work both of the subcommittee and of the Commission.

With the backing of the Director of the Budget and the Independent Offices Subcommittee, the Commission's staff has been increased from about 650, the 20-year low which occurred in the spring of 1955, when I became chairman, to about 1,000. A great deal more needs to be done, and support from the committee of the House which has substantive jurisdiction, namely the Committee on Interstate and Foreign Commerce, for the Commission's enforcement program and staffing and budgetary problems, is urgently needed.

In conclusion, I would like to make a few observations as to the purpose of Federal regulation of the interstate corporate securities markets. As lawyers, we sometimes tend to become so deeply immersed in the complexities and niceties of law and legal procedures that we lose sight of the basic social and economic objectives which the law serves. In a free society, with modern scientific and industrial techniques, the only way in which the production of the many things needed to provide a high standard of living and national security is through large aggregations of capital provided by millions of small investors. Today we have in the United States just such a system of free private enterprise. The means of production in our country are owned by the people, not through the state as would be the case under socialism or communism, but, rather, directly through ownership of corporate securities. If corporations are to attract the funds needed for capital purposes in an expanding economy, with a burgeoning population, and under conditions of enormous national security responsibilities at home and in the free world, they must have access to the savings of millions of individual investors. If these savings are to be made available voluntarily, these millions of investors must have confidence in the integrity of the capital markets. Because of abuses and other conditions which prevailed in the late twenties, the confidence of the American people in our capital markets was destroyed. Reestablishment of this confidence by Federal regulation became a basic policy of the Government, commencing with the enactment of the Securities Act of 1933. This act, incidentally, was based upon studies made by the Federal Trade Commission, commencing in 1928. A series of laws were placed on the books up to 1940. They have remained substantially unchanged since. As they have been administered over the intervening years by the Securities and Exchange Commission, with maximum and effective cooperation from a reorganized and highly responsible securities industry, the confidence of the investing public in the integrity of the capital markets has been restored. This is vitally important to the continued success of our free enterprise system. Hence, the Committee on Interstate and Foreign Commerce of the House and its Legislative Oversight Subcommittee have a great responsibility to the American people to support and aid the Commission in its efforts to improve the administration of the Federal securities laws. Thus, in the last analysis, the answer to, "Who's overseeing the oversighters?" is the American people.

It will be obvious to all of you that I feel strongly about these problems. I spent most of my time as a practicing lawyer for 12 years assisting business and industry in raising capital under these laws. Then for 4 years I was privileged to participate in administering them. I believe in them. They must be made to serve the public, and they must be improved. I have spoken my piece on this subject, in Washington and around the country.

For the past year and a half I have had nothing to do with the Commission. The views I express here are my own. I hope I haven't ruffled any feelings by what I have said or done. During my tenure on the Commission, I experienced most heartwarming support from responsible members of the bar, the securities industry, and Congress, not to mention fellow Commisisoners and staff, for whom my personal admiration and to whom my debt for their hard work, intelligence, and loyalty is truly enormous. I hope I have helped to stimulate responsible consideration of vital problems affecting our Nation's securities markets and the success of our free-enterprise system.

A Tribute to Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. REES of Kansas. Mr. Speaker, since we are nearing the birthday anniversary of our former President, Abraham Lincoln, it seems fitting and proper to include a statement delivered in the House by a distinguished and former Member of Congress, the Honorable Homer Hoch, who represented the Fourth District of Kansas during the period March 1919 to March 1933. It is a classical tribute to a great American, to a great President, Abraham Lincoln.

There is no new thing to be said of Lincoln. Nor is there a new thing to be said of the mountains or the sea or the stars. The mountains ever tower in solemn majesty above the drifting clouds, the mysterious sea ever sobs upon the shore, and the silent stars ever keep holy vigil above a tired world—but to mountain and sea and stars, men turn forever in unwearied homage. And thus was Lincoln. For he was a mountain in grandeur of soul, he was sea in deep undervoice of sadness and mystery, he was star in steadfast purity of purpose and of service. And he abides. With the name of Lincoln tears are called from old men's eyes, and with the name of Lincoln childhood learns to lisp a patriot's devotion. And there is no new thing to be said of him—what need, for such as he. But while the republic stands on whose altar he laid his great mind and heart, while liberty is cherished, while civic virtue and service and sacrifice are honored in the earth, the name of Lincoln will be spoken in undying love by the sons of men.

President John L. Lewis, United Mine Workers of America, Vehemently Protests the Ill-Advised Action by the German Government in Levying a Customs Tax of $4.76 on Coal Imports While the Flood of Foreign Oil to Germany Is Exempt From Such Taxation

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. VAN ZANDT. Mr. Speaker, with further reference to my protest to Congress on January 27, 1959, regarding the action of the German Government in levying a customs tax of $4.76 per ton on coal imports, I wish to call attention to the letter dated January 26, 1959, written by President John L. Lewis, United Mine Workers of America, to Hon. Douglas Dillon, Under Secretary for Economic Affairs of the Department of State, in protest over the arbitrary and discriminatory action by the German Government.

Mr. Lewis minces no words in evaluating the disturbing factors apparent in the shortsighted action taken by the German Government and which is certain to prove of aid and comfort to Soviet Russia in development of its export and barter programs.

Mr. Lewis' letter follows:

UNITED MINE WORKERS OF AMERICA,
Washington, D.C., January 26, 1959.

Hon. DOUGLAS DILLON,
Under Secretary for Economic Affairs, Department of State, Washington, D.C.

DEAR MR. SECRETARY: Your department is familiar with the protests of all elements of the coal industry against the proposed plans of the German Government, in its policy of discrimination against imports of American coal. Despite these protests and the sympathetic cooperation of your department, the German Government now officially announces a customs duty of $4.76 a ton, chiefly effective against American coal.

I point out:

(a) That the tax is not applicable to foreign oil, vast quantities of which are now entering Germany.

(b) That the tax will not affect coal imported from Poland, nor lignite from East

Germany, now and in the future delivered under barter arrangements.

(c) The arbitrary imposition of this tax will nullify term contracts with U.S. coal producers in the approximate amount of 10 million tons per annum. It will lay idle $100 million of investments made by American coal, railroad, and shipping interests, to provide facilities and highly efficient quality, requisite to deliver the tonnage obligated under existing term contracts. These investments were made upon the invitation of German coal, steel, and governmental interests, who gave assurances that continuity of purchase on the part of Germany would last over an indefinite number of years, and make possible the amortization of the aforesaid investments.

(d) Motivation on the part of the German Government is political in nature and not, in itself, economic. Germany is planning to increase its trade with Russia, Poland and East Germany on a barter basis, and has now pending requests from Russia for additional barter deals. The Russian development of the East Caspian and other coal fields now being planned will release vast quantities of Black Sea coal, now being mined by Russia for export and barter purposes.

(e) The employment of 20,000 Americans now employed in the coal, rail and shipping industries, will be destroyed by this contemplated action on the part of Germany, and the internal revenue of the United States will be diminished accordingly.

The contemplated arrangement smacks of bad faith on the part of the German Government, and will create bitterness and resentment on the part of those who will be the victims of such contemptible treatment. It is astonishing that this action should come at a time when the integrity of Germany, guaranteed by the United States, is being threatened by the nation which Germany now hopes to placate at the expense of her benefactor.

The arbitrary action of the German Government should be effectively protested by the Government of the United States, and economic reprisals resorted to if necessary, to protect our American economy against such ill-conceived and hostile action. Without hesitation, Mr. Secretary, I assure you that the overwhelming majority of all Americans adversely affected by the proposed act of the German Government support the sentiments I herein enunciate.

Yours truly,

JOHN L. LEWIS.

The Import Difficulties of the Automobile Industry

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. REED. Mr. Speaker, during the last session of Congress, I included in my remarks the text of an address made by Mr. Roger M. Blough, the board chairman of the United States Steel Corp. Mr. Blough called attention in his speech to the increasing flood of imports of steel and steel products and their resulting adverse effect on the American steel industry and our domestic economy.

Mr. Blough did not believe that reasonable tariffs to equalize foreign and domestic costs were the solution to the steel industry's problem. Rather, he felt that restraint with respect to wages could offer a solution. I pointed out at the time that, while I agreed with his statement of the problem, I did not agree with his solution.

Now another leading industrialist, Mr. Ernest R. Breech, chairman of the board of the Ford Motor Co., has cited the problems facing the American automobile industry as a result of the economic resurgence of Europe.

Mr. Breech and the other automobile manufacturers have good reason to be disturbed about the flood of imports and the failure of other nations to reciprocate our Government's generosity with respect to admitting imports. Yet, in part, policies which he espouses have caused this situation.

For the year ending October 31, 1958, the United States imported 398,791 automobiles. Over the same period we exported 130,723. From the viewpoint of the shareholders and workers in the automotive industry, such a 3-to-1 adverse ratio can scarcely be interpreted to mean that the foreign trade policies of the United States were written and are being administered with their welfare in mind.

And the situation would appear to be deteriorating rather than improving, in view of the fact that our automobile exports for the first 10 months of 1958 were down 10 percent from the same period of 1957; and our imports were up almost 100 percent.

While I am not an expert in the affairs of the automobile industry, one has only to do some simple arithmetic to compute the effect of this situation upon our workers. Some 600,000 people on the average were employed in the industry in 1958; production was 5,119,720 units. Thus, it might be said that roughly each worker produced about 8.5 automobiles during the year. Employment figures for the automotive industry show substantial month-by-month variations. The 600,000 figure is believed to be a relatively conservative one, rendering the results discussed elsewhere also on the low side.

Hence, we see that the 398,791 automobiles imported displaced some 44,300 jobs in the automobile industry.

On the other hand, and for the latest available 12 months' period, the exports of 130,723 vehicles provided jobs to some 15,400 workers.

The next time the free-trade advocates from Detroit express concern over unemployment in that area, they might well give some thought to the fact that the difference between the jobs displaced and the jobs created showed a net deficit of 28,900 jobs. That conservative estimate is no insubstantial number of unemployed American citizens, the vast majority of them in Michigan.

Now, in its monumental study, "The United States in World Trade," the American Tariff League makes the following statement:

> It can be estimated that for every 100 jobs permanently lost, a community is deprived of $360,000 in annual retail sales; $270,000 in bank deposits; 107 automobile registrations; 112 households; 74 jobs in other enterprises; 4 retail establishments.
>
> In addition to this approximate equation, other significant cutbacks must be computed, such as reduced Federal, State and local tax revenues; greater outlays for unemployment compensation; declining school budgets; less income for charitable purposes.

If these 28,900 jobs are permanently lost in the automotive industry, we can then apply the league's ratio of 74 additional jobs lost to each 100 manufacturing jobs lost, and we have 21,200 more unemployed, or a grand total of 50,100 jobs lost—again mostly in Michigan.

Let us assume that the annual wages of each of the 50,100 workers would have been $4,000 a year, a conservative figure. Again by simple arithmetic, we find that the imports were costing American workers $200,400,000 in wages lost over the 12 months named—again mostly in Michigan.

I would now like to call my colleagues' attention to the conclusions of Mr. Breech. While I would agree with him that the problem is serious and that American automobile manufacturing suffers from a serious cost disadvantage, I differ markedly from some of his conclusions. As one of his conclusions, he states:

> If America's cost disadvantage continues to increase, however, it seems to me that we must anticipate an increasing flight of American capital and much more sourcing of parts and products abroad. A trend in this direction is already evident. American manufacturers of tractors and farm implements, as well as typewriters, office machines, cameras, and optical instruments—particularly goods having a high labor content—are increasingly sourcing and manufacturing in Europe, Latin America, and Japan for sale in the American market. I suggest that what is now a trickle may grow to a flood which could disrupt both production and employment patterns here in the United States.

I disagree with him that this transplantation abroad of American capital and, more importantly, American jobs is now only a trickle. It already is disrupting both production and employment patterns here in the United States. Already substantial, it will inevitably continue to grow under the foreign trade policies our Government has practiced for the past 25 years. I agree with him that any such deteriorative situation is unfortunate.

His next conclusion deals with the same point:

> Now it seems to me that, if we want to sell in expanding world markets, and more importantly if we do not want to see American production and jobs disrupted by the flight of capital and industry abroad, we are going to have to remain competitive in design, quality, costs, and prices with foreign industry.

By all means we must remain competitive in design and quality. However, with the labor differential so substantial between our workers and those abroad, we cannot now compete with respect to costs and prices; nor will we be able to do so in the foreseeable future. This problem is not unique to the automobile industry; it is true of hundreds of other American industries.

Mr. Breech rejects the use of reasonable tariffs to make our prices and costs

competitive with those of foreign industry.

I do not agree.

Reasonable tariffs offer us at least a partial method of insulating our American standard of living against the ravages of cut-rate, foreign competition. And yet, as every Member of this House must know, I have never advocated the use of the tariff simply as a mechanism to exclude foreign goods from our markets. Rather, I have long advocated the principle of fair and open competition between American manufacturers and their counterparts overseas; and one way to insure this kind of competition is to use reasonable tariffs as an equalizing device.

If our automotive industry is to reduce its costs and prices as he suggests, all I can suggest is that they had better hurry up.

Mr. Breech also considers the lack of reciprocity abroad to be a major problem and I agree with much of what he says on this:

Here I want to point out that, whatever our own problems of cost reduction, we must be granted full and free competitive access to foreign markets.

The theory that trade is a two-way street applies just as much to our foreign competitors as it does to us. If we are to give free access to the American market to foreign producers with size and efficiency comparable to ours and with substantially lower wage costs, we must ask an equally fair crack at their markets.

Here I would point out that in 1957, Great Britain allowed only 265 American automobiles to be imported, and a scant 576 found their way to West Germany. This does not seem to me to be reciprocal trade. In 1957, the United States exported 142,000 cars, while West German auto exports exceeded 500,000 and Great Britain shipped 426,000. Both countries, of course, did much better in 1958.

For 25 years, the State Department has been, in effect, telling us that, if we provided a good example by lowering our tariffs, other countries would reciprocate. I believe that Mr. Breech's own remarks show how unsuccessful that policy has been:

Today, some European countries have tariff and quota barriers so effective, or penalties so high, as virtually to exclude all imports of various U.S. manufactured goods. Take the case of automobiles.

As you may know, our tariff on imported cars was recently lowered from 10 percent to 8½ percent. We have no quotas or other restrictive devices such as currency controls.

Now consider a 1959 Ford Fairlane 500 Fordor Hardtop, with full optional equipment, delivered in Pittsburgh. The suggested list price is about $3,600, including State and Federal taxes, although, as in the case of many other products, it is common knowledge that the actual cost to the customer may be somewhat lower than the manufacturer's suggested retail price. If you wanted to buy the same car in France, England, or Italy, you would have to hurdle barriers of severe quota restrictions and heavy cost penalties.

In France, the delivered price of that car is about $8,200. It includes no less than $3,200 of duties, a 40 percent premium for dollars called an equalization fee, and special purchase taxes. You would also pay an annual use tax of about $240. In Italy, it would cost $5,800, with a penalty of $1,400, plus an annual use tax as high as $302.50. In England, the price would be about $8,000, with the penalty composed of a 30 percent duty and a 60 percent purchase tax—which is applied without discrimination, however, to all passenger vehicles.

As if these formidable barriers were not enough, imports are further limited by severe quotas and related devices. France admits only 12,000 vehicles a year from all sources, the United Kingdom presently restricts imports from the United States and Canada to 650 automobiles per year—even that quota has not been filled every year—and Italy admits only a few hundred American cars.

I have many times commented on this lack of reciprocity which Mr. Breech so clearly documents in his address. For 25 years I have been listening to the State Department promise that the condition would be corrected.

Imports are not the only problem which has faced or now faces American industry. Obviously there are others, such as styling changes, consumer tastes, management-union controversy, and a host of like problems. But I would state, as anybody who goes out to a nearby traffic light can see for himself, that imported automobiles are one of them—and an extremely serious one at that.

I am concerned about the small shareholder who has invested his hard-earned savings in the automobile industry. I am concerned with the men and women who have lost their jobs. I am concerned with the young people who are unemployed because of diminishing job opportunities.

The major segments of the automobile industry have for some years preached the doctrine of ever-freer trade. Leaders of the United Auto Workers have also preached this doctrine. I should think that their shareholders and union members would today be wondering about the wisdom of such policies.

I might, therefore, respectfully urge that those business and union statesmen, who have been preaching freer trade, might wish to reevaluate their own policies.

I deeply regret I can foresee no immediate improvement in the situation.

Poison in Your Water—No. 4

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1959

Mr. DINGELL. Mr. Speaker, an article appeared in the Missouri Conservationist of September 19, 1958, setting forth compelling reasons for a vigorous program of Federal action to combat pollution in our waters. That article is entitled "Freshwater Cancer," by Mr. Bill Towell, director of the Missouri Conservation Commission.

That article outlines the terrible problem of sewage and other pollution as it affects the people of Missouri. This, of course, is a single example of the great problem besetting all of America—pollution.

I hope all will read this article and understand why it is necessary that we have vigorous enforcement and a continuation of the Federal grant program inaugurated by Public Law 660 of the 84th Congress making grants to municipalities for construction of sewage abatement works.

The article follows:

FRESHWATER CANCER

(By Bill Towell, Director)

We know from records of permit sales that one out of five persons in Missouri is interested in fishing and hunting. This does not include the thousands who are interested in the out-of-doors purely for the aesthetic value. Regardless of the particular interest, clean water is always a center of attraction.

With this in mind, we remember that only about one percent of the total surface of Missouri is water. This means that we are entertaining one-fifth of the people on one percent of its area, and this includes only hunters and fishermen. We have no accurate record of the thousands who seek outdoor recreation but do not wield a rod nor shoulder a gun. Together all of these must reach an enormous total. This, in our opinion, is significant in demonstrating the need for maintaining clean water. The importance of outdoor recreation is confirmed further by the fact that in Missouri expenditures related to hunting and fishing alone amount to an estimated $69 million annually.

Water pollution kills fish and other aquatic life, it lowers the fish supporting capacity of water for more desirable fish species and renders water unfit for recreation. These effects and their severity depend upon the kind and extent of the pollution. All occur in Missouri every year.

The conservation commission conducted a statewide survey of pollution in 1949. It showed that over 900 miles of streams in 69 counties and the city of St. Louis were polluted, and by mid-1957 these values had increased to more than 1,200 miles of stream in 74, or roughly two-thirds, of Missouri's 114 counties and the city of St. Louis. This represents an increase of 300 miles of polluted streams in 8 years.

Pollution is caused by many substances which vary in their effect upon fish and other aquatic life. Some pollutants which are lethal to fish directly include industrial chemicals, acid mine wastes, lead, zinc, iron, brine, insecticides, lime, plating liquor, and water treatment compounds. Others remove dissolved oxygen from water. These include sewage, dairy, corn products, canning, and meat packing wastes. Some of those listed have both of these properties and still others impart off-flavors to water and fish.

Other kinds of pollutants blanket the bottom of streams, ruining them as spawning and feeding grounds for fish. These include sediments resulting from washing barite, iron ores and gravel, oil, sawdust, glass fiber, coal washings, wood fiber and varnish.

The extent of some pollutants is more widespread than others, and the effect differs with the type and volume of the pollutant. Thirteen streams in 16 counties and the city of St. Louis are affected by industrial chemical wastes. A serious effect of this type of pollution is the foreign flavor imparted to fish. Although fish are not always killed, this condition renders them unfit for use. The commercial fishery in the Mississippi River from St. Louis to Cape Girardeau has been practically ruined by industrial wastes which enter the river in the Bi-State area surrounding St. Louis, and their effect has been reported downstream for at least 300 miles. Industrial wastes from the Kansas City area have a similar effect on the commercial fishery in the Missouri River in the

56-mile reach from Kansas City to Lexington, and during low flow, off-flavored fish have been reported at Boonville, about 180 river-miles below Kansas City.

During the 10-year period from 1947 through 1956, the number of licensed Missouri River commercial fishermen operating below Kansas City in Clay, Jackson, Ray, and Lafayette Counties declined 62 percent, and in the Mississippi River below St. Louis the number of these fishermen declined by 64 percent in the reach of river bordering Jefferson, Ste. Genevieve, Perry, and Cape Girardeau Counties. The reported commercial fish harvest in the latter 4 counties declined 71 percent.

Forty streams in nine counties are contaminated by coal mine waste. Acid water formed in coal mines probably kills more fish and aquatic life than any other single pollutant. This water contains sulfuric acid and iron compounds formed by the action of air and water upon coal exposed during the mining operations. Usually, there is some lag in time between the exposure of pyrites and the formation of the acid. Consequently, abandoned strip mines are serious potential sources of pollution. If corrective measures have not been followed, these mines cause trouble indefinitely.

The harmful effects of coal mine wastes are many. Not only do they kill fish, fish food organisms, and plants, they also render the stream unfit for stock watering and other purposes. Acids kill fish by coagulating the mucus of the gills resulting in the complete stoppage of the flow of blood. We are pleased, indeed, to note that some mines have adopted corrective measures, but pollution by coal mines remains a serious problem in the north-central, west-central, and the southwest portions of the State.

Thirty-eight streams in 30 counties and the city of St. Louis are affected by raw or poorly treated sewage. It affects fish in several ways most importantly by using up the dissolved oxygen in the water. None but the most tolerant fish can live in such water and these fish are not the kinds preferred by the angler. Sewage also contributes to fish disease, and sludge is ruinous to spawning grounds and to fish foods used by the kinds of fish which occur in clean water.

The washing of clay from barite ore has caused sedimentation in 10 streams in 3 east-central Missouri counties. Heavy sedimentation and high turbidity result from this operation and the accumulated sediment is carried downstream with increased discharge following rainfall. This causes the destruction or deterioration of fish habitat by destroying spawning grounds and fish food organisms and by reducing the transparency of the water to the extent that sight-feeding fish are not able to feed properly. In some instances fish have been killed by the clogging of their gills.

Oil pollution is quite widespread, affecting 19 streams in 16 counties of the State. The sources are refineries, leakage from barges and tank cars, waste from industrial users of oil, aircraft overhaul bases, service stations, and others. Refinery wastes contain phenols and other substances which impart an off-flavor to fish. Often oil kills fish by clogging the gills or it destroys eggs and kills fish food organisms. An oil film on the surface prevents normal aeration of the water and oil sometimes blankets the bottom of a stream for miles. This is particularly true of the Mississippi River below St. Louis, where oil deposits are found on the bottom for 83 miles downstream from the source.

Oil pollution in this reach of the Mississippi also has an important influence on waterfowl movement. The Conservation Commission's waterfowl counts between 1936 and 1955 show that for many years there has not been a measurable number of migratory birds in the reach of river between St. Louis and Ste. Genevieve. Contamination from oil has had a similar effect on waterfowl concentrations on the Missouri River. Pollution on this stream has been observed consistently in routine aerial censusing during the fall migration since 1937. After 1943 oil slicks became continuous in the Kansas City area and frequently were observed as far as Waverly, 80 miles downstream. Over a 20-year span covered by the Commission's observations, we believe that waterfowl habitat in the Missouri River has gradually deteriorated for a distance of 50 miles below Kansas City. Waterfowl specialists report few birds in this part of the river. Oil is particularly harmful to waterfowl because their feathers become saturated and the birds cannot fly.

Salts of zinc, lead and other heavy metals have caused fish kills in the east and southwest sections of the State. Six streams in four counties are affected. In southwest Missouri, this contamination resulted from pumping out inactive lead mines while in the eastern lead belt region it results from the escape of water in processing ore. The salts of lead and zinc are directly toxic and are lethal in low concentration.

Most organic wastes have an effect on fish similar to those described for raw or poorly treated sewage. These include dairy, meatpacking, canning, and corn products wastes. As they decompose, all have a high demand for oxygen which renders water unfit for all but the most tolerant species of fish. Dairy wastes alone contaminate 23 streams in 18 counties.

Wastes of the meatpacking industry affect seven streams in as many counties. This includes extensive contamination of the Missouri and Mississippi rivers. Decay of the organic matter in these wastes rapidly depletes the dissolved oxygen. This is also true for the 12 miles of three streams in two counties affected by canning wastes. The waste of an out-state corn products industry affects 25 miles of the Mississippi River in three Missouri counties. This has a high demand for dissolved oxygen and commercial fishermen report that it clogs their tackle.

Sawdust, glass fiber, mine, gravel, coal and iron ore washings, varnish and wood fiber wastes are others which cover the bottom of the stream, ruining it as a spawning and feeding ground for fish. Some of these create intense water turbidity. Sawdust affects about 18 miles of seven streams in seven counties, mostly in the Ozarks. It also has the property of giving off organic acids and lowering dissolved oxygen.

In recent years, insecticides have killed fish in several streams throughout the State. Toxaphene, DDT, aldrin, benzine hexachloride, chlordane, and others are extremely toxic to fish. Several of them kill fish in concentrations as low as one part insecticide in 100 million parts of water. The mere runoff from vegetation sprayed with aldrin recently killed many fish in a nearby slough and some insecticides are believed to be toxic to warmblooded animals.

This describes briefly the influence of water pollution on fish and wildlife and points out the value of recreation in the form of hunting and fishing. We often refer to pollution as the cancer of fresh water. I believe this is a reasonable analogy because pollution is the dark side in the future of fishing and other recreational uses in which the waters of Missouri are involved. If it continues to increase as it has in the past 10 years, pollution will soon make a serious inroad on fish and other forms of wildlife at a time when there is a greater demand for this resource than ever before in Missouri's history.

To Revive Europe: More Competition and Fewer Cartels

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. CURTIS of Missouri. Mr. Speaker I wish to take this opportunity to insert in the CONGRESSIONAL RECORD an editorial by Robert M. Burr which appeared in the September 13, 1958, issue of the Saturday Evening Post entitled "To Revive Europe: More Competition and Fewer Cartels." I believe it merits the attention of the Members of the Congress:

TO REVIVE EUROPE: MORE COMPETITION AND FEWER CARTELS

(By Robert M. Burr)

As a nation we have been spending much time and money to increase living standards throughout the world. Our ability to defend democratic institutions against the spread of communism and other types of authoritarianism depends in large measure upon the success of this effort.

But what has made it possible for the United States in the last 50 years to outstrip all other nations in productivity and living standards? A number of authorities say: "Competition." The British Specialist Team on Industrial Engineering of the British Productivity Council, after an extended tour of the United States in 1958, stated that "more than any other factor, competition provides the drive for more frequent analysis of costs and application of industrial-engineering techniques in the United States."

For more than 50 years we in the United States have been developing and perfecting a very uncomfortable form of capitalism for producers and sellers, but a very satisfactory one for consumers.

We have had our ups and downs, as has every other economy. But no other economic system thus far created has developed as potent and effective motivations for the achievement of maximum distribution of wealth as have been nurtured under our system of competitive capitalism. It is these strong motivating forces that need to be exported and sold throughout the world.

Restrictive trade practices are rampant abroad. For example, at the end of last year, an official count showed more than 1,900 restrictive agreements in existence in Great Britain. More than 650 cartels exist in Switzerland, and virtually every industry operates under such agreements. In a few countries, tentative, cautious, creeping steps have been taken toward overseeing or limiting such practices. A West German anti-cartel law, passed in July 1957, is the boldest act so far. Great Britain requires the registration of various types of agreements. But Great Britain exempts agreements affecting export and international trade, and Germany is seeking authority to reestablish its cartels in international trade. The Swiss rejected by a substantial margin (191,934 for and 549,842 against) a constitutional amendment which would have made illegal all agreements intended to limit competition. Four years ago, Japan announced that it was going to reestablish its cartels. Nowhere in the world is there even a resemblance to competitive capitalism as practiced here.

The margin between living standards abroad and in the United States has shifted

very little in the last 10 years. It is going to take much more than foreign aid, foreign investments, technical assistance and tariff reductions to change this situation. What is needed is the establishment of a dynamic society throughout the world comparable to our own.

We must rework our foreign economic policy so that the advancement of competitive capitalism throughout the world becomes one of its major planks. We should adjust our administration of foreign aid, the trade-agreements program and the Tariff Act to encourage the spread of competitive capitalism abroad and safeguard its practice here.

The Military Draft Issue

EXTENSION OF REMARKS
OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1959

Mr. McGOVERN. Mr. Speaker, on June 30, 1959, the Universal Military Training and Service Act will expire unless the Congress act to extend its life. In view of the growing number of both military and civilian critics who feel that our present method for recruiting members of the Armed Forces is filled with flaws and inadequacies, I call to the attention of my colleagues an excellent article by Mr. Fletcher Knebel appearing in Look magazine, May 27, 1958, entitled "The Fight To Kill the Draft." It raises questions fundamental to the security of our country, the morale and effectiveness of our military forces and our quality of leadership.

Under unanimous consent I include the article in the RECORD, as follows:

THE FIGHT TO KILL THE DRAFT

(By Fletcher Knebel)

"We must abolish the draft—bury it in the military museums alongside the muzzle-loading rifle and the cavalry saber. We must create a new military manpower system; one that will give the services the kind of men they, and the Nation, desperately need."

This is the battle cry of a small but growing group of manpower experts who are directing a withering fire at the Selective Service System. They see the draft as a poison that infects our Armed Forces and gives us delusions about our military strength. They point out that modern war is a business for razor-sharp, highly skilled specialists ever ready to handle the newest weapons. They argue that compulsory service isn't doing the job—that it's a museum piece. It worked fine in its days, but it fails miserably to meet the standards set by the cataclysmic threat of the nuclear-space age.

Ralph J. Cordiner, president of the General Electric Co., and chairman of a committee that spent 18 months devising ways to make a military career attractive, says, "The explosive speed of advances in modern war technology makes it almost impossible to train a specialist in 2 years." (That is how long draftees serve.)

"I talked to hundreds of enlisted men," adds Cordiner. "I found antagonism and bitterness over the draft. They were checking off the days until they got out. We must devote 25 percent of our military effort to training men who don't stay. The trainers are discouraged. They resemble the poor teacher whose every class flunks."

Air Force Maj. Gen. Harold R. Maddux, a West Pointer who directs the Defense Department's division of manpower requirements, says, "The next war might come with only a few minutes' warning. It is impossible to provide the required state of instant readiness with men who don't want to be there. We need a professional service, manned by men who are proud of their uniform and trained for the job."

"We need dramatic changes in pay and attitudes to upgrade a military career in the eyes of the Nation. We can't get that change with huge numbers of men compelled to serve against their will."

Dr. Eli Ginzberg, director of staff studies for the National Manpower Council, sees the conscription system coming under more and more scrutiny and criticism from experts and the public. "More and more people are questioning the status of the draft," he declares. "A compulsory system that is supposed to be universal—and isn't—creates political hazards. The trouble with the system is that there is a tendency for the defense management to seek the remedy for its errors by the simple method of calling up more manpower."

Senator MIKE MANSFIELD, of Montana, Democratic whip of the Senate, looks at the men the draft serves up and finds serious weaknesses. One third of the 179,000 draftees in 1957, he reports, were rated "dull" or below normal in intelligence. Like other responsible men who are beginning to doubt the draft, MANSFIELD wouldn't wipe out the conscription law without a substitute that would keep 2,500,000 men, about our present strength. But once this substitute is found—and MANSFIELD backs the Cordiner report, which would upgrade service salaries to attract better men—he says, "The draft should be abolished."

It was 18 years ago, with the shadow of World War II reaching toward America, that the first $21-a-month draftees were called up. On July 1, 1959, the present draft law runs out, and the Eisenhower administration will ask Congress for an extension, probably for 4 years. Here are some charges against the draft that already are being leveled, and that will resound when the Congressmen must decide:

INEQUITY

"The Universal Military Training and Service Act"—the draft law's official name—is one of the least universal of our laws. This year, some 1,170,000 boys turn 18 and must register. But draft calls have been running under 200,000 a year.

Outright exemptions, for ministers and conscientious objectors, are few. But no fewer than 4,115,000 out of the 10,144,000 men currently liable for military service have deferments, according to the Selective Service System's latest report. For many other men, service is postponed until they escape the draft in practice if not in theory. Childless men between 19 and 26 are supposed to go first. But if a potential draftee becomes a father before he's caught in a quota, he drops a notch on the available list. If he passes 26 and still hasn't been called, he goes down still further. Meanwhile, thousands of younger boys keep coming along each year.

COMPLACENCE

The draft guarantees an endless flow of young bodies, as many as needed. Only the Army has been taking draftees, but the Air Force and Navy use the draft indirectly. Both say the threat of conscription is what gives them enough enlistees.

As a result, the Armed Forces can—and do—shrug off their shortcomings. They seem to be as strongly manned as the budget will allow. There is no pressure on them to provide the kind of leadership and morale that long have been a spine-tingling tradition of the all-volunteer Marine Corps.

The administration is also draft-deluded. It is under no pressure to sponsor and cherish the type of military service that would make young men proud to join and stay. As evidence is the way servicemen's fringe benefits have been raided and curtailed. Military housing has been a recurrent scandal. Military pay reforms languished until the Cordiner Committee put steam into reform proposals.

The heat is off Congress to pass the legislation needed to attract competent men to a profession of arms. With the Armed Forces always filled to the limit, the public also gets complacent. Actually, the 2-year draftee is a babe in the woods in an era of airlifted armies, missiles, and nuclear bombs. He just begins to learn about the arsenal of modern military science when he's sent back home.

LEADERSHIP

"The draft has poisoned our military system," says a ranking officer. "The rot of draft motivation extends from the newest group of inductees up through thousands of officers."

These officers took their commissions merely to escape conscription. One Pentagon official estimated that "80 percent of our officers below the rank of general are draft-motivated." He says the poison has spread to the service academies with terrible results. He asks, "What kind of leaders will we have when hundreds of boys at the academies are there, not because they want to be officers, but because they don't want to be enlisted men?"

The Reserve officers' program on the college campuses is filled with men who intend to serve their 3 years and then return promptly to civilian life. Seventy-three percent of them quit the minute their compulsory tour of duty is up.

WASTE

Ninety-seven out of every one hundred draftees return to civilian life as soon as their hitch ends. This is just the point in their training when they would begin to be of some value to the Army. A private company would go broke quickly with such a wasteful turnover of apprentice personnel. And the Defense Department, costing $76,000 a minute to run, is the free world's largest enterprise.

The Army, the Cordiner report showed, has only half the career enlisted men it needs to maintain electronic gear; the Air Force, less than half, and the Navy, only one-third. Assistant Defense Secretary William H. Francis, Jr., says that 6½ wings of Strategic Air Command bombers on the average have been made idle recently for lack of trained ground and air crews. So a favorite argument of Air Force and Navy officers—that they don't want draftees, but do want the draft as a persuader for voluntary enlistments—fades away. Conscription provides raw manpower—but not men to do the vital jobs. For draft pressures are of scant benefit in making the trained men stay at their posts.

MORALE

Americans look down their noses at institutions rooted in compulsion. The Armed Forces are no exception: Military service must be bad, it is said, if men have to be forced into it against their will. A private poll conducted for the Pentagon showed that the public rates a military career far down the prestige scale of occupations.

If the civilian snoots the uniform, say foes of the draft, how can the man who wears it be expected to respect it? Not until every man in the services is there of his own choice will the uniform be vested with the dignity it deserves at a time when our Armed Forces are defending not only this country, but the whole free world.

Those who favor continuation of the draft are disinclined to meet this battery of arguments head on. Rather, they shift their fire. They argue, first, that the draft is a symbol of American preparedness. The draft's number one champion, Maj. Gen. Lewis B. Hershey, Selective Service Director, believes that shedding this symbol would be

catastrophic abroad. "We would say to the world," says Hershey, "that we don't have the stamina and will power for leadership. The results would be terrible—disintegration for the NATO aliance, neutrals fleeing to the strong arms of communism and Russia emboldened to new aggression."

The importance of the draft symbol was demonstrated during the 1956 campaign when Adlai E. Stevenson aired his qualms about the effectiveness of draftee forces. It appeared to many voters that he wanted to weaken our defenses. His attempts to explain were lost in the heat of the campaign. This explains why some congressmen who privately question the value of the draft hesitate to do so publicly.

The second chief argument against abolition of the draft takes the form of a question asked over and over in Congress and at the Pentagon: "Suppose we do abandon the draft in favor of a substitute program—are you willing to risk decimation of the Armed Forces on a gamble?" Defense Secretary Neil McElroy, President Eisenhower, the Joint Chiefs of Staff—all answer, "No." As Assistant Defense Secretary Francis puts it: "Because a shoe doesn't fit, we'd be foolish to cut off the foot." The Army believes it must have a draft or fall below manpower requirements. Without conscription, the Pentagon chiefs fear that enlistments for the other services, now running at 300,000 a year, would wither. It is a common saying at the Pentagon that volunteers might man a service of 1,500,000 men, but anything above that has to be draft-induced.

This doesn't mean that the Pentagon admires conscription. Rather, it is viewed as a necessary evil. Brig. Gen. James P. Berkeley, chief of manpower for the Marine Corps, states the prevailing attitude succinctly: "We don't want any part of the draft in the Marines. We want every man a volunteer and proud of it. But we've got to have the draft law to provide the pressure that propels boys into our recruiting offices. After that, it's up to us to make marines of them."

A curious fact about the draft is that Americans have accepted it so placidly in recent years. Once we hated the draft with a passion. Millions of us are descended from immigrants who fled Europe to escape conscription by the old armies of empire. Only 95 years ago, more than 1,000 persons were killed in New York City's Civil War draft riots. In 1941, a proposal to lengthen the draftees' term of service passed the House with only one vote to spare—and that at a time when World War II was under way in Europe.

For years, the peacetime draft has been accepted without question at the Pentagon. Now, doubts about it have arisen in the wake of dire shortages of skilled manpower. And the challenge to compulsory service will grow in volume. For one basic fact is too stubborn to yield. Our military manpower system is not supplying the skills our defenses demand in an age when the issue is nothing less than survival.

Consideration of Immigration Matters

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. DULSKI. Mr. Speaker, the proposal to transfer consideration of immigration matters in the House of Representatives from the Judiciary Committee to the Committee on Internal Security runs exactly contrary to the best American traditions.

It implies that the immigrant is a potential security risk or suspect, instead of a potential good American.

It tends to stop consideration of the immigrant as a man seeking freedom and justice—for these are factors that a judicial function considers—and instead makes of the immigrant a man possibly guilty of subverting our institutions, and therefore the business of a security committee.

The transfer of passport controls to such a committee is equally bad. Instead of keeping the emphasis on the right of every American citizen to travel, as a free man, the emphasis would now be placed upon the danger of any American citizen being allowed to move at will about the world.

The implications of such transfers of function thus run far beyond the administrative questions involved. They go to the very essence of the picture of freedom which we present to the world abroad, and to our people at home.

Even on the administrative level, however, immigration questions bear much closer relationship to the courts and the Department of Justice—and therefore to the Judiciary Committee—than they do to police or security functions. If any other interest were to be consulted, it would logically be that of the departments and committees charged with labor and economic questions.

The same is true respecting passport affairs, which fall basically within the area of the State Department and the Senate and House committees charged with the supervision of foreign relations.

Any departure from this logical distribution of authority could only be justified on the theory that a special police or security function is involved in these matters.

Clear Choice

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared recently in the Rockford (Ill.) Morning Star, entitled "Clear Choice":

Congress now has a clear choice between intelligent labor reform offered by President Eisenhower and ineffective legislation proposed by congressional liberals and backed by the labor bosses themselves. The President's program gets at serious abuses which are sidestepped in the milder legislation embodied in the Kennedy-Ervin bill, which is a reproduction of the measure Senators KENNEDY, of Massachusetts, and IVES, of New York, sponsored unsuccessfully last year.

In his labor recommendations, President Eisenhower challenged Congress to do the kind of a job that needs to be done in the way of labor reform. He made clear that he will give determined leadership to the fight for effective legislation. The President can count on strong support from northern and southern conservatives in Congress and from the public, which has been made aware of the seriousness of the problem by the McClellan Rackets Investigating Committee.

President Eisenhower has asked Congress for changes in the basic Taft-Hartley labor law to ban racket picketing and tighten curbs on secondary boycotts. The President's program would require union leaders to make detailed annual reports on financial operations and election procedures. It also calls for public disclosure of union finances, secret ballot election of union officers, and other safeguards which would protect rank-and-file members.

The President said he was offering a complete and effective approach, rather than piecemeal legislation. The fact that Senator GOLDWATER, of Arizona, presented the President's program gives further assurance of its effectiveness. Senator GOLDWATER fought hard last year for effective labor reform.

The President's program stops short of what many feel must be the ultimate objective of applying the antitrust laws to organized labor. Exemption from the Sherman Act, which restrains business from endangering the public interest, has made the labor monopoly possible.

Senator KENNEDY's liberal labor bill would set up rules for union finances and require democratic procedures within unions, but it is silent on the matters of racket picketing and secondary boycotts. That silence makes it acceptable to the union leaders who have a strong influence in the Democratic-controlled Congress.

President Eisenhower is making the fight that must be made in the interest of the public and labor itself.

Wool Act Should Protect Sheep Growers and Workers

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. HOLLAND. Mr. Speaker, as a member of the House Committee on Education and Labor, I have become acquainted with a serious problem of cut earnings and unemployment among sheepshearers in some Western States. This decrease in earnings and work is not due to economic conditions in the industry. Instead, it is the result of importing workers who labor under semipeonage conditions and undercut the wages of sheepshearers who have long lived and long worked in the areas.

The crews who are being imported into the woolgrowing areas from Texas are paid as little as one-fourth of the wages of the sheepshearers who live in the Rocky Mountain and west coast States. They are tied to the contractor who brings them into the wool areas because they owe him the money he has advanced them in the winter or nonshearing months.

The conditions of these crews who come into the woolgrowing areas to shear sheep is short of fantastic. They are crowded into trucks like cattle. They must sleep around the trucks. They are provided only the lowest quality foods.

This exploitation of substandard living and working conditions has resulted in serious harm to the sheepshearers who live in the woolgrowing areas. Their jobs are being taken away. Their wage rates are being seriously undercut. They are finding it increasingly difficult to get work.

Mr. Speaker, I want to point out that these conditions exist while the Federal Government supports the earning of wool growers. The wool act was enacted to put a floor under the earnings of the growers. It is aimed at allowing American growers to compete with foreign ones.

It is obvious that the growers have a protection which workers do no have. It is obvious that workers need the same sort of protection against imported labor, which undercuts their wages, as the growers have protection against imported wool whose price undercuts their income.

I sincerely hope that legislation to protect sheep shearers will be enacted by Congress. If we are to protect one part of the wool industry, we must protect the other also.

In the past, I, as well as many other Representatives from urban areas, have voted for the Wool Act and other measures which aided the wool industry. I am certain that these city Congressmen believed, as I did, that our votes would help not only the woolgrowers, but also the workers who shear the sheep.

Workers should certainly have the same protection which the growers have. This is simple justice. If the growers opposed legislation to provide fair labor standards for the workers, I would certainly reconsider my position toward the Wool Act. I would see little justice in renewing the act, as we do every 3 years.

I am certain, Mr. Speaker, such a situation will not come about. I hope legislation to protect the earnings of sheepshearing workers will be enacted, just as legislation now exists to protect the earnings of woolgrowers.

Strong Labor Law Needed

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria (Ill.) Journal Star of January 30, 1959:

STRONG LABOR LAW NEEDED

Senator JOHN KENNEDY's new labor-management bill, as everyone knows, is considerably less than is needed to protect workers and the public from union racketeers and monopolists. But the old half a loaf is better than none argument has been trotted out to justify it.

Sometimes the half a loaf argument is logical. But this is not one of those times.

The sordid record of lawlessness in some unions so far produced by the McClellan committee has been brought to the people by every communications medium—newspapers, radio, television, magazines, and newsreels. It has alarmed labor union members as well as the general public. Never has the need for comprehensive reform in any area been so clear and so well understood.

To say that it would be useless to expect Congress to pass a sweeping reform bill, because it is a Democratic Congress heavily indebted to labor union politicians, is to say that the party owes a greater debt to labor bosses than to the rank and file of labor and to the people of the United States.

If the Democrats in Congress feel that way about it, let them bear the blame for failing to vote a reform that is widely demanded. And instead of accepting half a loaf, which would theoretically appease the public, let us continue to demand real reform and set about electing a Congress in 1960 with enough courage to give it to us.

Senator KENNEDY's bill is aimed at characters such as Jimmy Hoffa and his associates. It would drive hoodlums out of labor unions. But it would do nothing about the monopoly power of unions, such abuses as the secondary boycott, blackmail picketing or the dangers that have grown up with the uncontrolled power of some unions.

Labor unions once needed the protection of the law against big business. Now they themselves have become big business and their power, in some instances, is greater than that of the robber barons of business who brought on antitrust and other restrictive legislation. Public protection against this unrestricted power is as necessary as worker protection against racketeers in unions.

The need for comprehensive reform is proven. The public demand is unmistakable.

This is no time to talk of settling for half a loaf.

Constitutional Government Imperiled

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. DAVIS of Georgia. Mr. Speaker, in recent years the fact has become more and more evident that the U.S. Supreme Court is following a studied pattern of attempting to amend our Constitution and change our laws through usurpation of authority which the Court does not possess. Judges, lawyers, and citizens in every section of the country are concerned and alarmed at these destructive blows which are being struck at our constitutional form of government.

The American people as a whole believe in law and order, and respect constituted authority. However, when one branch of the Government deliberately oversteps its authority and usurps functions belonging to another branch of the Government, such reprehensible conduct is good reason for vigorous and emphatic protests on the part of good citizens and right-thinking people throughout the entire country.

A very able address on this subject was delivered by the Honorable Marlin T. Phelps, now Chief Justice of the Arizona Supreme Court in Phoenix, Ariz., on November 13, last year. I have just recently had the privilege of reading Chief Justice Phelps' address. I was so impressed by it that I have obtained permission to insert it in the CONGRESSIONAL RECORD, and pursuant to unanimous consent of the House I attach the address herewith as a part of these remarks:

CONSTITUTIONAL GOVERNMENT IS IMPERILED

(Text of speech delivered before the Arizonans for America Organization, Phoenix, Ariz., on November 13, 1958, by Hon. Marlin T. Phelps, justice, Arizona Supreme Court)

GOVERNMENT OF MEN REPLACES GOVERNMENT OF LAWS

Ladies and gentlemen, in order to get a better perspective of what has taken place and what is taking place in our Nation today I believe it would be well to go back to the inception of our Government and briefly refer to the considerations which brought it forth even at the expense of repeating much that is trite.

Original concept

In the first place this Government is the result of a concept never before adopted by any people as their governmental philosophy. It rests upon the postulate that all the powers of sovereignty should forever reside in the people and that the government they were about to establish should be a limited government subject always to the will of the people.

Pursuant to this concept resulting from their broad knowledge of the history of governments that had risen and fallen in the past and their knowledge of the frailties of man, our forefathers sought to create a government limited both in the duties assigned to it and limited in its power to discharge those duties with such checks and balances incorporated therein as would insure that all public officials should forever remain subservient to the will of the people. They had experienced the oppressive hand of British rule as a result of unbridled power, and they had witnessed the adoption of oppressive legislation by some of the American Colonies after they had gained their freedom from Britain.

They, therefore, determined that, insofar as they could prevent it, they would establish a government that would secure to its citizens, life, liberty, and the pursuit of happiness, declared in the Declaration of Independence to be inalienable rights of all men. Lincoln afterward defined the government thus created on this basis to be a Government of the people, by the people, and for the people. It was designed to be a government of laws and not a government of men. The framers of the Constitution were of the view that the checks and balances provided for therein between the executive and legislative branches of the Federal Government would result in a wholesome restraining influence as between these two branches. Nevertheless, they provided that the judicial branch of such government should have the power of review over the official actions of both the executive and legislative branches in order that they may be securely kept within the constitutional limitations delegated to them. The final arbiter in such matters was vested in the Supreme Court of the United States.

Judiciary unrestricted

Unfortunately, however, they provided no checks against the exercise of excessive powers by the Supreme Court although most of them agreed that this constituted a great weakness in the framework of the proposed new government and expressed fears of the potential dangers that lurked therein. The only restraint that exists today against the exercise of excessive power by the Supreme Court is that restraint which the conscience dictates to the individual members of the Court. Congress has the constitutional power to limit its appellate jurisdiction under such regulations as the Congress shall make

but it refused to exercise such power at its last session. Experience has confirmed the historical fact that the conscience of the men who are vested with great power in government is inadequate to protect the governed from oppression. Jefferson recognized that when he said: "* * * free government is founded in jealousy, and not in confidence, which prescribes limited constitutions to bind down those whom we are obliged to trust with power; that our Constitution has accordingly fixed limits to which, and no further our confidence may go. * * *

"In question of power, then, let no more be heard of confidence in man, but bind him down from mischief by the chains of the Constitution."

And with respect to the Supreme Court he said:

"* * * there is no danger I apprehend so much as the consolidation of our Government by the noiseless and therefore unalarming instrumentality of the Supreme Court."

Fear prompts amendments

It was the fear of the inadequacy of the limitation provided for in the original document that prompted the immediate adoption of the first 10 amendments. The 10th amendment to the Constitution reserved to the States respectively, or to the people, all powers not delegated to the United States by the Constitution. This was done to serve as a check against all the branches of the Federal Government and it served its purpose splendidly for 150 years; but if the present Court is aware of its existence, it has shown no evidence of it in recent years. If there were ever any cases in which this amendment should have been considered it was in the Court's decisions in the sedition and segregation cases.

The segregation decisions concerned the public school system of the sovereign States of the South, a matter which had always been considered to be of purely local concern and therefore subject to the exclusive control of the States under the powers reserved to them under the 10th amendment. The identical question decided in these cases was adversely decided by the same Court in 1896 and reaffirmed in 1927 in a school case where both the equal-protection of the law, and the separate-but-equal-right questions under the 14th amendment were directly raised. The Supreme Court then headed by Chief Justice Taft unanimously decided both questions in favor of segregated schools provided for by the constitution of the State of Mississippi. The Court then said the same question had been many times declared to be within the constitutional power of the States without intervention of the Federal courts under the Federal Constitution.

Fourteenth amendment overworked

Please remember I am not discussing segregation, I am discussing the proposition that the present Supreme Court does not feel itself bound by either precedent involving the same constitutional question, or by the Constitution itself. Without any qualms or apologies they set aside the previous decisions of the Court which had been recognized by the Court itself as binding upon it for nearly 60 years. These decisions were handed down in 1954 based upon the provisions of the 14th amendment providing equal protection of the law to all citizens as well as due process of the law. The 14th nendment is a limitation only upon the States. The Court said in *Brown* v. *Board of Education* in discussing these questions that "we hold that plaintiffs and others similarly situated, for whom the actions have been brought are, by reason of the segregation complained of, deprived of the equal protection of the laws guaranteed by the 14th amendment. This makes unnecessary any discussion, whether such section also violates the due-process clause of the 14th amendment."

But, in the Bolling case involving the District of Columbia decided on the same day the Court invoked the provisions of the fifth amendment which applies to the Federal Government only. It does not have in it the equal-protection clause but only contains the due-process clause and with its usual disregard of constitutional provisions in reaching its decisions it held that the "due-process clause" in the fifth amendment should be construed also as an equal-protection clause as respects the Federal Government, although on that very same day in the Brown case, it distinguished between the two clauses and after it decided the equal-protection clause had been violated it said it was unnecessary to also discuss the due-process clause of the 14th amendment whether such segregation also violates the due-process clause of that amendment.

Unstable decisions

Ladies and gentlemen, its decisions are as unstable as the shifting sands of the desert and are as unsound as they are unstable. A decent respect for the provisions of the Federal Constitution would have demanded the consideration of the 10th amendment in these cases. Many of the greatest judges and lawyers in the United States condemn these decisions as being purely legislative in character and wholly beyond the power and jurisdiction of the Court to pronounce.

A cursory examination recently made by some of the law clerks in cur court indicates that approximately two-thirds of all the cases which the Supreme Court has accepted for consideration since Warren's ascension to the bench have been cases involving Communists and undesirables whom the Government has attempted to deport, and out of the first 39 such cases considered by the Court, 30 of them were acquitted which resulted in a wholesale release of Communists throughout the Nation charged with similar offenses—Chief Justice Warren voted for the acquittal in 36 of the 39 cases. In the October 28 issue of the Arizona Republic I noticed that the Court has decided to review the case of William L. Green who lost his job as an $18,000 a year vice president of a Maryland engineering research firm in 1953 when the Defense Department withdrew his security clearance. This involves the right of the Federal Government to impose loyalty and security standards in defense plants. It's dollars to doughnuts that the right to impose such standards will be denied.

Decisions not supreme law

The Attorney General of the United States and the President and others who are following their lead are telling the people of the Nation that the decisions of the Supreme Court on these constitutional questions are the supreme law of the land and that it is the duty of every citizen both public and private to obey them. The Supreme Court itself in a supplemental opinion a few weeks ago in the segregation cases stated that the decisions in those cases are the supreme law of the land. The fact is that no individual has to obey these opinions except the parties who were litigants in court any more than you have to obey a decision of the supreme court of this State unless you are a party to the cause of action in which the opinion is rendered. This is just simple commonsense. And it has been the declared law of all courts for 150 years and until Mr. Warren established his arbitrary rule of being bound neither by precedent nor the Constitution. The most that can be said concerning their effect is that they furnish a standard by which all cases of a like nature must be determined until the Court reverses its position again. The Constitution states in clear and simple language that "this Constitution and the laws of the United States which shall be made in pursuance thereof and all treaties made and to be made under authority of the United States shall be the supreme law of the land."

The Constitution, acts of Congress and treaties with foreign nations alone constitute the supreme law of the land by which the sovereign States of the Union and the people of the United States are bound. There was nothing farther from the minds of the framers of the Constitution than that the decision of the Supreme Court should ever become the supreme law of the land. This was clearly evidenced by the pronouncement of Jefferson quoted above.

Not until the Supreme Court reverses its philosophy of government and takes the position that it is bound by a previous decision of that Court on the same constitutional question (interpreted according to cardinal rules of construction, i.e., upon the intent of the farmers, the purpose of its adoption, and its historical background) and that such decision is integrated into the Constitution and becomes a part of it as much so as if originally written therein, can anyone justifiably and truthfully say that the decisions of the Supreme Court are the supreme law of the land binding upon all persons public and private. It will then become the supreme law of the land not because it is a decision of the Supreme Court but because it has been integrated into and become a part of the Constitution.

Unwarranted emphasis

The unwarranted broadening of the scope of the 14th amendment by the Court has been the basis of all of the decisions of the Court liberating hundreds of dangerous Communists in this country by restricting the congressional and executive branches of the Government in the exercise of their constitutional powers. It has been the too frequent use of this amendment and the broadening of its scope that makes it so dangerous to the liberties of the citizens of this Nation. It has been one of the Court's springboards which it has employed in its practical destruction of States rights. Both Justices Holmes and Hughes recognized this danger. Justice Holmes stated in an opinion (in *Baldwin* v. *Missouri*, 281 U.S. 586) that he had not adequately expressed the more than anxiety he felt at the ever-increasing scope given to the 14th amendment in cutting down what he believed to be the constitutional rights of the States, and Justice Hughes said, in substance, in a speech in 1937 before a joint session of Congress, that it was just as essential to preserve the rights of the States under the 10th amendment as a check against the encroachment of the Federal Government upon the liberties of their citizens as it was to preserve inviolate the checks and balances of the three coordinate branches of the Federal Government against each other.

The Supreme Court is not alone to blame for constitutional violations and the continued centralization of power in the Federal Government. Congress enacted a law in 1935 providing that anything which affects interstate commerce is a part of an interstate transaction which has been interpreted by the Court to cover window washers and elevator operators in a building where there is located a business engaged in interstate commerce subjecting them to the provisions of the interstate commerce clause of the Constitution, and therefore under the control of the Federal Government. By the enactment of this law Congress opened the door for these opinions. The Constitution only gave Congress the right to regulate interstate commerce. By the use of the term "affect interstate commerce" it broadened its own powers, which has been construed by the Court to empower Congress to regulate transactions wholly within a State upon the theory that it affects interstate commerce. There is not a business in Arizona today that the Court cannot say is engaged in inter-

state commerce. This gives the National Labor Relations Board exclusive jurisdiction over all disputes between building contractors, plumbing contractors, or any other kind of contracting business and labor unions in Arizona, or any other State. Even if the National Labor Relations Board declines to accept jurisdiction of such a case the courts of a sovereign State of the Union cannot determine their own jurisdiction in the matter but must first obtain the consent of the National Labor Relations Board to exercise such jurisdiction before it can do so. Think of it. The courts of sovereign States in whose citizens all powers of sovereignty reside, must petition a Federal administrative agency for permission to exercise the powers of sovereignty. Until this new and strange philosophy sprang up it was always considered by the courts of the States that such courts had the inherent power implicit in the sovereignty of the State of which it was an arm, to determine its own jurisdiction in all cases wholly independent of any interference from Federal restrictions and especially from a Federal administrative body.

Congress abdicates powers

Both the legislative and executive branches of the Federal Government are deliberately violating the Federal Constitution. The President violated the Constitution when he sent Federal troops into Little Rock to picket a high school there and to order citizens off of their own front lawns and that of their neighbors. There wasn't a semblance of legal authority for this action.

In 1934 at the request of President Roosevelt, Congress passed a law commonly known as the Reciprocal Trade Agreement Act, in which Congress delegated to the President the power to enter into a reciprocal trade agreements with foreign nations. This grant of power to the President was upon the understanding that it was a legislative expediency to aid the President in pulling the Nation out of a great depression and that it would not be extended beyond the term granted. Notwithstanding these assurances at the end of each period to which the authority had been extended, at the insistent demand of Mr. Roosevelt and each of the succeeding Presidents, this power delegated to the President has been extended again and again and is still in full force and effect except that it has been now, by executive agreement, removed beyond even the power of the President to fix a tariff on any imported commodity by agreement with other nations. President Truman, in 1947, without authority from Congress entered into a series of multilateral agreements with 36 other nations including at least one Communist country (Czechoslovakia) by which the United States has lost its control over our tariffs. Under the present arrangement with these nations known as GATT, tariffs on commodities imported into the United States are fixed by these 37 nations and we have only 1 vote in 37 in fixing our tariffs on imports. The result has been disastrous to American industries. President Eisenhower in urging its renewal stated that it was vital even to our safety as a nation. It is reputed that the reason for this statement is that the State Department (Mr. Dulles) is using it as a bargaining instrumentality in establishing our foreign policy. A government whose actions are based upon expediency such as this rests upon a foundation of sand and can withstand neither wind nor wave.

President violates Constitution

The power to lay taxes, imposts, duties, and excises and to regulate commerce with foreign nations is vested in the Congress of the United States by the Constitution, and Congress unlawfully abdicated its constitutional powers and its Members violated their oaths of office and the provisions of the Constitution when Congress gave the Executive the power either to lay a duty on imports or to regulate trade with foreign nations, and the President is violating his oath to support the Constitution when he urges its violation by Congress and in exercising that power. It is elemental as a fundamental principle of law that both the executive and legislative as well as the judicial branch of Government must function within their constitutional limitations if we, the people, are to remain free. Failure to recognize and to function within such limitations destroys the very concept upon which the Federal Government was founded. It makes this Government a government of men and not of laws. It destroys the sovereignty of the people and empowers those whom we have entrusted to administer our Government to enslave its citizens.

Trade Agreement Act disastrous

Since the power to fix duties on imports has been exercised by the President, over 700 textile plants have been forced to close their doors resulting in the unemployment of over 350,000 textile employees. Repeated protests have been made by textile operators concerning this situation but to no avail. Textile plant owners are having to pay 20 percent more for cotton today than foreign textile plants have to pay and they cannot compete with these foreign cotton goods manufacturers with their cheap labor under such condition. They are told they may procure money from the Government to build a textile plant in a foreign country and ship their products into the United States but the Government refuses to raise the tariff on imports of these commodities from other countries, primarily I presume, because it cannot do so until it gets the consent of 36 other nations. But Congress has never ratified the Truman agreement and it could have refused the extension of such grant of power. However, it again supinely yielded to the President's demand at the last session of Congress.

Since 1934 tariffs on imports have been reduced to one-third of what they then were. Dean Manion reports that in 1938 there were 70 sewing machines shipped into this country but as a result of this reciprocal trade agreement in 1956, there were 55,156 sewing machines shipped in. Ten years ago five American companies were manufacturing sewing machines in the United States. Today there is only one.

In 1938 less than 1,200 dozen cotton shirts were imported. In 1956 the number exceeded 1¼ million dozen. One big American camera company has quit manufacturing parts and accessories and is now shipping them in from Germany.

In 1938 there was less than 3 million square feet of plywood shipped into the United States. In 1956 there was more than 708 million square feet shipped in.

In 1956, 173,851 autos were shipped into the United States. In 1957, 259,343 autos were shipped in.

A long list of other imports could be given that have suffered the same fate.

General Motors, he says, is manufacturing cars in Europe and shipping them into the United States. Studebaker now distributes for German-made Mercedes. A Los Angeles manufacturer of ceramic dinnerware has become the U.S. distributor for its Japanese competitor. He says many of the modern foreign factories to which American jobs are now being exported have been built and equipped with American foreign-aid money. In other words, he says: What is being done by these 37 nations known as GATT, who meet in Geneva, Switzerland, is that they are administering a worldwide job-sharing distributing system of international trade regulations at the expense of American industry, American workmen, and American taxpayers. The results of the operation of the reciprocal trade agreements are alone sufficient to bring on a depression in this country in both loss of employment and loss in production of wealth. The Democrats and Republicans think we can spend ourselves back into prosperity when a recession occurs and they are putting the Government in business at the expense of private business.

Perhaps one of the most outrageous of all the wrongs heaped upon the people of the United States in further centralization of power in Washington has been the creation of dozens and dozens of Federal administrative agencies, giving to them the power to adopt rules and regulations of said agencies which have the same force and effect of laws so long as they are pertinent to the purposes for which the agency was created and within the powers vested in them.

Despotic bureaucratic rule

A splendid example of such a situation is the Agricultural Adjustment Act under the administration of the Secretary of Agriculture. This legislation gives to the Secretary of Agriculture practically the power of life and death over the farmers of this Nation. (Read the editorial on this subject in the November 8 issue of the Saturday Evening Post.)

Dan Smoot in his report of August 11, 1958, detailed the method of operation in the administration of the Agricultural Adjustment Act in a case in Michigan, one in Texas, another in Indiana, and another in Ohio. The pattern is the same. Investigators go onto the farm, measure the acreage planted to wheat, cotton, or whatever the crop may be, determine the quota he is entitled to under the act, if one has not been already established, determine the excess acreage and fix the penalty or fine, and the committee known as the Agricultural Stabilization Committee notifies him of the amount of the fine imposed and demands payment. There is no escape from the penalty imposed. Mr. Smoot says the regulation that provides that a farmer who has less than 15 acres in cultivation, has no voice in whether the program shall be kept in force or abandoned, has disfranchised 90 percent of the farmers of the United States in the referendum vote and leaves its determination in the hands of the big farmers. They make money by not growing crops. There are 20 million farmers in the United States and only 200,000 can vote under the restrictions imposed. The act since 1954 is compulsory on all farmers whther they want it or not. The declared purpose of the act was to reduce the surplus of the crop grown.

Specifically as it applies to wheat, the Government claims that the excessive production of wheat was depressing prices. The purported object was to grow less wheat and receive better prices. The fact is that there is and was no wheat surplus and has never been. He said while American farmers are paying fines for growing too much wheat we are importing wheat to relieve the wheat shortage; that America was once the world's largest wheat exporting Nation, and that governmental meddling has priced our wheat out of the world market. In Ohio, a large wheat- and corn-growing State, the head of a large milling company of Mansfield, Ohio, told a farm association in June 1956 he had already exhausted the supply of wheat from all the counties in its normal trade area in Ohio; that never before in 40 years had there been such a shortage of wheat in Ohio, when during that very year over 200 Ohio farmers had been fined for growing wheat on their own farms. This applies to cotton and other crops as well.

Exorbitant taxes

We are now exacting of our citizens income and other taxes to meet exorbitant budgets, billions of which are willfully wasted. Nothing is being done to correct it although the Hoover Committee has twice pointed the way.

Other billions are being given away even to Russian satellites. This too is without constitutional authority. Neither of the branches of the Federal Government makes any attempt to function within constitutional limitations. The Supreme Court is by judicial fiat gradually repealing the 10th amendment in violation of its plain provision. Congress has by legislation invited the courts to enlarge its constitutional power to regulate interstate commerce. The effect of all the things I have mentioned is to centralize all power in the Federal Government. The next step is dictatorship.

Ladies and gentlemen, I have never believed anything more sincerely in my life than that the collapse of constitutional government is inevitable in this country if present trends continue. The officials in the higher echelons of government have repudiated the principal concept upon which our Government was founded and the creature has become master of the creator. Already bureaucratic despotic rule is in evidence in the administration of the Agricultural Adjustment Act as above stated and in the income tax administration agency. Whatever states rights are left are being rapidly lost. We are aiding in this process by calling on the Federal Government for aid for everything we seek to do. It is historically true that the centralization of all power in a government is the last step preceding national decay. A dictatorship then becomes inevitable. When that happens the Russian coal fields of Siberia will be thrown wide open to American citizens, "from whose bourne no traveler returns."

Please let us through the conservative thinkers of both national parties try to preserve America. This can only be done by demanding an adherence to the principles embodied in the Declaration of Independence and in the Federal Constitution, and an abiding faith in God.

The Activity of Unions in Politics Is Going To Compel Business To Do Same for Self-Protection

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared recently in the Rockford, Ill., Morning Star, entitled "The Activity of Unions in Politics Is Going To Compel Business To Do Same for Self-Protection":

Unless corporations make politics an essential part of their business, they are going to find it increasingly difficult to do business at all, Thomas R. Reid, director of Ford Motor Co.'s civic affairs office, said Monday in an address at Los Angeles, Calif.

Addressing the general management conference of the American Management Association, Mr. Reid said that the competition to influence the legislative climate is the most critical of all problems facing American businessmen in the next few years.

"This fact of life goes beyond business and affects every citizen," he said. "Right now completely representative government is in danger."

The Ford official urged that businessmen take immediate steps to establish positive political action programs. He said that employers and managers have shunned politics and consequently have allowed other elements to have more than a proportionate share in forming all legislation.

Mr. Reid emphasized that when he spoke of a "program for business," he was not advocating that business "line up the whole support of the corporations behind one political party as labor's support has been given to the other."

He said he was strongly opposed to the practice of partisan-power politics by either unions or corporations. Any attempts to tie one party exclusively to one group of interests, he continued, can only lead to the breakup of representative government.

Mr. Reid told members of the conference that some persons feel that political action on the part of business "will simply consist of the corporations using their money and influence to strengthen one party."

"I do not think that corporations have any right to use their stockholders' money in this way," he explained, "any more than I believe that unions have a moral right to use their members' money.

"This kind of division would ruin our two-party system, and none of us can afford that disaster."

He said he believed that the most effective political action that corporations or individuals could take was to strengthen the whole system of representative government, not to try to capture a party.

"The corporation should express its opinion—pro or con—publicly and clearly on those public issues at all levels of government in which it has an interest," he declared. "It should take positions on legislation having impact on its operations and state them. The corporation has every right to be active in governmental relations. Anything that affects its business becomes its business.

"However, the corporation has no business in politics as a corporation. Its responsibility as a corporate citizen is to encourage its members of management and its employees to participate voluntarily as individual citizens in the political party of their choice.

"It is time to admit that public affairs are a business problem," Mr. Reid said. "Ford Motor Co. has pioneered among large companies in recognizing this and is doing something about it," he said.

He urged other businessmen to begin planning now for the November 1960 elections and outlined a month-by-month timetable of political activity.

Mr. Reid said any business could adapt the following major points of his timetable to their own organization:

1. Study the impact of government and politics on business and what can be done about it.

2. Organize within corporations for effective action on governmental, legislative, and political matters.

3. Speak out on public issues.

4. Compile and issue to members of management and employees a digest of votes of Congressmen and State legislators on key business issues.

5. Get acquainted with Senators, Congressmen, and State legislators.

6. Recruit employees to work with the party of their choice.

7. Train members of management in practical politics.

8. Get people to register to vote.

9. Declare company policy encouraging political participation in the party of the employee's choice.

10. Conduct year-round activity instead of last-minute campaign efforts.

"Such a program," Mr. Reid said, "will result in a net gain in business action to improve the governmental and political climate in the United States."

Voluntary Retirement Savings Plans for Self-Employed Individuals

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. CRAMER. Mr. Speaker, I have today again introduced legislation to encourage the establishment of voluntary retirement savings plans for self-employed individuals. This legislation, which is similar to the measure which I introduced last session and identical with the bill that was passed by the House of Representatives on July 29, 1958, would permit self-employed individuals to take a current deduction for a limited amount of income invested in certain types of retirement annuity or trust. The investments would be treated as ordinary income when actually received in later years. This legislation is intended to achieve a greater equality of tax treatment between self-employed persons and employees.

Under present law, a corporation can deduct from taxes money put into a qualified employee pension plan and the employee is not taxed on this money until he actually receives the retirement income in later years.

When this provision was made in our tax law in 1942, the millions of self-employed persons were apparently overlooked. These self-employed citizens are denied this opportunity to defer taxes on retirement savings.

This legislation would generally apply to persons who are subject to the tax on self-employment income—for social-security purposes. This would include doctors, barbers, druggists, farmers, undertakers, lawyers, accountants, and other self-employed persons.

The bill would permit self-employed persons to take a deduction for a limited amount of income which they voluntarily place into a restricted retirement plan. This deduction is in general limited to 10 percent of net income from self-employment, but not to exceed $2,500 in any one taxable year and it may not exceed $50,000, during the lifetime of the self-employed person.

If an individual is over 50 years of age on the effective date of the proposed act, the limitation on the annual deduction is increased by one-tenth for each year that his age exceeds 50. For example, if he is age 60, the annual limit on his deduction would be 20 percent of income, but not over $5,000. No deduction is allowed for any year beginning after the taxpayer attains age 70.

That the present tax law discriminates against the self-employed is not denied. Can this discrimination be morally perpetuated indefinitely when a just and economical revision of the law is available?

If tax deferment is economically sound for the employed, then why is it not equally sound and just for the self-employed?

Mr. Speaker, the Members of the House gave their answer to these questions on July 29, 1958, by overwhelmingly passing legislation similar to that which I introduce. I sincerely hope that this Congress will pass such legislation early in this session.

Need to Supplement Surplus Commodities

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mrs. KEE. Mr. Speaker, during last week I joined with Senators RANDOLPH and BYRD of West Virginia in introducing legislation to direct the Secretary of Agriculture to use $200 million to purchase foods to supplement the surplus commodities now being distributed to needy citizens.

This legislation is of particular interest to West Virginia, Mr. Speaker. Our State is in the unfortunate position of having 306,000 people dependent upon these surplus commodities for their food supply. At present, only butter, flour, meal, rice and dried milk are available for distribution.

The unfortunate families of West Virginia and the rest of the Nation who must, because of no fault of their own, rely upon this food supply, are not getting anywhere near an adequate diet. The West Virginia Department of Health has stated that the diet, as now constituted, provides only 26 percent of the needed calories, 36 percent of the necessary protein and 46 percent of the required calcium.

Mr. Speaker, the Secretary of Agriculture should be in a position to purchase other foods as they become available to supplement this diet. At present, he does not have such authority. The legislation I introduced will give it to him.

The plight of these 306,000 West Virginians, dependent upon surplus Government-owned farm commodities for their food supply, emphasizes the need for a program to assist distressed economic areas such as West Virginia.

The providing of food, as essential as it is in the present emergency, is at best only a stopgap measure. What is needed is a program to attract industries which will provide jobs for these people. We are all familiar with the story of how employment in coal mines and on railroads has declined steadily in recent years. These men must be given new opportunities.

Congress is going to pass legislation in this field. The legislation would provide loans and grants for the economic rehabilitation of distressed areas. The jobs such a program would create will make surplus food programs unnecessary in the long run.

But in the meantime, Mr. Speaker, we should at least provide a subsistence diet for people who are forced to depend upon surplus commodities for food for their families.

The Amateur Athletic Union of the United States Is Proud of Its Accomplishments in the Field of Amateur Sports as a Member of the Sports Committee of the People-to-People Program

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. VAN ZANDT. Mr. Speaker, a lot of credit is due the officials of the Amateur Athletic Union of the United States, and especially its foreign relations committee, for its many activities in the field of amateur sports as its contribution to the people-to-people program designed to encourage international relations and promote peace and good will among the nations of the world.

The Amateur Athletic Union of the United States, which is the national governing body of 19 sports in the United States, has been carrying out the people-to-people idea for more than 40 years. During that time this organization has sent many thousands of track athletes, swimmers, boxers, wrestlers, weight lifters, basketball, and other teams to all parts of the world and have brought many hundreds of foreign athletes to this country. In the year of 1958 the AAU sent more than 300 athletes to over 30 different countries, including visits to several countries behind the Iron Curtain.

To get some idea as to the extent of the AAU's activities as a member of the sports committee of the people-to-people program, I am inserting herewith a copy of the annual report of the organization's foreign relations committee, which is self-explanatory:

FOREIGN RELATIONS COMMITTEE REPORT

To the Amateur Athletic Union:

Starting with the British Empire—U.S.A. track and field match on December 5 in Sydney, Australia, following the Olympic games in Melbourne in which the United States was victorious, American athletes competed on five continents during the following 10 months, bringing fame to themselves and honor to the AAU and the United States.

Six different sports were represented by nearly 300 athletes on their jaunts around the globe. Track and field led in the number of athletes and trips. As a result of their outstanding performances in the Olympic games, our track and field athletes have been very much in demand.

The match between the athletes of the London athletic clubs and those of the New York clubs at the White City Stadium, London, July 19–20 and another meet in Manchester on July 24, resulted in our sending more track and field athletes abroad this year than ever before, except possibly in an Olympic year. With the approval of the sponsors, we selected the so-called New York team from among the best athletes of eastern Pennsylvania, New Jersey, Connecticut, New York, and Massachusetts and the London clubs drew their talent from a 100-mile radius from London. The match was won by the New York team with a 94-point score to London's 61 points.

In addition to the team which competed in this match, five other American teams showed their talents in Finland, Sweden, Denmark, Norway, Germany, France, Switzerland, Italy, and Rumania.

Our girls basketball team won the world's championship in Rio de Janeiro, Brazil, early in November defeating the Soviet Union in the finals by a score of 51–48. They went through the tournament with but one defeat and that was at the hands of Czechoslovakia early in the tournament. Twelve countries had teams in the tournament. Because of lack of funds, we had about given up hope of being represented in this important championship, but at the last minute the father of one of the girls chipped in $2,000 which made the trip possible.

A five-man wrestling team competed successfully in Japan.

We were represented in the World's Bobsled Championships in St. Moritz, Switzerland, by two teams in the two and four man events, one team making the trip from the United States and another the military team made up of representatives of the Armed Forces in Europe.

A seven girl synchronized swimming team plus two male divers toured Japan and exhibited at many of the United States military bases for the entertainment of U.S. troops stationed in the Orient.

Betty Becker Finkston, manageu and chaperoned two divers—Jeanne Stunyo and Don Harper to Buenos Aires, Argentina, for a series of exhibitions there in March.

Arthur O'Connor, track coach at Fordham University, was selected by the AAU to accompany his former star, 800-meter Olympic champion, Tom Courtney on a 18-day tour of South Africa.

The Denver Chicago Truckers basketball team played a series of games in Argentina between August 17 and September 15, winning eight matches and losing just one.

The last U.S. team to compete abroad was the U.S. weightlifters who competed in the World's Weightlifting Championships at Teheran, Iran, November 5–14. Like our women's basketball team, we experienced considerable difficulty in raising the necessary funds to defray this team's expenses. It could not have left the United States except for the willingness of Clarence Johnson, chairman of the National AAU weightlifting committee, to pay the $2,500 balance on the transportation costs to enable the team to make the trip.

Bobby Clotworthy, the Olympic diver accepted Australia's invitation to appear in a number of swimming meets following the Olympic games. He also accepted an invitation to engage in a number of diving exhibitions in Chile as a representative of the State Department.

Rafer Johnson of the University of California at Los Angeles, was selected for a tour under the sponsorship of the State Department and he visited Italy, Yugoslavia, Belgian Congo, Israel, and Pakistan between July 14 and August 13. The tours of both Clotworthy and Johnson were highly successful. Both athletes were very popular wherever they visited and proved excellent good will ambassadors for the United States.

Some 50 American athletes traveled to Israel to participate in the Maccabiah games from September 15 to 24, competing in track and field, swimming, and basketball.

The traffic in athletes was not all away from the United States. A wrestling team from Japan visited the United States early this year and competed in a series of wrestling matches all across the United States, including the national AAU wrestling championship at Waynesburg, Pa.

Dawn Fraser and Lorraine Crapp, Australia's famous swimmers and Olympic champions, with Mrs. Dorothy Quinton as their manager and chaperone, accepted our invitation to compete in Honolulu, Oklahoma

City, Houston, Tex., and San Francisco. At Houston they competed in our national AAU swimming championships for women. Miss Fraser won the 110-yard freestyle event and Miss Crapp won the 440-yard freestyle event. These girls were very popular and won the hearts of the Americans with whom they came in contact. They were not only great champions but were leaders in sportsmanship and made many friends for Australia during their visit in the United States.

The international boxing tournament held in Seattle, Wash., August 1, 2, and 3, attracted entries from Japan, China, Mexico, Canada, Cuba, and Hawaii.

A team of seven Greek-American track athletes toured Greece from July 31 to August 24. The team received a tumultuous welcome by the Greek people. They participated in exhibtiions in Athens, northern Greece, the Balkans, and had a dual meet with Austria.

Merger of Manufacturers Trust Co. and Bankers Trust Co. Would Have Most Serious Competitive Implications

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. CELLER. Mr. Speaker, last week I wrote to the Superintendent of Banks of the State of New York, the Chairman of the Federal Reserve Board, and the Assistant Attorney General in charge of the Antitrust Division, Department of Justice, calling their attention to the grave competitive implications of the proposed merger of Manufacturers Trust Co. and the Bankers Trust Co., both of New York City.

In these letters I pointed out that this consilidation, following on the heels of the Guaranty Trust-Morgan merger proposal, would result in an undue concentration of banking facilities in New York City; spur further bank mergers in the city; and ignite a chain reaction that could have the most profound repercussions on the entire banking structure of the city and State.

The banking system of New York City, is already highly concentrated to the point where the four largest banks in the city control over 60 percent of the city's banking assets. Manufacturers Trust is now the third largest in the city with over $3 billion of total assets, while Bankers Trust is the city's sixth largest bank having total assets in excess of $2.8 billion. Merger of these two institutions would mean that almost 70 percent of the tctal assets of New York City's banks would be concentrated in the hands of four financial houses.

I pointed out that although there are now approximately 54 banks serving the city area, the new entity resulting from the consolidation would have assets almost double the combined total assets of 44 of the city's banks.

It is no less significant that Manufacturers Trust and Bankers Trust are in substantial competition with each other in the so-called retail banking field. Manufacturers Trust, with 114 branches in New York City, already has the most extensive retail banking system in the city. Adding the 45 branches of Bankers Trust would only serve to increase the dominance of the new institution in this phase of the city's banking business and further restrict the freedom of choice of depositors and borrowers alike.

In addition to these considerations, I indicated that the present size of Manufacturers Trust and Bankers Trust has been acocmplished in large part through absorption of other banking houses. Manufacturers Trust Co., for example, since its organization in 1905, has absorbed no less than 81 banks together with their branches, all in the greater New York area. The Bankers Trust Co. also has been taking over other banks at a rapid rate, especially in the last several years. Since 1950 the Bankers Trust Co. has absorbed such substantial banks as the Public National Bank & Trust Co. of New York, the Title Guarantee & Trust Co., Lawyers Trust Co., Flushing National Bank, the Commercial National Bank & Trust Co., and the Bayside National Bank.

In the context of the merger history of these two institutions the present merger proposal appears as but another step toward larger size and greater dominance in the New York City market area.

In my letter to Assistant Attorney General Hansen in charge of the Antitrust Division, I said in part:

Bank mergers, whether accomplished by stock or asset acquisitions, are * * * circumscribed by the provisions of the Sherman Act of 1890 which prohibits combinations in restraint of trade, attempts to monopolize, or monopolization of trade or commerce. * * * Establishing a Sherman act violation hardly presents insuperable problems.

In this connection, I think it is highly significant that since 1950 there has been a total of 1,232 bank mergers, of which 1,059 took place in the period from 1953 to 1958. Despite this great number of bank consolidations which is concentrating control of the Nation's banks into fewer and fewer hands, the Antitrust Division has never once invoked the provisions of the Sherman act against a bank merger. I am at a complete loss to understand this extraordinary record of inaction.

In respect to the Guaranty Trust-Morgan and Manufacturers Trust-Bankers Trust merger proposals, I trust that the situation will change and that the Department will finally execute the provisions of the Sherman Act promptly, vigorously and effectively. This is particularly important since each of these mergers on its face would apparently result in a substantial lessening of competition as between the acquiring and acquired institutions. Thus, Guaranty Trust and J. P. Morgan are seemingly in vigorous and substantial competition with each other in the wholesale banking business, while Manufacturers Trust and Bankers Trust compete with each other substantially in the retail banking field. In both cases, this competition would be entirely lost should the merger plan be accomplished.

The chairman of the board of J. P. Morgan last week has been quoted as saying that the Department of Justice inquiries about the merger with Guaranty were apparently routine. If this accurately reflects the nature of the Department's inquiries, that would be a most serious reflection on the Department's willingness to enforce the provisions of the Sherman Act impartially and vigorously. A token investigation conducted for appearances' sake would be worse than no investigation at all. Moreover, I hope that in dealing with these two merger proposals the Department will carefully avoid pursuing the course it followed in 1955 in connection with Chase-Bank of Manhattan merger.

In my letter to Chairman Martin of the Federal Reserve Board, I stated, among other things:

The statutory structure requires that State member banks be placed on an equality with national banks in respect to branches and that since national banks must obtain approval of the Comptroller of the Currency of branches acquired through merger, State member banks of the Federal Reserve System are necessarily subject to the same condition. Thus the Board has made it plain that in determining whether or not it will approve the establishment by a bank of branches acquired through merger, it is bound by the same terms and conditions and the same limitations and restrictions as are applicable to branches of national banks. For that reason, the Board has stated that it is required, like the Comptroller of the Currency, to consider the effect of the merger on competition.

It follows, in these circumstances, that it is incumbent on the Board to use the same competitive test as that which the Comptroller of the Currency has stated he follows. In this connection I would point out that the Comptroller of the Currency has made it clear that before granting merger approval, he will determine whether the effect of the transaction in any section of the country may be substantially to lessen competition or tend to create a monopoly; that he will determine, in short, whether the transaction is violative of the policy of the Celler-Kefauver Act.

* * * * *

In view of the competitive test set forth above, it is difficult to ascertain how the Board could grant approval of the branch applications which will be here involved.

* * * * *

More than that, the consequences of the contemplated transaction are so far-reaching as to make it imperative that the Board conduct public hearings on the record so that all the facts be brought out and all interested parties be given an opportuinty to be heard. I think it fundamental that matters of this importance not be left to informal private determination. The public interest involved here is too great for that.

My letter to the New York State superintendent of banks pointed out the necessity of careful investigation of this transaction in order to determine whether its effect may be substantially to lessen competition or tend to create a monopoly. It also emphasized the importance of public hearings on the record.

I further indicated that it was essential for each of the three agencies involved to have close consultation with each other particularly with respect to the competitive phases of the merger proposal.

Finally, each agency was requested to furnish to the Antitrust Subcommittee answers to a series of questions dealing with the competitive factors that are involved.

Attached are copies of my letters to the Assistant Attorney General in charge of the Antitrust Division, the Chairman of the Federal Reserve Board, and the New York State superintendent of banks.

JANUARY 23, 1959.

SUPERINTENDENT OF BANKS,
State of New York Banking Department,
New York, N.Y.

DEAR SIR: My attention has been directed to a proposed merger of the Manufacturers Trust Co. and the Bankers Trust Co., both of New York City. This transaction, which would require your approval, presents on its face grave competitive implications. Following on the heels of the Guaranty Trust merger proposal, there is little doubt that its consummation would result in an undue concentration of banking facilities in New York City; spur further bank mergers in the city; and ignite a chain reaction that could have the most profound repercussions on the entire banking structure of the city and State. I think it entirely probable that approval of a Manufacturers Trust-Bankers Trust consolidation would bring banking monopoly in our State much closer into being.

As you know, the banking system of New York City is already highly concentrated to the point where the four largest banks in the city control over 60 percent of the city's banking assets. In this connection it will be noted that Manufacturers Trust is now the third largest in the city with over $3 billion of total assets, while Bankers Trust is the city's sixth largest bank having total assets in excess of $2.8 billion. Merger of these two institutions would mean that almost 70 percent of the total assets of New York City's banks would be concentrated in the hands of four financial houses. This, I think you will agree, would be a matter of the most serious concern.

Furthermore, although there are now approximately 54 banks serving the city area, I would emphasize that the new entity resulting from the consolidation would have assets almost double the combined total assets of 44 of the city's banks.

No less significant, Manufacturers Trust and Bankers Trust are in substantial competition with each other in the so-called retail banking field. Indeed, Manufacturers, with 114 branches in New York City, already has the most extensive retail banking system in the city. Adding the 45 branches of Bankers Trust, would only serve to increase the dominance of the new institution in this phase of the city's banking business and further restrict the freedom of choice of depositors and borrowers alike.

It must be borne in mind that the present proposal, like that of Guaranty Trust and Morgan, does not involve a situation where a small, inadequately financed or managed bank, suffering or falling behind in the competitive race, seeks by merging to form a big, integrated institution able to compete on equal terms. On the contrary, each of the banks involved here is a gigantic, efficient, and vigorously competing institution well able independently to serve the banking needs of its respective clients. In fact, it is evident that the proposed consolidation is primarily the outgrowth of a deliberate effort on the part of the parties to expand their banking facilities, add to their capital and depositors, and, in general, increase their overall financial strength in the economy. Nor can it be overlooked that the present size of Manufacturers Trust and Bankers Trust has been accomplished in large part through absorption of other banking houses. Manufacturers Trust Co., for example, since its organization in 1905, has absorbed no less than 81 banks together with their branches, all in the Greater New York area.

The Bankers Trust Co. also has been taking over other banks at a rapid rate, especially in the last several years. In fact, since 1950, the Bankers Trust Co. has absorbed such substantial banks as the Public National Bank & Trust Co. of New York, the Title Guarantee & Trust Co., Lawyers Trust Co., Flushing National Bank, the Commercial National Bank & Trust Co., and the Bayside National Bank.

In the context of the merger history of these two institutions, the present merger proposal appears as but another step toward larger size and greater dominance in the New York City market area.

You will recall that on December 19, 1958, I wrote to your office with respect to the proposed merger involving the Guaranty Trust Co. and J. P. Morgan & Co. In that communication I pointed out that your predecessor had testified before our Antitrust Subcommittee in 1955:

"It has been my policy as superintendent of banks of the State of New York to follow the spirit of the Celler Antimerger Act in determining whether or not to approve mergers of banks that come within my jurisdiction. That is to say, if after analysis of all facts, I find that the effect of a proposed bank merger may be substantially to lessen competition or tend to monopoly in any locality, I will unhestitatingly withhold approval."

The Comproller of the Currency of the United States has likewise made it clear that his policy is the same—that before granting merger approval, he will determine whether the effect of the transaction in any section of the country may be substantially to lessen competition or tend to create a monopoly; that he will determine, in short, whether the transaction is violative of the policy of the Celler-Kefauver Act. Thus, in a letter to me dated March 14, 1955, the Comptroller of the Currency stated in part:

"In determining whether the approval of this office will be given to any merger or consolidation, the Comptroller considers, among other things, how the proposed merger will affect the particular banks involved, the soundness of the national banking system, and the convenience and needs of the community concerned. There may be a technical question as to the specific application of section 7 of the Clayton Act to these mergers. However, it has been the practice of the Comptroller before giving his approval to determine whether the effect of the merger, 'in any section of the country * * * may be substantially to lessen competition, or to tend to create a monopoly.'"

Again in March 1957, the Comptroller testified before the Antitrust Subcommittee as follows:

"COUNSEL. Is it your practice * * * not to approve any bank merger where the effect may be substantially to lessen competition or tend to create a monopoly?

"Mr. GIDNEY. I say, that has been our practice. We have not approved any where it could be.

"COUNSEL. That is your practice?

"Mr. GIDNEY. We have not approved where it could be shown."

If competition in the banking field in New York City is to be preserved, it is, of course, vitally important that your office adhere to this policy in scrutinizing both the Guaranty Trust-Morgan and Manufacturers Trust-Bankers Trust merger proposals. Furthermore, in applying that policy, it is equally important that the purpose of the Congress in passing the Celler-Kefauver Antimerger Act be kept carefully in mind. In this respect, as I indicated in my previous letter of December 19, 1958, the decision of Judge Weinfeld in the Bethlehem-Youngstown merger case is extremely relevant. Also in my previous letter, I observed that Judge Weinfeld in that decision had pointed out that the precise purpose of the Celler-Kefauver Act was to limit future increases in the level of economic concentration resulting from corporate mergers in order to block resulting monopolistic tendencies in their incipiency. The report of our House Judiciary Committee on this legislation emphasizes that a merger would come under the statutory ban when its effect "may be a significant reduction in the vigor of competition, even though this effect may not be so far reaching as to amount to a combination in restraint of trade, create a monopoly, or constitute an attempt to monopolize. Such an effect may arise in various ways such as elimination in whole or in material part of the competitive activity of an enterprise which has been a substantial factor in competition, increase in the relative size of the enterprise making the acquisition to such a point that its advantage over its competitors threatens to be decisive, undue reduction in the number of competing enterprises, or establishment of relationships between buyers and sellers which deprive their rivals of a fair opportunity to compete."

In connection with the present transaction you will note that in the Bethlehem-Youngstown case the court rejected a contention, which undoubtedly will be made here, that the merger of the two companies would result in increased competition with the largest concern in the field. Apposite is the court's statement that to allow the merger would set in motion "a chain of reaction of further mergers by the other but less powerful companies in the * * * industry * * * [reaching] a point of more intense concentration in an industry already highly concentrated."

The considerations in the Bethlehem-Youngstown situation apply with even greater force to the Manufacturers Trust-Bankers Trust merger proposal. More than that, the consequences of this contemplated transaction are so far-reaching as to make it imperative that your office conduct public hearings on the record so that all the facts be brought out and all interested parties be given an opportunity to be heard. I think it fundamental that matters of this importance not be left to informal, private determination. The public interest involved here is too great for that.

I point out also that the Antitrust Division of the Department of Justice is the executive agency possessing the greatest expertise with respect to application of the standards of the Celler-Kefauver Act. Consequently, it would seem essential that your office seek the advice of the Antitrust Division, if there is to be an informed judgment concerning the competitive phases of the transactions.

In all the circumstances, I would greatly appreciate your adavising our Antitrust Subcommittee as soon as possible as to whether or not your office contemplates following the spirit of the Celler-Kefauver Act in determining whether or not to approve the proposed Guarantee Trust-Morgan merger and the Manufacturers Trust-Bankers Trust merger.

With respect to the Manufacturers Trust-Bankers Trust merger proposal, I should also appreciate your advising our Antitrust Subcommittee:

1. Whether or not your office is undertaking an investigation of this transaction;
2. The nature of such investigation;
3. Whether or not your office is consulting with the Antitrust Division with respect to the competitive phases of this transaction;
4. The nature of such consultation;
5. Whether or not your office proposes to hold hearings with respect to this transaction;
6. In the event hearings are not held, the reasons therefor.

Finally, you will recall that included in my letter of December 19 was a series of questions relating to the Guaranty Trust-Morgan merger proposal. Would you undertake to provide answers to these questions at your earliest convenience?

Sincerely yours,

EMANUEL CELLER, *Chairman.*

JANUARY 26, 1959.

Hon. WILLIAM MCCHESNEY MARTIN, Jr.,
Chairman of the Board of Governors,
Federal Reserve System,
Washington, D.C.

DEAR MR. CHAIRMAN: My attention has been directed to a proposed merger of the Manufacturers Trust Co. and the Bankers Trust Co., both of New York City. This transaction presents on its face grave competitive implications. Following on the heels of the Guaranty Trust-Morgan merger proposal, there is little doubt that its consummation would result in an undue concentration of banking facilities in New York City; spur a further wave of bank mergers in the city; and ignite a chain reaction that could have the most profound repercussions on the entire banking structure of the city and State.

As you know, the banking system of New York City is already highly concentrated to the point where the four largest banks in the city control over 60 percent of the city's banking assets. In this connection, it will be noted that Manufacturers Trust is now the third largest in the city with over $3 billion of total assets, while Bankers Trust is the city's sixth largest bank having total assets in excess of $2.8 billion. Merger of these two institutions would mean that almost 70 percent of the total assets of New York City's banks would be concentrated in the hands of four financial houses.

Furthermore, although there are now approximately 54 banks serving the city area, I would emphasize that the new entity resulting from the consolidation would have assets almost double the combined total assets of 44 of the city's banks.

It is clear that this transaction cannot be completed except with approval of the Federal Reserve Board which, as you have previously advised me, has jurisdiction over the establishment by the continuing bank of branches at locations of former offices of the absorbed institution. Indeed, the Board, as you recall, has recently pointed out in *Old Kent Bank and Trust Company* v. *The Federal Reserve System* (D. Col., C. A. No. 1993–58) that the necessity for Board approval of branches acquired through merger is required by the Federal statutes dealing with supervision and regulation of the banking industry. The Board's position, as indicated in that case, is that the statutory structure requires that State member banks be placed on an equality with national banks in respect to branches and that since national banks must obtain approval of the Comptroller of the Currency of branches acquired through merger, State member banks of the Federal Reserve System are necessarily subject to the same condition. Thus the Board has made it plain that in determining whether or not it will approve the establishment by a bank of branches acquired through merger, it is bound by the same terms and conditions and the same limitations and restrictions as are applicable to branches of national banks. For that reason, the Board has stated that it is required, like the Comptroller of the Currency, to consider the effect of the merger on competition.

It follows, in these circumstances, that it is incumbent on the Board to use the same competitive test as that which the Comptroller of the Currency has stated he follows. In this connection I would point out that the Comptroller of the Currency has made it clear that before granting merger approval, he will determine whether the effect of the transaction in any section of the country may be substantially to lessen competition or tend to create a monopoly; that he will determine, in short, whether the transaction is violative of the policy of the Celler-Kefauver Act. For example, in a letter to me dated March 14, 1955, the Comptroller of the Currency stated in part:

"In determining whether the approval of this office will be given to any merger or consolidation, the Comptroller considers, among other things, how the proposed merger will affect the particular banks involved, the soundness of the national banking system, and the convenience and needs of the community concerned. There may be a technical question as to the specific application of section 7 of the Clayton Act to these mergers. However, it has been the practice of the Comptroller before giving his approval to determine whether the effect of the merger, 'in any section of the country * * * may be substantially to lessen competition, or to tend to create a monopoly.'"

Again, in March 1957, the Comptroller testified before the Antitrust Subcommittee as follows:

"COUNSEL. Is it your practice * * * not to approve any bank merger where the effect may be substantially to lessen competition or tend to create a monopoly?

"Mr. GIDNEY. I say, that has been our practice. We have not approved any where it could be.

"COUNSEL. That is your practice?

"Mr. GIDNEY. We have not approved where it could be shown."

Against this background I note that Manufacturers Trust and Bankers Trust are in substantial competition with each other in the so-called retail branch banking field. Indeed, Manufacturers, with 114 branches in New York City, already has the most extensive retail banking system in the city. Adding the 45 branches of Bankers Trust, would only serve to increase the dominance of the new institution in this phase of the city's banking business and further restrict the freedom of choice of depositors and borrowers alike.

In view of the competitive test set forth above, it is difficult to ascertain how the board could grant approval of the branch applications which will be here involved.

Beyond that, it is clear that the Antitrust Division of the Department of Justice is the executive agency possessing the greatest expertise with respect to application of the above competitive standards in view of its prosecution of cases under the Celler-Kefauver Act. Consequently, it would seem essential that the board seek the advice of the Antitrust Division, if there is to be an informed judgment concerning the competitive phase of the transaction.

Also, since the transaction is subject to approval by the New York State Superintendent of Banks, and since the avowed policy of the superintendent is to follow the competitive test specified above, it would seem essential for the board to maintain close and continuous liaison with the bank superintendent particularly in respect to competitive aspects.

More than that, the consequences of the contemplated transaction are so far reaching as to make it imperative that the Board conduct public hearings on the record so that all the facts be brought out and all interested parties be given an opportunity to be heard. I think it fundamental that matters of this importance not be left to informal private determination. The public interest involved here is too great for that.

In view of the foregoing considerations, I would greatly appreciate your advising our Antitrust Subcommittee as soon as possible as to the competitive test the Board will follow and whether or not the Board will disapprove this transaction if it finds that its effect in any section of the country may be substantially to lessen competition or tend to create a monopoly. I should also appreciate your advising our subcommittee:

First. Whether or not the Board is undertaking an investigation of this transaction;

Second. The nature of such investigation;

Third. Whether or not the Board will consult with the Antitrust Division and the New York State Superintendent of Banks with respect to the competitive phases of this transaction;

Fourth. Whether or not the Board proposes to hold hearings with respect to this transaction.

Finally, many of the above factors are equally applicable with respect to the proposed Guaranty Trust-Morgan merger proposal. Therefore, it would be appreciated if the Board answer each of the above questions as they relate to that proposed transaction.

I am enclosing for the Board's information copies of letters I have sent to the Superintendent of Banks of the State of New York and the Antitrust Division of the Department of Justice concerning this matter.

Sincerely yours,

EMANUEL CELLER,
Chairman.

JANUARY 26, 1959.

Hon. VICTOR R. HANSEN,
Assistant Attorney General,
Department of Justice,
Washington, D.C.

DEAR JUDGE HANSEN: My attention has been directed to a proposed merger of the Manufacturers Trust Co. and the Bankers Trust Co., both of New York City. This transaction presents on its face grave competitive implications. Following on the heels of the Guaranty Trust-Morgan merger proposal, there is little doubt that its consummation would result in an undue concentration of banking facilities in New York City; spur further bank mergers in the city; and ignite a chain reaction that could have the most profound repercussions on the entire banking structure of the city and State. I think it entirely probable that a Manufacturers Trust-Bankers Trust consolidation would bring banking monopoly in New York State much closer into being.

The banking system of New York City is already highly concentrated to the point where the four largest banks in the city control over 60 percent of the city's banking assets. In this connection, it will be noted that Manufacturers Trust is now the third largest in the city with over $3 billion of total assets, while Bankers Trust is the city's sixth largest bank having total assets in excess of $2.8 billion. Merger of these two institutions would mean that almost 70 percent of the total assets of New York City's banks would be concentrated in the hands of four financial houses. This, I think you will agree, would be a matter of the most serious concern.

Furthermore, although there are now approximately 54 banks serving the city area, I would emphasize that the new entity resulting from the consolidation would have assets almost double the combined total assets of 44 of the city's banks.

No less significant, Manufacturers Trust and Bankers Trust are in substantial competition with each other in the so-called retail banking field. Indeed, Manufacturers, with 114 branches in New York City, already has the most extensive retail banking system in the city. Adding the 45 branches of Bankers Trust would only serve to increase the dominance of the new institution in this phase of the city's banking business and further restrict the freedom of choice of depositors and borrowers alike.

It must be borne in mind that the present proposal, like that of Guaranty Trust and Morgan, does not involve a situation where a small, inadequately financed or managed bank, suffering or falling behind in the competitive race, seeks by merging to form a big, integrated institution able to compete on equal terms. On the contrary, each of the banks involved here is a gigantic, efficient, and vigorously competing institution well able independently to serve the banking needs of its respective clients. In fact, it is evident that the proposed consolidation is primarily the outgrowth of a deliber-

ate effort on part of the parties to expand their banking facilities, add to their capital and depositors, and, in general, increase their overall financial strength in the economy. Nor can it be overlooked that the present size of Manufacturers Trust and Bankers Trust has been accomplished in large part through absorption of other banking houses. Manufacturers Trust Co., for example, since its organization in 1905, has absorbed no less than 81 banks together with their branches, all in the Greater New York area.

The Bankers Trust Co. also has been taking over other banks at a rapid rate, especially in the last several years. In fact, since 1950, the Bankers Trust Co. has absorbed such substantial banks as the Public National Bank & Trust Co. of New York, the Title Guarantee & Trust Co., Lawyers Trust Co., Flushing National Bank, the Commercial National Bank & Trust Co., and the Bayside National Bank.

In the context of the merger history of these two institutions, the present merger proposal appears as but another step toward larger size and greater dominance in the New York City market area.

Further demonstrating the effect this and the Guaranty Trust-Morgan proposal will have on the banking structure, the president of the Manufacturers Trust Co. was quoted last week as saying: "The merger discussions were spurred by news of the Morgan-Guaranty combine. * * * I know of no bank in New York that hasn't had conversations formal or informal with other banks over the possibility of a merger." Business Week of January 10, 1959, had this to say: "New York bankers predict that if and when [this] merger goes through, a series of competitive realinements will result that won't end until a new balance of power is established among New York banks."

I am quite aware that these two merger proposals may involve an acquisition of assets and that, should this be the case, section 7 of the Clayton Act would not be applicable. However, I am equally aware—as I am sure the Department of Justice is—that bank mergers, whether accomplished by stock or asset acquisitions, are also circumscribed by the provisions of the Sherman Act of 1890 which prohibits combinations in restraint of trade, attempts to monopolize, or monopolization of trade or commerce. Illegality under the Sherman Act is established by proof that the merger has actually resulted in an unreasonable lessening of competition. It is true that such proof is more difficult than the Clayton Act test which requires only a reasonable probability of a substantial lessening of competition. Nevertheless, establishing a Sherman Act violation hardly presents insuperable problems.

In this connection, I think it is highly significant that since 1950 there has been a total of 1,232 bank mergers, of which 1,059 took place in the period from 1953 to 1958. Despite this great number of bank consolidations which is concentrating control of the Nation's banks into fewer and fewer hands, the Antitrust Division has never once invoked the provisions of the Sherman Act against a bank merger. I am at a complete loss to understand this extraordinary record of inaction.

In respect to the Guaranty Trust-Morgan and Manufacturers Trust-Bankers Trust merger proposals, I trust that the situation will change and that the Department will finally execute the provisions of the Sherman Act promptly, vigorously, and effectively. This is particularly important since each of these mergers on its face would apparently result in a substantial lessening of competition as between the acquiring and acquired institutions. Thus, Guaranty Trust and J. P. Morgan are seemingly in vigorous and substantial competition with each other in the wholesale banking business, while Manufacturers Trust and Bankers Trust compete with each other substantially in the retail banking field. In both cases, this competition would be entirely lost should the merger plan be accomplished.

The chairman of the board of J. P. Morgan last week has been quoted as saying that the Department of Justice inquiries about the merger with Guaranty were apparently routine. If this accurately reflects the nature of the Department's inquiries, that would be a most serious reflection on the Department's willingness to enforce the provisions of the Sherman Act impartially and vigorously. A token investigation conducted for appearance's sake would be worse than no investigation at all. Moreover, I hope that in dealing with these two merger proposals the Department will carefully avoid pursuing the course it followed in 1955 in connection with the Chase-Bank of Manhattan merger.

There is a further consideration. As you know, both of the merger proposals will require the approval of the New York State Superintendent of Banks and the Federal Reserve Board. In considering these transactions these agencies should, for reasons which I have set forth in the letters which are enclosed, consider whether the merger's effect may be substantially to lessen competition or tend to create a monopoly. This competitive test is the same as the standards set forth in section 7 of the Clayton Act as amended by the Celler-Kefauver Act. For that reason, it would appear imperative that the Antitrust Division present its views on the competitive phases of these transactions to the Superintendent of Banks and to the Federal Reserve Board. As you know, it would not be a novel departure for the Division to present its views on the competitive aspects of a bank merger to a bank supervisory agency. This is evidenced by your letter to me dated March 20, 1957. It is also evidenced by the Department's intervention before the Federal Reserve Board on the application by the First National City Bank of New York to form a holding company to acquire the County Trust Company of Westchester. In view of the competitive implication of each of the two current bank merger proposals, I think you will agree that it is of even greater importance here for the Department to present its views to the bank supervisory agencies. On the other hand, should the Department fail to act, "in its overall responsibility for section 7's enforcement—outside of the banking area—(the) Department would be bound by bank merger precedents (it) had no voice in picking or shaping."

In light of the foregoing considerations, I will appreciate your furnishing the following information to our Antitrust Subcommittee as soon as possible with respect to the Guaranty Trust-Morgan and the Manufacturers Trust-Bankers Trust merger proposals:

1. Whether the Department of Justice is presently undertaking a Sherman Act investigation of each of these proposals;

2. Whether or not each of these investigations is or is not routine;

3. Whether or not the Department of Justice is consulting with the New York State Superintendent of Banks and the Federal Reserve Board with respect to the competitive phases of these transactions;

4. The nature of such consultations.

Finally, I am enclosing for your information copies of letters I have sent to the New York State Superintendent of Banks and to the Federal Reserve Board concerning the Manufacturers Trust-Bankers Trust merger proposal.

Sincerely yours,

EMANUEL CELLER, *Chairman.*

Flood Control Thoughts

EXTENSION OF REMARKS
OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 27, 1959

Mr. LEVERING. Mr. Speaker, the people of my congressional district, as everyone knows who has read the newspapers in the past several weeks, have been hit by a devastating flood. Rather than bemoaning their fate, they have pitched in as individuals to clean up after the flood, to rebuild and restore the buildings and land laid waste.

Knowing them as I do, I knew that they would respond in this way—by doing everything, individually, they could do to restore life to normal and to make the countryside as beautiful and well kept as it was before.

Yet, the people are not forgetting the tragic flood. They are discussing it, and its causes. This, too, could be expected. It is, I think, a tribute to them, as thoughtful men and women in the United States and as good citizens, to strive to find out what happened, what was not done that should have been done, and what ought to be done to prevent future damage in future potentially dangerous flood periods.

As a public official, I have striven to develop and to hold the idea and the attitude that I do not know everything. I have stated before, and I meant it sincerely, as I state now, namely, that I covet the thinking of the people in my district about every problem which affects them and impinges upon public questions.

I respect their advice and counsel. I strive in every way to get the viewpoints of many, diverse individuals, for I realize that everyone, if he will contribute what he can to our problems, can help to solve or assuage our public problems.

Robert Burton said: "A dwarf, standing on the shoulders of a giant, may see farther than the giant himself."

I feel, in a way, that the combined intelligence of the people of my district constitutes a lot of wisdom. Figuratively speaking, I want to stand on their shoulders and, using their combined knowledge, strive to see a little farther into the distance, in order to help them. But I can help them only to the extent they express themselves freely and that I learn of the thoughts they are thinking.

Relative to our flood, Mr. Speaker, a number of fine citizens have expressed their thoughts and observations in various ways. Because I feel that each of the following news clippings, either letters to the editor or news columns are pertinent to the problems my district faces in making sure we are not the victims again of a disastrous flood, I am inserting them in the CONGRESSIONAL RECORD.

A letter to the editor of the Mount Vernon (Ohio) News, written by D. F. Ridenour, and published on January 29, 1959.

Two columns by George McConnell, farm planner and Wayne Burkhart, County Agent, published in the Mount Vernon (Ohio) News on January 29, and January 30, 1959, respectively:

[From the Mount Vernon (Ohio) News, Jan. 29, 1959]

PEOPLE'S FORUM

EDITOR, THE NEWS:

The first time I realized we were having a flood I drove up to the east side of Knox Lake to see if the water was high there. I thought some of you people would be interested in what I found.

The two creeks that come into the lake there were all over the lowland and pouring over the new road about four feet deep for at least one-eighth of a mile. Ice a foot thick was lodged on the trees turned up edgewise and holding the water back . That country looked like the Atlantic Ocean.

I became alarmed about the dam so drove down the west end of the lake and the ice was not broken at all and the water was about normal.

If this lake had not been there Mount Vernon would have had at least 2 feet more of water. This was at noon Wednesday. Knox Lake was not built for flood control but it really saved Mount Vernon this time.

D. F. RIDENOUR.

[From the Mount Vernon (Ohio) News, Jan. 29, 1959]

DRY DAMS SUGGESTED AS SOLUTION OF FLOOD PROBLEM HERE

(By George McConnell)

There has been much written and said about what could and should be done to prevent a recurrence of the flood of January 21, in Knox County. Certainly no one wants it to happen again. Many people have offered ideas that are worth considering.

It seems obvious that channel clearing is needed. The dikes need repairing and perhaps relocated. Apparently the Corps of Engineers has a plan to take care of this need, although it has not yet been made public. This may offer the lowest sections of Mount Vernon a measure of protection. Cooperation with the Corps of Engineers would seem to be the quickest way to protect the most people and property at the lowest cost to local government.

First, Congress must appropriate the necessary funds and the Public Works Agency must approve the proposals made by the Corps of Engineers.

The official Soil Conservation Service notes of water level at the B. & O. bridge at Mount Vernon are most interesting. The record of the floodwater rise went like this: 8:15–9:15, 1.5 feet; 9:15–10:25, 1.7 feet; 10:25–noon, 1.5 feet; noon–1, 1.4 feet; 1–2:45, 1.9 feet; 2:45–3:15, 2 feet; 3:15–3:35, 2.4 feet; 3:35–4:20, 2.4 feet; 4:20–4:35, same flood crest; 4:35–4:50, 0.1 down; 4:50–5:15, 0.1 down.

The rise was about 1.5 feet per hour till noon, then about 0.4 foot per hour till 2:45. It was during this period that the water spread out in the west end of town and rose more slowly because it was covering more and more land.

Then between 2:45 and 3:15 the floodwater level rose exactly 2 feet in just one-half hour, in spite of the fact that the water was still spreading out. The rise (of 0.8 foot) and spread continued for about another hour cresting between 4:15 and 4:35 p.m. The local Soil Conservation Service personnel searched for 5 days for an answer to this behavior. We saw the abrupt rise. Many people reported a wall of water from 3 to 6 feet high coming down the river.

The SCS figures prove that there was a sharp rise. The only explanation that seems worth considering is the big pool of floodwater that gathered in the north end of Fredericktown. It finally broke over the railroads opposite the Edwards sheet-metal plant about 11:30 a.m. The big blocks of ice may have dammed the 9-foot culvert under the railroad there also. Plenty of them are big enough. Certainly it must have cut loose abruptly. At any rate it temporarily detained the water. The heaviest rain shower at Mount Vernon came after 3:30. Rain may have been heaviest at Fredericktown earlier in the afternoon.

The North Fork of the Kokosing River falls about 80 feet in the 8 miles by river to the viaduct in Mount Vernon. It seems logical that the water from the temporary dentention structure at the upper end of Fredericktown could have reached Mount Vernon at about 3 p.m. as the figures indicate. The next question is just how much water was stored, temporarily, in the upper end of Fredericktown. A quick look at the area early this week indicates that it may have been about 1,000 acre-feet. That is an average of 4 feet, over 250 acres of land or the equivalent of less than a 2-foot rise in Knox Lake. In a dry dam, that would be regarded as a good sized body of water.

If the above assumptions are correct, and we feel that they are, then this demonstrates how valuable upstream dry dams could be. With several thousand acre-feet of flood storage the damage could have been nearly, if not entirely, eliminated in Mount Vernon and Fredericktown.

[From the Mt. Vernon (Ohio) News, Jan. 29, 1959]

FLOOD PREVENTION IS EXPENSIVE, FLOODS ARE EVEN MORE SO

(By George McConnell)

Flood prevention is expensive, but floods are much more expensive. Provisions have been made under Federal and State law for part of the cost to be paid by the Federal Government.

It will still cost local government a considerable amount for the protection needed. We understand that the local government will have to provide easements, rights-of-way and in some cases buy land and pay to get utilities moved. All this will be needed so it can't happen here again.

Channel improvements along the Kokosing and pumping stations in Mount Vernon will help give some protection, but they will not do the whole job. Dry Creek has repeatedly gone on a rampage.

County Engineer Warren Veatch had done excellent work on the Dry Creek channel, but it continues to roar out of its banks from time to time. It is apparent that upstream protection is also needed to substantially slow down the fast flowing runoff from the watershed of Dry Creek.

Future damage in the north end of Fredericktown cannot be averted by channel work alone. The water will have to be controlled before it reaches Fredericktown.

Knox County losses have not been limited to the densely settled urban areas and to roads and bridges, although they suffered the most. Many farmers in the bottom lands also sustained heavy losses. Our preliminary estimate of fence damage is 100 miles washed out. The cost of rebuilding these fences will average about $1,000 per mile. There is probably another 100 miles of fence that is badly damaged but can be put back for an average of about $400 per mile.

There have been few reports of flood damage in any of the towns downstream from the Muskingum Conservancy District dams. They have not had serious damage. The topography of the land above Mount Vernon on the Kokosing does not lend itself to big flood control dams such as the Mohawk dry dam. Maybe we are lucky at that The river bottoms that would be flooded are the most productive land we have.

There are, we are sure, scores of sites where small dry dams could be built on many of the branch streams and their tributaries. In many instances these small dams would flood only woodland and pasture land. This would do little, if any, damage. This time of year and in early spring when most floods occur it would do no damage even to crops that might be temporarily flooded by such a dam since the water would be retarded for only a day or two. Retarding or slowing the water runoff for only a few hours before it reaches the main tributaries will sharply reduce the flooding in most instances of the larger streams below.

The worst flood hazard areas are in Oklahoma, Texas, and Nebraska. They have worked there under rainfall conditions much more severe than ours. They have had rains up to 9 inches in a single day and no damage. Dry dams have furnished flood protection there on watersheds similar to the Kokosing and they can do the same thing here.

We know of several locations where a properly located dam would benefit individual farmers on whose land they were built protecting his lower lying land as well as providing downstream protection. This protection would be in two ways. It would keep the lower land from being flooded and reduce the stream bank erosion. This would surely be true on many farms.

Small dams and other on-the-farm flood-control measures could be installed entirely with Federal flood-control funds, under the Watershed Protection and Flood Prevention Act of 1954. If a farmer wanted water for livestock or irrigation in addition to providing flood storage he would have to pay a proportionate part of the cost. In almost all instances the farmer would still have full use of the land in addition to the flood control and other benefits that might accrue to him. He would also be benefiting all who lived downstream from him.

Adequate conservation practices would have to be applied upstream from any dry dam in order to avoid reducing its effectiveness by siltation. These conservation practices must be applied by the time the dam is built. The reasons are obvious. There are about 1,200 farms upstream from Mount Vernon. About 360 of these farms are upstreaem from Fredericktown. It is on these farms that our floods begin. That seems to be the most sensible place to start stopping our floods. It will require an understanding of the total values on the part of the farmers who live on these farms. The planning and building of structures will take a lot of time and study. There are many agencies of the county, State, and Federal Government that are able and willing to cooperate in getting the job done. They can and will work closely together to help us solve our problems here if we ask them for that help. More than 887 small watersheds like ours all over the United States have asked for and are getting planning help under the Watershed Protection and Flood Prevention Act of 1954. We can too. Floods are much too expensive, when they can be prevented.

Chance for Labor Cleanup

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

from the Peoria (Ill.) Journal Star of January 29, 1959:

CHANCE FOR LABOR CLEANUP

Congress, with its large majority of Democratic Members friendly to the cause of organized labor, has an opportunity this year to clear away some of the abuses which have given certain sections of the labor organization a bad name.

It has before it now two proposals. One is the spineless bill sponsored by Senator KENNEDY, of Massachusetts, which is similar to the legislation passed by the Senate last year and which really will do little toward routing the racketeering bosses from some of the labor unions.

The other is the program presented by President Eisenhower, which also won't accomplish everything which needs to be done but which would go a long way toward providing protection against racket picketing in cases where no labor dispute is involved.

There are rumors to the effect that a third and stronger bill will be presented by Senator MCCLELLAN, who, as chairman of the Senate Labor Racketeering Committee, knows as much as anyone just what is needed to clean up labor.

Certainly the Kennedy bill will not do the job. It obviously was drafted with a primary objective of doing nothing which might offend the labor bosses. It has all the earmarks of the work of a man who is trying to line up strong support for an effort to win a presidential nomination.

The Eisenhower program, whatever its shortcomings, tries to bring racket picketing under control. That section of the bill is desperately needed. Secondary boycotts and racket picketing inflict severe damage on people who are not directly involved in labor disputes and they must be curtailed.

Congress now has its choice. It either can go along with the hollow pretense of adopting the Kennedy bill or it can draft the more workable legislation which bitter experience has shown is the country's need.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1959

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include my newsletter of January 31, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

JANUARY 31, 1959.

The President's labor message to Congress contained various commendable provisions to remedy labor leaders' abuses and excesses, suggesting: (1) Unions to file annual public reports concerning financial transactions with the Secretary of Labor; (2) filing of union constitutions and bylaws; (3) keeping of proper records, open to the government and union members; (4) proper administration of union funds; (5) the right of secret ballot by union members; (6) imposition of criminal penalties for violations of the law (bribery, embezzlement, records destruction, false entries, etc.); (7) prevention of secondary boycotts; (8) recognition of coercion or blackmail picketing as illegal.

These legislative requirements are tougher than the Democrat bill of last year and the newly introduced Democrat bill of this year, but at best they comprise a minimum labor law. What we need, in addition, is a law to put labor unions under the antitrust law and subject to all the laws which govern our citizens (not above and beyond the law as labor unions are at present). Such a law is urgently needed to protect union members themselves from their own leaders.

A comprehensive tax reform bill is another urgent Federal legislative need. The progressive confiscatory tax, never intended by the originators of our Nation's income tax, is killing incentive and drying up risk capital. When incentive goes, free enterprise will die. When risk capital becomes scarce, Government loans enter the scene. In both cases, socialism blooms while the heavy-laden taxpayer gives up property and loses freedom. To a degree this is the United States' situation today. To whatever degree we are encouraging socialism by tax burdens, at the expense of personal freedom and free enterprise, we must alter the income tax law. Yet such alteration in the closely-knit Government-business relationship must necessarily be accomplished gradually, with maximum foresight and planning. The changes effected must not disrupt business nor inflate or weaken our currency through deficit spending, as a result of precipitously reduced income to Government.

So I joined others in sponsoring the bipartisan tax reform and reduction bill known as the Herlong-Baker bill. The bill provides: (1) A gradually reduced individual and corporate income tax rate over a 5-year period (individual—lowest bracket down from 20 to 15 percent; highest—91 to 47 percent; corporate, 1 percent per year); (2) a more realistic depreciation rate; (3) decreased estate and gift taxes; (4) deferral of capital gains tax until taxpayer disinvests. At the end of the 5- year period further tax changes could be made to remove the tax burden and stimulate economic growth. The loss of Government income, which always must be considered in tax cuts, would be more than offset by business growth which in turn provides more tax revenues. This seemingly contradictory anomaly has been established by earlier tax cuts providing the wisdom and incentive of such action. So it is that by preserving incentive and building risk capital, we can surpass any Russian effort (no matter how great) that is based on government tyranny. If we try to emulate Russia by government regulation, control, and confiscatory progressive taxation, which is Russia's blueprint for destroying free enterprise societies, we just commit suicide. Unfortunately, many citizens and some Congressmen, as I see it, do not even recognize the danger, much less the solution to the problem. This tax bill provides a solution, it seems to me.

Controversial subjects now being discussed here for legislative attention, in addition to tax and labor reform, include agriculture, housing, airports, depressed areas and school construction—all requiring more Federal money, more stipulated Federal terms, more Federal control—at the expense of local and State jurisdiction and the balanced budget.

As we embark legislatively in a new Congress, I think the time has come for both political parties to state their principles. Surely, Members of Congress should know and adhere to a basic concept of the role that Federal Government should play in our lives—rather than competitively bidding for votes, or entering name-calling contests, solely on the strength of a name—Republican or Democrat—without a basic definition of principles. It is my hope that in the days ahead, members of both parties will stay with basic American concepts in defining the Constitution, and will decide legislative issues with an eye to the strictly limited role assigned the Federal Government by the Constitution, thus preserving States rights and the importance of the individual citizen.

"A wise and frugal government, which shall restrain men from injuring one another, which shall leave them otherwise free to regulate their own pursuits of industry and improvement, and shall not take from the mouth of labor the bread it has earned. This is the sum of good government" (Thomas Jefferson, inaugural address, March 4, 1801).

Carol Wise

EXTENSION OF REMARKS
OF
HON. IRIS FAIRCLOTH BLITCH
OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1959

Mrs. BLITCH. Mr. Speaker, under leave to extend my remarks, I wish to insert an article by Paul Robinson, which appeared in the Waycross Journal-Herald, of Waycross, Ga., on December 31, 1958, concerning Carol Wise, a native Ware County girl, who has just recorded her first gospel hymns. I am very proud of this outstanding artist who resides in my congressional district in Georgia and would like others to know of her achievements and her courage, despite her physical handicap. Her dedication to God's work and her faith in Him is an inspiration to all who know her.

The article follows:

CAROL WISE, NATIVE WARE COUNTY GIRL, RECORDS HYMNS

(By Paul Robinson)

Endowed with what is called one of the finest singing voices in Georgia, a native Ware County girl has just recorded her first gospel hymns.

Carol Wise, daughter of Mrs. Lois Wise and granddaughter of Mr. and Mrs. J. E. Hancock, now has the first copies of her recording, entitled "He's Everywhere," and "How Great Thou Art."

The recordings were cut under Miss Wise's own label. Accompanists for the vocal solos were R. G. "Gene" Hancock, an uncle of the singer, playing the electric organ, and Miss Wanda Hill at the piano. A Springfield, Mo., firm cut the records.

Miss Wise is a graduate of Wacona High School and studied voice 1 year under Clayton Logan at Valdosta State College. Her ambition is to continue voice training. Meanwhile, she is biding her time.

AN UNUSUAL GIRL

A chat with friends of Miss Wise reveals that Waycross' newest recording star is an unusual young lady.

Carol Wise has what friends describe as an unexcelled faith. Her faith is exemplified in her daily life and the type of songs which she recorded, one observer stated.

It is said by acquaintances that her charming manner endears her to all with whom she comes in contact. To know her is to love her, is what many friends say of this petite brunette.

One close friend said, "Carol simply glows with love for family and friends. Her devoted family rejoices in her amazing attitude and accomplishments."

Another said, "She is unusual in that a physical handicap has not embittered her nor hindered the development of talent and personality. She has no qualms about being dealt a cruel blow by fate."

SINGS WITH MEANING

All who have heard Carol sing proclaim the clarity and tone of her voice as being just great. When she sings, her listeners say they feel immediately she means every word of the gospel hymns.

"To hear her crystal-clear voice ring out when she sings 'He's Everywhere,' would tug at the heartstrings of even the stanchest unbeliever," was the way one admirer described her singing.

"I see Him in a baby's smile." Quoting these words from one of the hymns, the friend of Miss Wise said though the young lady might never see the glory of a sunrise or the beauty of a sunset, when she sings the lyrics to "He's Everywhere," you know by the earnestness of her voice and the peaceful expression that she knows her God is everywhere.

Her admirers say Carol's song is made more touching by the knowledge that, though she says she sees Him everywhere, it is only through faith that she knows He's there.

For Carol has retinitis pigmentosis, an eye disease that doctors say is incurable. The disease causes progressive blindness and Carol's handicap is in the advanced stages.

But the courageous youngster wants no pity. She aspires to a singing career, hoping to prevent being a burden to her family. All her hosts of admirers feel that her charm and talent should assure the plucky lass of this.

Readers who would like further information on the records mentioned here may contact Carol Wise in care of J. E. Hancock, Route 4, Waycross.

What They Don't Say

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Joseph Alsop which appeared in a recent edition of the Washington Post and Times Herald:

WHAT THEY DON'T SAY

(By Joseph Alsop)

In public and in private, the President, the Secretary of Defense, and the Chairman of the Joint Chiefs of Staff are now pouring the usual floods of soothing sirup about America's defense posture.

This year's soothing sirup differs in several respects from the sirup of earlier years, however. For instance, it has a higher content of outright untruth. Even the President indulged in flat misstatement of facts, though no doubt unwittingly, when he told his press conference that "our missile program is going forward as rapidly as possible."

But what makes the 1959 vintage of soothing sirup really memorable is not so much the untruth that is included, but all the harsh, disagreeable, indigestible facts that are left out. As a really superb illustration of how to compound soothing sirup by the method of omission, consider the diversified means of delivery argument used before the Senate Armed Services Committee by the Chairman of the Joint Chiefs, Gen. Nathan Twining, and also used elsewhere by Secretary of Defense Neil McElroy.

Even by making the most transparently overoptimistic estimates of Soviet progress, the Secretary and the General could not absolutely wish away the Soviet lead in intercontinental ballistic missiles. Secretary McElroy has actually admitted that we are conceding the Soviets a 3-to-1 lead in ICBM's by 1962, and in reality we are almost certainly doing far worse than Secretary McElroy admits. But Twining and McElroy argue that the Soviet ICBM lead will be counterbalanced by our diversified means of delivery.

On the debit side of the balance sheet, in other words, Twining and McElroy write down just Soviet ICBM's, and on the credit side they write down our much smaller number of American ICBM's, plus our Strategic Air Command, plus the intermediate range missile squadrons we are sending to our allies, and so on and on. According to Twining and McElroy, the results ought to satisfy everyone.

In the Senate hearings, Senator STUART SYMINGTON, Democrat of Missouri, therefore asked General Twining how many IRBM's the Soviets would have among their own diversified means of delivery. Fantastically enough, Twining replied that he really did not know and would have to look into the matter. But the answer to the Senator's question is plain. The Soviets must be assumed to have, already in operational squadrons or soon going into operation squadrons, between 600 and 1,000 IRBM's to cover the Strategic Air Command's bases in Europe and the Mediterranean, plus enough more to cover SAC's Pacific bases.

The facts that demand this assumption are of all sorts. One is the regular Soviet IRBM testing rate—15 a month, fired off as though by clockwork—which clearly implies test firings to train operational IRBM squadrons. Another related fact is the identification of whole Soviet IRBM trains, including specially designed cars to serve as launching pads. Still another fact is the enormous number of Soviet IRBM tests that were identified in the earlier period, before we had even tested one IRBM at full range.

The plain truth is that the Soviet IRBM lead is vastly greater than the Soviet ICBM lead. Secretary of Defense McElroy has not been allowed to count the Soviet IRBM's on a special guided tour, so he can say he is not positive the Soviets have any that are operational. But it is worse than playing Russian roulette with the intelligence estimates, if American policy is not squarely on the assumption that the Soviets now have or will soon have the kind of IRBM capability outlined above. And this powerful Soviet IRBM capability is simply omitted from the balance sheet!

Meanwhile, the mere 8 squadrons of 120 IRBM's that this country will eventually send to Britain and elsewhere are put down on the balance sheet's credit side. And the fact is omitted that our allies wil absolutely control the use of these American IRBM's. The whole striking power of SAC is also put down on the credit side. And the further fact is omitted that SAC's striking power can be reduced by at least 50 and perhaps 60 percent by a surprise attack by the Soviet IRBM's on SAC's overseas bases. Thus the balance sheet is cooked in the most flagrant manner.

The question remains why such men as Twining and McElroy are first willing to delude themselves and then willing to delude the public by cooking the balance sheet. The answer lies in the administration's conviction that it is better not to look hard facts in the face, because the richest country in the world really cannot afford to defend itself. As General Twining has gloomily remarked, "irresponsible spending for military hardware" (for which read "spending to meet the Soviet challenge") could result in our losing, without ever firing a shot, the very things we now fight for.

Professional Gossips

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a sermon given by His Eminence Richard Cardinal Cushing, archbishop of Boston, at the sixth annual journalists' mass, celebrated at Our Lady of the Railways Chapel, Boston, Mass., on January 25, 1959.

In his remarks about and warning of "professional gossips," Cardinal Cushing well said:

Newspapers are made for men by men and unless they help to make all men better, then they are truly without significant purpose.

The above-mentioned follows:

PRESS WARNED OF PROFESSIONAL GOSSIPS—CARDINAL CUSHING PRESIDES AT MASS FOR JOURNALISTS

(Following is the address of Richard Cardinal Cushing at the sixth annual journalists' mass, Our Lady of the Railways chapel, South Station, Boston. The mass for the press was offered on Sunday, January 25, 1959, at 4 p.m., in anticipation of the feast of St. Francis de Sales, patron of journalists, January 29.)

This is the sixth annual mass for the press and each year I have been happy to preside at the ceremonies and to offer some observations on the work of the journalistic profession.

My first duty is to say a word of thanks, even in informal fashion, to the working press of Boston for their services during these last few months, when I found myself, like the rockets of the scientists, launched into the unknown world of fame and glory by becoming a Cardinal. No one knows better than you how little my disposition is in accord with such special dignities and how little inclined am I to elevated decorum of any kind. Many of you have followed me into the hospitals and prisons, you have seen me happy with the aged and the poor, you know my affection for the little ones, afflicted and undeveloped—in short, you know me, and I like to think that more than most others you understand me.

Because of this particular relationship that I have seen formed between the working press and a bishop going about trying to do good, I am especially happy to be here this afternoon. Since that October day on which good Pope John announced my name as a member of the College of Cardinals you have hardly been able to give your typewriters a rest. So many kind words came my way that I blushed to pick up the papers, so many pictures that I hurried over the pages. There were many pious exaggerations too in the midst of the excitement, but they were the product of an excess of goodwill in my regard. At this time it is enough to say that I understand the good motives that inspired your many efforts and that I am grateful for it all, even when your generous phrases ran on ahead of the reality.

The press of Boston, as I see it, has a unique flavor like the city itself. I have often described Boston as a big city and a small town. This is at once its character and its charm. It is true also of its press. Rolling off the big city editions of the newspapers, now with two of America's newest and most modern plants, the papers of Bos-

ton stand on a level with the great papers of the other large cities of the country. At the same time they have a quality of their own, the subtle, small-town quality of being interested in people. This is more significant than we may realize at first for it expresses a kind of philosophy of journalism, even if only in an unconscious fashion.

Newspaper very often concern themselves almost exclusively with events and in our times events are happening so quickly as to be easily the preoccupation of editors. From Quemoy to Berlin, from Little Rock to Anchorage, from Cape Canaveral to the moon, and in these last weeks almost to the sun—in every part of the world and beyond it the day's news brings us new events and new accomplishments. Sometimes it is possible for us to forget that the center of the world is still man, that history is the story of man, and civilization the product of his genius. News is significant principally as it affects man, and any record of the day which leaves out the human element or merely touches it lightly distorts the true values of our existence.

In this connection I have been thinking recently of the young lady reporter who took herself to prison rather than reveal certain sources of information used in her column. I suppose it is natural to feel a certain sense of chivalry in her regard—she suffered, according to her claims, in order to protect the position of another. From this point of view, even if her action was ill-advised, she has demonstrated a certain strength of character. There are added circumstances, of course, which color the incident and all of them are important for those who wish to make a judgment in her regard.

For my part, I will leave it to those more learned in the law than myself to pass a definitive decision on the celebrated case; in a conflict of rights such as this one, there are many aspects of the case to be studied and the claims of justice move in many directions. For myself, I would prefer to comment on a matter which stands at the source of the incident itself and has been little discussed, but deserves some consideration from us all.

The original item of news which began the controversy and raised so many questions was, in a simple everyday phrase, a bit of gossip. Normally, we do not take seriously the problem of gossip; we think of it generally as something associated with elderly ladies gathered about a tea table and with men having nothing else to do. For the most part it is fair to say that gossip is harmless. It is clear, however, that it can become dangerous, and indeed immoral, when it touches the good name and reputation of others. This does not mean merely that we should be careful not to tell lies about our neighbors, but that in certain cases we cannot even tell the truth, if such a revelation will destroy a reputation and serve no just purpose. These principles we have learned in our youth and so we know the moral evil of detraction which reveals a damaging truth about another, as well as calumny, which reports a lie about another.

Now for several decades we have had growing up in the newspaper world a whole batch of writers who must be termed professional gossips. Things were bad enough when the only gossips we had around were the backfence variety and other amateur forms; it has become intolerable now that the whole business has gone professional with newspaper writers making a living out of it, and in some cases, I dare say, a fortune out of it. Of course, I know that much of these columns is made up of items of a pleasant and happy nature, and I know that there are some columnists who show good taste and restraint in discussing the lives of celebrities.

But I also know that there are some who handle the lives of their neighbors with no sense of values at all and with no respect for reputations. In little staccato lines they feed the hungry public the evil food of malicious gossip; they quietly destroy their subjects and just as quietly poison their readers.

Fortunately, this is something quite rare in our city; when we encounter it, it is likely to be something introduced from some other area. At the same time we must take every precaution against its increase either locally or nationally. Gossip of the kind I refer to is essentially unkind, and it caters only to the instinct of curiosity in man, the busybody tendency which lurks beneath the surface of the best of us and looks for opportunities to be satisfied. Moreover, gossip is also unjust, for it nearly always damages the reputation of others and takes away from them their good name or the remnants of their proper esteem in the community. It might also be noted that gossip has a very debilitating effect on the character of those who make a practice of indulging in it. It is the product of small minds and it encourages small-mindedness.

All of us can remember reading in the masthead of the New York Times the famous legend, "All the News That's Fit To Print." This is a very old text but some reflection on it might put a good deal of sense into our thinking on situations like the one we have been referring to. A newspaper is a free enterprise; it sets out to find the news and to give it to the public. At the same time, every editor and, indeed, every reporter knows that he cannot print all the news; he must select and reject, and he must have a formula for preferring the one and setting the other aside. There is, in plain terms, some news fit to print and there is some news that is not fit to print. A good publisher and a good editor know how to make the distinction between the one and the other.

Some people speak a great deal about the so-called right to know. This is a very precious idea and it lies at the heart of the democratic society as we know it. The public has a right to know many things about the conduct of government, the state of society, as well as any and all, the public events which make up a passing day. At the same time there are many things that are not public property; we just do not have the right to know everything about everybody.

It has never been a rule of good journalism that we have a right to print everything we can find out about everyone in the world. Alongside the concept of right to know we must set the principle of fit to print. Beside the ingenuity of the reporter who finds out hidden facts we must be sure to encourage the restraint of the editor who knows which ones will serve legitimate interests and which will unjustly bring damage to others.

The newspaper is not an irrational machine into which we can carelessly throw the news, and let the results fall where they may. Newspapers are run by newsmen and that is why they must be answerable, as man is answerable, to laws higher than themselves.

Perhaps the reason why papers in Boston do not often fail in this regard can be found in the quality I mentioned earlier, the fact that they are human enough to be interested in people. We know that newspapers are a kind of daily textbook in the education of the readers, that minds are informed and personalities affected by their reading. This places a high community responsibility on the newsmen of a city, for they can be said to set the human climate of the areas they serve.

If papers are edited in a manner that recognizes human dignity, that encourages what is best in man instead of exploiting what is worst in man, this will be reflected in the community. Your work certainly helps to make Boston a happy place in which to live.

In this sense, then, that it will always be a place where people are important, Boston will always be a small town; I sincerely hope so. In other ways, of course, we must all work together to make it a more prosperous big city, although we must never proceed at the expense of those human factors which give it its special quality. Boston can be bigger, its facilities can expand and new ones be developed; Boston can be richer, its business life can grow and its investments mount; Boston can be newer, its old buildings can be torn down and new ones replace them—all of this can happen and in some measure must happen. But the authentic spirit of Boston can remain unchanged even while the city moves on to new greatness.

I know that you appreciate your role in the life of the city and I know too that, with remarkable consistency, you are faithful to it. My purpose this afternoon is to encourage you to continue this fidelity in the days ahead. Keep before you the thought of man himself as the center of your work; do not permit situations and events to smother the true value of things so that the human factor becomes merely one more among many.

There are matters far more important than putting out big papers or vast numbers of papers; you must be certain to put out good papers which do not wither the spirit of those who write them or those who read them. Newspapers are made for men by men and unless they help to make all men better, then they are truly without significant purpose. The focus you take in every day's work can make the difference, and it is the difference between success and failure.

Need of Flood Control

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. LEVERING. Mr. Speaker, I took office on January 7. Today is January 30. That is 23 days I have held office, representing a great constituency in the 17th District of Ohio.

In that brief period, the people of my district—and many other parts of Ohio and other adjacent States—have suffered a devastating flood.

On January 22 I made a personal tour of the devastated area to see for myself the extent of the damage and to alleviate in every possible way, personally or officially, the suffering of my people. Knox County has been the home of my family for generations. I have thousands of friends there. I had an opportunity to talk to the mayors and other elected officials of towns and cities in my district. I am happy to say that, in spite of the emergency situation, the two persons in the district I had chosen to be on my staff were available and ready to go to work at once. They were Mrs. Nona Darling of Lucas, Ohio and Emmett Guthrie of Coshocton. Mrs. Darling is my district secretary and Mr. Guthrie is my district liaison officer.

Although there was no chance for them to be paid for some of the work they might be called upon to do, at least during January, I am happy to report

that both of them offered to pitch in and to work without thought of themselves.

My district, Mr. Speaker, has many problems. They were not all born on the day I took office on January 7—22 days ago. In my campaign, I pointed to many of our problems, as a district and as a nation.

I would like for my people to realize that I am here striving to represent them—all of them—all of the time, except during those rare occasions, and I hope they will be very rare, when a crisis in my district calls me home to be with them, to render such aid as I can and to learn more about it in order to serve them better.

I would also like for them to know that I welcome their viewpoints on all issues. It is not necessary that these viewpoints parallel my own. All of us are in varying degrees of knowledge and understanding about problems of all kinds—local problems, State problems, national problems, international problems. There are many fine citizens who have different economic interests. What is pleasant and profitable to one group may seem most unpleasant and definitely costly to another group. I feel it is my duty, indeed, it is my pleasure to learn of all the viewpoints possible represented among the many diverse individuals in my district. We are proud of our people in the 17th District and of their determination and ability to think for themselves. This is their right and I want to make it clear on my 23d day here that I want the views of all the people in my district who want to express their views to me. I also am happy to read in the newspapers the views of our finest citizens, about pressing, immediate problems, as well as their view about long-range problems.

Among the many fine citizens of my district, Mr. Speaker, is F. B. Herendeen, of Fredericktown. I know Mr. Herendeen and I respect his views and admire his unusual style of writing. I am asking that a copy of his letter to the editor which he recently sent to the Mount Vernon (Ohio) News be carried in the CONGRESSIONAL RECORD at this point. When a gentleman of his caliber takes the time to write a thoughtful letter to the editor, it behooves us all to read it and to ponder the thoughts he has written:

FREDERICKTOWN, OHIO,
January 25, 1959.

EDITOR, THE NEWS:

Now that most of us have the top mud washed off, the furnace back in working order and our nerves tranquilized, we are wondering just what happened and what we can do about it.

How could the engineers in one State make so many blunders in just one small community as have been made in this, the Fredericktown section. We must be the focal point for engineering incompetency. Surely they couldn't make as many in each community. There just ain't that many engineers in Ohio.

First, there is the poorly designed and constructed Smith curve, where many lives have been sacrificed. Recently the State has spent a few dollars to erect sufficient signs and in a measure correct the construction.

Then, there are the double curves at the south side of Fredericktown. Fortunately the property damage has been the major destruction.

The design and construction of Leaky Dam at Knox Lake cost the taxpayers thousands of dollars and for 2 years placed an awful threat to lives of residents and property downstream. This was breached, as were several others, and a dam was built that we hope is safe.

The muddling and blundering of the cave-in on North Main St. here is another. Right now, water has to run uphill to get to the culvert and the sidewalk is useless after a rain unless you risk the splash from passing vehicles.

But the daddy of them all, the prize of engineering stupidity is the concrete bridge on Route 13 just north of Fredericktown. This should concern Mount Vernon and all points down the Kokosing. This bridge dam (or dam bridge) caught the floodwaters in April 1948 and caused the north end of Fredericktown to be inundated. The damage was not so extensive and fewer people were harmed, so it did not attract much attention. Actually it was an advantage to Mount Vernon as it held back the crest.

This barrier to the natural watercourse has done it again and this time the disastrous results are not localized. In my humble opinion, that is the real cause of the flooded dikes and the breakthrough in Mount Vernon.

Here is the situation: Sixty years ago the B. & O. built a bridge across the Kokosing. Evidently, the railroad engineers studied the rainfall, area drained, rate of flow, topography, etc., and put in a bridge about 200 feet wide with one pier and sufficient clearance. That took care of the big flood of 1913. A little 5-foot driveway dike kept the water out of Fredericktown.

When Route 13 was relocated west of the railroad, some 30 years ago, the present concrete bridge was built. This bridge is 150 feet (not 200) long, there are two piers (one additional) and the clearance was lowered by about 2½ feet. The State engineers apparently ignored the precedent set by the railroad engineers with their bridge about 100 feet downstream. Either for the sake of economy or lack of ability and knowledge they narrowed the width and dropped the bridge, thus reducing the opening by a wide and critical margin. The water is no respecter of State engineering procedure so it just keeps rolling along—right down Route 13 to spread over the north end of Fredericktown. When that section was overflowed, the next lower ground was over the railroad back to the channel. The break through the railroad came at 11:30 a.m., Wednesday, causing a wall or crest of water estimated at 3 to 6 feet, to start down the Kokosing for Mount Vernon. Of course, the once adequate dike could not stand that. It just overflowed and caused all the misery and damage. The engineering of the High Street bridge is another matter and certainly deserves some deep study by others than State engineers.

Since the crisis has passed, what are we going to do? Be pacified by the visits of the governor and Congressman or unite in an effort to get a correction. Let's see whether the visits were for vote-getting window dressing or a sincere effort to correct the situation. Time will tell.

A suggested remedy should follow a criticism. In 1948, the writer reported the flood situation and the highway department surveyors verified the figures given above, but like most complaints, the buck was passed and nothing was done to correct it. So few votes were affected that they could do better spending elsewhere.

This last catastrophe affects 300 people, directly, in Fredericktown, 3,000 directly and 15,000 indirectly in Mount Vernon. How much more will we have to tolerate before the lethargic officials act? Let's strike while the iron is hot.

Let's demand that they raise the bridge by at least three feet, add another span, build a dike to protect Fredericktown, and then clean out the channel under and below the bridge. Stubs of the construction piling are still under the bridge to catch and hold debris. The gravel people have ruthlessly dug and piled the dirt with no concern for the rights, safety, or welfare of our community or for the general appearance of the neighborhood. This has not helped the situation.

Here is a chance for action. The chamber of commerce, business and professional men, manufacturers, unions, lodges, service clubs, and other interested organizations (and aren't we all interested?). Our alert mayors now have the attention of the politicians; the way is open for action—let's push it.

Nero fiddle while Rome burned.

F. B. HERENDEEN.

Tortoise and Hare

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Edwin L. Dale, Jr., which appeared in the New York Times on January 29, 1959:

TORTOISE AND HARE—SLOW PACE OF U.S. ECONOMIC GROWTH SUGGESTS THAT SOVIET MAY WIN RACE

(By Edwin L. Dale, Jr.)

WASHINGTON, January 28.—Nikita S. Khrushchev predicted yesterday that economic growth in the Soviet Union over the next 7 years would come to about 8.6 percent a year. Judging from recent performance, he may not be far wrong. Mr. Khrushchev said this compared with an annual rate of growth in the United States of 2 percent. He was being unnecessarily kind. Since the end of the Korean war, the annual economic growth of this country—after correcting for higher prices—has averaged less than 1.5 percent.

The experts are deeply divided on the two most obvious questions:

Why has the slowdown in growth occurred?

What ought to be done about it?

Economic growth is usually measured by the increase in the real gross national product, or total output of goods and services, after allowing for price changes. Growth comes about because the labor force grows each year and because, with the aid of machinery, each worker's productivity—his output for each hour worked—also increases each year.

NORMAL RATE AT LEAST 3 PERCENT

The rate of growth has varied widely during United States history, but by almost any test the recent experience has been disappointing. There have been periods—1947–53 was one—when growth in real terms came to 5 percent a year or more. Almost no expert puts normal, achievable growth at less than 3 percent a year, and many think it should be more.

Practically everybody favors a high rate of economic growth. It improves living standards. It supplies more and more revenue to governments at all levels, without raising

tax rates, to do the many things that governments now must do and in the future will have to do even more. But how do we get it?

"We" in this case clearly means mainly the Federal Government.

CAUSE AND CURE DEBATED

The arguments range over the cause of the recent slowdown and what should be done now.

All sides concede that the main reason for the decline in the average rate of growth over the last 6 years has been that this period saw two recessions, during which the economy went down rather than up. All sides also agree that the rate of growth in the long run will depend on the rate of increase in plant and equipment (national capital), plus the rate of increase in our technical skills and inventiveness.

But after that, the disagreements begin.

Some say far greater Federal spending is essential to speed up the rate of growth. Others say the exact opposite: that the best prescription for growth is lower spending and hence lower taxes, which would supply more investment capital.

Some think the present situation calls for budget deficits; others believe large surpluses are the right medicine.

Some say high interest rates and tight money greatly deter growth and are mainly to blame for our recent slowdown. Others say high interest rates increase savings and thus help growth, and also help growth by checking inflation.

ROLE OF INFLATION ARGUED

Some say a little inflation is probably the price that must be paid for more rapid growth. Others say that toleration of even a creeping inflation will result in uneven growth, and less growth in the long run, with more frequent "busts" or recessions following inflationary booms.

Some say that growth can best be stimulated by tax relief aimed at encouraging more investment in plant and equipment. Others say the reverse: that the best stimulus would be to cut taxes for low-income groups, thus increasing demand and inducing businessmen to expand.

Some say higher wages are essential to spur the rate of growth. Others, with equal conviction, say that greater profits are the key.

All of these differences are fundamental. The differing viewpoints are held by nonextremists on both side. And meanwhile growth has practically ground to a halt.

This year, to be sure, will see a pickup in the rate. That always happens after a slump ends. But the period that has greatly disturbed experts of practically all viewpoints is the prosperous period of 1956–57.

Following the typically rapid growth of the post-recession year of 1955, growth in 1956 was only 2.4 percent and in 1957 it was 1.1 percent. Why? Until the experts—let alone the politicians—come to some agreement on the answer, Mr. Khrushchev may make good his boast about catching up to the United States by 1970.

More About Airlift's Importance to Defense

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1959

Mr. HOSMER. Mr. Speaker, considerable interest has been evidenced in the remarks I made a few days ago about evaluation of the need for an adequate, fast airlift as part of our defense system. By way of further information I have asked that the article by Donald W. Douglas, Jr., president of the Douglas Aircraft Co., which appeared in the May-June, 1958, issue of National Defense Transportation Journal be reproduced here. Mr. Douglas' article describing what airlift is and how it fits in the defense picture reads as follows:

LET'S LOOK AT AIRLIFT

(By Donald W. Douglas, Jr., president, Douglas Aircraft Co.)

It is often said that the sputniks were a boon to the United States because they awakened us to a dangerous situation and forced us to take a hard look at ourselves. In recent months this critical reexamination has focused on missiles, basic research, the country's educational system, and the conquest of outer space. This is all to the good and should continue. But preparedness is compounded of many things, and we must be careful that our concern is not confined to more spectacular items at the expense of equally vital factors in national security.

We accept as axiomatic that this country's world position depends in large measure on the military capability we possess in support of our diplomatic actions. It is no less true that military strength must be supported by an effective and swiftly responsive logistics system.

Today this means airlift. Failure to understand this, and act accordingly, could be an Achilles heel.

Airlift is a component of preparedness that is equally effective in cold and hot warfare. During World War II air transport helped link the farflung forces of the United Nations. The most dramatic example, perhaps, is the famous "Over the Hump" airlift in southeast Asia which, for a long time, was virtually the only link between China and her allies. Since V–J Day, airlift has demonstrated its indispensability in the Korean war, in cold-war situations like the Berlin airlift, the evacuation of Hungarian refugees, and the rapid transfer of United Nations troops to the Suez area in late 1956.

Airlift also made possible the construction of the DEW Line radar network along the shores of the Arctic Ocean. It speeded completion of Thule, the vital Strategic Air Command base in northern Greenland. Without it U.S. scientists could not have wintered at the South Pole for scientific work in connection with the International Geophysical Year.

There are other aspects of a complete logistics system that we tend to overlook. In support of its commitments to NATO, and its Mutual Defense Assistance Pacts with 43 nations, the United States maintains deterrent forces in many distant locales. This requires the continuous movement overseas of an enormous quantity of supplies—something on the order of 16 million tons annually—a small but critical portion of which moves by air. The stationing of intermediate range ballistic missiles at foreign bases will soon increase the problem of keeping these forces at a high level of combat readiness. No taxpayer needs to be told of the burden this imposes on the national economy.

Airlift can ease that burden. Shipping by air reduces almost to the vanishing point the quantities of an item that must be bought just to "fill the pipeline," and permits drastic reduction of inventories as well. For example, when the U.S. Air Force began shipping J–57 replacement engines by air, it found that its requirement was reduced by about 2,000, a saving of $337 million. Similarly, use of air shipment enabled the Air Force's European command to save $500 million in its service operations and achieve a 14-percent increase in effectiveness while doing it.

Air shipment saves in other ways, too. Packaging is simplified and in some cases eliminated; warehousing is reduced because inventories can be lower; and finally, items are usually handled less, so that the possibility of damage in transit is lessened. It is a startling but proved fact that airlift can pay for itself in savings.

Even more important than economy, however, is the military importance of airlift. We have seen how quickly airlift can react to cold war emergencies. This same rapid reaction time will be essential in meeting the outbreak of hostilities anywhere in the world. Many competent observers believe that limited, so-called brush-fire conflicts, rather than an all-out nuclear holocaust, are likely to confront us in the years ahead. It is obviously impractical to keep adequate forces at all points of possible trouble. With airlift we can quickly move forces to places where they are needed, and perhaps insure that the conflagration does not spread.

The Soviets, because they operate on internal lines of communications, enjoy a built-in logistical advantage. Despite the vastness of their country, supply routes are much shorter than those we must maintain in support of forces all around the Soviet Union's periphery. There is only one way to match and possibly surpass the Communists' capacity—the use of airlift.

Like any transportation system, airlift requires terminal facilities, fuel supplies and a good route system. All are available in adequate measure today. For more than a decade the U.S. Military Air Transport Service has been giving logistical support to U.S. deterrent forces around the globe, as well as standing ready to evacuate Americans from sensitive areas or engage in mercy missions. MATS, like the civil airlines that fly allied flags, is a living symbol of free world unity.

What, then, is lacking? What is there to be concerned about?

The answer can be given in one word: aircraft. The need for airlift is clear, and the system to support it already exists. But the aircraft fleet—in being and potential—is not adequate. Shortsightedness, parading in the guise of economy, has hobbled our airlift system by condemning it to operate with aircraft which lack the range, speed, and payload capability demanded by modern cargoes, both military and commercial.

In some cases, reciprocating engine aircraft are employed beyond their economic service life, so that even our present limited airlift is not functioning with the efficiency we should expect.

The question is not one of numbers alone. Ten years ago we mustered a large fleet of military and commercial planes and met, with outstanding success, the challenge of the Berlin blockade. The need then was to move many relatively small packages less than 300 miles. Two years later the Korean conflict created an entirely different kind of problem: moving men and material long distances over water. The same aircraft could be used, and perforce were, but at the cost of a severe restriction in payload. They made a valiant showing, but the fact is that Korea was a lesson in the lack of proper airlift preparedness. And today, a decade after the Berlin Airlift, many of the aircraft that did yeoman service then are still used by the Air Force and civil airlines.

Aircraft types as well as numbers must figure in any assessment of airlift potential. Thus, while some 350 of the more than 2,000 aircraft in the U.S. airline inventory are part of the Civil Reserve Air Fleet, approximately half are passenger planes. The primary military need is for cargo lift.

Full mobilization of this Reserve, likely only in the event of total war, would require about 60 days and cut our civil airlift by

half. Moreover, since these are mostly medium-range aircraft, their effectiveness for overseas operation would be very limited. As things now stand, therefore, mobilizing our Civil Reserve Air Fleet would provide only an inadequate supplement to the military cargo lift, and at the expense of crippling civil aviation service when it might be needed most.

Emphasis on airlift is justified, and indeed essential at this time, because of the ever-accelerating advance in weapon technology, accompanied always by rising costs. The most conspicuous example, of course, is that of missiles. These are simply too expensive to buy and stock in quantity as we once did with guns and tanks and even aircraft. Large missile inventories would be prohibitively expensive and create attractive targets for enemy attack or sabotage. In a techno-military sense they would be unwise, since new developments continuously make most of our weapons obsolete almost as soon as they reach mass production.

With airlift, however, missile preparedness can be militarily sound and economically sensible. High speed mobility, by air, can keep a reasonable number of weapons available for use wherever and whenever needed.

There is another immediate factor that is sometimes overlooked. The intermediate range ballistic missile will precede its intercontinental sisters into service by many months, and even when ICBM's are available the IRBM will continue to play an important role for us and for our allies. The significant thing about the IRBM is that it is not intended to be fired from this continent. Under a united defense system, bases must, and it now seems certain will be developed. Airlift is the only effective means to support such bases.

The Soviets have recognized the importance of airlift and are moving ahead of us rapidly in this field. Russia has developed at least six new turbine-powered transport types, and her aircraft fleet appears to cover the spectrum of airlift requirements. Included are high-speed jet personnel carriers, long-range heavy cargo transports, and short-range cargo aircraft that can operate from rough terrain. While some of these aircraft are employed for commercial service, all are unmistakably intended for speedy conversion to military use. Many of these Soviet craft are already familiar in European skies and one, the 70-passenger TU–104, has been flown to the United States.

Our own effort is in marked contrast to that of the Communists. Against their four turbine-powered cargo transports we can muster only two, the Lockheed C–130 and Douglas C–133, and the work capability of their aircraft is superior to ours. In the personnel carrier field the Soviets have two turbine-powered types; we have none. U.S. airlines have ordered large numbers of jet transports, some of which will be assigned to the Civil Reserve Air Fleet. But today there is not a single modern jet personnel transport in the Air Force inventory. The KC–135 jet is a tanker plane, and is restricted to Strategic Air Command missions.

This adds up to a substantial Soviet lead in the development of airlift. There is no technological barrier to our overcoming this advantage; we need only accord airlift the priority consideration it requires. Normally; years of design, development and testing precede the introduction of a new transport plane into service. We should, right now, be working actively on new types that would go into service in the mid-1960's. For the more immediate future, we are fortunate in having several modern commercial designs that could easily be modified to meet current military needs.

Developing large, new transport aircraft is an expensive business involving hundreds of millions of dollars. For the military services, as well as for civil airlines, this presents a serious problem. Several means to finance the airlift we need have been proposed: leasing portions of our military fleet for commercial use, fast tax writeoffs for airlines that buy new transports and assign them to the reserve fleet; granting of military airlift contracts to civil airlines as a stimulus to their purchase of new equipment.

The blunt truth is, however, that the costs of developing prototype aircraft and tooling up for production must be borne by Government. The financial magnitude of the task is now beyond the capability of private industry. This is a hard fact that the Congress, the administration, and all of us had better face if we want the United States to hold its own along the world's skyways.

There is a well-established precedent for this kind of support. In the last two decades for compelling reasons of national security, the Government has supported the American merchant marine with both ship construction and operating subsidies. For equally valid reasons, this same principle can now be applied to cargo airlift. In the case of cargo airlift, however, the savings to Government made possible by air transport will more than compensate for the initial investment. Airlift, as I have said, pays for itself.

If Government provides this initial financial boost, freight or cargo aircraft can then be priced within reach of commercial operators.

Developing a full-bodied sky cargo system, as well as providing the military with adequate transport aircraft, would be a tonic for the national economy. To visualize an economy in which air cargo plays a major role is to perceive the future. We need desperately men of such vision and imagination—in Government, business, and the military—who will act now to insure American leadership in the years ahead. The Soviets, it is clear, are moving in the direction of large-scale air cargo transport. We can do no less, and indeed must strive to surpass them.

Every plane and every dollar invested in the development of a peacetime air cargo system is paid-up insurance against a wartime emergency. Another war is likely to come too suddenly and its decisive phases be too brief to permit our placing much reliance on Reserves that take time to mobilize. Forces in being, both combat and logistical, will be the blue chips for both sides.

One need not peer into the future to see how a true air cargo system could weigh heavily in a sudden war situation. Think what air cargo might have done for General MacArthur's embattled forces in the Philippines after Pearl Harbor. Or how, in the Korean situation, an effective airlift could have saved lives by minimizing the effects of a serious ammunition shortage—a shortage, incidentally, made all the worse because filling the pipeline of a slow, earthbound logistics system was in itself a gigantic task.

There are no insuperable obstacles to creating an adequate airlift for this country, and there are many compelling reasons, both military and commercial, for getting on with the job as quickly as possible. This is the inescapable conclusion for anyone who troubles to take a hard look at the problem.

U.S. Coal Is Dealt an Unfair Blow

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "U.S. Coal Is Dealt an Unfair Blow," which appeared in the January 30, 1959, issue of the Messenger, of Madisonville, Ky.

The editorial is as follows:

U.S. COAL IS DEALT AN UNFAIR BLOW

A stiff new West German tariff of $4.76 a ton on imports of U.S. coal is being vigorously protested, and the National Coal Association, which fends for the industry in Washington and elsewhere, this week urged the State Department to protest the German levy most vigorously.

No Hopkins County coal is exported to Germany, but for the industry as a whole the German action is a sharp blow. Involved, jobwise, are work for several thousand miners, for unnumbered railroad people, and for others whose jobs are related to the getting out of coal for the German market, transporting it to ports, loading it aboard ship, and transporting it across the Atlantic.

All in all, the effect is much larger than a casual observer might think.

Tom Pickett NCA executive vice president, described the damage in a letter to Secretary of State John Foster Dulles in which he said:

"This arbitrary, unilateral action will effectively deprive the United States of about 60 percent of its largest oversea market for bituminous coal."

Further, Mr. Pickett pointed out that this is only the latest damage done the coal industry in the field of international relations. Pickett asserted that in the name of free trade and international friendship we have seen coal's normal markets on the Atlantic coast submerged by an ever-increasing tide of imported residual fuel oil.

Pickett asserted that in spite of the heavy damage to the coal industry, our own Government has failed to stem this tide of oil, and said the State Department has had an important voice in this refusal to act.

The West German Cabinet last week approved the new tariff on all but the first 3,500,000 tons of U.S. coal to be imported this year. Last year West Germany imported 9,500,000 tons of bituminous coal from our country.

Since the quota is retroactive to January 1, the 3,500,000-ton mark will be reached by May, leaving the rest of the year's shipments from America subject to a duty of $4.76 per ton, which practically equals the price of coal at American mines.

Pickett said another thing which irks American taxpayers, including the coal industry and its thousands of workers, is the fact that the United States has furnished West Germany more than $13 billion in foreign aid since 1948, much of which went to rebuild the German coal industry.

"The hand that fed West Germany has now been bitten," he said.

Fishbait

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. HARRISON. Mr. Speaker, under leave to extend my remarks, I insert in the Appendix of the RECORD a bright and vivid article by Mary Van Rensselaer Thayer concerning the House's able major-domo, William M. Miller. Without minimizing the emphasis the article places on Fishbait's service to new Mem-

bers, it is fair to say that he is equally invaluable to those of us who have served here for a number of years.

Why do we continue to confer the ignominious title of "Doorkeeper" upon an important official under whom serve some hundreds of employees and who has responsibility for the housekeeping operations of the House of Representatives? This seems an especially appropriate question, in view of the efficiency with which the duties are performed by the present incumbent.

Ever hear of a fishbait special? Sandwich? Seafood cocktail? Some curious adjunct to piscatorial sport? Not at all!

It's an initiation ritual set up for newly elected Democratic Representatives by "Fishbait" Miller.

But who's Fishbait?

Why, he's the House of Representatives majority Doorkeeper, who likewise functions as House crier, housekeeper, and Emily Post.

Fishbait, who toiled under the Capitol Dome 27 years, has been majority or minority Doorkeeper since 1947, and during that time has demonstrated the niceties of congressmanship to thousands of fledglings. This autumn, thanks to the Democratic landslide, he's shepherding a record 63—there are 19 new Republicans chaperoned by House minority Doorkeeper Tom Kennamer—and, as usual, he has shown them the ropes in nine easy stages.

How does a "fishbait special" operate?

Preliminarywise, "Fishbait" gets to know his future charges before they're elected. On even (election) years when Congress adjourns, "Fishbait," 50-year-old Chief Page Turner Robertson and Charles Hackney, Assistant Director of the House Telephone, scoot over to the National Democratic Congressional Campaign Committee.

Ohio's Representative MIKE KIRWAN was last year's chairman and the "savvy" trio functioned as his glorified office boys throughout the campaign. By election night, "Fishbait" knows the Democratic candidates from A to Z.

A week or so after battle, victors trickle into the Doorkeeper's office, ripe for the "Fishbait Special."

"Fishbait" welcomes them with courtly Mississippi charm in his green-carpeted, gilt-mirrored suite. Then, he personally conducts them on a leisurely tour.

Here are the "fishbait special" ports-of-call:

First, the stationery room where the Congressman-elect pens a facsimile signature as pattern for his mailing frank. Second stop is ches Emmanuel Ridgell, the House Office Building Superintendent. Mr. Ridgell explains the office situation, asks the newcomer to draw a metal disk from a box. The disk number determines priority on the office space list. Then, the Superintendent "shoos" them off to inspect a sample suite.

Afterward, the Doorman takes his new Congressman visiting.

They drop into the Speaker's office to meet Mr. Sam's administrative assistant, John Holton, then call on assistants to the House Parliamentarian.

Next, the freshman legislator is introduced to Joe Metzger, the Parliamentarian's secretary, an important "guy" to know, because he stopwatches the minutes allowed for House oratory.

Last on the list is Lewis Deschler, the Parliamentarian who's been interpreting the rules for 30 years. Deschler sets the newcomer in the right groove by giving a 5- to 10-minute briefing on House procedure.

Next, the Congressman gets down to practical business.

Ralph Roberts, the House Clerk, reminds him to file a campaign expenditures accounting and keep his certificate of election handy.

Harry Livingston, Disbursing Office Chief, follows along, explaining that a Congressman may hire up to eight clerks, secretaries, stenographers (most settle for five or six) on a $17,500 allowance, though none can be paid more than $7,000 annually.

And now comes the big moment when the happy Congressman is put on the payroll. He's in. It's Zeake W. Johnson, Jr., the House Sergeant at Arms, who turns the trick.

As a "Fishbait" special finale, the new legislator is told the Capitol facts of life.

This is no birds, bees, and flowers stuff but a shrewd warning by Ken Harding, executive secretary of the National Democratic Congressional Campaign Committee.

Harding hands his visitor a list of experienced office workers employed by former Congressmen. He emphasizes that a knowledgeable staff keeps a Congressman in office, while an inexperienced office force may ruin reelection chances.

The tour done, "Fishbait" and his now sophisticated charge return to base.

But what of "Fishbait" himself? How come a doorkeeper is so important that he's constantly consulted by congressional VIPs and draws a cosy $18,150 annually?

It's because his job is important. It was set up during the first session of our First Congress. It's an elective office; Congressmen do the voting and the election of Doorkeeper and other House factotums is legalized in the first resolution of each new Congress.

The job's purpose, according to the incumbent, is to take care of all the chores. The chores are something and under "Fishbait's" direction 250 to 300 employees handle them. They include House pages, working doormen and 40 custodians who keep the vast House spotless.

"Fishbait" also supervises three barbershops; the document and folding rooms, and a snack bar in both Democratic and Republican cloakrooms.

The part of his job "Fishbait" enjoys most is announcing each group of VIP guests at joint congressional sessions.

He belts out "The President of the United States," with such resonance that radio men leap back from their microphones.

Practically no one knows "Fishbait's" real name (it's William M. Miller) and he even campaigns under his nickname. He acquired his compelling moniker in a curious way. As a 15-year-old, he weighed a trifling 75 pounds and, hailing from a small Mississippi town on the Gulf of Mexico, he spent much time on the waterfront. Because of his smallishness he was called an assortment of names—"Alligatorbait," "Garbait," "Crabbait," "Shrimpbait"—but "Fishbait" finally stuck.

Now he's a sizable chunk of man.

How did he get that way? "I've been feeding at the public trough a long time," he says with a grin, "and besides I married a registered nurse."

Airmen of the Greenville Air Force Base

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. SMITH of Mississippi. Mr. Speaker, our soldiers, sailors, and airmen have a first responsibility of performing their mission as servicemen. I think as a whole that they have a good record as citizens of the communities in which their bases are located. This is especially true at the Greenville Air Force Base at Greenville, Miss.

I am sure a major part of the credit for the fine record of good relations between the airmen at the Greenville Air Force Base and the citizens of the surrounding territory is due to the fine leadership of Col. Jasper N. Bell and the preceding base commanders as well as the local civic leaders who helped to establish liaison with the base.

There are many instances of the contributions which the airmen at the Greenville Air Force Base have made as good citizens of the city of Greenville, but I would like to mention at least four with which I am familiar. This story can best be told by clippings from the Clarksdale Press Register and the Greenville Delta Democrat Times, which follow:

BASE FOLK AMONG FINEST CITIZENS OF GREENVILLE

To the EDITOR:

This concerns relationships between the airbase and civilian personnel of the city of Greenville. In the past too many of us have regarded the Air Force as transients instead of citizens of our community. In my opinion, this is not true.

I would like to use, for an illustration, S. Sgt. Richard F. Gray, of Headquarters Squadron Section Wing. Sergeant Gray overheard a conversation between Mrs. Azar and myself regarding two destitute families in our city. Sergent Gray went back to the airbase, took the matter up with his associates, and brought in a quantity of groceries and clothing. This was to some families that he had never seen. I don't know who all contributed to this, but I do know that it cost them a considerable sum of money and effort.

Colonel Bell says that we should be proud of our Champion Air Base. I would like to say that I am not only proud of our Champion Air Base, but I am also very proud to live in a community with people like Sergeant Gray and his associates.

H. A. IRVINE,

Veterans Service Officer, Beppo-Arnold Knowles Post, American Legion.

BRAVERY AND HUMANITY

It's good to live in a world where a sergeant will rush into the children's ward of a burning hospital time and again, disregarding the personal danger, to help evacuate helpless youngsters.

And it's good to live in a world where a captain will streak across the State in a jet and back in less than an hour and a half, with officials at each end bending their efforts to speed a life-saving serum to a child who might otherwise die.

Both these rewarding stories were told this week. The first incident brought a much-deserved Soldiers' Medal for heroism beyond the call of duty to a Lelander, S. Sgt. William V. Carpenter.

The second one brought life to young Stanton Horne, 13, of Inverness, who lay critically ill in the King's Daughters Hospital, thanks to Capt. John C. Carson, III, and a multitude of others.

That the immediate plight of one small 13-year-old could throw the hospital medical staff, the Red Cross, the county sheriff's office, and two Air Force bases into high-geared action to save his life is something to make one proud to be an American.

BOLIVAR COUNTY HOUSEWIFE FINDS THERE ARE MANY WHO ARE WILLING TO HELP HER IN CRUCIAL FIGHT

SHELBY.—Mrs. Carl Savage, a farm housewife who lives between Shelby and Perthshire, has been given 61 pints of blood by

transfusion and continues to require it at the rate of a pint a week.

Yet she is fairly active, supervising the cooking and housework at her home. She doesn't look too strong, as might be imagined of a woman of 137 pounds who now weighs 92, but she is putting up a gallant fight against cancer.

She has even shown recent improvement, gaining 7 pounds in the last few weeks.

The encouragement Mrs. Savage has received from friends and relatives of Shelby, Perthshire, Gunnison, Cleveland, and other towns in north delta counties is illustrated by the many contributions of blood made on her behalf.

* * * * *

Mrs. Savage received her first blood transfusion September 19, 1957.

She underwent her first operation for cancer in January 1951. Another operation was required in July 1956.

* * * * *

An estimated 100 people have contributed blood for Mrs. Savage, including several friends of a brother, Maurice Powell, coach and junior high principal at Belzoni.

However after nearly all donors near her home had given blood, the Reverend J. Bradley Pope, pastor of the First Baptist Church at Shelby, wrote Congressman FRANK E. SMITH requesting help in locating servicemen in the area.

Representative SMITH wired Col. Jasper N. Bell, commanding officer of the Greenville Air Force Base, and the senior chaplain at the naval air station at Millington, for assistance.

Within 4 days of Pope's appeal to SMITH, the assistance of servicemen at both stations had been offered. Greenville responded first as Colonel Bell wired back that arrangements had been completed to furnish blood for Mrs. Savage as needed.

"Blood will be drawn by base hospital personnel from volunteer donors and shipped as required," the colonel said. "Thirteen have already volunteered and more anticipated as the need arises."

* * * * *

Two pints of blood are given Mrs. Savage every 2 weeks, with her last transfusion coming Friday.

Her gratitude liberally covers all the many donors who have helped her. While there is no end in sight of the blood she will need, there appears the same infinity of people ready to keep her in ample supply.

Wilkes-Barre Kiwanis Club Honors Former Mayor Charles N. Loveland

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader-Evening News of January 8, 1959:

KIWANIS CITE CHARLES N. LOVELAND

In awarding a citation for outstanding community service to Charles Noyes Loveland at a dinner in Hotel Sterling tonight, Wilkes-Barre Kiwanis Club is taking cognizance of a career spanning six memorable decades he helped to shape. Today at 86, he is cast in the role of elder statesman, a local version of Herbert Hoover, whom he resembles in so many respects.

An attorney by profession and member of a colonial family with its roots deep in the soil of Connecticut, this native son followed the advice of Dr. Russell Conwell and found his Acres of Diamonds amid familiar scenes. As he heads for the century mark, he is able to look back, with satisfaction, on a life of service, studded with achievement and garnished with modesty.

It was back in 1894 that Wilkes-Barre first heard of Charles Loveland as a public benefactor. Fresh out of Yale University and only 22 years of age, he was studying law in the office of the late Henry Fuller when he organized the Boys' Club in the 14th ward. It was an auspicious start and a happy omen, for young men usually have their minds on other subjects when they are in the early twenties. But Charles Loveland was a stimulating exception to the rule.

Admitted to the bar of Luzerne County where he was to distinguish himself subsequently in civil practice, he answered the call of his country 2 years later when the Spanish-American War was declared. Back in civilian life, he plunged into a round of activities, lending a hand to such institutions and worthy causes as Georgetown Settlement, the children's guidance movement, Playground and Recreation Association, Wilkes-Barre General Hospital, Sutton Home for Men, Community Chest, and First Presbyterian Church.

It was inevitable that a man of his background and idealism should be induced to enter politics. It was as a member of city council and mayor of Wilkes-Barre that he was to make one of his most impressive contributions to the public welfare. He also served as solicitor to the board of education in Wilkes-Barre and to Laurel Run where he maintained a summer home.

This recital does not pretend to encompass the entire record of his activities, but to touch only on a few of the highlights. But it is enough to furnish an insight into the character of the man Kiwanis will acclaim tonight.

To be singled out for service by an organization, dedicated to service, is a rare distinction indeed and a fitting tribute to one who has given consistently of his time and talents to the betterment of Greater Wilkes-Barre over so long a period.

Charles N. Loveland, public servant and good citizen, is a worthy recipient of this honor, conferred only once before and, on that occasion, on William Sword, whose name in this decade has become a household word by virtue of his contribution to the rehabilitation of the city and its environs.

In saluting Mr. Loveland, the Times-Leader Evening News also would like to commend Wilkes-Barre Kiwanis Club for maintaining so high a standard in its 1959 selection for this civic recognition.

Reimbursement of the State of California

EXTENSION OF REMARKS
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. KING of California. Mr. Speaker, I submit for inclusion in the RECORD, under leave to extend my remarks, a memorandum dated June 5, 1958, in regard to H.R. 10443, 85th Congress, introduced by me. This memorandum was prepared for the Honorable JOSEPH M. MONTOYA, at his request, for use at the hearings on that bill. I have reintroduced the same bill, H.R. 827, of the present 86th Congress:

In order to provide for reimbursement of the expenditures of the various States in responding to requisitions for troops, Congress passed an act approved July 27, 1861, 12 Stat. 276, as follows:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury be, and he is hereby, directed, out of any money in the Treasury not otherwise appropriated, to pay to the governor of any State, or to his duly authorized agents, the costs, charges, and expenses properly incurred by such State for enrolling, subsisting, clothing, supplying, arming, equipping, paying, and transporting its troops employed in aiding to supress the present insurrection against the United States, to be settled upon proper vouchers, to be filed and passed upon by the proper accounting officers of the Treasury."

By resolution approved March 8, 1862, 12 Stat. 615, to assure prospective as well as retroactive application of this statute, Congress provided: "That the said act shall be construed to apply to expenses incurred as well after as before the date of the approval thereof."

Congress also provided by joint resolution approved March 19, 1862, 12 Stat. 616, as follows:

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That if any State during the present rebellion shall make any appropriation to pay the volunteers of that State, the Secretary of War is hereby authorized to accept the same, and cause it to be applied by the paymaster general to the payments designated by the legislative act making the appropriation, in the same manner as if appropriated by act of Congress; and also to make any regulations that may be necessary for the disbursement and proper application of such funds to the specific purpose for which they may be appropriated by the several States."

The following regulations pertaining to reimbursement of the expenditures of the States were promulgated by Secretary of the Treasury Chase:

"8. Bounties or donations to men, or their families, to induce men to volunteer, will not be recognized. Such bounties as may be authorized by law will be paid by the United States directly to the men authorized to receive them. Voluntary contributions, either by States or local corporations or by individuals, in aid of families of volunteers, etc., constitute no charge against the United States, and will not be refunded."

Congress viewed this legislation as sufficient authority to reimburse California for bounties and extra pay (see House report, pp. 46, 48, 49):

"It is not apparent how the requirements shown in section 8 of these rules necessarily flow from and are in accord with the intent of the act of Congress.

"If it is to be inferred from the interpretation put upon this act by the Secretary of the Treasury that the expenditures were not proper if they constituted bounties * * * such a conclusion cannot really follow from anything in the act itself * * *.

"The expenditure made by the State of California * * * was not a bounty in any proper sense.

"Had it not been for this particular paragraph 8 of the so-called Chase regulations, so narrowly interpreted, the legislation enacted by Congress on July 27, 1861, would have been sufficient long ago to have enabled the Secretary of the Treasury to have settled the requests for reimbursement on behalf of the State of California.

"It is only upon such a technicality presented under the so-called Chase regulations, narrowing and limiting the plain intent of

the act of 1861, that up to the present the State of California remains unreimbursed.

"Congress * * * swept aside this technical construction of the act of 1861 under the Chase regulations, which the Army officers themselves stated were unjust and inequitable to apply thereto."

The California Soldiers' Relief Fund was insufficient to cover all claims filed by its enlisted volunteers, and the California Legislature by an act approved March 31, 1866, Statutes of California, 1865–66, at 640, appropriated the additional sum of $550,000 for the payment of the claims of California volunteers accrued or to accrue under the provisions of the act of April 27, 1863, and the State treasurer was authorized and required to transfer that amount from the general fund to the solders' relief fund.

By an act approved March 31, 1866, Statutes of California, 1865–66, at 604, the California Legislature provided that the remainder of extra pay claims after the exhaustion of the additional appropriation of $550,000 should be paid out of the soldiers' bounty fund which was created by the legislation hereinafter referred to in finding No. 32.

EXTRA PAY TO VOLUNTEERS

Pursuant to said acts, the State of California expended the principal amount of $1,459,270.21 as extra pay to the California volunteers for their services in the United States Army. In addition, California expended $3,000 to print the relief or extra pay bonds.

By April 1864, the time was approaching when the enlistments of many volunteers raised in California in the early part of the war would expire. The California volunteers in the United States Army were occupying important stations throughout the Far West, and it was obvious that it was a matter of necessity to retain them in the service by reenlistment or to replace them with new recruits. Despite the provision for extra pay, it was difficult to obtain sufficient enlistments to meet the additional calls made on California by the Federal authorities.

The probability existed that unless volunteer enlistments increased, the national draft would have to be applied in California as it had been in the East. The threat of the draft failed to stimulate enlistments.

By an act approved April 4, 1864, Statutes of California, 1863–64, at 486, the California Legislature granted every soldier who should thereafter enlist as a California volunteer in the United States Army for 3 years, or during the war, a bounty of $160 in addition to any other pay or bounties to which the soldier might otherwise be entitled. To encourage reenlistments, it was further provided that a bounty of $140 be paid to every veteran soldier who had served more than 6 months in the United States Army, either honorably discharged therefrom or then serving therein, who reenlisted in any unit organized as a part of any quota of California.

To pay the bounties, the California Legislature created the soldiers' bounty fund by appropriating $2 million to be raised by issuance of bonds bearing interest at the rate of 7 percent per annum, redeemable July 1, 1884.

BOUNTY PAYMENTS TO VOLUNTEERS

The bounty payments made by the State of California pursuant to said act, amounted to the principal sum of $900,839.50.

INTEREST PAID ON EXTRA PAY AND BOUNTY INDEBTEDNESS

The interest paid by the State of California acts of April 27, 1863, and April 4, 1889, on the original relief (extra pay) and bounty bonds, issued pursuant to the California Acts of April 27, 1863, and April 4, 1864, to the date of their redemption or conversion at times prior to July 1, 1889, amounted to $302,364.60 on the relief bonds, and $366,206.26 on the bounty bonds, or a total of $668,570.86.

By an act approved April 2, 1870, Statutes of California, 1869–70, at 646, the California Legislature authorized the issuance of bonds known as the State funded debt bonds of 1873, to bear interest at the reduced rate of 6 percent per annum, for the purpose of liquidating and refinancing the funded indebtedness of the State. Pursuant to said act, and on January 2, 1873, various new bonds were exchanged for relief bonds to the extent of $239,500, and for bounty bonds to the extent of $605,000. Thereafter and until July 1, 1889, the State of California paid interest on such new bonds in the sum of $233,025 on the converted relief indebtedness and in the amount of $598,950 on the converted bounty indebtedness or a total of $831,975.

The total interest payments to July 1, 1889, on the relief and bounty indebtedness amounted to the sum of $1,500,545.86.

After July 1, 1899, and until July 2, 1945, when all of the State funded debt bonds of 1873 were redeemed, the State of California paid interest on the new bonds issued in exchange for the original relief and bounty bonds, to the extent of $789,693.34 on the relief indebtedness, and in the sum of $2,032,900.85 on the bounty indebtedness, or a total of $2,822,594.19.

The total interest paid by the State of California on all bonds covering the indebtedness incurred to finance the extra pay and bounty payments amount to $4,323,140.05.

By an act approved May 27, 1902 (32 Stat. 207, 235), Congress provided that the claim of the State of Nevada be reopened and reexamined by the Secretary of the Treasury. As authorized thereby, the Secretary transmitted the claim to the Court of Claims for determination of disputed questions of law. In its opinion of March 14, 1910 (45 C. Cts. 254, at 271–86), the court upheld the Chase regulations and decided that Nevada could not recover bounties paid to officers for securing enlistments, extra pay provided to the Nevada volunteers, or interest paid on moneys borrowed for those purposes.

Thereafter, by an act approved March 4, 1929 (45 Stat. 2378), Congress authorized by direct appropriation the payment of such claims of the State of Nevada.

CERTIFICATION BY THE TREASURER OF THE STATE OF CALIFORNIA

Exhibit A

Amount expended in recruiting California volunteers	$24,260.00
Amount expended in payment of adjutant general, etc	38,083.17
Amount expended in organizing volunteers	5,639.34
Amount expended in pay of volunteer officers	23,277.34
Amount expended in extra pay to enlisted men of California volunteers	1,459,270.21
Amount expended in bounty to enlisted men	900,839.50
Total expenses of volunteers	2,451,369.56
Amount expended in payment of interest on moneys borrowed to carry out the provisions of laws of the State of California enacted Apr. 27, 1863, and Apr. 4, 1864	1,500,545.86
Aggregate expenses incurred on account of volunteers, principal, and interest	3,951,915.42
Amount expended on account of militia	468,976.54
Grand total of expenses on account of volunteers and militia	4,420,891.96

Exhibit B

Interest paid on moneys borrowed through the sale of State bonds issued under acts of Legislature of California approved Apr. 27, 1863 and April 2, 1870; (period of interest payments, July 1, 1889–Sept. 25, 1950),[1] aggregate	$789,693.34
Interest paid on moneys borrowed through the sale of State bonds issued under acts of Legislature of California approved Apr. 4, 1864 and Apr. 2, 1870 (period of interest payments, July 1, 1889–Sept. 25, 1950),[1] aggregate	2,032,900.85
Discount on sale of State bonds issued under acts of Legislature of California approved Apr. 27, 1863, Mar. 18, 1864, Mar. 31, 1866, appropriating $1,459,270.21 for pay of troops; loss	100,512.00
Discount on sale of State bonds issued under acts of Legislature of California approved Apr. 4, 1864, appropriating $900,839.50 for pay of troops (recruits and reenlistment); loss	217,510.00
Total loss on account of discounts at which original bonds were sold and on account of the discount at which new bonds were given in exchange for original bonds	318,022.00

Recapitulation

Volunteers and militia, expenditures and advances	$4,420,891.96
Discounts on sales and exchanges of State bonds	318,022.00
Interest paid on moneys borrowed through sale of State bonds, July 1, 1889–Sept. 25, 1950[1]	2,822,594.19
Amount repaid by the United States since July 1, 1889	None
Final balance due State of California	7,561,508.15

[1] All actual interest payments ceased on July 2, 1945, being the date of redemption of all bonds affecting this matter, therefore above calculations reflect actual interest payments to July 2, 1945.

The Honorable and Logical Course

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1959

Mr. EVINS. Mr. Speaker, last week, as we know, there was introduced in both bodies of the Congress a joint resolution for an amendment of the Constitution to reaffirm the rights of the States and local governments to administer their school systems. This resolution has been received with great interest not only in the Congress but throughout the Nation. Among the significant comments on this resolution have been editorials in the Nashville Banner, the Nashville Tennesseean, and the Wash-

ington Post. Under unanimous consent, I include these editorials in the Appendix of the RECORD. The editorials follow:

[From the Nashville Banner, Jan. 28, 1959]

RIGHT, SENATOR TALMADGE: AS CONSTITUTION PROVIDES, LET THE PEOPLE DECIDE

In his proposed constitutional amendment to fix, beyond any question, the area of public school authority, Senator HERMAN TALMADGE goes to the heart of the school issue.

The stipulation sought is neither segregation nor integration; it provides simply that administrative controls shall be vested in the hands of the individual States and their subdivisions—which means that the decision would be made there and not in any blanket decree handed down by Washington or a five-man majority of the Supreme Court.

Further, he proposes that this decision of where the controls belong be submitted to the people of the United States and rendered by them. Congress should need no reminder that Government derives its just powers from the consent of the governed; and no consent has been given to divest the States of the authority and rights in question.

The seven Southern Senators joining Senator TALMADGE in this step to codify by formal action a principle that was honored until the judicial trespass of 1954 occurred, do not stand alone in challenging that departure from the constitutional concept, or in insisting that an issue of such magnitude is for the people to decide. Not only other Southern Congressmen, but Constitution-minded lawmakers of other regions, must see the merit of it.

It is, as the author of this amendment declares, a way to avert the unparalleled catastrophe of widespread sehool closings.

It is not the first suggestion to settle by the constitutional method the question of where these controls shall remain.

Eighteen months ago, on July 30, 1957, the Banner proposed the following amendment: "The public school system of these United States is the property of the States individually, and subject in all particulars exclusively to State and local jurisdiction."

The accompanying editorial declared the belief that that stipulation belongs as the 23d amendment to the United States Constitution, and that a resolution to that effect calling for such amendment should be drawn by Congress for immediate submission to the people.

It would, the Banner said, "Define beyond doubt and arbitrary evasion, an area of authority historically reserved until—wholly without precedent, constitutional warrant, or legislative assent—the Supreme Court divested State and local governments of that jurisdiction."

It was further emphasized that the amendment would in no sense bar integration of schools where that is the wish of the States. They would have that right, exactly as they have had it all along.

The Talmadge resolution goes no less to the heart of the matter, providing equally the right of the people to decide for themselves, State by State.

Actually it would incorporate in the Constitution—as an unarguable safeguard—the point of law already validated 10 times in the legislation extending statehood, the latest case being Alaska.

The Banner repeats, the American people are confronted by a question demanding answer now. Congress is aware, surely, of a responsibility to the electorate in a matter thus far evading the sanction of legislative enactment.

For the sake of principle and security in a primary realm of concern to every right-thinking citizen, the amendment proposed is needed. It would provide effective and adequate guarantee of school stewardship where it belongs, where historically it has resided, but where right now it is increasingly endangered.

Senator TALMADGE and his cosponsors have furnished a mean sof redress. It should be swiftly adopted by Congress, and submitted to the people of 49 States to deside for themselves.

[From the Nashville Tennessean, Jan. 28, 1959]

COURT'S CRITICS OPEN EYES TO HIGHER POWER AT LAST

Southern Senators who propose a constitutional amendment which would assure States and their subdivisions full control of education—and thus override the 1954 decision of the Supreme Court—are now getting down to fundamentals.

The amendment as introduced by Senator TALMADGE of Georgia would declare that "nothing contained in this Constitution shall be construed to deny the residents thereof (meaning the States) the right to determine for themselves" the manner of administering the schools.

As far as the sponsors are concerned, this is a segregation amendment which comes close on the heels of new court blows to the theory of massive resistance to the present law.

Whether the Talmadge plan, cosponsored by Senator HARRY F. BYRD and six others, will ever get approval of two-thirds of both Houses and ratification by three-fourths of the States is a matter of speculation. The odds would seem to be against it.

But in advancing the plan with such vigor, the backers have gone far towards undermining their claim that the Nation is at the mercy of nine capricious men on the Supreme Court or, as Mr. TALMADGE puts it, "the whims of whatever five men happen to constitute a majority of the Court."

Reference is made to the disruptive laws applying to every school in the Nation. But the fact remains that rulings of the Court with which the American citizenship is not in sympathy are always subject to change by ordered processes.

New members have been added to the high Court since 1954, but they too have shown their concurrence in the historic ruling of that year.

Coupling the new development with the recent State and Federal court decisions in Virginia which have left that State floundering for a way out, those who are pledged to fight integration to the last now show awareness of the fact that the Supreme Court is always answerable to the people and their representatives.

Espousal of a constitutional change, in the opinion of this newspaper, has always been the logical course for those opposed to the integration ruling.

By inference, Mr. TALMADGE and his associates are saying that they are willing to leave the issue up to the Nation as a whole, which is certainly an entirely new approach. Perhaps they believe that sentiment against the Court has been built up to a point where there is a real chance of success.

Changing the Constitution as it applies to public schools would inevitably bring about the abrogation of other clauses of that document which have had traditional acceptance. Such a change can cause controversy and debate, and the guess is that it will.

In any case, however, a step has been taken to apply the yardstick of public opinion to the integration rulings of the courts—and especially the Supreme Court—with full assurance that decisions of lawmakers and citizens will prevail, as they should in this democracy. That is the reasoned way.

Earlier acceptance of this course would have prevented the futile fight over interposition and the succession of other court rebuffs which culminated last week in a double rejection of Virginia's segregation laws.

The Federal court said that Virginia cannot by State action close schools in some communities and keep them open in others; that it cannot by local action close some schools in a community and keep others open in that same community.

And the State supreme court decreed that Virginia cannot close public schools—except temporarily—without amending the State constitution, which requires a State system of public education. In addition, it cannot withhold State funds from a school, even though it becomes racially mixed; it cannot establish State control over school funds raised by local taxes, take control of schools from local boards and vest the control in the Governor, or use funds withheld from local schools to finance payment of tuition grants to pupils for use in attending segregated schools.

Considering these developments in Virginia, which was supposed to be showing the rest of the South how to evade the 1954 ruling, it is not surprising that a broader and more direct approach to the whole question at last has won favor.

[From the Washington Post, Jan. 30, 1959]

THE HONORABLE WAY

Senator TALMADGE and seven southern colleagues have chosen an altogether proper and dignified means of registering their disagreement with the Supreme Court school desegregation decision. In a commendably moderate speech Mr. TALMADGE has proposed a constitutional amendment to establish the exclusive right of the States to determine the manner of administration of schools. In his preamble the Georgia Senator speaks of the terrible tragedy of the closing of a public school system, and adds that "the American concept of universal education, more than any other factor, is responsible for the greatness which this Nation has achieved."

Especially notable is Mr. TALMADGE'S recognition that the Supreme Court decision "is an accomplished fact which will remain so until it either is reversed by the Court itself or is nullified or modified by Congress or the people." Of course, Congress has no power to nullify or modify a Supreme Court decision on a basic constitutional question. Mr. TALMADGE speaks, however, of his dedication to seeking reversal of the decision "by every lawful means." This comes close to an acknowledgment that the decision is the supreme law of the land.

We hope that Mr. TALMADGE is wrong when he says that the overwhelming majority of people in the South will neither accept nor submit to the forced implementation of that decision—for the Court has indicated many means of gradual adjustment. And we have no thought that if the amendment is put to a vote either in Congress or among the State legislatures requisite majorities will elect to overrule the Supreme Court in its interpretation of the 14th amendment.

Nevertheless, this is the honorable way for those who disagree with the Court decision to make their case—to seek to amend the Constitution through the established process. If they should win two-thirds of both Houses of Congress and three-fourths of the State legislatures to their cause, no one could reasonably object. The obverse of this situation, of course, is that if they should fail, their obligation to respect the decision would become even clearer. At any rate, Mr. TALMADGE has sought to raise consideration of the problem to a legal plane from the muck of defiance and closed schools.

Dr. Adolph Stone Describes Berlin

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. HOSMER. Mr. Speaker, the Secretary of States is proceeding to Europe this week to discuss the problem and much more will be heard in months to come about the controversial city of Berlin. The Journal of Geography for November 1958, carried an interesting article about the city by Dr. Adolf Stone which provides considerable data helpful in understanding the situation there. Dr. Stone's article follows:

BERLIN [1]

(By Adolf Stone)

"Berlin is the most interesting city in Europe." This statement refers to a paradox unequalled any place else in the world. The capital of defeated Germany under the 1945 Potsdam Agreement became a joint trust of the then four Allied Powers, the United States of America, France, Great Britain, and the U.S.S.R., whereas all other German lands were divided into four occupation zones. Since the Red army took over all German territories east of the Elbe River, Berlin became a political island surrounded on all sides by what the West calls the Soviet Zone and what the East has designated as the German Democratic Republic.

The events following this partition are well known. The cooperation between the three western allies a the U.S.S.R. came to an end in 1948. A Soviet attempt to swallow Berlin by cutting all roads and all communications was met by the historic airlift, or better airbridge, as the Germans called it. For 11 months, from June 1948 to May 1949, more than 2 million Berliners were kept alive by air missions of peace. When the blockade ended on May 12, 1949, two worlds began to consolidate in a space of only 338.3 square miles, one patterned after American democracy and the other after Russian communism. Berlin today is the most interesting city in Europe because it is an outpost of the West in a Red sea.

LOCATION

Two factors account for the rise of Berlin: (1) Its geographical location; and (2) the history of the Hohenzollern dynasty. The city lies about half way between the Elbe and the Oder, the two important waterways which open Central Europe to North Sea and Baltic Sea traffic (fig. 2).

The original town was at a crossing point of a large west-east glacial depression. Swamps, lakes, and small rivers, such as the Havel and the Spree, still marks the path of the retreating ice and stretch all the way to the 700-mile long Elbe and the 500-mile long Oder. Thus, a combination of central location and of navigation facilities to the open sea are natural growth factors in this city of several harbor basins and of famous water sport facilities.

Bodies of water are so frequent, even in the metropolitan area, that a surprising 20 percent of Berlin is still in parks, each spreading around one, or several, waterfilled depressions. Best known as the Grunewald (Green Forest) and the Tiergarten (Game Garden). The few driftpiles, none exceeding 350 feet, in this flatland of sands and marshes became so prominent that they are reflected in district names, such as Kreuzberg and Schoeneberg (berg meaning mountain).

Climatic charts, too, show that Berlin is a meeting place, namely of continental influences from the East and of maritime influences from the West. There is much irregularity in the length of summer and winter. Temperatures climb as high as 85° F. in July and fall to 15° F. in January. Annual precipitation is around 30 inches with considerable snowfall in winter. Berliners consider their climate the invigorating variety. It might be pointed out that even in the densely populated center rift, air pollution is only slight due to ample winds.

GROWTH

Berlin was named in 1307 after its feudal lord Albrecht, the Bear. The city's symbol ever since is the Bear displayed on city seal and flag, also on all products made in this city of the bear.

Growth, thereafter, came step by step. The bridle trail of the Hohenzollern Kurfuerst (Prince elector) to his hunting lodge, for instance, is now the fashionable boulevard Kurfuerstendamn. What was the property of a princess developed into one of Berlin's largest districts, Charlottenburg. A Friedrich (Frederic), like in Friedrich Strasse, became king and thereafter turned the place into his royal capital. Finally, Chancellor Bismarck proclaimed his King Wilhelm (William) in 1871 the new German emperor. With this act, Berlin took a seat among the great centers of the world and words from the Wilhelm-Strasse were as much listened to as those of Downing Street or Pennsylvania Avenue. Unfortunately, the imperial government of this second Reich paid less heed to city planning than to the building of the two pillars of a unified Germany, the civil service and the army.

To take care of the ever-swelling population, a conglomerate of unsightly apartment houses and streets grew up. Historic homes in the old center gave way to new office and business structures and Berlin's core area became known officially as "the city." The Nazis with their coordination of party and government brought new armies of functionaries and with them more "city" construction. Berlin's population in 1943 had reached 4,489,000 and Hitler's chief of construction and armament, Albert Speer, prepared it for a ten million hub of central Europe's highways, railroads and airlines.

THE PIECES

Then came the catastrophe. The unfortunate, but under the circumstances unavoidable, allied air bombardments of 1943–45 were followed by the fury of Hitler's last ditch fight in the streets of Berlin. German officials claim that the Red army, after achieving victory, in the months of uncontested rule from May to July 1945, continued the destruction and also dismantled 70 percent of the city's industrial installations.

In July 1945, the already mentioned four-power military government took charge of a city of ruins. The 2,807,000 remaining Berliners, after evacuees and casualties, literally dug out from the rubble. Clearing and salvage teams, among them many women, were the first signs of new life and the most needed tools and machines were put together in a manner in which American boys build engines out of junked parts.

With the Allied Kommandantura as the highest echelon, each ally was, and still is, repsonsible for one sector of the city. Southwestern Berlin, an area of 81 square miles, is under U.S. guardianship. In 1949, the three Western allies began to consolidate their total area of 184.5 square miles into a free Berlin, while the 153.8 square miles of Soviet sector under the catching name, "Democratic Berlin," was being integrated into communistic East Germany. West and East now are in such proximity that in some instances a street is policed by communists while the houses facing this street are under Western control with Western policemen walking their beat from basement to basement.

The unfortunate city has more governments than any other place in the world and everything exists in duplicate from public utilities to fire departments, and from mail to street cleaning. No telephone connects East and West Berlin and the only joint operation is the sewage system. Yet, commuting within the total area of Berlin is still possible except for customs and currency control at the sector boundaries.

In spite of confusion and treaty restrictions the three Western allies managed to guide free Berlin to self-government. The combined West sector is now governed by a freely elected senate. A proportional number of senate seats are still open for delegates of the East sector if, and whenever, the Soviets allow free balloting. West Berlin has also been proclaimed a land (state) since West Germany is a Federation of Laender. However, Berlin's delegates to the Federal parliament (Bundestag) have only a voice and no vote. All Federal legislation requires separate legislative processing in Berlin. Thus, free Berlin is federated with West Germany, but full integration must wait until the "Limitations of Allied Authorities" are removed. This is the often referred to difference between Berlin's de facto and de jure status. This respect of the West for treaties coupled with Berlin's present geography makes the restoration of its political functions at least temporarily impossible. That Berlin some day will again be the capital (Hauptstadt) of 67 million Germans is vouched in the new West Berlin constitution. But, while the West can offer only a promise, the East simply moved the communistic government of East Germany into its Berlin sector. In order to avoid misunderstanding, the West does not identify this government with Berlin but only with the suburb in which it resides, Pankow.

ECONOMIC STRUGGLE

Berlin's economic recovery is impressive but somewhat slower than that of West Germany. The obvious reasons are (1) a long lasting blockade; (2) the island location; and (3) the split of a prewar economic unit. Fortunately, the west as well as the east considers the area a "show window" for their respective economic strength. Therefore, Government aid in the form of loans, outright grants, priorities, and preference rates lubricates progress in both camps. Posters on construction projects in West Berlin display the United States and the German colors announcing that the work is financed by GARIOA (Government Aid and Relief in Occupied Areas).

The problem of rubble disposal was solved in an ingenious manner. Manmade mountains of junk were smiply landscaped, thus giving Berlin additional recreation areas. The new apartment houses and commercial structures are of the modern skyscraper variety which, at least, is not worse than Wilhelminian or Goering architecture. Up to 1957, 120,000 dwellings had been reconstructed in West Berlin against a total loss of 300,000.

Prewar Berlin was not only the German captial but also the country's leading trade center and largest industrial producer. Thus a large pool of skilled labor and management was available to be put to work. Already in 1945 most of these talents gave a clear vote of confidence in the west by gathering in the west sectors. This made up for the disadvantage that most prewar industrial sites were east of the new boundaries. As in the field of politics, duplication was frequently

[1] The author wishes to express his grateful appreciation for the contribution of much unpublished information by the (1) Free University of Berlin, Institute of Geography, (2) U.S. mission, Berlin-Dahlem.

necessary. For instance, West Berlin was plunged into darkness when the Soviets staged their walkout in 1948. Machines for power production had to be airlifted. Today, a new steampower plant produces sufficient electricity, but a lack of switching facilities occasionally brings hours of paralysis to entire districts. As of 1957, close to 1 million West Berliners were again gainfully employed and about 100,000 listed as unemployed. The constant flow of refugees from the East makes reduction of the latter figure very difficult. Imports into West Berlin, also proportionally declining, still exceed exports, with meats and dairy products leading the list. The precarious food situation is underlined by the fact that the people maintain victory gardens throughout the metropolitan area. Other essential imports are industrial raw materials and coal, the city's major source of energy.

Since almost all the needed goods come from West Germany, a long haul through communistic territory represents the lifeline of this outpost of the West. Transportation is two-thirds by truck with rail and water carriers sharing the remainder.

Four industries account for the bulk of exported goods: (1) Electrical products come from the world-famous plants of A.E.G., Siemens, Telefunken, Osram; (2) machines are shipped from the assembly lines of Borsig and Schwartzkopff, and machine tools from Adrema and Rotaprint; (3) optical instruments from Zeiss-Ikon and from Oskania are known everywhere; (4) chemical industries achieved world repute with the pharmaceutical products of Schering and with Europe's answer to nylon, called perlon. Others are clothing, beer (Berliner Kindel), chocolate (Sarotti), and pianos (Bechstein). It seems reasonable that the same carriers, which bring imports to the city, take the readymade goods out on the same politically precarious roads. While West Germany is West Berlin's most important customer, a U.S. instigated Berlin marketing council and an annual industrial fair boost the city's exports to other Europeans as well as to Latin America and to the United States.

Berlin's biggest problem that seemingly cannot be solved pending a summit conference is transportation. Logically, but also unfortunately, railroads, including Berlin's interurban trains are communistically operated. This rail hub of prewar Central Europe has now only one major terminal, which of course is the Ost (East) bahnof. Within the city, streetcars and buses stop at the sector boundary, while the subways go through under special agreements. Traffic to and from Berlin is restricted to only a few gaps in the Iron Curtain which the Soviets agreed to keep open, some canals, four highways and a 20-mile-wide air corridor. Since ground transportation is constantly harassed, Berliners like Americans take to the air. Tempelhof airport, the island's gateway to the world, is getting too small for the ever-increasing two-way flow of Berliners and their friends.

Possibly counteracting anxiety over a shoestring lifeline as the basis of everybody's livelihood is a renaissance in culture. West Berlin has again many theaters, an opera house and a central library which is an American contribution and, therefore, named the American Memorial Library. There are two schools of university rank, the Technical Institute in Charlottenburg and the Free University in the former village of Dahlem and grouped around the new Henry Ford Hall. Dahlem, also an end station in the urban transportation system, seems to be developing into the new culture center. Latest display of the Dahlem Museum is the world famous head of Nefertite.

EAST BERLIN

Little dependable material is available on East Berlin's economic recovery. Several unpleasant lawsuits show that East Berlin products are sold in neutral countries under the same prewar tradenames which the West tries to revive. The basic issue seems to be whether the name goes with the original factory site or with the producing company. The state-owned East Berlin industries produce the same type of goods in which West Berlin excels, namely, electrical equipment, machines, and optical instruments. Leading customers are the countries of the communistic bloc, and also neutral nations. The quality of East Berlin's technical products is good. Textiles, especially clothing, on the other hand are definitely inferior. In addition, many items such as fuel, are still rationed. Of course there is no unemployment recorded in a socialized economy. But, actual purchasing power is reduced by rationing, complete lack of many items, and mainly by the poor quality of the articles used in daily living. Most amazing, but also revealing, is the continued food rationing and the complete disappearance of foods, such as potatoes, from the market from time to time. This, in spite of the fact that East Berlin geographically is part of East Germany and that East Germany always has been the traditional farm area of prewar Germany.

Constructionwise, the much proclaimed showpiece of the Communists is the mile-long Stalin allee, a Moscow style district with 2,200 flats, all in eight to nine story apartment houses with shops, movies, and restaurants on the ground floors. The retail center, with all stores completely nationalized in the H. O. Handels (trade) Organization, is the Alexanderplatz. Nearby is the restored old city hall, now headquarters of the communistic city administration. Other communistic additions are a palatial Soviet embassy, some gymnasiums and similar mass assembly facilities.

Much disputed is the Marx-Engels Platz, a huge parade ground like Moscow's Red Square, for which the former imperial palace had to give way. A stupendous Russian War Memorial in Berlin-Treptow and the Red Army monument at the edge of the boundary line, but on Western territory, complete the picture of mostly ruins interspersed with some life. The guards at this monument and at the prison for top war criminals, located in West Berlin-Spandau, are the only armed Russian soldiers, anywhere in the world, permitted to stand on Western soil.

EAST MEETS WEST

East and West now face each other in the center of the city which, as the location of Hitler's last resistance, became one huge field of dead rubble. Most of it is now under Russian control with the remainder in the British sector. To every Berliner this area around the symbolic Brandenburg Gate is synonymous with the much desired political functions. Both sides talk much about reconstruction of this historic central district, but so far very little has been done. East of the Brandenburg Gate, Berlin's avenue of parades, Unter den Linden, has been replanted with several hundred Linden trees and work is proceeding on the Gate itself. West of it, and in free Berlin, the restoration of the Reichstag is still in the blueprint stage. Further west, the Tiergarten Park is filled again with 1 million young trees. Part of it, the English Garden, is a gift of the British people. The West's most ambitious undertaking halfway close to the center is the reconstruction of the Hansa district. Here, grasping a unique opportunity, architects of many countries have each designed his own version of modern living quarters, shops, and churches. The entire 8,000 flat project is handled as an International Architectural Exhibit.

Standing on the main east-west thoroughfare, famous Potsdamer Square, even the casual observer can see why so many have defected from the east via the Berlin escape hatch. Whereas the east side of the square is dead rubble, the west side is covered with wooden stalls and a veritable carnival of all imaginable merchandise. Anybody can buy anything in West Berlin and, in spite of an unfavorable currency exchange, East Berliners have become ingenious at smuggling.

At the root of this western superiority lies an American inspired reform of the West Germany currency, which included West Berlin. Now the international exchange rate is one west mark (DM) for four east marks. To avoid hardships, special provisions have been made for West Berliners who work in the east sector and vice versa. Official Exchange Bureaus in West Berlin permit unrestricted spending of east marks in free Berlin. The east sector, on the other hand, accepts west marks only at the unrealistic rate of one to one and prohibits the import of east marks to all but the holders of communistic identification cards.

THE PEOPLE

A large share of the credit for the city's rise from the ashes goes to the people of Berlin. With 3,400,000 inhabitants in 1957—2,200,000 in the west and 1,200,000 in the east—the city is still 1 million short of the 1943 population figure. But almost the entire increase of 600,000 people since 1945 has been in West Berlin, whereas in the east sector, the influx of administrative personnel is equaled by the exodus of mostly young people. The free Berliner's confidence in his city's present, as well as in its future, is shown everywhere in the crowded sidewalk cafes, in stores, factories and at the ballot box.

American aid for this Mecca of freedom totals about 1 billion dollars. Since the money comes from sales of surplus foods in Germany, it is no direct burden on the U.S. taxpayer. These mutual security funds are strictly loans with the provision that payments are to be reinvested. So far $150 million have been repaid. From the economic, and from every other point of view, the American citizen could have made no sounder investment anywhere in the world.

Address by Hon. Richard M. Simpson at 73d Annual Meeting of the American Tariff League

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1959

Mr. UTT. Mr. Speaker, one of the most able and conscientious Members of this body was the recent recipient of an annual award by one of America's oldest business organizations. On October 29, 1958, the American Tariff League awarded its annual scroll of honor to Representative RICHARD M. SIMPSON, of Pennsylvania.

We are all aware, I am sure, of Congressman SIMPSON'S consistent devotion to the maintenance of a strong and prosperous America and his almost prophetic concern with the problems that occur in the economic area. He has been an active proponent of all measures directed toward a stable industrial base for our country. He has for years devoted his energies to the creation of a sound, equitable taxation

system and has just as vigorously opposed the perpetuation of unsound fiscal policies.

On the occasion of the Tariff League award, Mr. SIMPSON delivered an address, since reprinted in Vital Speeches of the Day, calling attention to the new crises ahead in world trade. I heartily recommend this speech to all Members as a portion of what we can expect in the days and years ahead.

Under leave to extend my remarks, I include the text of the league's award as well as the text of his address. They follow:

THE AMERICAN TARIFF LEAGUE ANNUAL SCROLL OF HONOR, 1958

The American Tariff League, Inc., at its 73d annual meeting salutes the Honorable RICHARD M. SIMPSON, U.S. Representative from the 18th Congressional District of the Commonwealth of Pennsylvania, who has served continuously, beginning with the 75th Congress in 1937, in the interest of a sound, strong, and prosperous United States of America.

Representative SIMPSON has devoted his legislative energies to the perfecting of his country's foreign trade and tax laws in ways that would assure the growth of a dynamic economy and would prevent the corrosive effect of unsound fiscal policies. His high position on the Committee on Ways and Means of the House and the friendly respect in which he is held by his fellow House Members of all parties have combined to make his voice important in Government councils. In addition, his own party in the House has demonstrated its regard and confidence in Representative SIMPSON by entrusting to him for several years the leadership in their political campaign efforts.

Representative SIMPSON in the last four Congresses has courageously lent his name and prestige, and gave unstintingly of his efforts, to legislation designed to afford adequate safeguards to American industry faced with injury due to the workings of our foreign trade policy. As a result, these safeguards now have an assured place in our laws.

In respect and appreciation for his great services to the American economy, and with its best wishes for his future, expanding role in legislative and Government affairs, The American Tariff League, Inc., on October 29, 1958, unanimously resolves that this scroll of honor be presented to Representative SIMPSON.

WORLD TRADE: NEW CRISES AHEAD

(Talk by Hon. RICHARD M. SIMPSON at 73d annual meeting of American Tariff League)

I thank you sincerely for this splendid award—and for the singular honor of your friendship.

Your sincere good will is reassuring, particularly to one so fresh from the heat of congressional controversy.

It is always reassuring to see again that Americans really care, that they are truly interested in wise government, and in the people they send to Washington to serve their highest and most honorable interests.

As you well know, many of us differ as to just what these honorable interests are.

Are they, for example, best served by yielding a large measure of sovereign economic authority to a multinational body, in which our voice is only one of many?

Are they best served by inviting American manufacturers to take their capital and machines and jobs to other shores, as the most effective way to meet and beat the competition for the home market here?

And are they best served by inviting others to invade the world's most productive economy on terms that are clearly harmful to many of our industries and workers, terms lacking minimum wage guarantees, child labor prohibitions, and beyond the purview of our antitrust laws?

I don't think so. I know you don't think so. I know many other Americans don't think so.

I know something else, and that is that in the years just ahead a great many more Americans are going to find that they don't think so, either.

Far from being resolved in 1958, as some would have you believe, the great issues of international trade will intensify. Many critical decisions remain to be made in capitals around the world.

Foreign trade, moreover, is quite likely to occupy a prominent position on the agenda of the 86th Congress. Let me recount a few of the reasons why.

Issue No. 1 concerns a legal interpretation of Executive authority under the Trade Agreements Act. The Customs Court of New York has seriously challenged the supposed discretion of the Executive to modify recommendations of the Tariff Commission as he sees fit.

If this ruling is upheld, the Executive will be required either to accept or reject Tariff Commission findings as they stand, and he will be required to act within the time limit specified for these cases by Congress.

This issue may have to be resolved by legislation. If the Customs Court decision is sustained by higher tribunals, legislation is the likely recourse for those who seek to maintain Executive freewheeling in trade policy.

But no matter how the litigation ends, the case already has crystallized doubts in the minds of many, doubts which may be thoroughly explored and discussed in the next Congress.

Issue No. 2 calls up again the question of OTC, the proposed Organization for Trade Cooperation. Has the idea really been discarded by its advocates? Have they really found a way to reach the same goal by detouring around Congress, as the press has suggested?

This speculation grows out of what was said—and not said—by a leading United States delegate to the latest meeting of GATT. He said the United States was amenable to creating "stronger permanent delegations" to GATT in Geneva, presumably so that these delegations might assume duties previously foreseen for OTC. But he did not mention OTC.

This is still a subject of raw speculation. Those in a position to know the answers have remained silent. Meanwhile, the trial balloon is aloft, waiting to be pushed one way or the other by public opinion.

I need not remind you that two Congresses have rejected the principles of OTC. My conviction is that Congress will continue to reject OTC, camouflaged or otherwise.

Now, issue No. 3. And that is GATT itself, to which I have been a delegate. In my opinion, it is showing signs of wear and tear. Today it is challenged by a trading concept, the European Common Market, which is a contradiction of its basic principles.

There is talk of a watchdog committee to protect the interests of GATT's non-European members doing business in the Common Market. At the same time there is talk of new Common Market agreements elsewhere in the world.

The question is, where does the American manufacturer fit in? Equally important, where does the American workingman fit in?

A few weeks ago, at a meeting here in New York, the president of a large corporation told a group of chemical producers that only one course is open to American industry, and that is to establish plants in Western Europe.

He said this was the only way that American companies could compete in the Common Market and its system of "monopolistic free enterprise," to quote his own words.

Then, just last week, a spokesman for the State Department said the same thing. And that is particularly ironic, since it was by the same source that we were assured only recently that the Trade Agreements Act would strengthen our bargaining hand and prevent just such a situation.

There are other ironies attached to GATT. You probably noticed that the British delegate accused us of "bad behavior" in our trading policies. He was particularly incensed by the Administration's lead-zinc quota, and, as usual, he rebuked us for continuing a system of agricultural quotas which serve to stabilize our domestic farm market and safeguard the standard of living of our farm population.

He said the United States should take the lead in chopping down trade barriers and fostering the flow of goods between nations.

On the other hand, when it was believed that large profits were waiting behind the Iron Curtain for those who would come and get them, American leadership and considerations of Free World defense were shunted aside by these same allies.

Over our objections, the controls on strategic shipments to the Communists were peeled back at the insistence of merchants in Britain and other Western countries.

It boils down to this:

When it comes to sacrifice, the United States is exhorted by Sir David Eccles, Chief of the British Board of Trade, to furnish the momentum.

When it come to opportunity even the dubious opportunity of doing business with international warloards, the United States is asked not to stand in the way of progress.

We are used to this, of course. As acknowledged leader of the Free World, and as the pillar of Free World security, perhaps it is no more than right that we should give more than we expect to receive.

The fact is, we have accepted this burden of self-sacrifice, at tremendous cost to our citizens and our economy, even while attempting to disguise it as "reciprocity."

These are simply a few of the issues, the unsettled questions, facing us in the field of foreign commerce. There are others—the Soviet economic offensive, for example.

That the Soviets can severly disrupt world markets at their pleasure has been proven to us all. By dumping tin and aluminum on a large scale, the Communist provoked market upheavals that brought hardship to large and small nations alike.

In fact, these tactics proved so successful that they have been adopted by the Chinese Communists who are flooding the Far East with slave-labor goods, to the distress of Japan and other countries.

Both Houses of Congress, through their respective Foreign Affairs and Foreign Relations Committees, will, I expect, investigate this problem in the next session.

Policies bearing on United States private investment abroad will be studied by a subcommittee of the Ways and Means Committee.

Furthermore, the new Congress will be watching for signs that changes in the Trade Agreements Act of 1958 are accomplishing what they set out to do; namely, to provide a greater measure of stability and equality for domestic industries and workers vulnerable to excessive imports.

I realize you were not satisfied when Congress enacted this law. I was not satisfied, either, because several improvements that we worked for were rebuffed.

But in perspective we must recognize that important gains were made.

For the first time in a quarter of a century Congress holds statutory powers to review Executive decisions in escape clause

cases. These powers are not easily invoked—yet they are a long step in the right direction.

In addition, peril point procedures were tightened up. The range of relief available under the escape clause was broadened. The Office of Civil and Defense Mobilization was given greater authority to curb trade practices harmful to national security.

Obviously, these are not cure-all measures. Important gains, yes, as far as they go. And certainly they reflect credit not only on the 85th Congress, but on the American Tariff League and other responsible groups and individuals whose support was essential and decisive.

Yet you know and I know the struggle is far from over. In view of the long list of imponderables confronting our policy-makers, and the long list of unresolved issues, you might say the struggle has hardly begun.

I cannot emphasize too strongly the importance of continued vigilance—on the part of America's industries, American labor, American consumers; and on the part of those they select to encourage a healthy, expanding economy by intelligent governmental action.

The need for responsible participation in a vital public issue is still strong. Already we are witnessing new currents of alarm among industries once unconcerned by this issue.

This underscores my belief that more and more industries, more and more workers, more and more Americans in all walks of life will be sharing our concern in the years just ahead.

Again, I thank you for this generous award, for your warm hospitality, and for inviting this expression of a firm and mutual faith.

Legislation Clarifying and Overcoming Certain Supreme Court Decisions Is Essential

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. CRAMER. Mr. Speaker, I am today introducing the fourth in a series of bills to clarify or overcome Supreme Court decisions in some of the more aggravating cases, specifically including bills dealing with the Mallory, Sullivan, Yates, and Nelson cases.

I have previously introduced H.R. 491 dealing with the redefinition of the term "organize" which was necessitated by the Yates decision which ruled, in effect, that it is legal to organize Communist cells with the avowed purpose of teaching and preaching the overthrow of the Government of the United States. This bill passed the House unanimously on final passage but failed in the Senate during the last session.

I also introduced H.R. 488 dealing with the Mallory case which had the effect of permitting a confessed Negro rapist to go free in Washington, D.C., by ruling his confession as inadmissible solely because the accused was held for 7½ hours between his arrest and arraignment—with no elements of coercion whatsoever present. My bill would make such admissions admissible in evidence.

In addition, I introduced H.R. 492 dealing with the Nelson case which invalidated the Pennsylvania State antisedition statute simply because the Federal Smith act, the antisedition statute, was enacted on a national basis, and despite the fact that nowhere did it state that it was the intention of Congress that the Federal act should supersede or preempt the State statute on the same subject matter. My bill would prevent such implied preemption by the Supreme Court in the future and is similar to H.R. 3 introduced by Mr. SMITH of Virginia.

Today, I introduced the fourth bill, dealing with the Sullivan case in which the Court ruled that gamblers could deduct from their income tax expenses incurred in carrying out their illegal operations, which, together with the Mallory case, gives the criminal licenses to commit crimes by stymying law enforcement efforts. My bill would eliminate this deduction.

It is my fervent hope that this Congress will more readily accept its responsibility in these fields of fighting communism and strengthening our criminal law enforcement than did the 85th Congress which failed to enact any of the first three bills, the fourth resulting from a subsequent ruling of the Court. As the ranking minority Member in the 86th Congress of the Special Subcommittee on Supreme Court Decisions, of the Judiciary Committee, a subcommittee that did much fine and constructive work in this field, it is my hope that our efforts will bear fruit this session.

American Public Opinion and Communism

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. JOHANSEN. Mr. Speaker, with so much evidence these days of superficial thinking and action relative to international communism, it is refreshing and heartening to receive an unsolicited and sensible appraisal of the Communist threat from a rank and file citizen.

Recently, I received such a communication from a constituent of mine in the Third District of Michigan, Mr. William Sweeney, of Hillsdale, Mich.

Under leave to extend my remarks, I include this letter from Mr. Sweeney:

HILLSDALE, MICH., *January 23, 1959.*

DEAR MR. JOHANSEN: One may wonder what the strange relationship developing between Red communism and American public opinion portends.

The wise poet, Alexander Pope, may have given the most revealing insight into that relationship:

"Vice is a monster of so frightful a mien
As to be hated, needs to be seen;
Yet seen too often, familiar with her face
We first endure, then pity, then embrace."

Accepting the assumption that communism is a great vice, many puzzling things become more clear. To name but a few: The willingness of communism to make use of the lesser vices when expedient, the similarly of Red slavery and white slavery, the spirit of clandestine conspiracy, the arrogance and impudence of its leaders, and its fever of hatred when rebuked by religious opposition.

Americans seem to be now in danger of entering into that second stage—that of pity in which our quasi-intellectuals entered long ago.

This "pity" would seem to be an emotional experience, perhaps a psychological mystery having to do with an affinity or merging of spirit.

This assumption would also serve to explain why realistic men whose work brings them into contact with organized vice or unlawful rackets have a better understanding of communism than do many bemused university professors.

It also provides or suggests the logical reasoning back of the present strategy of Russian communism toward America.

This strategy would appear to be a program of familiarity, of togetherness. They are saying, in effect, "have pity on us poor Russians; we need so much from you; we are trying so hard to be prosperous and unafraid like you; we need your understanding—have pity."

What is our answer? Our answer is unbelievable, but a matter of record. Our prospective presidential aspirants journey to Moscow for an understanding, which they must feel is necessary before they can announce their intentions.

Congress, by compelling a break in diplomatic relations with Soviet Russia, could counter this strategy and prevent the possibility of America taking that last and final step cited by Pope, that of embracement of communism.

But Congress may no longer have the will and courage to do this.

There are three facts concerning communism that seldom, if ever, are brought to the attention of the average American:

First, there is no warrantee from past world history that America could not fall victim to communism.

Second, triumphant world communism would look with favor upon the resettlement of two or more hundred million land-hungry people from Asia into North America.

Third, militant communism has acquired a near perfect psychological understanding of the American mass mind by patient investigation over a period of 40 years.

The amazing success of their massive controlled experiment upon 7,000 American prisoners of war in Korea alone gives the Communists a blueprint for action against the younger generation of Americans, if, indeed, it would not be effective against all Americans.

Sincerely,

WILLIAM SWEENEY.

Public Housing for the Aged: A First for Toledo, Ohio

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. ASHLEY. Mr. Speaker, with congressional hearings underway on the far-reaching housing bills which have been introduced in both the House and the Senate, I should like to call the attention of my colleagues a recent de-

velopment in Toledo, Ohio, which is especially timely and significant.

The Toledo Metropolitan Housing Authority, having long ago recognized the need for low-cost public houisng for our senior citizens, recently opened the first public housing development completed with Federal assistance, designed exclusively for elderly persons.

The immediate and great success of this project, known as A. Gideon Spieker Terrace, has led me to the conclusion that this type of housing should be included as part of the total public housing program for the country.

I should like to briefly describe the Spieker Terrace project.

The project consists of 50 dwelling units in 10 buildings—44 one-bedroom apartments for families and 6 efficiency apartments for single persons.

Persons living in the project are 65 years of age or older and are living on small incomes derived mainly from pensions.

The buildings are single story, brick veneer, ranch-style. They are especially designed to make life easier for the elderly, all walks being ramped to eliminate the hazards of steps to accommodate wheelchair users. The walks are all surfaced with rough concrete to prevent slipperiness.

The project is located on 2.64 acres of land adjacent to another public housing project of 384 units, occupied mostly by younger families with children. It is within two blocks of a regularly scheduled busline and near stores and shopping facilities. It is also near churches of various faiths and public recreation facilities.

A community building of 1,000 square feet is located in the center of the project and includes facilities for movies, game and hobby rooms, meeting rooms, and a general lounge.

There are two laundry rooms in the project with free washing and drying facilities.

During the designing and construction of the project every consideration was given not only to convenience for the elderly residents but for their safety.

Each fireproof unit is equipped with an electric range, an electric refrigerator, individual gas-fired space and water heaters, a bathtube with a built-in seat and wall-mounted handrail, as well as an emergency buzzer system for summoning help. There are electrical outlets on every wall to eliminate the need for hazardous electrical extension cords. The doors are extra wide to allow wheelchairs easy passage and, to protect pension checks from vandals, each unit has a special wall slot for mail delivery.

The estimated overall cost of this project is $606,830—a per unit cost of $12,136. Of the total cost, planning costs amounted to $39,871.

Annual interest on borrowed funds for the project amounts to $17,816.

Actual site acquisition, survey, construction, and installation of equipment amounted to $535,573, or a per unit cost of $10,711.

In view of the fact that the families who reside in this project are recipients of meager incomes—old-age pensions, social security, and other types of retirement benefits—the management operation of the project has been combined with the larger project adjacent to it to allow costs to be prorated on a unit count basis for both projects.

Although the management experience of this project is, as yet, limited, the financial balance is estimated at $35 per month average rental and $26 per month operating cost, leaving an anticipated net of $9 per month per unit.

The housing authority has estimated the operating cost probably will be much lower than the figures quoted since the project is much better constructed than other projects on which the estimate is based.

The tenant selection office for the dwelling units in the Spieker Terrace project has reported a waiting list of more than 100 eligible applicants.

The need continues to grow for such units as this because of the accelerated rate of retirement of persons who are able to care for their physical needs but whose incomes are restricted.

At this point I should like to include the following article from the Toledo Blade of Sunday, December 21, 1958, dealing with the reaction of the elderly residents of Spieker Terrace to the project:

GOLDEN AGERS PUT PERSONAL STAMP ON NEW HOMES—EXPERIENCE TOTALS NEARLY 4,000 YEARS

(By Elsie McKay Cram)

Spieker Terrace is less than 3 months old. But already this haven for senior citizens is as invitingly friendly as that mythical grandmother's house "over the river and through the woods."

And that's to be expected. For in it live 60 men and women whose combined homemaking experience totals nearly 4,000 years.

They are, in a sense, the elite of the city's retirees. From among hundreds of applicants, they were selected to become the pioneer residents of Toledo's first public housing for the aged.

"They're a wonderful group," said McClinton Nunn, Toledo Metropolitan Housing Authority director.

"And this is a wonderful place" appears to be the unanimous appraisal of the residents about their new domain.

LITTLE THINGS ADDED

Helping make this homelike atmosphere are not only the scientifically planned details built in by TMHA, but the little things added by the occupants.

The Christmas tree and lighted wreathes in the windows at Apartment 400, for example. They help make it home for Mr. and Mrs. William Pechikos.

So do the religious pictures on the walls, brought along to Spieker Terrace when the couple moved in last October.

Mrs. Pechikos sometimes is crippled with sickness, and climbing stairs is hard for her. Hence, she likes the one-floor plan of their apartment. The kitchen, too, is compact, requiring no wasted steps.

The master of the household, still a husky, active fellow at 75, is more enthusiastic than his wife about the apartment. He has only one complaint. He misses puttering around. Everything is so new, there's nothing to keep a Mr. Fix-It busy.

SUGGESTS GARDENS

Mr. Pechikos hopes that in any future senior citizens housing projects, TMHA plans will find room on the site for some small gardens.

"Not a big garden," he explained, "just a place where a fellow could keep busy putting in a few flowers and vegetables."

Down the road a bit, Mr. and Mrs. Lloyd Black have found their apartment a godsend, as Mrs. Black expressed it.

They came from a seven-room, two-story house in West Toledo, and possibly could afford more than the $52 a month rent they are now paying for their present one-bedroom quarters.

But Mr. Black is confined to a wheelchair as a result of a stroke. Before moving to Spieker Terrace, the couple were separated 8 months—he living in a rest home and she with a son. Both are in their seventies.

In some respects, the new apartment is just about perfect for the Blacks. It has no stairways, and the doors are wide, making it easy for Mr. Black to negotiate his wheelchair.

RAMPS FROM DOORS

Mrs. Black can push him outside for a stroll with ease, for the front and back doors have ramps leading to sidewalks.

In some respects, said Mrs. Black, the apartment could be improved. She suggested sliding instead of swinging doors on cupboards and utility rooms. There is little space in the pullman-like kitchens, and the doors, when open, tend to interfere with one another.

"But don't think I'm complaining," she hastened to add.

Mr. and Mrs. Leo Lassond are another couple tickled, as they said, to be chosen for Spieker Terrace. They lived in a second-story apartment before, where access to out-of-doors was down a long hallway and a flight of stairs.

Mrs. Lassond has a serious heart condition. As a result, she seldom got outside. Now, the curb is only a few steps away, and she gets out for a drive now and then.

The bathroom in her new home is extra special, Mrs. Lassond said, because it has a tub with a wall grip bar that makes it easy for her to take a bath.

Mr. Lassond is a retired factory worker who has discovered, due to his wife's health, that he can turn out as sparkling a family wash as any of the girls who use the community laundry room.

AUTOMATIC LAUNDRY

The automatic washers and driers, he explained, are just around the corner from his apartment, and can be used free of charge.

In the midst of the 50-unit project are six efficiency apartments, all occupied by persons living alone. Frances Smith moved into one of them 10 days ago. She pays $27 a month and says she couldn't beat it anywhere in the city.

For the $27, she has a large combination living-bedroom, kitchen with stove, refrigerator and plenty of cupboards, a linen closet and large clothes closet, and a buzzer arrangement in case she needs to summon help from neighbors. The rent includes all utilities, and the tenant has control over the thermostat.

Miss Smith was one of the founders of the Women's Advertising Club of Toledo, and formerly ran the public stenographic service in the Secor Hotel. With that busy background, she finds her new surroundings a bit quiet.

But, she said, she's about to take a new lease on life and start developing some hobbies in the new community recreation building just across the court from her apartment.

The Truth About the British Ambassador's Complaint Involving Contracts and the National Security

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. HOLLAND. Mr. Speaker, I have drawn to the attention of Mr. Leo A. Hoegh, Director of the Office of Civil and Defense Mobilization, the unreasonableness of the complaint by the British Ambassador insisting that since they are able to undersell the manufacturers of electrical goods due to their low income to the workers, that we should grant them the contracts anyway—even at the cost of unemployment to between 500 and 1,000 electrical workers.

I am hoping Mr. Hoegh will consult with our own Government instead of taking the dictates of a foreign government when he asks for advice in the placing of orders:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., January 30, 1959.

The Honorable LEO A. HOEGH,
Director of the Office of Civil and Defense Mobilization, Washington, D.C.

DEAR SIR: It is my hope that the petitions submitted to you by the national security committee and the transformer section of the National Electrical Manufacturers Association and by the General Electric Company regarding the threatened impairment of national security as a result of imports of large hydraulic turbine generators, large transformers and large electrical circuit breakers will be considered and decided entirely within the letter and spirit of the criteria expressed by Congress in the Trade Agreements Extension Act of 1958. I have noted the recent news stories and press comments which were published following your decision recommending that the hydraulic turbines for the Greers Ferry Dam in Arkansas be purchased from the Baldwin-Lima-Hamilton Corp., on national security grounds, instead from the English Electric Company which submitted the low bid. I have also noted that the British Ambassador promptly protested to the State Department that it is "a strange form of trade liberalization" to invite foreigners to bid and then tell them that the low foreign bid will not be accepted because of the national security interests of the United States.

In my opinion it is strange that the British Ambassador has so little regard for a decision of our Government regarding the national security interests of the United States. Last year when Congress was considering the Trade Agreements Act several representatives of foreign trade interests argued that the United States should not adopt a policy of restricting imports which threaten our national security. The foreigners, who naturally want unrestricted access to American markets, argued that such restrictions would be contrary to "liberal trade" policies. Congress rejected these arguments, and wrote into law specific criteria for protecting our national security interests when threatened by imports. I suppose it is the British Ambassador's duty to make a special plea for a British manufacturer who wants to sell his good to a United States Government agency. On the other hand, I hope you will regard it as your duty to carry out the policies of the United States, as prescribed by Congress and approved by the President last year.

As Secretary of State Dulles observed a few days ago, the United States is not the only country making certain exceptions and qualifications to the general principle of liberal trade. In fact, I believe the foreign trade policies of the United States are far more liberal than those of Great Britain.

I urge that the pending petitions dealing with the threats to our national security interests from imports of heavy electrical equipment be resolved not according to the desires of foreign suppliers and foreign governments, but in keeping with criteria set forth in the provisions of section 8 of the Trade Agreements Extension Act of 1958.

Furthermore, I want to urge that your decision on these petitions be made as promptly as possible. The petitions deal with problems of national security, but inevitably the economic welfare of the employees in the heavy electrical industry is also involved. We need a realistic Government policy to guide our Government procurement and we need it soon.

Sincerely yours,
ELMER J. HOLLAND,
Member of Congress.

The Biggest Carnival

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. KARTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Paul Pioneer Press of January 31, 1959:

THE BIGGEST CARNIVAL

The biggest and best frolic of them all is here, as the people of the city and surrounding territory, outstate Minnesota and visitors from over the Nation gather for the opening of the St. Paul winter carnival of 1959. This occasion makes St. Paul the winter entertainment capital of the Nation, proves that winter sports and contests are as popular as those of any traditional vacation season.

The old theme of the carnival, the warfare between Boreas, king of the north wind, and Vulcan, the fire king, will be unfolded once more as new generations of visitors, along with the older ones, thrill to the colorful drama of this festival of lights, this realistic drama based on legend and mythology. The audacity of Vulcan and his fellow conspirators is not limited to Boreas and his followers, however, for the fire king cares nothing of what people think of him, knowing well that he will eventually overcome the good-natured winter king, put his court to flight and seize his throne. But spectacular events attend the struggle between these titans before the warfare is over.

The parade of Saturday, led by Capt. Richard B. Laning, commanding officer of the atomic submarine *Seawolf*, during its 60-day submerged run last fall, is an early highlight of the festival, when gorgeous floats representing the area's industry, trade, culture, and history, pass through the streets. The torchlight parade, the earlier version of the first pageant, will perhaps draw even a greater attendance. The two parades' attractions vary from the antics of the clowns and other entertainers to the solemn reminders of the past and the bravery of the pioneers who founded the present State and city.

The coronations of both King Boreas XXIII and the carnival princess are occasions of lights, music and gaiety. Outstanding entertainment is presented in the auditorium. Talent, professional and local, will be on hand during the entire course of the carnival. St. Paul Musicians Association, Local 30, will again donate the services of its members for performances during the festival. Verne Rooney's orchestra will play for Boreas' coronation, and Ray Komischke's group for a high school dance in Hotel St. Paul Saturday after the parade.

The great outdoors, however, is the chief arena for those who have come primarily to participate in the winter sports or to constitute the galleries for these events. Skating, fishing for prizes, skiing contests, dog races are on the agenda at this yearly assembly. Outdoor square dancing is offered in a blocked off area of a downtown street. Tobogganing sliding at the State Capitol grounds is provided as in other years. And for those who are interested in prizes, there is the treasure chest hunt sponsored by the St. Paul Dispatch and Pioneer Press.

The time is here for the major national sports and entertainment feature of the winter season. The success of the gathering may partially depend on the weather—on whether Boreas can summon sufficient snow to give the setting its usual luster and magic. But the spirit is what counts. It has always been merry at carnival time, a bubbling over of good nature in the games and amusements of our invigorating climate.

"Repaying the Federal Government Through Taxes on Their Increased Incomes"—Missouri Veterans' Education Director Urges GI Educational Benefits for Younger Veterans

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mrs. SULLIVAN. Mr. Speaker, we are all aware of the tremendous good accomplished for the entire country, as well as for the young men and women who received the benefits directly, as a result of the educational opportunities provided under the World War II GI bill of rights and the Korean war GI bill.

Educational benefits have not been provided for veterans who entered the service after February 1, 1955, although many bills have been introduced since then to revive this very successful program of educational and vocational training.

Paul S. Smelser, director of veterans' education for the Missouri Department of Education, recently wrote me a very interesting letter on this subject, pointing out, among other things, that the veterans who participated in the previous programs have "attained professional, educational, and vocational objectives that have increased their ability to contribute to the economy, the general welfare, and the defense of our Nation. They have acquired greater earning power, and they are now repaying the Federal Government through taxes on their increased incomes. There is every reason to believe that the cost of an

extension of these programs would be repaid in the same manner."

Mr. Speaker, the letter from which I have quoted is worth reading, as follows:

STATE DEPARTMENT OF EDUCATION,
DIVISION OF PUBLIC SCHOOLS,
Jefferson City, Mo., January 26, 1959.

Hon. LEONOR K. SULLIVAN,
House of Representatives,
House Office Building, Washington, D.C.

DEAR MRS. SULLIVAN: An increasing number of Missouri veterans are inquiring about the possibility of legislation that would provide education and training assistance for them. As you know, these men and women who entered the military service since February 1, 1955, have been denied the assistance granted to veterans by Public Law 550, 82d Congress. We believe that legislation to extend similar educational benefits to these veterans is worthy of careful consideration.

The interruption of the education of these men and women because of their service in the Armed Forces has resulted in a great loss to them individually. It has also resulted in a great loss to this State and to this Nation. These losses can be partially or fully restored by the enactment of an adequate educational and vocational assistance act.

The education and training assistance programs that have been granted to veterans since World War II have paid generous dividends. The veterans who participated in these programs have attained professional, educational, and vocational objectives that have increased their ability to contribute to the economy, the general welfare, and the defense of our Nation. They have acquired greater earning power, and they are now repaying the Federal Government through taxes on their increased incomes. There is every reason to believe that the cost of an extension of these programs would be repaid in the same manner.

We have been informed that several bills are being introduced that would grant educational and vocational assistance to veterans for so long as compulsory military service is required. We respectfully request your careful consideration of these bills.

Please let us know if we can be of help to you at any time in furnishing you with information regarding education and veterans in Missouri.

Sincerely,

PAUL S. SMELSER,
Director, Veterans Education.

Luzerne County (Pa.) Medical Society Honors Five Doctors

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader Evening-News of January 13, 1959:

In honoring Dr. Charles Shafer of Kingston, Dr. Peter Mayock of Wilkes-Barre, Dr. M. C. Rumbaugh of Kingston and Dr. George Baskett of Montana, formerly of Retreat, for more than 50 years of service each to the public, and Dr. A. W. Grover of Kingston as the General Practitioner of the Year, the Luzerne County Medical Society voices the sentiments of the community. Greater Wilkes-Barre shares medicine's high regard for these men as citizens and neighbors as well as in their professional capacity.

So many honors have come to Dr. Shafer in the course of his long career that it is like gilding the lily to add to the list. A native of Williamsport, a World War veteran and a fellow of the American College of Surgeons, Dr. Shafer has held such offices as president of the Federation of State Medical Boards of the United States, chairman of the Pennsylvania Board of Medical Education and Licensure, president of the Luzerne County Medical Society, president of the Kingston Board of Health, director, staff president and chief surgeon of Nesbitt Memorial Hospital and chairman of the Wyoming Valley Chapter of the American Red Cross. He has served as president of Wilkes-Barre Kiwanis and commander of Black Diamond Post of the American Legion and has been a prominent figure in the Masons and other fraternal bodies. It is an amazing record for an individual to compile.

Dr. Mayock, a native of Miners Mills and a resident of Wilkes-Barre, by coincidence, launched his career in Kingston in 1909. A nationally known urologist, he holds fellowships in the American College of Surgeons and the American Urological Society. He also is a diplomate of the American Board of Urology. Apart from his specialty that has brought him such renown in the profession and outside it, Dr. Mayock is known widely for his contributions to the field of social hygiene where he is credited with a great deal of pioneering. As first chief of the State Genito-Urinary Clinic, he led the successful fight locally against syphilis and other social diseases, giving Wilkes-Barre the lowest incidence of any city in Pennsylvania. He also served as chief of the urological department at Mercy Hospital and consultant at other institutions. It would be difficult to estimate the indebtedness of the community to him for service beyond the call of duty.

Dr. Rumbaugh, a native of Thompsontown and a veteran of the First World War, came to Kingston in 1911 after preparing for teaching and business careers and actually entering the employ of the Lackawanna Steel Co. at Buffalo. The steel industry's loss was medicine's gain, for he has been an outstanding member of the profession which has conferred on him its highest honors. He not only is a member of the International College of Surgeons, but its board of examiners in general surgery, and the board of qualifications of specialists in surgery have designated him a certified fellow. He also is a fellow of the American College of Surgeons. Dr. Rumbaugh has been chief of surgery at Wilkes-Barre General Hospital and founder of the clinic that bears his name. Friends know and respect him also as a trustee of the Methodist church and teacher of a men's Bible class, an extracurricular activity that provides an index to his character.

The inclusion of Dr. Baskett on the list of members of the profession to be honored recalls his service at Retreat State Hospital where he was superintendent for 22 years and where his wife, Dr. Olive Baskett, was a member of the staff. The bridge, crossing the river at Retreat, is one of the many monuments to his zeal and foresight. Dr. Baskett devoted his entire career to institutional work, being identified with the State Mental Hospital Service of Minnesota before coming to Pennsylvania. Dr. Baskett's professional skill was matched by his enthusiasm and his candor. Dr. Baskett through the years gave unstintingly of himself to the phase of medicine to which he dedicated his life.

Dr. Grover, who will be honored as the practitioner of the year, also qualifies for recognition as a veteran physician and surgeon. A native of Hobbie, he came to the West Side 60 years ago and is a fellow of the American College of Surgeons. He is a past president of the Luzerne County Medical Society and is a director of Nesbitt Memorial Hospital as well as a member of the staff since it was organized in 1912. He also has served on the staff of Wilkes-Barre General Hospital and as director of postgraduate work offered by the Pennsylvania Medical Society. He is widely known for his extracurricular activities, particularly for his long service on the board of education in Kingston both as a member and president. He also was identified with the draft boards in both world wars.

In brief, these are the records of the men to be honored at the annual dinner of the medical society at Hotel Sterling on January 21. They are impressive, to say the least.

Sound and Specific

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. VANIK. Mr. Speaker, since January 12, 1959, when the Honorable Michael V. DiSalle took office as Governor of the State of Ohio, it has become apparent that a new era of vigorous leadership has commenced in Ohio's affairs. Governor DiSalle has pledged to increase Ohio's economic expansion and at the same time take care of the genuine needs of its citizens. He proposes to undertake this program with no new tax burdens. In his vigorous program, Governor DiSalle has the solid support of the citizens of the State.

The following editorials indicate the widespread appreciation of the Governor's program:

[From the Cleveland Press, Jan. 28, 1959]

SOUND AND SPECIFIC

In his first major policy statement since he took over as Governor, Mike DiSalle made it clear that (1) he's not soft on labor racketeering and (2) he's not a wild spender.

DiSalle punched up these points in his message to the legislature with special emphasis and for a special reason.

His opponents spread plenty of scare stories during the campaign about how DiSalle would take his orders from the labor bosses, and spend the State into ruin.

This is a standard line, including the drawing of a gloomy parallel with Michigan, where some of these frightful things have actually happened under a Democratic administration.

So DiSalle naturally was anxious to dispel any lingering doubts about where he stands, and how he intends to run the State.

But his comments went reassuringly beyond vague statements of principle.

On labor racketeering, he urged State laws to trap the crooks and hoodlums who've wormed their way into the labor movement.

This is a refreshingly direct approach to a responsibility which less courageous State politicians have been happy to push off on the Federal Government.

On money, the governor realistically concluded that the State is in a pinch. He'll deal with financial problems more thoroughly next week.

But meanwhile, he specificially (and wisely) ruled out a State income tax.

One of Ohio's best selling points in attracting new industry is that it doesn't have an income tax.

And cities like Cleveland which have resisted the temptation to adopt this deceptively easy way to gather in more money can make full and persuasive use of the argument.

DiSalle's comments on these two subjects not only answer his critics, but give further promise of an administration that will offer fresh vigor and fresh ideas, liberally sprinkled with courage and commonsense.

[From the Cincinnati Post and Times-Star]

DiSALLE AND THE CITIES

Governor DiSalle talked sense about city-State relationships and problems in his message to the legislature.

The Governor noted the current interest in adoption of a State income tax, then put his foot down squarely on the idea. If the State did turn to this tax, which it has a right to impose under the constitution, the levy would be too disruptive, in the Governor's view, of the balance in the tax field.

The Governor, whose home city of Toledo was the first in the State to use the payroll (income) levy, is aware of the chaos that would result if the major municipalities were suddenly forced to abandon this tax. Even though the State is under constitutional edict to return half of income tax revenues to local governments, the consequences would be serious to all municipal budget-makers.

The Governor's second point is a corollary to the first. Local governments have complained justly from way back that the legislature had the unhappy habit of loading them with new duties, then letting the local officials worry about finding the money.

"We must either give the (local governments) the right and authority to finance their own governments, or to spell out the services rendered by local governments on behalf of the State as a whole," the executive said.

The meaning of this language is plain. It should not be misunderstood even by some of the veteran legislators who look upon State-collected taxes as private State money to be doled out frugally to hat-in-hand mayors.

[From the Columbus Citizen, Jan. 28, 1959]

DiSALLE'S PROGRAM

Governor DiSalle pledges:

"We will demonstrate beyond a scintilla of doubt that efforts have been and will be made to eliminate duplication, waste and extravagance, and that the sums of the financial program are those required to take care of the genuine needs of Ohio. * * *

"It is our intention to proceed with a minimum of imposition on our citizens and the continuance of the conditions which have made Ohio's industrial climate the envy of many of its sister States."

With these prefacing statements, the new Governor spelled out to the legislature his program for the next 4 years—a commonsense, practical program that if accomplished will bring reforms sorely needed by the taxpaying public for many, many years.

In his program, that could become a monument to him if carried out, the 'round-the-clock working Governor recognizes the State's perilous financial condition.

And he promises that the program "will be minimal in the need for funds and these funds can be considered in the nature of investments which will produce returns that will help spread and meet these costs as far as the future is concerned."

DiSalle sets out concrete proposals that can be accomplished only by his department heads and the Ohio legislature working as a team.

Among them are:

Increase Ohio's economic expansion.

An aggressive policy to combat the long-neglected water and air pollution.

Encouragement of labor and management to settle their differences without resorting to strikes.

Break up labor racketeering.

Provide for payment of supplemental unemployment benefits.

Reorganize workmen's compensation procedure for better benefits to people hurt on the job.

Put the highway program on a pay-as-you-go basis instead of spending millions for needless interest payments.

Reform the utility laws to give the consumer a better break.

Create a civil rights commission for the protection of all persons. Overhaul the stumbling mental hygiene system.

Establish old-age pensions on a basis of practicality instead of rigid, artificial ceilings.

Reestablish the relationship between local governments and the State.

Strengthen the criminal code with the intent of bringing the big shots to bay instead of the small fry.

Abolish capital punishment.

Fewer and better-paid State employees, more efficiency.

Some of these proposals will be bitterly fought. Some of them will be lost.

Whether the earnest, sincere Governor can accomplish his goal in the main is a matter for time to tell.

The taxpayers wish him well on the huge task he has outlined.

Editorial Freedom for the Broadcasters

EXTENSION OF REMARKS

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1959

Mr. MACK of Illinois. Mr. Speaker, the Illinois Broadcasters Association recently adopted unanimously a statement dealing with the very important subject of editorial freedom for the broadcaster. Since this is a subject which interests all of us, I include it here under leave to extend my remarks:

Whereas an editorial or editorializing as defined by dictionary is as follows:

Editorial: An article as in a newspaper presenting the opinion or comment of the periodical; an article in a newspaper, explicitly stating opinions of the editor or publisher.

Editorializing: To set forth one's position or opinion on some subject in, or as if in, an editorial; to express editorial opinions into (a newspaper article, etc.); and

Whereas from a practical standpoint in a definition of an editorial the broadcaster assumes the role of a newspaper publisher; and

Whereas actually since only ownership of the firm or corporation holding the license is responsible to the FCC in case of failure to live up to the responsibility of a broadcaster under the terms of its license, therefore, the owner of the firm or corporation must be the one responsible for editorial policy through its agents or otherwise; and

Whereas by certain utterances of FCC commissioners and important persons in the broadcast industry, station operators are continually urged to editorialize; to establish and maintain regular editorial broadcasts and policies; and

Whereas by the very nature of an editorial, the great preponderance of editorials should be advocating or setting forth the station's position for or against a certain subject matter; and

Whereas by certain utterances of the FCC in the past, it has been said in substance that " * * * the licensee must follow a reasonable standard of fairness in the presentation of the issues in the controversy" (and to this we agree) but—

Whereas the Commission has also said "* * * that he has an affirmative duty to seek out, aid and encourage the broadcast of opposing views by responsible persons" (and to this we disagree).

This dictum, while sounding good in substance, is unsound and impractical. If carried to the strict letter and interpretation, this makes practically impossible an editorial policy of force and effect; and

Whereas it is the consensus of opinion of the Illinois Broadcasters Association that the burden of seeking out and encouraging the broadcast of opposing views by responsible persons puts an undue hardship on the broadcaster for the reason that (1) in many instances there is no organized opposition of responsible person in the area in which the broadcaster operates willing to oppose the broadcaster's editorial point of view; and (2) the burden on the broadcaster of determining that the person applying for time to present the opposite point of view is a responsible person is an unnecessary and unrealistic position in which to put the broadcaster; and (3) that should the broadcaster determine that the applicant is not a responsible person, such person requesting the time could go into court claiming damages, requiring the broadcaster to prove irresponsibility, all of which complicates the matter of editorializing to such a degree that it makes it impractical and unrealistic for a broadcaster to entertain and pursue a serious editorial policy in conformance to present Commission rules, lest his license and livelihood be placed in jeopardy; and

Whereas practically any person who has the funds to do so can buy time from the broadcaster to say most anything he desires subject to legal limits and FCC rules, yet it is illogical that the broadcaster himself is not presently under responsibility to go seek out and sell an ad to someone else to present another point of view, nor can he present such view himself; and

Whereas from a practical standpoint, anybody but the broadcaster can have his opinion published under the strict legal interpretation of the present rules; and

Whereas the broadcaster is in danger of violating a rule of the Commission unless, when he expresses an opinion he must affirmatively seek out a "responsible" someone to express an opposite point of view; and

Whereas in Illinois today, there are several important issues before the voters involving the subjects of education, hospitalization, welfare, and judicial reform, all of which the broadcaster should be free to explain and take a position without fear of the FCC or the Federal Government: Now, therefore, be it

Resolved, That the NAB, representing the broadcast industry, be hereby urged and requested by unanimous vote of the Illinois Broadcasters Association to appoint a representative industry committee to confer with the FCC, as well as with Members of Congress and other Federal Government officials in an endeavor to get established a commonsense editorial policy for broadcasters in substance as follows:

"That so long as the broadcaster follows a reasonable standard of fairness in the presentation of an editorial or an issue that

the broadcaster may approve or oppose by editorial; and

"So long as the editorial is designated an editorial or opinion of the broadcaster, both before and after the editorial; and

"That when such editorial is so defined, it shall not be necessary for the broadcaster to affirmatively seek out a responsible person to present the other point of view, but when opposition desires to be heard either in writing, properly identified, or by personal appearance, it shall be the duty and obligation of the broadcaster to provide equal time and facilities for such opposing views."

The Andrija Artukovic Case

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. UTT. Mr. Speaker, on Friday, July 29, 1955, I inserted in the CONGRESSIONAL RECORD a speech of mine entitled "The Persecution of Andrija Artukovic." This was followed by an article written by Rev. M. D. Forrest, M.S.C., in the CONGRESSIONAL RECORD of June 17, 1958, volume 104, page 99, involving the same subject. Again, on August 25, 1958, page A7763, there appeared an additional article by Reverend Forrest. On the same date, at page A7843, I inserted a letter which I had written to the Honorable J. M. Swing, Commissioner of the Immigration and Naturalization Service, which resulted in the correction of misinformation given to the public by that Department. Now I am asking unanimous consent to insert in the Appendix of the RECORD a portion of the decision of the Federal District Court in Los Angeles disposing of the extradition proceedings brought by the Government of Yugoslavia against Andrija Artukovic which completely exonerates him of the charges made by that Government, beginning with rule of probable cause:

The Supreme Court of the United States in *Collins* v. *Loisel*, 259 U.S. 956, laid down the rule to be followed in extradition cases. That Court said:

"It is not the function of the committing magistrate in foreign extradition proceedings to determine whether or not the accused is guilty, but merely to decide whether or not there is competent evidence which, according to the law of the surrendering State, would justify his apprehension and commitment for trial if the crime had been committed in that State."

The law to be applied is therefore the laws of California. See for example, *Cleugh* v. *Strakosch*, 9 Cir. 1940, 109 F. 2d 330, 333; *Charlton* v. *Kelly*, 1913, 229 U.S. 447, 457, 33 Sup. Ct. 945, 57 L. Ed. 1274; *Curreri* v. *Vice*, 9 Cir. 1935, 77 F. 2d 130.

The U.S. Court of Appeals for the Ninth Circuit in *Cleough* v. *Strakosch*, supra, said:

"The phrase 'sufficient cause' in sections 871 and 872 of the Penal Code, means reasonable or probable cause. This appears in section 1487 of the same code, which provides that where 'a party has been committed on a criminal charge without reasonable or probable cause, he shall be released on habeas corpus. * * *' Evidence showing reasonable or probable cause to believe the accused guilty is sufficient" (citing cases).

The district court of appeals of California in *Ex Parte Martinez*, 98 P. 2d 528, held:

"The term 'sufficient cause' within the statute providing that a defendant can only be held to answer when it appears from the evidence that there is sufficient cause to believe that defendant committed offenses charged, means the same as 'reasonable and probable cause,' and hence a commitment based entirely on hearsay or incompetent evidence is unauthorized" (citing 7 Cal. Jr., sec. 120, p. 984).

Therefore, it becomes a question of fact in this case whether the evidence presented is sufficient to show reasonable and probable cause to believe that the defendant is guilty of at least one count of the amended complaint in extradition. Inasmuch as it is a question of fact in each case no useful purpose would be served by citing and quoting from cases determining that fact under other evidence. It is so elemental that where evidence is taken in any proceeding the weight to be given the evidence is for the finder of fact that citation of authorities is unnecessary.

Murder is a crime in both Yugoslavia and the United States. The definition of murder is substantially the same in both sovereigns. Section 187 of the California Penal Code defines murder as "the unlawful killing of a human being, with malice aforethought." Both Yugoslavia and California makes one a principal if he commits the offense directly or aids, abets, advises, or encourages the commission of the crime. Murder is a crime coming within the provisions of the treaty as a basis for extradition.

Absolutely no evidence was presented that the defendant himself committed murder. The complainant relies entirely upon their evidence that members of the Ustasha committed murders upon orders from the defendant. There is no necessity to review all of the evidence in this opinion. Only portions will be referred to for illustrative purposes.

The Ustasha at one time was a political party in Croatia. They ardently supported an ideology of a separate state for the Croatians. When political parties were abolished in Yugoslavia the Ustasha continued to function secretly and when the Germans and Italians commenced invasion of Yugoslavia during World War II came out into the open and proclaimed an independent State of Croatia.

On April 15, 1941, one Eugen Kvaternik was appointed by Dr. Ante Pavelic, the "Poglavnik" or "head man" of the independent State of Croatia, as Ustasha Commissioner for Public Order and Security in Zagreb with directions that all organs of police, gendarmerie, etc., must execute his commands and orders and act in compliance with his instructions.

On April 16, 1941, there was published in the Narodne Novine, the official paper in the independent State of Croatia, an order of the Poglavnik appointing the defendant commissioner of the entire public security and internal administration. The following day on April 17, 1941, the order appointing defendant Minister of Internal Affairs was published.

A number of changes were made in the ordinances and decrees as to the internal functions of the Ustasha. At one time the Ustasha was accountable only to the Poglavnik. At other times it was placed under the Minister of Internal Affairs. At all times Eugen Kvaternik remained at the head of the Ustasha. Mr. Kvaternik was a very ambitious man.

The Poglavnik by ordinance at one time required compulsory sojourn in collective and working camps of any persons dangerous to the public order and security or who might menace the peace and tranquility of the Croatian nation. The Ustasha was authorized to establish the camps and to determine who was to be interned with no appeal or complaint to any court. These ordinances provided for the internment of the entire family of anyone coming within the ordinance. Even before the issuance of such ordinance people were being interned by the Ustasha in Crotia.

The evidence is conflicting as to the orders made with reference to the Serbs, Jews, and gypsies. Some of the orders were for internment and deportation. Some of the evidence shows alleged verbal orders for the killing of the enemies of the Independent State of Croatia.

It was common practice during World War II to intern anyone who was even suspected to be an enemy or possible enemy of the government in power. Our own Government saw fit to intern all Japanese on the west coast, men, women, and children of all ages, immediately following Pearl Harbor.

The evidence is convincing that the ones named in the complaint with committing the murders called on the head of the Ustasha, Mr. Kvaternik, in Zagreb, on many occasions. The evidence is light that the defendant met with these men.

All of the evidence presented by the complainant is in narrative form. The affidavits were signed by the affiants but very evidently are not in their words. They are someone's conclusion as to what the testimony covered. A layman is often prone to sign anything presented if prepared by a court, an attorney or notary public without proper regard to its accuracy.

The same language appears time after time in the affidavits. The words "so-called Independent State of Croatia" appears in affidavit after affidavit. I doubt very much that this could be a coincidence.

There was no opportunity for this court to observe the demeanor or possible motives of these witnesses. I do not have even the words of the witnesses to judge their meaning or whether the answers were induced by the questions asked. I am presented with someone else's conclusion of what the testimony was. This is very unreliable evidence which can be given little weight.

Much of the evidence presented by the complainant is hearsay. Hearsay evidence, under decisions of the higher courts, may be admissible in extradition cases but the weight to be given the evidence is for the committing magistrate. For example many of the affiants stated they knew a certain individual was dead because it was well known in the village; or because so-and-so told him or because "he was taken away and I never saw him again."

It is also apparent that the affidavits were drawn to incite passion and prejudice. They constantly refer to children of tender years, newborn babes, aged persons, cruel and inhuman treatment, and so forth. If a murder is committed the age or sex of the victim should make no difference in the action taken. This evidence may have been offered to show it was not a political offense which is one of the defendant's affirmative defenses. This subject will be covered later.

The complainant attempts to lend credence to the affidavits by showing that they were taken in a court with a judge presiding. An examiner or investigating officer was present to conduct the examination with a registrar or recorder to report the proceedings. But the testimony of the witness is not furnished. In only a couple of instances is a question and answer given. The evidence on behalf of the complainant resolves itself into ex parte affidavits.

The defendant presented live witnesses who were subjected to vigorous cross-examination. In certain instances the live witnesses testified that the affiants were not telling the truth. No attempt was made to rebut this evidence. The complainant presented no rebuttal witnesses nor asked for time to secure rebuttal evidence. The live

witnesses were in the United States and under no fear, inducement, or compulsion to testify falsely. History indicates this might not have been true in Yugoslavia at the time the evidence was taken.

One must also keep in mind that the events to which the witnesses testified took place at least 10 years before the testimony was taken. The passage of time tends to reduce the weight which may be given to evidence. Some of the affidavits must be eliminated from consideration because the affiants testified to matters of which they could not possibly have personal knowledge. Many of these affiants testified that certain people were loaded on trucks or railway cars, taken to such and such a camp and there killed. They could not know where they were taken or what happened to them. Such testimony stretches the credulity to the breaking point.

Most of the affidavits state that the ones committing the atrocities were Ustasha. Sometimes they were well-known members of the Ustasha. Sometimes they were in Ustasha uniform. Sometimes they were Ustasha in Moslem attire. Sometimes they were Ustasha wearing a fez. Sometimes they were Ustasha in ordinary attire. But always they were Ustasha.

No evidence was given as to how the Ustasha could be identified. They apparently wore no brands or means of identification. They were of no special color or distinguishing characteristics. One might try to identify a Democrat or a Republican by their appearance, but it certainly would not be reliable enough to act upon in any important matter.

Some of the complainant's witneases testified they called on the defendant with reference to the treatment of the Serbs, Jews, and Gypsies. Some of defendants' witnesses testified they also called upon the defendant. Again the evidence is in irreconcilable conflict. The complainant's witnesses testified the defendant told them his orders were being obeyed. The defendant's witnesses testified that the defendant told them to see the man upstairs, Mr. Kvaternik, that there was nothing he could do. Where does the truth lie? I believe the live witnesses when they said the defendant told them there was nothing he could do. Mr. Kvaternik was theoretically under the Minister of Internal Affairs during part of the period involved. I am convinced that in fact Mr. Kvaternik was taking orders from no one.

The pro forma use of the name of a minister in such orders and decrees does not meet the quantum of proof necessary to show reasonable and probable cause to believe the minister is guilty of participating in crimes committed by others in his department. To so hold would probably result in failure to find any candidate who would accept the responsibilities of such a position if he was going to be held to answer for crimes committed by his underlings without more definite proof that they were acting under his orders. Such proof is lacking in this case.

I am cognizant of the proof necessary to hold a defendant for extradition. In *Glucksman* v. *Henkel* (221 U.S. 508, 522, 55 L. Ed. 830, 31 S. Ct. 704), the Supreme Court said:

"It is common in extradition cases to attempt to bring to bear all of the factitious niceties of a criminal trial at common law. But it is a waste of time. For while, of course, a man is not to be sent from the country merely upon demand or surmise, yet if there is presented in somewhat untechnical form according to our ideas, such reasonable ground to suppose him guilty as to make it proper that he should be tried, good faith to the demanding government requires his surrender. * * *"

And in *Fernandez* v. *Phillips* (268 U.S. 311, 312, 69 L. Ed. 970, 972, 45 S. Ct. 542), Mr. Justice Holmes, speaking for the Supreme court, said:

"Competent evidence to establish reasonable grounds is not necessarily evidence competent to convict. * * *"

I am convinced that Mr. Kvaternik usurped all powers over the Ustasha and that the defendant had little or none. Mr. Kvaternik even aspired to be Poglavnik and did anything he thought necessary to assert his power and gain his ambitions.

Upon consideration of all the evidence presented and the authorities cited by both parties I can reach but one conclusion. The complainant has not shown by sufficient competent evidence that there is reasonable or probable cause to believe the defendant guilty of any of the crimes charged. I hope I do not live to see the day when a person will be held to answer for a crime in either the California or U.S. courts upon such evidence as was presented in this case on behalf of the complainant. It would be mere speculation or surmise to find the acts charged were done upon orders from the defendant.

AFFIRMATIVE DEFENSES—POLITICAL OFFENSE

It is probably unnecessary for me to determine any affirmative defenses in view of my findings on probable cause. However, the issue was presented and the parties are entitled to my findings.

One of defendant's affirmative defenses is that the crimes, if any, are political in nature and not extraditable under the treaty. I do not deem it necessary in this case to go into the question of extradition for so-called war crimes.

Article VI of the treaty involved provides:

"A fugitive criminal shall not be surrendered if the offense in respect of which his surrender is demanded be of a political character, or if he proves that the requisition for his surrender has, in fact, been made with a view to try or punish him for an offense of a political character."

"Political character" or political offense has not been too satisfactorily defined. Generally speaking it is an offense against the Government itself or incident to political uprisings. It is not a political offense because the crime was committed by a politician. The crime must be incidental to and form a part of political disturbances. It must be in furtherance of one side or another of a bona fide struggle for political power.

The evidence presented, as well as historical facts of which I can take judicial notice, proves that for years the peoples of the Balkans were in disagreement. Without any elections or choice of the Croations following World War I Croatia was made part of the Kingdom of the Serbs, Croats, and Slovenes. This government was controlled by the Serbs which imposed tremendous burdens upon the Croats. The Croats wanted an independent government or at least representation in the Sabor or Parliament. In 1928 Croatia held an election and elected delegates to the House of Parliament in Belgrade. Upon their arrival the Serbian leader of the House proceeded to shoot the delegates. Civil war nearly ensued and in 1929 King Alexander dissolved all political parties. The Croatians never forgot their ideal of an independent state and when the Germans and Italians invaded Yugoslavia during World War II they had their first opportunity to set up their own government.

On April 10, 1941, the Croatian leaders declared their independence and started to establish their own government. This was opposed by the Serbians and others and civil strife was rampant.

The leaders of the Independent State of Croatia called upon the Croats to support the new government and took what steps it considered necessary to further its struggle for political power. The evidence disclosed that some villages, where the new government was unable to furnish protection, established their own militia for self-protection. Bands from the new government would come in and take control only to be ousted by bands from their opponents. Some villages changed hands several times a day. These bands were not organized armed forces but in many instances ordinary civilians. Many lives were taken. Fractions of the Chetniks and Partisans were doing everything they could to defeat the aims of the new government.

Conditions were such that even the complainant's own witnesses referred to the occupation by Italian troops as a "liberation." It was better to be under the control of the organized troops of Italy than continue the internal strife.

Complainant contends I must ignore completely the findings of Judge Hall and the opinion of the U.S. Court of Appeals on the question of whether the crimes charged are of a political nature. The Supreme Court of the United States vacated the judgment of the Court of Appeals and remanded the case for a hearing under section 3184. Undoubtedly these decisions are not binding upon me as they have been vacated. However, they certainly are entitled to my consideration and are persuasive as far as the question of law is concerned.

In my opinion the order of the Supreme Court means nothing more than that the question of whether the crimes charged are of a political character cannot be determined upon habeas corpus but must be determined at a hearing under section 3184.

The Supreme Court in *Ornelas* v. *Ruiz* (161 U.S. 502, 509), stated that whether the crime charged is of a political character is "* * * a question of mixed law and fact, but chiefly of fact."

I hereby adopt the opinion of the U.S. court of appeals in *Karadzole et al* v. *Artukovic*, supra, and the findings of Judge Hall in the habeas corpus action as my opinion and findings insofar as the question of law is concerned.

From the evidence presented I find as a fact that the crimes charged in all counts of the amended complaint are political in character.

JURISDICTION

No question has been raised as to my jurisdiction to hear and determine this extradition matter. I hereby take judicial notice of the order of the district court appointing me as U.S. commissioner for this district which includes the power to conduct hearings where persons are sought to be extradited by foreign governments, and to do all acts and things which may be necessary in connection therewith, and as more particularly described in section 3184, title 18, United States Code.

IDENTITY OF DEFENDANT

No contention has been made that the defendant before me is not the Andrija Artukovic named in the amended complaint on extradition. The evidence presented conclusively proves that the defendant before me is the person named in the amended complaint.

FINDINGS OF FACT

I

That I have jurisdiction to hear and determine this case.

II

That the defendant before me is the person named in the amended complaint on extradition.

III

That the complainant has not proven by sufficient competent evidence that there is reasonable and probable cause to believe the defendant guilty of any of the crimes charged in the amended complaint on extradition.

IV

That the crimes charged in the amended complaint on extradition are of a political character and under article VI of the treaty are not extraditable.

CONCLUSIONS OF LAW

I

That the demand of the complainant for the surrender of the defendant should be denied for failure to prove by sufficient competent evidence that there is reasonable and probable cause to believe the defendant guilty of any of the charges in the amended complaint on extradition.

II

That the crime charged in the amended complaint on extradition are of a political character and the surrender of the defendant should be denied.

ORDER

It is hereby ordered, adjudged, and declared that the demand of the complainant for the surrender of the defendant is denied and the bail bond of the defendant in the habeas corpus action should be exonerated.

Dated at Los Angeles, Calif., this 15th day of January A.D. 1959.

THEODORE HOCKE,
U.S. Commisisoner.

More Jobs

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, at a time when several million of workers and their families are in distress and great need, the Eisenhower Administration continues to push curtailment policies and bitterly opposes legislation to alleviate this suffering or to reverse the backward economic trend.

Under the guise of economy, the President and White House advisers continue to push policies that result in the tragic waste of real wealth that comes with idle men, idle factories, and in lost educational opportunities and public health and welfare services.

This may create the better business climate envisioned by White House and NAM visionaries, but in addition to bringing widespread human suffering it is leading the Nation toward disaster.

Mr. Speaker, the question of jobs and the narrow, blind, and selfish policies of White House advisers and the NAM is vivdly portrayed in an editorial in the current issue of "The Machinist."

Under leave to extend my remarks, Mr. Speaker, I include herewith this editorial on "More Jobs."

MORE JOBS

Respectfully, of course, we'd like to suggest that President Eisenhower crate up the economic theorists now working at the White House and ship them to the National Association of Manufacturers—collect.

The current crew of White House theorists is as woolly as they come. In our opinion, they don't know the first thing about the American system or what makes it prosperous.

Obviously, their learning comes from books written at least a half century ago and not from events. They may have read the words, but they don't get the message. The NAM News may be their bible, but they lack the simple instinct for economic survival that saves most businessmen and union members.

The White House theorists have discovered that business must make a profit to survive. But they haven't the foggiest idea of what it takes to keep our shops and factories busy.

They have read that our population is expanding, that the labor force is growing, that we need more and more jobs. But they don't know what creates jobs.

The theorists say the basic factor is high profits, profits that can be used to build new factories and buy new machine tools. That was true a half century ago when the big problem was production. Today profits are only part of the picture. Today business cannot or will not expand its plants or create new jobs unless and until the demand for its products increase. Today the big problem is selling what we produce.

Last year's recession wasn't caused by any lack of production. Men weren't laid off because we didn't have enough factories or enough machine tools. We had a recession last year because the customers didn't have the money to buy all the goods we were producing. The customers ran short of purchasing power.

Anybody who knows anything about the American system knows that unless the American people have the money in their pockets to buy the goods, the factories lay off and the farmers take a licking.

Yet, on the advice of economic theorists and a few financiers who lack that instinct for self-preservation, the President is saying we should go easy on wage increases; he is talking about tax loopholes to raise profits.

Union members had better negotiate more purchasing power or we'll soon have another recession that'll make last year's look like prosperity.

Caution

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the February 2, 1959, issue of Newsweek:

CAUTION

Although most U.S. papers splashed the trial story on page 1, many editors who watched did so with misgivings. The Chicago Sun-Times executive editor, Larry Fanning, who had turned down a Castro invitation to his paper, explained: "No one is saying that the guys who went down there can be bought, but somehow the context is all wrong for a newspaperman. The implication is that you are being bought whether or not that is true." Like many other editors, Fanning felt that coverage of Castro had been inadequate long before the trials started. "The night before Batista fled," Fanning recalled, "both UPI and AP put out word that the Castro forces had been crushed. We were completely misled. We're hoping the copy we're getting now is a fair representation."

Some on-the-spot observers sincerely believed that stories of Castro's executions had been overstressed at the expense of news about the gains he has made for his country. "The executions," said Look magazine's foreign editor William Attwood, "are what prevented riots; nothing else could have done that. When the Hungarian Freedom Fighters began killing policemen in 1956, they were praised by everybody. When Castro does the same thing, he's cursed."

Back in New York, Herbert L. Matthews, the New York Times man who had secured an exclusive three-part interview with Castro in 1957, remarked:

"In all my 36 years of newspaper work, I have never seen a worse job of journalism than the coverage of the Cuban revolution during the last 3 weeks. All you saw in most papers was how many people Castro shot. The real picture of a country under Batista's brutal dictatorship was not made clear."

At the weekend, despite criticism of the Sports Arena trials, Castro announced that they would begin again this week after he returned from a 3-day trip to Caracas, where he helped celebrate the first anniversary of the overthrow of Venezuelan dictator Marcos Pérez Jiménez.

Castro's toll in his first 24 days in power: 253 executions, 100 acquittals.

One for the Road—Back

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. WILSON. Mr. Speaker, a group of outstanding citizens of the city of San Diego, Calif., have joined in the past several months in a move which is typical of the very fine and dedicated public spirit of our community. What these good friends of mine have done is very well set forth in a feature article published in the December, 1958, issue of the National Business Woman, the magazine of the National Federation of Business and Professional Women's Clubs, Inc. I have had the good fortune to assist these ladies in clearing some of the hurdles they faced in forming the Crossroads Home. Crossroads is performing an invaluable service to the southwestern corner of the United States. I am proud to pass on this information to my colleagues in the House of Representatives.

With your kind permission, Mr. Speaker, the article follows:

ONE FOR THE ROAD—BACK

(By Peggy L. Penney)

Last December 24, a desperately ill young woman sat disconsolately in a bus depot in San Diego, Calif., facing the unpleasant prospect of Christmas in jail. This young woman's illness was alcoholism; her only relief alcoholic oblivion. In her battered purse was 50 cents—enough to buy one drink at the nearest bar. Surely bar friends would supply the rest. Then, inevitably, jail. She didn't really want that drink, or the others, but her body cried out in helpless torment. What else was there? She had no home, no hope, no one to help.

Idly she glanced at a discarded newspaper on the bench beside her. A headline caught her attention. Eagerly she read the story of a new home for homeless women alcoholics. It changed her life. Someone did care. She spent a dime of that last half dollar to call Crossroads Home. A month later she was able to leave Crossroads with renewed spirit, friends, a job, clothes, and help in her continuing battle against her disease—alcoholism.

This young woman, ill and at the crossroads of her life, found hope and help on the road back because a San Diego research attorney named Bernice Morris was deeply concerned over the fate of the homeless alcoholic women who roamed the city.

Bernice Morris, past president of the National of San Diego's BPW Club is founder of Crossroads Home. The home is a monument to her leadership, for wholeheartedly into its cause went not only her own BPW club but a list of other organizations reading like a bluebook of clubdom contributed time, money, materials and furnishings: Zonta, Pilot, Soroptomist, American Association of University Women, California Association of Cosmetologists, American Association of Women Accountants, American Pen Women, Medical Secretaries' Association, Visiting Nurse Association, Opti-Mrs., Kiwani-Annes, Federated Women's Clubs and the Women's Christian Temperance Union.

Alcoholics are not all skid row failures or social riffraff. Alcoholism is a disease. It is not selective in its targets. It is no respecter of persons. Professional women, housewives, mothers, society matrons—any woman whose body chemistry cannot assimilate alcohol normally is a potential victim of our greatest national killer—alcoholism. The ratio of women alcoholics is more than 1 out of 3.

Armed with these grim facts, Miss Morris called together a group of friends in April 1957, in a community endeavor to cope with a community problem. In the group of 10 were 6 recovered alcoholics—men and women—respected members of the community with years of sobriety behind them. Within a month these business and professional men and women had formed Crossroads Foundation; within 9 months they opened the pleasant two-storied residence on San Diego's Fifth Avenue known as Crossroads Home.

In leading Crossroads Foundation into action Miss Morris said, "I felt that it was the duty of the community to care for persons suffering with the disease of alcoholism just as much as it is to care for those afflicted with tuberculosis or who are homeless."

The foundation's first discovery was that there was no place for a woman alcoholic to stay during the time it took her to recover. A few charitable organizations gave help for a few days at a time and there were organizations to give help to their recovery, but no home or haven; no provision for clothing and food. These necessities were given top priority on the foundation's program.

Two founder's committees—finance and housing—were appointed. Within a few months a pencil-slim budget of $3,200 was obtained from businesses, organizations, and individuals, of this, $400 was paid for rent and $500 for necessary carpenter work. Pressed by the need for economy, the house committee gratefully accepted the helping hands of the business, professional, and club women of San Diego.

Some women donned blue jeans to help with the painting; others took up needles to make slipcovers, curtains, and draperies. Artists and decorators lent their talents freely to color-coordinate the rooms. The result in a pleasant, homelike atmosphere—a far cry from the barren jails, State institutions, and cheap rooming houses so many of Crossroad's guests have known.

Crossroads Home, newly decorated and freshly painted in a labor of love, opened its doors to its first two homeless women on Christmas Eve 1957. In its short period of operation, it has offered 33 women an opportunity to take their first steps on the road back—all but 4 of them are still sober.

The work so nobly begun by the business, professional, and club women of San Diego didn't stop with Crossroad's opening. More join forces each month to see that these women have the best possible chance to succeed.

For example, a clothing committee collects, sorts, and cleans donated clothing to give each Crossroads' guest a recent wardrobe. A girl or woman just out of jail isn't likely to have much more than the clothes on her back. In soliciting clothing the committee urges, "Give us something you would be caught dead in. In other words, we want our residents to go out into the world when they begin their new life, looking like businesswomen."

A welfare committee of businesswomen consults with the girl and her sponsor regarding her job possibilities. If training is indicated, they endeavor to secure it for her. One BPW club has earmarked its contribution to be used in furtherance of its project "Employment of the Mature Woman," with the money expended for carfare, brush-up courses, and in the case of one "over 40" woman, such a useful adjunct to job hunting as a set of false teeth.

An advisory board of 12 women—all of whom are recovered alcoholics—works with the residents counseling and advising them.

Each girl has a sponsor, a recovered alcoholic, who understands her problems. The sponsor calls her girl at least once a day, invites her to meetings of recovered alcoholics, and is consulted by the trustees and welfare committees on all matters involving her.

As a further contribution to each girl's peace of mine, Attorney Morris tries to straighten out some of the problems. It is here that her legal training is of special value. Are creditors hounding the girl? Attorney Morris talks with the creditor. If the debt is an unjust one, the creditor is advised to "lay off;" the girl to "forget it." If the claim is bona fide, the creditor (with the girl's permission) is advised that she is seriously ill with alcoholism. If she recovers, the debt will be paid; if she continues drinking, he probably won't get his money anyway. Attorney Morris asks bluntly, "Why not give her a chance?" Most creditors cooperate.

Residents come from all walks of life. Some are college graduates, nurses, technicians, office workers, waitresses, factory workers. Most have seen jail from the inside. All have one common bond—a sincere desire to stop drinking. In their new, if temporary, home they quickly find friends, understanding, and help. No woman is ever turned out to find her troubled way alone. She is helped to a job, a pleasant place to live, and her new friends never slacken their interest in her welfare.

One woman, nearing 60, had been in and out of jail so often in 28 years of residence in the city that her only friends were among the jail matrons. This woman, after finding the road back at Crossroads, is now living in a boardinghouse run by a new-found friend and sponsor, a recovered alcoholic.

Perhaps the true meaning of Crossroads can best be expressed by the guests. Here in halting, heartwarming words is what Crossroads means to one newcomer whose poignant history of arrest and confinement is typical: "* * * I have been in Alcoholics Anonymous and at Crossroads for 5 days and I know evrything is going to be all right now because it's a wonderful place and a gift from God. God still loves me and everyone here loves me like a sister and I love them the same. I finally found what I have been searching for. I didn't know alcohol was a disease, I thought I was no good and had almost given up hope. I won't say that I'll never take another drink. I just hope and pray that I don't."

The road back can be a long one, and while it is paved with good intentions, they are not enough; it needs sympathetic, helping hands. Through Crossroads Foundation and Crossroads Home, the business, professional, and club women of San Diego are extending that helping hand to offer the homeless alcoholic women of San Diego one for the road * * * back.

Holly Product Saved Sub's Polar Trip

EXTENSION OF REMARKS

OF

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. BROOMFIELD. Mr. Speaker, all of us are very proud and elated at the remarkable accomplishments of our Navy's atomic submarine, the U.S.S. *Nautilus*. I would like to call the attention of my colleagues to a $135 purchase by the Navy from a small manufacturing plant in my own home district of Oakland County, Mich., which made this possible. The owner of this firm, Mr. Fred D. Barton, of Holly, Mich., has made an indirect, but nevertheless valuable, contribution to our Nation's defense and prestige.

The following account appeared in the January 23, 1959, issue of the Flint Journal:

HOLLY PRODUCT SAVED SUB'S POLAR TRIP

(By Harold R. Gerace)

If it hadn't been for $135 worth of stop-leak concoction—made in Flint area for auto radiators—the atomic submarine *Nautilus* wouldn't have made its epic voyage under the North Pole last August.

A leak in the condenser threatened to halt the voyage under the icecap by the $100 million vessel.

The stuff that succeeded, when all other efforts to stop the leak failed, is prepared and bottled in Holly at Bar's Products Supply, Inc., 720 Rose Street. Bar's is a contraction of Barton's.

Owner of the firm is Fred D. Barton, who got into the stopleak business by mixing water, soluble oil and a little household ginger.

He never dreamed that years later his modernized, patented product would make him the atomic age counterpart of the legendary Dutch boy who saved the town by using his finger to plug the leak in the dike.

Barton's radiator stop-leak is known the world over and is sold under a variety of brand names. It is used on six to seven million cars annually.

Comdr. William R. Anderson, skipper of the *Nautilus*, tells about the stop-leak treatment of the nuclear submarine in his book, "*Nautilus* 90 North." It is the story of the first voyage under the North Pole.

The *Nautilus* was in the Pacific en route to the Pole when the condenser developed a tiny leak. Salt water was seeping into the steam of the propulsion plan. This condition would corrode if it allowed to continue. The leak could not be found when the *Nautilus* was placed in drydock in Seattle.

In desperation, lest the polar trip be canceled, Commander Anderson ordered the crew to try the automobile stop-leak. At first the crewmen didn't know whether he was fooling. He finally convinced them he was dead earnest.

Barton treasures a Government purchase order for 75 quarts of radiator stop-leak to be consigned to the *Nautilus*. It cost $1.80 a quart, or $135.

"Incredible as it may see," Commander Anderson writes, "the stop-leak treatment worked. Wherever it was, the leak was plugged. Neither in Seattle, nor later would this problem arise again."

Barton has been the guest of the skipper of the *Nautilus* and was toured the submarine. He donated $1,000 to the recreation fund of the *Nautilus*.

The 51-year-old Barton once conducted a school to train salesmen. Its success caused him to go out of business.

His F&I Training School was in San Francisco. The letters meant "Focus & Impulse."

"All my graduates seemed to get high-salaried jobs," Barton recalled. "I guess I wasn't charging enough for the course. So I closed up the school to try for a high-paying job."

A ruddy-faced heavy-set individual whose 206 pounds are distributed on a 5-foot 10½-inch frame, Barton, in his gravel-throated voice, likes to expound his philosophy of the rights of individuals and small business.

He practices what he preaches, too. He has just taken on a giant chemical company in a suit to collect $33 million in a case involving his product. He also recently organized the RIS Foundation and endowed it with $50,000 to assist students studying for business careers. The initials "RIS" stand for the "right of the individual to sell."

Nearing completion is Barton's dream house. It is near his factory in an area he has named Holly Wood Acres. The house has five baths and will have a swimming pool.

Barton is a native of Saginaw and was graduated from Saginaw High School.

He spent many years in California. After he closed up his salesmen's school, he sought a job with an oil company. It was then that he became interested in automobiles.

In the backyard of his home, he mixed water-soluble oil with water and bottled and sold it as a rust-preventive for automobile radiators. As Barton tells it, he began wondering about adding something to his product that would also stop radiator leaks. He began experimenting with household items his wife had on hand. He isn't sure just why he tried ginger, but he did and it worked.

In trying to mix a better stop-leak, he finally came up with the roots of certain plants. His formula now is protected by patents. Virtually all new cars are treated with his product before they leave the factory. Buick is one of his big customers.

Plugging the leak in the Nautilus was probably the most spectacular feat of Barton's product, but it was by no means the first.

In 1950 his stop-leak saved a huge irrigation project from closing down. A ditch-digging shovel that scoops up 20 yards of dirt at a time and has the weird name of Walking Monagahan sprung a leak in its engine. The shovel, which "walks" as it progresses in digging, was the key machine for the entire project and hundreds of jobs were threatened.

In the 1956 Olympic games at Melbourne, Australia, the swimming events nearly came to a halt when the pool developed a leak. Again Barton's concoction fixed the trouble.

While he enjoys dwelling on the success of his product, Barton can remember the uncertainties encountered when he was starting out. Someone wanted to know if his stop-leak would be effective under compression—around the water jacket of an engine valve, for instance.

"You got rocks in your head?" he asked. "How could something like that withstand compression?"

After thinking about it, Barton quietly gave it a try and, to his amazement, found it did stop leaks under compression.

Since then he has never made the mistake of underestimating his product.

He got into the stop-leak business in 1947 and moved to Holly in 1954. He wanted to get back to Michigan. He now operates another plant, Fret, Inc., in Shortsville, N.Y.

The name Fret again shows Barton's fascination for abbreviations. The word is an acronym—a combination of the first two letters in his name, Fred, and his wife's, Ethel.

The Bartons have two daughters, Mrs. William Fies, Redwood City, Calif., and Barbara Beth, a student nurse at the University of Michigan.

"No son," he mournfully comments. "That's the tragedy."

Warren County, Ind., Farm Program Survey

EXTENSION OF REMARKS
OF

HON. FRED WAMPLER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1959

Mr. WAMPLER. Mr. Speaker, recently I received an exceptionally interesting report setting out in some detail the results of a farm program survey conducted by an energetic, nonpartisan group of approximately 30 Warren County, Ind., farmers.

I was particularly impressed with the survey report, which was brought to my attention by Mr. Warren C. Wright of Williamsport, Ind., because of the specifically-mentioned unbiased composition of the survey group itself. The group's roster included individuals of both major political affiliations, as well as large and small farmers.

As I told Secretary of Agriculture Benson, in a letter covering the survey's transmittal to him for his analysis, there is considerable merit to the contention of the Warren County group that the farmer be given an opportunity to vote on the type of farm program with which he must comply.

I am, and I feel sure anyone even relatively close to this country's agricultural economy is, entirely sympathetic with the farmer's efforts to increase his income to full parity thus attaining an equality of purchasing power, while decreasing the production of surplus farm commodities, with the ultimate goal of eliminating Government subsidies.

Although the administrative costs of such a program as proposed by the Warren County, Ind., survey group might slightly exceed current costs, this small increase in operational expenditures would be more than offset, in the long run, by the reduction, if not the removal, of tremendous quantities of grain now in storage, thereby saving the taxpayer astronomically high annual storage costs and contributing to the eventual elimination of subsidies.

The Warren County, Ind., farm program proposals follows:

WARREN COUNTY FARM PROGRAM

The following tentative farm program was discussed, developed, and written by a group of approximately 25 to 30 Warren County, Ind., farmers with no political affiliation, organized backing, or outside influence for the purpose of conducting a survey to determine what type of a farm program, we as Warren County farmers most desire of the three general types (high price supports with rigid controls, flexible supports, or present program, or no program at all).

In order to conduct the survey, the following program was formulated:

TENTATIVE FARM PROGRAM

The purpose of this program is to increase our income to full parity in order that we might as farmers have equality of purchasing power, while decreasing production of commodities now in surplus, and to eliminate government subsidies and handouts.

(a) Full parity support price on all feed grains and certain crops such as corn, soybeans, wheat, grain sorghums, barley, oats, rye, etc. This could apply to any crop or crops in any area.

Full parity being approximately $1.75 for corn, $3 for beans, $2.40 for wheat, $2.60 per hundredweight for grain sorghum, 87 cents per bushel for oats, $1.33 per bushel for barley, $1.57 per bushel for rye, etc.

Compulsory acreage allotments shall be established on all farms in the United States that produce any crop that has a price support. These allotments shall be given only to those farms having grown such crops in one or more of the past 3 years. These allotments shall be established for each crop on any farm by the following method:

A percentage of total tillable crop acre base shall be established for each crop in any area by using a 10-year land use history of that crop in its area.

The national need for each crop would be determined and a certain percentage would be deducted from, or added to, the land use history base of all areas. Each farm within its land use area would then have the same percentage of its tillable crop acres in any given crop, as every other farm in that area. This eliminates the unfairness that has always been present and helps, rather than hinders, the farmer that has been using good farming practices.

This system for allotting acres could be applied to any crop grown in the United States and would eliminate the shifting of overproduction of crops from one area to another.

The total allotted acres for any crop in the United States should be set low enough (without any floor on acres) to just produce our national and foreign needs, or even cut into the surplus, if it exists, for the next 2 or 3 years.

A 2 months' supply, or whatever deemed necessary, of these supported crops, should be established as a national reserve commodity to be used in case of emergency, such as war, drought, floods, etc.

The penalty for exceeding the acres shall be set at: Overage acres X average area yield X support price, with the option of destroying the overage acres of crop before harvest.

(b) Twenty percent, or whatever percentage deemed necessary, of the tillable crop acres of each farm having a crop allotment shall be put in a soil building program free of Government payment.

The penalty for not complying with the soil building part of this program shall be: The number of acres not in compliance X average area yield X support price of highest priced crop of that area.

(c) A levy of five cents per alloted acres to be used for new uses and better markets of all allotted farm crops.

(d) The last and probably the most important part of this program is to give the farmer a chance to vote on the type of program he most desires among the three general types (high price supports with compulsory allotments, flexible price supports with little or no allotments, or no farm program at all).

This program along with a ballot and a self-addressed stamped envelope was sent out to fourteen hundred farmers in Warren

County (tenants, landlords and farm managers who farmed, owned or managed fifteen acres or more), with the following results:

Four hundred sixty nine were voted and returned and counted at a public meeting; 48 percent voted for the high support compulsory acreage allotment or above program; 33 percent voted for the no program; 19 percent voted for the present program. This survey was taken in February 1958.

It was our hope that by developing a program and taking a survey that, we could determine what the farmers of Warren County really wanted in the way of a farm program. We felt that we were successful in that 35 percent of the ballots were voted and returned. The fact that 48 percent of the votes were for a program that has some teeth in it was also very significant because, this survey was taken in a county that has a very strong Farm Bureau organization (all but 2 of the 25 to 30 farmers who developed the program are Farm Bureau members) which is opposed to a high support, compulsory program.

A survey was also taken in Pike-Steuben Township Farm Bureau of Warren County. One hundred and sixty ballots were sent out, 64 or 40 percent were voted and returned with the following results: 13.9 percent voted for Farm Bureau program (support at 90 percent of average market price for last 3 years with no allotments); 67.4 percent for full parity with compulsory allotments; none for flexible price supports; 18.6 percent for no program at all.

It is our feeling that if this new program was adopted this would still be a big administrative job, but the total cost would be far less than storing huge quantities of grain year after year. The only way to solve the farm problem is to control production the same as every other business does that manufactures a product to sell.

The big thing that is bothering most farmers is the fact that they don't have the opportunity to vote to determine the type of farm programs they most desire. That, if nothing else, is something that certainly could be rectified.

The recent corn referendum was an example of sidestepping of the issues and was an insult to the intelligence of the average farmer. There was nothing on the ballot but a choice between an unworkable program and one that will make the situation even worse. I sat on the election board (corn referendum) and, of the few farmers that did vote, practically every one expressed his dissatisfaction in no uncertain terms.

WARREN COUNTY SURVEY GROUP.

George Christopher: He Served the People

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. BOLLING. Mr. Speaker, the following fine editorial on our late colleague, the Honorable George H. Christopher, of Missouri, appeared in the January 30, 1959, edition of the Kansas City Daily News-Press:

GEORGE CHRISTOPHER: HE SERVED THE PEOPLE

It's hard to believe that Congressman George H. Christopher is gone. The leathery visaged Shakespeare quoting man of the soil served well the people he knew best—the farmer and the working man who comprised the majority of his constituents.

Because farming is often a complicated business in this day and age, Congressman Christopher could also grasp the problems arising for the businessman, especially the small businessman.

As a Democrat he always found the time to lend his services and presence to any party group or gathering, no matter how large or how small. It was this common touch, this willingness to serve all the people and the party he represented, that endeared him to so many, and paved the way to victory for him when the chips were down.

Always a fighter, he overcame the handicap of an amputated leg to make a strong and successful bid for reelection.

In a way it was fitting that his life should end after passing the biblical mark of three score and ten, for he was a God-fearing man and knew the Good Book and lived by its principles.

For George Christopher the end came in the Capital City of the Nation he loved.

His body is now interred where his heart forever was—in Bates County, among the people he loved.

An Honor to a Great Wisconsin Editor

EXTENSION OF REMARKS
OF
HON. ROBERT W. KASTENMEIER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. KASTENMEIER. Mr. Speaker, a distinguished editor, well-known throughout the country for his continued and outspoken efforts in the interest of the economic, political, and social welfare of the people, has now been honored for his dedicated service to, and perpetuation of, the ideals, heritage, and culture of Norway.

King Olav V of Norway has bestowed the Knight's Cross, First Class, of the Royal Order of St. Olav upon William T. Evjue, editor and publisher of the Madison (Wis.) Capital Times.

Mr. Evjue, in the progressive traditions which he saw grow under the personal guidance of the late Senator Robert M. LaFollette, Sr., and his sons, and which he has nurtured through his persistent editorial leadership, is held in high regard by the people of the State of Wisconsin and the Nation for his dedicated opposition to the forces of concentrated wealth. Now he has received a highly deserved recognition for his fidelity to the heritage and culture of Norway, passed on to him by his parents who immigrated to Wisconsin from Norway. It is for this loyalty that King Olav V has conferred the rare honor upon this leading citizen of Wisconsin.

Under leave to extend my remarks in the RECORD, I include the following article describing in detail the honor conferred upon Mr. Evjue, which appeared in the Wisconsin State Journal, Madison, Wis.:

WILLIAM T. EVJUE AWARDED TOP HONOR BY NORWAY KING

William T. Evjue, 920 Castle place, editor and publisher of the Capital Times, has been awarded the Knight's Cross, First Class, of the Royal Order of St. Olav by King Olav V of Norway.

Evjue was notified of the award, given for furthering Norwegian ideals, heritage, and culture in this country, Tuesday in a letter from the Norwegian consul in Chicago, Ill., Helge Akre.

Evjue said Tuesday that he had been invited to receive the award and accompanying citation at the Norwegian consulate in Chicago at his convenience but had not decided when he would do so.

The award is the highest Norwegian honor which can be awarded to an American civilian. It includes the St. Olav Medal and a citation signed by the King.

No specific reasons for the award were cited in the letter of notification and Evjue said Tuesday that it came as a complete surprise to him. His intense interest in his Norwegian heritage and Norwegian-American activities in this country are well known, however.

The award will be the second time that Evjue has been honored by the Norwegian Government. During the early years of World War II, he was cited for his work as State chairman of the Norwegian Relief Committee which raised money to be sent to Norway for the relief of citizens of the war-stricken country.

Evjue becomes the third State resident to be given the St. Olav Medal. In 1940, Einar Haugen, chairman of the department of Scandinavian studies at the University of Wisconsin, was presented with the award after serving as a visiting professor at the Univerisity of Norway in 1938.

The late Gov. Albert G. Schmedeman also received the award during World War I for his service as U.S. Minister to Norway.

King Olav V, who conferred the honor upon Evjue, is no stranger to Madison. He visited here in 1939, while still Crown Prince, was awarded an honorary doctor of law degree by the university, addressed the legislature, and was entertained at the Madison club in a gala event by the late Gov. Julius Heil.

Lest We Forget

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks, I include the following letter which I recently received from Tullius Brady of Brookhaven, Miss.:

DEAR MR. JENSEN: Sir, I wish to thank you for your remarks of January 9, published on page A33 of the CONGRESSIONAL RECORD. It is such a tragedy that there are so few of you, too few, I fear, to save us from destruction.

Sincerely,

TULLIUS BRADY.

P.S.—This, too, should be put in the RECORD, just to keep it straight that someone knew a long time ago this would happen.

Words of Webster in eulogy of George Washington, who said: "If disastrous war should sweep our commerce from the ocean, another generation may renew it; if it exhaust our treasury, future industry may replenish it; if it desolate and lay waste our fields, still, under a new cultivation, they will grow green again, and ripen to future harvests.

"It were but a trifle even if the walls of yonder Capitol were to crumble, if its lofty pillars should fall, and its gorgeous decorations be all covered by the dust of the valley. All these may be rebuilt.

"But who shall reconstruct the fabric of demolished government? Who shall rear again the well-proportioned columns of constitutional liberty?

"Who shall frame together the skillful architecture which unites national sovereignty with State rights, individual security, and public prosperity?

"No, if these columns fall, they will be raised not again! Like the Coliseum and Parthenon, they will be destined to a mournful and a melancholy immortality. Bitterer tears, however, will flow over them than were ever shed over the monuments of Roman or Grecian art; for they will be the monuments of a more glorious edifice than Greece or Rome ever saw, the edifice of constitutional American liberty."—"Daniel Webster's Eulogy of Washington."

A Budget, "Political" and How

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. KILBURN. Mr. Speaker, I hope the Members and the country at large will digest this editorial which appeared in the February 2 issue of Life magazine. The writer did a great service for our country in presenting this and I hope everyone reads it and understands it:

A BUDGET, "POLITICAL" AND HOW

The budget for fiscal 1960 which the President submitted last week is already the hottest issue between him and Congress. Democratic Senate Leader LYNDON JOHNSON immediately termed it a "propaganda budget" which was designed to "create a political issue for 1960." JOHNSON was grossly unfair to the President. Nevertheless the wily Texan said a mouthful.

If the Republicans stand with the President, and the Democrats behave in their normal spendthrift manner, the voting issue before the American people in 1960 will be clear and sharp. That issue will be the value of the dollar. The purpose of the President's budget is to protect the dollar. LYNDON JOHNSON and SAM RAYBURN will have to watch their step if they do not want to subvert the dollar, which is the first step to subverting the country. Any Congressman who does not actually favor inflation (or higher taxes) must either support this budget or try to cut in. Instead of which, leading Democrats are attacking it as too small, with epithets like "skinflint."

A "skinflint" budget? It is the largest peacetime budget in U.S. history. It is barely balanced (at $77 billion) in a year which, in Ike's own words, is "expected to be the most prosperous of our history." It is as full of economic waste as the Nation can afford.

The men who made this budget assume an increase of more than $30 billion in this year's gross national product, from which they figure to get $9 billion more in Federal revenues at present tax rates. The men who made the budget achieve balance by cuts of $3.8 billion below the current rate of spending. But so far from slashing any major Federal programs, they have merely taken advantage of the expiration of certain nonrecurring expenses of fiscal fifty-nine, such as the soil bank, Federal unemployment payments, and the antirecession Housing Act. Our greatest economic scandal, farm subsidies, remains virtually untouched.

The Eisenhower budget meets all the basic civilian needs of a prosperous U.S. economy, with a big bet on continued expension. It is a typically Republican bet, that a free economy will do its own expanding if Federal policy gives it half a chance. Democrats argue that this rich country can afford the many extra public services, from dams and public housing to subsidized consumption and easy money, for which any imaginative politician can pretend to hear a public demand. Chairman Martin, of the Federal Reserve, answers that argument with this question: "Since Americans clearly can afford these expenditures, why don't they pay for them?" The only way we can pay for more Government services than we are getting is through higher taxes. Either that—or inflation and ruination.

The Republicans think taxes are high enough now, if not too high. In his state of the Union message, Eisenhower declared his next objective after securing a balanced budget: a thorough revision of the tax structure, to remove inequities and to enhance incentives for all Americans. In short, a downward revision. In these fly-now-pay-later days, it may seem an old-fashioned order of business to deny ourselves public services now so as to have more real income later. But it is also the honest order. The tax revision Eisenhower promises depends on a stable dollar. A nation incapable of balancing its budget in the most prosperous years in its history would be a nation incapable of self-government.

Such are the issues raised by this Eisenhower budget. It makes fiscal integrity a political issue. Congressmen who support this budget will be doing the minimum necessary for a sound dollar. Congressmen who vote additions without voting equal cuts or new taxes must be deemed irresponsible. If Republicans and Democrats divide along that line, the Republican chances in 1960 will look very much better than in 1958.

The Most Brazen Attempt at Propaganda Ever Devised

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. HALPERN. Mr. Speaker, the New York Times and other newspapers last week carried news accounts of an exhibit of Russian-made scientific equipment set up at meetings of the American Physical Society and the American Association of Physics Teachers at the Hotel New Yorker in New York City. The purpose of this exhibit was to promote the sale to American schools of such Soviet-made equipment as microscopes, electronic equipment, projectors, and other apparatus for use in our classrooms.

Mr. Speaker, in passing the National Defense Education Act of 1958, the Congress declared:

The Congress hereby finds and declares that the security of the Nation requires the fullest development of the mental resources and technical skills of its young men and women. The present emergency demands that additional and more adequate educational opportunities be made available. The defense of the Nation depends upon the mastery of modern techniques, development from complex scientific principles. It depends as well on the discovery and development of new principles, new techniques, and new knowledge.

This act was designed to make appropriations of some $70 million annually over a 4-year period to State education agencies for the acquisition of equipment to teach sciences, mathematics, and modern foreign languages.

It is a sobering challenge.

It must be met head on. We cannot afford to be second best in this educational race with Russia.

To meet it, we will need the best talents of American educators, the best talents of American manufacturers, and the enthusiastic cooperation of our schoolchildren and college students.

This is a project for the whole United States.

Its seriousness is shown by the fact that no sooner had the ink dried on this new law than the Russians began figuring ways to take advantage of it—for Russia.

And—in typical Red fashion—they've really moved right in on us. They want to show us how to teach our youngsters. They want to show us with made in Russia scientific equipment which they are anxious to sell to American school boards, State educational agencies, and colleges at a much lower cost than American-produced equipment.

This is the most brazen attempt at propaganda ever devised. The Russians hope to reach our youth during their most impressionable years. They hope to convince them—by setting up made in Russia equipment in our classrooms—that Russia is the world's No. 1 scientific power.

How can we convince our youngsters that America is the greatest of all nations—that our scientists are the world's best—that our manufacturers produce products that are the envy of the world—if we place Russian microscopes, electronic equipment, and other devices in their physics lab classes?

Sure, the Russian-made equipment is cheaper. Even with the heavy duty the Russians must pay their equipment can be sold at lower prices than American-made goods. Do I have to tell you why? The Russian equipment is made by slave labor or other workers in Government-run factories. In fact, I am sure that the Reds would be glad to provide these wonderful propaganda gimmicks for free if we would let them. They realize, of course, that to give it to us for free would make it a truly propaganda vehicle but by selling it to us they are bringing in this propaganda weapon under the guise of commercial business.

There is no question among the educators and scientists with whom I have talked that our equipment is far superior to the Russian equipment. But that is not the point. This is just another Russian move—another Russian big step—to propagandize us. We hope that American educators will have more sense than to fall for this obvious device.

A Bill To Impose a Tax Upon Savings and Loan Associations and Mutual Savings Banks

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. CURTIS of Missouri. Mr. Speaker, today I have reintroduced a bill to equalize a taxpaying situation in our economy and at the same time provide revenue to the Federal Treasury, which is similar to the bill I introduced in the last Congress with the exception that I have deleted the portion that limited the amount savings and loan institutions could pay out in dividends and receive a tax credit.

The following is the same explanation I made of the bill at the time I originally introduced it. However, before setting it out I want to make it clear that my purpose in introducing a specific bill was and still is to have something specific for the Ways and Means Committee to consider. In suggesting that the 12 percent tax reserve fund be changed to 5 percent I am wedded to no figure. If hearings developed the fact that more than 5 percent is required I would be interested in using that figure. Certainly savings and loan and mutual banks are entitled to some differential which reflects their actual needs for reserve accounts to insure the safety of their investors. On the other hand, that figure should be realistic as should all differentials placed in our tax code. All differentials need periodic review lest through changed circumstances or merely through added experience we find that what we thought was a differential actually is a preferential.

I do not share the concern of certain people in the mutual bank and savings and loan field that equalizing the tax burden between savings institutions places a tax on thrift. Quite the contrary, it should encourage thrift by making the institutions which appeal to the people to save on a more equally competitive basis. The entire issue should be what will made the Federal tax laws neutral as between competitive thrift institutions. Differences between types of institutions should be reflected in the tax laws where the differences make a competitive difference. If the differential is too large it becomes a preference; if too small it becomes a burden. I want the amount of tax free credit funds to be neither a preference nor a burden. Two way of equalizing.

This bill would impose a tax upon savings and loan associations and mutual savings banks. It is motivated by no lack of appreciation for the economic service being performed by these institutions. Quite the contrary. As a member of the board of directors for 17 years of the oldest savings and loan institution in Missouri, I am deeply concerned about their economic welfare and want them to continue performing the service they do perform for our society. I am satisfied that placing them on a basis of nearer equality as opposed to preference, with other savings institutions will actually redound to their economic health. Wherever possible we should remove subsidies in our economy whether they are in the nature of direct subsidies or indirect subsidies through tax benefits or other devices.

Savings and loan associations and mutual savings banks were specifically exempt from the payment of Federal income taxes until 1951. In that year the Congress revoked their tax-exempt status and put them on a taxpaying basis. While this amendment was in the Senate, however, a provision was added which permits a savings and loan association or mutual savings bank to retain, as a deductible reserve for bad debts, any and all earnings as long as the reserves of the association do not exceed 12 percent of all withdrawable accounts. As a result of this provision, which was enacted into law, practically all savings and loan associations and most mutual savings banks are able to retain all their earned income without paying and Federal income tax thereon.

It was obviously the intent of the Congress, in removing the tax-exempt status of these organizations, to put them on a taxpaying basis. That intent was not fulfilled as a result of the tax formula which was adopted. The ineffectiveness of this formula is quite evident by comparing their reserves when the tax law was passed with those of a recent date. At the end of 1951 the capital structure of the members of the Home Loan Bank System—representing 95 percent of the assets of all associations—was 8.2 percent of their outstanding shares, which then totaled $15,025,505,000. Earnings in 1951 were $540,260,000. On December 31, 1955, with earnings of $1,190,865,000, and outstanding shares of $30,813 million—an increase of $15,800 million—their capital structure was approximately 7.5 percent of outstanding shares. Thus, it is evident that after years of tremendous prosperity, they are getting no closer to being required to pay any Federal income tax.

Section 593(2) of the Internal Revenue Code should be amended so that it will no longer permit practically all savings and loan associations and most mutual savings banks to escape the payment of all income taxes. Since most State laws relating to State chartered building and loan associations provide for a reserve equal to from 3 to 5 percent of withdrawable accounts, it seems that a reserve of that amount would be adequate. At the present time the reserve of most commercial banks is less than 1 percent. In order, then, to put savings and loan associations and mutual savings banks on a taxpaying basis, the suggested bill provides that the amount of tax-free reserve funds that can be accumulated be limited to 5 percent instead of 12 percent of withdrawable accounts.

Russian Chrome Ore to United States

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. ULLMAN. Mr. Speaker, as most of my colleagues are undoubtedly aware, a major U.S. producer of ferroalloys recently acquired 80,000 tons of Russian chrome ore. Commenting on this transaction, the E&MJ Metal and Mineral Markets, in their October 30, 1958, issue, stated that the United States has "no significant amount of chrome ore—it is clearly a have-not nation in this respect."

Mr. Speaker, it is true that chrome deposits in this country are not as large as those existing in several other countries. However, it is quite untrue to contend that the United States is a have-not nation with respect to chrome ore. Our present have-not position has nothing to do with a lack of deposits—it only results from the lack of a sound domestic mining program. It is for this reason that I have diligently worked for the enactment of such a program and am hopeful that one will be enacted promptly during the 86th Congress.

Commenting on the E&MJ Metal and Mineral Markets article, the November 1958 issue of the Ore.-Bin, published by the Oregon State Department of Geology and Mineral Industries, made some interesting statements which I believe will be of interest to my colleagues. Consequently, I ask permission to include this article in the RECORD:

RUSSIAN CHROME ORE TO UNITED STATES

The E & MJ Metal and Mineral Markets, issue of October 30, 1958, states:

"Russian chrome ore, 80,000 tons of it, is being acquired by a major U.S. producer of ferroalloys. The same firm bought perhaps a third as much last year. On both occasions a Canadian broker arranged the business.

"The transaction is probably better described as a barter arrangement. An amount of steel equal in value to the chrome ore is being taken by the Canadian broker for shipment to the U.S.S.R. A major U.S. steel manufacturer may have had more interests in arranging the transaction than the ore consumer. The steel company has probably assured the ferrochrome manufacturer it will take any of the ferro the latter cannot sell.

"Though the ore is scheduled to go to Canada, shipping arrangements for some of it may provide for alternative U.S. destinations. The ore is standard Russian ore—good grade but with considerable amount of fines.

"Doubtless chrome ore suppliers and their governments will express displeasure at acceptance by U.S. firms of Russian ore. Some Americans take the position that since the U.S. has no significant amount of chrome ore—it is clearly a have-not country in this respect, and chrome ore is an important product to the steel industry here, it is to the advantage of the United States to take all it can get from the U.S.S.R. It might appear that it conserves the limited Western supply. Turkish chrome ore representatives have been saying Turkish good grade ore is becoming scarcer and that what was

a few years ago considered only passable ore is now considered high grade; they suggest this will continue. They have claimed prices must rise because of this growing scarcity of good ore. In the past year Turkish asking prices have dropped very little in spite of the drastic drop in sales.

"The claim probably will be made the Russian sales are really calculated to destroy the western chrome ore industry. Some chrome ore suppliers point out that the U.S.S.R. was once a major supplier of chrome and manganese ore to the U.S. and some years ago stopped selling here—a part of the U.S.S.R.'s economic warfare. No one doubts the U.S.S.R. will engage in economic or any other form of warfare that suits its purpose. But there is no doubt it also has the more usual motive—to export in order to import.

"Since the U.S.S.R. is taking an equal value of steel, and since the steelmaker here appears to be as interested in the steel market as the ferromaker is in getting the ore, any claim of economic warfare may be hard to prove. Doubtless when negotiations were going on the sale of perhaps $3.5 million of steel looked to be most beneficial to the U.S. economy and steel industry. Certainly U.S. firms can be expected to compete with the rest of the Western World in getting foreign business, including with Russia. They have been put to considerable disadvantage by the slowness with which the U.S. Government has implemented the COCOM agreements, announced August 15, to drop the Western embargo on the export of hundreds of products to the U.S.S.R.

"It is most impractical to export products to the Iron Curtain areas without importing from them; if U.S. firms are going to get a significant amount of that business they will have to import from them also."

How familiar these arguments sound to the West's mining industry. Following World War II we were characterized as a "have not" nation in various materials, including tungsten, petroleum, cobalt, columbium-tantalum, uranium, and quicksilver—to name a few. Now we have many of these commodities "running out of our ears." That "have not" is a matter of price has been demonstrated time and again.

Another slant on the subject is furnished by the Wall Street Journal in its commodity letter of November 18, 1958. Here pitfalls of trading with Russia are touched upon. Sales of aluminum and platinum have been carefully timed by Russia to disrupt the markets, according to U.S. producers. Russia trades arms for cotton and then dumps the cotton on world markets. Now it is rumored that Russia plans to dump Chinese tea.

Perhaps the barter of American steel for Russian chrome, as described above, benefits the steel producer in this instance, but such a deal puts another nail in the coffin of the domestic chrome industry and therefore is difficult to reconcile with the common good.

The Institute of International Education Presents an Award for Distinguished Service to the People of Burns, Kans.

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. REES of Kansas. Mr. Speaker, on last Friday evening, January 30, at a dinner at the Mayflower Hotel in Washington, D.C., the Institute of International Education celebrated its 40th birthday anniversary. The highlight of the event was the granting of awards to organizations, institutions, and individuals that have made unusual contributions to the understanding among nations.

Among the recipients chosen by the institute is the town of Burns, Kans. This award is granted because of the unusual service of the town of Burns, Kans., in developing international understanding. The award was made by Vice President NIXON. Mr. and Mrs. E. D. Grimwood, of Burns, accepted the award. It is an honor to include in the RECORD the citation as well as the reply of Mrs. Grimwood. The town of Burns is in the Fourth District of Kansas. Mr. and Mrs. Grimwood are among its leading citizens:

CITATION FOR A U.S. COMMUNITY

To the people of Burns, Kans., who have created a home away from home for foreign students from all parts of the world, the Institute of International Education presents its award for distinguished service.

In the midst of farmlands and oilfields, isolated from the stream of world traffic, this town of 310 people has proved that international exchange is not the sole privilege of metropolitan cities. Since 1954, young men and women of very race, creed and color have been welcomed into the homes of the Burns farmer, the cabinetmaker, the minister, the businessman and the teacher. A foreign student aptly characterized the distinctive character of the town when he said, "Burns is on the way to and from everywhere."

The Burns program, organized by the Women's Society of the Methodist Church, began on Thanksgiving, 1954. The first foreign visitors were 10 students from the University of Kansas, 140 miles away. Not only did they return, but they brought with them friends from campuses across the country. They came on Christmas, New Year's, Mother's Day, Easter, the Fourth of July, and during the summer—just as American students come home for college vacations.

In 5 years 77 students from 37 countries—Hindus, Moslems, Christians and Buddhists—have come to Burns, not once but many times. If the city of Washington, with a population of 800,000, had opened its homes on a comparable scale, we would have had 192,000 guests from abroad here during that time. As one overseas guest said, "Burns is the smallest U.S. community with the biggest foreign diplomatic service in the world."

The students came back to Burns because they did not feel like visitors. They had gained the feeling of belonging to a family—a rare gift to any man or woman thousands of miles from his own country. These students have become a part of the life of Burns. They drive combines and tractors in the wheat fields, milk cows in local dairies, help to cook meals and dress the children, and some even teach Sunday-school classes. They have shared the joys and sorrows of this small town, taking part in its weddings, baptisms, and funerals.

One foreign student on her return home described the impact of her Burns experience: "When I close my eyes a little bit I see the Grimwood house with the chain of Christmas lights in front, and my look wanders around: I see Burns Plaza, the Methodist and Catholic churches, the Nelson's, the Lohrentz', the Funke's and Notz's, the Brenzikofer's, the Warkentine's, and all the other houses and farms. And it is good to know that you are all there instead of in a big city, where life and people are changing so terribly fast. I see you picking up your mail at the post office—there must be a lot of foreign mail—and going to the grocery and filling station. Really, I haven't lost a bit of all this, because they are my most and best cherished memories. It is a great accomplishment, what you have done. We never can pay back all of you. It never can be compared with the organized dinners and club and church meetings where in the long run a foreign student felt a little bit like a peacock in a zoo. You gave us part of you, by sharing your everyday life with us."

To the citizens of Burns, the descendants of pioneers, who have understood so well that friendship is not a gesture but a real sharing of everyday life, the Institute of International Education presents its distinguished service award.

The award will be accepted by Mr. and Mrs. E. D. Grimwood of Burns, Kans.

RESPONSE OF MRS. E. D. GRIMWOOD

This evening you have presented to our community of Burns the highest honor which can be received by a group of citizens active in extending hospitality to students from other lands.

As we accept this citation we would like to share it with other Kansas communities which have taken an active part in the student exchange program.

We feel that the award is not limited to Kansans, but it is being shared by the many students who have been in our homes, students who are now living in many areas throughout the world. Above all, we would mention the first 10 foreign students who came to Burns. Not only were they at home with us, but they made us feel at home with them. They encouraged the participating families with the warmth of their response to our hospitality and with many letters of appreciation which followed their first visit to Burns.

One of the first letters which we received was from an Italian school teacher who said, "When I come back to Italy and I will speak about America, I always think Burns, and I am sure all my friends will like Burns. I can never forget the lesson, wonderful lesson, that you gave me: You invited in your home the Catholic priest and the Methodist minister, and they looked very well together. This one, for us intolerant European and Asiatic people, was the best lesson of tolerance."

One of the six students who spent Christmas Eve 1954 in Burns said it was impossible to be homesick when she went to church and recognized the postmaster and his assistant, a rancher in whose home she had been a guest, her host's baby sitter and she even knew the priest.

It is not unusual for a Burmese to see his first snowfall in Burns; a German lawyer to assist his host in cutting fireplace wood; a doctor in economics from Pakistan and a Venezuelan engineer to freeze ice cream for a party; a Methodist host to be welcomed as a visitor in the Mennonite church with his guest—a Quaker from Kenya; or for a Swiss student to take her fellow Europeans to town to meet her friend, Mr. Hammann, the harness maker.

Families who have been hosts to students, other than those named in the citation, are the Don Parrishs, Mark Millers, Fred Olberdings, James Benjamins, and Rev. Robert Peters.

Tuesday, just before our departure for Washington, a Burns hostess shared with me a letter which she had just received. It was written by a Japanese teacher who, together with her husband, had visited our community for the only time less than 2 months ago. She wrote: "Thank you so much for your letter which made me homesick for

Burns. How I wish to visit your home again (before I leave for Japan) but since things are so rushing it looks very doubtful. I hope you will write me and tell me all about your lovely home and about life in Burns so that I can remember Burns as if I visited there often."

We, in Burns, have made no new discovery * * * but we have experienced an age-old reality: When people can live together in the atmosphere of a home there are no barriers of race, creed or nationality. One of our students wrote from Switzerland this Christmas: "This sharing of your everyday life with us is certainly one of the finest accomplishments in a foreign students program. I wish some Russians could come some day and experience the same. And many more of them* * * then we would not need to be afraid of a war."

Our hands are small * * * because they are few, But, when linked with God's hand they have become big and we have been thrilled to share in a bit of His plan for world peace.

If we could be granted one prayer this evening it would be that many additional communities the size of Burns, Kans., would also share in this plan which could eventually bring peace to our world.

Mr. Vice President, to you and to the Institute of International Education, we say, "Thank you, from the depths of our hearts."

St. Louis Archdiocesan Council of Catholic Men Opposes Recognition of Red China

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mrs. SULLIVAN. Mr. Speaker, Mr. Charles J. Malloy, social action chairman of the St. Louis Archdiocesan Council of Catholic Men, has forwarded to me a resolution adopted by the council, and also by the National Council of Catholic Men, dealing with the question of recognition of Red China. I think this merits the attention of the House and I am submitting it for printing in the Appendix of the CONGRESSIONAL RECORD.

The Most Rev. Joseph E. Ritter, S.T.D., is episcopal chairman of the St. Louis Archdiocesan Council of Catholic Men. J. Stuart MacLellan is president. The Rev. Clarence D. White is spiritual moderator, and the Rev. John P. Cradick is assistant spiritual moderator.

The resolution referred to, as adopted by the executive committee of the National Council of Catholic Men and also by the St. Louis Archdiocesan Council of Catholic Men, is as follows:

OPPOSING RECOGNITION OF RED CHINA

We have noted in recent days that certain groups and individuals have expressed favorable policies and opinions in regard to the recognition of Red China by the United States and the admission of Red China to the UN.

The National Council of Catholic Men wishes to record once again its strong opposition to such recognition and admission of Red China. It also opposes any steps which might lead in this direction.

The passing of time has only served to underscore again and again that Red China by its policies and action is opposed to the principles of the United Nations and the United States.

Sophisticated technicalities and secular philosophies cannot be used to rationalize the facts of international life as related to Red China.

These facts are known to the people of the United States.

War, religious, and secular persecution, the violation of human rights are not credentials acceptable for recognition by either the UN or the United States.

We respectfully call upon the Congress of the United States to reaffirm the joint resolution of the 84th Congress on this matter.

We Bitterly Oppose Raise in Federal Gasoline Tax

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. ABBITT. Mr. Speaker, since the new budget recommendations were made 2 weeks ago, there has been considerable publicity in the press concerning the proposal to raise the Federal tax on gasoline in order to meet the mounting costs of the Federal highway program.

When this program was before the Congress several years ago, I opposed it because I felt at that time, and still feel, that this would be just another example of Federal assumption of power in the States and that it would ultimately cost the American people far more than its supporters led us to believe. I believe that roadbuilding, like so many other things, can best be handled by the States and I am opposed to raising gasoline taxes further.

Typical of the objections I have had brought to my attention is that contained in a fine editorial in the Hopewell News of Hopewell, Va., edited by Mr. A. Robbins, Jr.

Mr. Robbins is a sound believer in States rights and in the necessity of maintaining a strong fiscal economy. He advocates a commonsense approach to the problems of our people and is a firm believer in self-reliance rather than the present-day tendency to run to the Federal Government to meet our needs. I wholeheartedly concur in his feelings.

Given the situation we now face, I feel the suggestions he makes are worthy of attention and I would like to include the editorial herein with my remarks:

WE BITTERLY OPPOSE RAISE IN FEDERAL GASOLINE TAX

There was one item in the President's budget message with which we violently disagree. That was his proposal to increase the Federal tax on gasoline by 1½ cents.

This has no bearing on balancing the budget, because the money would go into the separate fund being used to construct the huge new System of Interstate Highways.

Due in considerable measure to the hard work of our own Senator HARRY F. BYRD this new highway system was set up separately, outside the Federal budget, supposedly on a pay-as-you-go basis. It had the Federal taxes on gasoline, oils, tires, etc., assigned to it and this was supposed to pay the Federal Government's share of the system.

But, due to rising costs, the special highway fund is going into the red during the next fiscal year, if construction continues at the present rate. So the President calls upon the Congress to raise the Federal gasoline tax from 3 to 4½ cents per gallon.

ANOTHER SIDE

There is another side to the coin, of which we here in Virginia are very conscious. In spite of the fact that the Federal Bureau of Public Roads is supposed to pay 90 percent of the cost of these interstate superhighways, the extra costs to the various State highway departments, above the actual 10 percent of the construction costs, have put such a burden on many of them that they are going into the red, if they meet all the Federal matching terms and still keep up their own primary and secondary highways.

The Virginia Highway Department estimates that it will need an additional $25 million in the next tax years if it is to continue to match the Federal interstate highway money and meet all of its other obligations on our primary and secondary highways.

Governor Almond has hinted that it might be necessary to ask the next general assembly to increase the Virginia gasoline tax 1 or 1½ cents per gallon to meet this situation.

If the Federal tax went to 4½ cents and the State tax to 7½ cents, that would make a total tax load of 12 cents on every gallon of gasoline that we burn. That is too much. It is not fair to the average motorists to force them to pay such a high tax on gasoline.

As we have stated before, we would rather see the Virginia tax hiked one penny, if that is necessary to take care of the pressing needs of our State highway department, than to see the Federal tax increased at all. As a matter of fact we have always felt that the Federal Government should have left the taxing of gasoline entirely to the States.

ONE SOLUTION

In any event, there is apparently only one solution to this situation, without raising taxes and that is to spread out the Federal Interstate highway program over a longer period of years.

Even then, it might be necessary to increase the State tax on gasoline 1 cent per gallon. We would oppose any greater increase and we bitterly oppose any increase in the Federal tax.

If you think as we do, that speeding up this huge Federal program is not worth paying more Federal gasoline tax for, then we urge you to write to our Representative and our Senators:

Representative WATKINS M. ABBITT, House Office Building, Washington, D.C.; Senator HARRY F. BYRD, Senate Office Building, Washington, D.C.; Senator A. WILLIS ROBERTSON, Senate Office Building, Washington, D.C.

And if you feel strongly about it also write to President Dwight D. Eisenhower, The White House, Washington, D.C. He won't see the letter, but if enough protests descend on The White House it will make an impression.

We feel that the automobile has been made the goat for taxes long enough. When you buy a new car there are a minimum of some $600 in Federal taxes in the purchase price. And the Federal Government goes right ahead taxing tires, oil, gasoline, etc. Then we have the State gasoline taxes, license plates, drivers license, property tax, etc.

It is time that automobile owners put a stop to it. We don't think that a few years delay in completing the huge new Federal Interstate Highways is going to hurt anything. It won't affect most of us one way or the other. But if they put another increase on the gas tax you know very well we'll never get rid of it.

The Balanced Budget—Administration's Answer to Soviet ICBM

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. BOLLING. Mr. Speaker, the following excellent article appeared in the Friday, January 9, 1959, issue of the Kansas City-St. Joseph Register:

THE BALANCED BUDGET—ADMINISTRATION'S ANSWER TO SOVIET ICBM

(By Norma Krause Herzfeld)

In spite of sputniks and congressional pressures and various reports and cries of mortal danger, President Eisenhower continues to be more interested in achieving a balanced budget than in providing adequate military defenses against Russian armed might. The public has long since been shut out of the great debate on U.S. military security, and secrecy and deliberate misrepresentation have made it increasingly difficult for the press to dig up the facts.

Nevertheless, it is quite possible, according to all available indications, that the United States has already lost the cold war. And if it hasn't already lost it, and no drastic changes are made in the present go-slow, little-bit-of-everything, business-as-usual defense policies, the United States seems bent on losing it in the next few years.

Those who take this grim view are contemptuously tagged "Cassandras" and hooted down as prophets of gloom and doom. There is little they can do to prove their case because, although the cold war can be lost today, the unthinkably tragic results will not show up for 5 or 10 years. In the meantime, life goes comfortably on.

The first and most obvious indication of inadequacy, of course, comes in the amount of money spent on defenses. The U.S. defense budget was cut from $43.7 billion in 1953 to $38.5 billion by 1957. The same week Russia's sputnik hit the skies, Secretary of Defense Charles Wilson held his farewell press conference and expressed satisfaction that all the economies he had effected would achieve his aim of a $38-billion defense budget. Congress, too, indulged in a budget-cutting orgy in 1957.

But although the administration was able to sit on information on Soviet H-bomb developments and air capabilities, and attemped to quash reports of successful Soviet ICBM tests, it was not able to hide sputniks from the American people. The sputniks, which they could see quite plainly at stated intervals, alarmed them.

The administration set out to reassure them, with the President planning a series of speeches, characteristically of the "chins up" rather than the "chips down' variety. After only two of these vague speeches, the President had a stroke and the whole project was quietly dropped. But a couple of tiny Explorer satellities and even a Vanguard satellite aloft seem to have convinced most Americans that things were all right after all. The only indications that they are still beset with some deep fears and suspicions have been the elections, when to be a Republican has been the kiss of death.

The top-secret Gaither report, which was turned in to the administration in November 1957, gave a more-than-grim picture of U.S. defenses vis-a-vis Rusisa, according to all reliable stories concerning it. It recommended that defense spending be increased from the then current $38.5 billion by $8 billion annually, to a total of $46.5 billion a year. It also recommended that another $5 billion be spent annually on civil-defense shelters, up to a total of $22 billion. The subsequent Rockefeller report recommended substantial increases in defense spending, running to at least $3 billion more annually until 1965.

Almost all the non-Pentagon witnesses at the Senate Preparedness Subcommittee hearings which ended last January declared that the U.S. defense effort was too little, too slow, and certainly needed a bigger budget. At a follow-up hearing of the Senate subcommittee in July, Pentagon officials admitted that the United States has no defense or even any prospect of defense against Soviet ICBMs; that the United States can't even move one fully equipped combat division overseas by airlift; that there has been no increase in aircraft deliveries.

In the meantime Gen. James Gavin, Army Chief of Research and Development, who had told the subcommittee that he had "watched the deterioration of our military forces with increased concern," was hounded out of his job for talking too frankly. Trevor Gardner, a similarly frustrated victim of administration defense policy, had resigned in 1956 as Assistant Air Force Secretary to protest the slow pace of U.S. missile development.

These voices were joined with those of other "Cassandras," including Senators SYMINGTON and KENNEDY, former Air Force Secretary Thomas Finletter, the journalistic team of Joseph and Stewart Alsop, and a handful of newspapers and magazines.

The administration has ballyhooed such diversions as non-stop jet tanker flights and atomic sub journeys under the Polar icecap, and has even gone so far as to vastly exaggerate the significance of the recent Atlas satellite success in relation to Russian achievements. But the fact remains that the current defense budget is only $40.8 billion, and the administration would like to cut that.

If one makes allowances for inflation and the phenomenon of dollar depreciation in procurement and research, which could increase all costs by possibly 3 percent annually, the defense budget needs an increase of approximately $1 billion annually just to keep it where it was in 1957 when it had been pared to the bone.

Senator SYMINGTON pointed out to Defense Secretary McElroy last July that "the total amount of money that has been asked for since the first sputnik on October 4, for acceleration over previous programs is a great deal less than the depreciation in the value of the dollar in the same period."

With regard to U.S. limited-war power, the administration is currently slashing military manpower by 75,000, bringing the Armed Forces down to their pre-Korean war level. The Army needs a $15-billion modernization program, mostly outside its present budget.

The token landings in Lebanon last summer strained the whole U.S. airlift system and took too long to accomplish. Arabs, at first shocked, were later amused by some of the obsolete equipment U.S. troops carried.

As to major war capabilities, the deterrent power of the Strategic Air Command is growing weaker rather than stronger. The administration has refused to speed up vital Polaris and Minuteman missile programs and has frozen funds voted by Congress for this. Many experts now predict a "gap" in U.S. defenses from 1960 until 1963 or later, when Soviet capabilities for nuclear attack will far outstrip U.S. defenses and retaliatory power, leaving the U.S. completely vulnerable not only to political and economic blackmail but military disaster.

Senator LYNDON JOHNSON queried Gen. Nathan Twining, Chairman of the Joint Chiefs of Staff, last July about this gap. "Are you satisfied," he asked, "that we will have adequate countermeasures by the time the Soviet missile capability reaches its height?" Twining replied, "Well, we hope so. , I wouldn't want to say 'Yes' to that one."

Nevertheless, the Budget Bureau remains the top-priority U.S. weapon and it gave orders for 1960 budget makers in defense, as well as in every other Government program, to cut spending. President Eisenhower continues to remain the captive of the balanced-budget-above-all-else philosophy of his former Treasury Secretary George Humphrey.

When the sputniks made their appearance, Humphrey, in contrast to most other administration officials admitted that they were a "real danger." What he meant by "danger," however, was that the American public might get excited about them and demand more action to keep up with Russia, regardless of the cost.

Above all the administration ballyhoo, two things stand out:

1. Most experienced and savvy observers here, expert in their particular fields in the Government, say privately that the United States is not doing enough in these respective fields to overtake or to keep ahead of the Russians.

2. The American people are being told on the highest authority that the United States cannot afford to spend more money in all these fields without going bankrupt.

If both of these things are true, we have already lost the cold war.

Federal Excise Tax on Gasoline

EXTENSION OF REMARKS
OF
HON. LAWRENCE BROCK
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. BROCK. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following resolution:

LEGISLATIVE RESOLUTION 11

Whereas since the enactment in 1919 of the first State gasoline tax, this levy has been historically and rightfully a State tax, and

Whereas the gasoline tax has traditionally provided the major portion of the funds needed by the States to construct and maintain their highway systems, and

Whereas in 1932, the Federal Government also imposed an excise tax on gasoline, as a temporary, emergency, revenue-producing measure, and

Whereas the expressed, and reaffirmed, intent of Congress to vacate this tax field has not been carried out, and

Whereas instead, the original Federal excise on gasoline has been continued and increased by 200 percent, and

Whereas the mounting Federal tax on this product threatens to preempt this legitimate tax source belonging by priority and equity to the States, and

Whereas further increase in the Federal gasoline tax rate would lead to serious restriction upon the ability of the States to

secure funds for needed highway improvements: Now, therefore, be it

Resolved by the members of the Nebraska Legislature in 69th session assembled:

1. That the 69th session of the Nebraska Legislature does respectfully record its opposition to any further increase in the present Federal excise tax on gasoline.

2. That a copy of this resolution be transmitted by the clerk of the legislature to the office of the President of the United States and to the Members of the House of Representatives and of the U.S. Senate from Nebraska, and to the chairman of the Ways and Means Committee of the House of Representatives and to the chairman of the Finance Committee of the United States Senate.

DWIGHT W. BURNEY,
President of the Legislature.
HUGO F. SRB,
Clerk of the Legislature.

Poison in Your Water—No. 5

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the RECORD an article from the Twin Falls, Idaho, Times-News describing the situation in the Columbia, Snake, and Yakima River Basins to show that poison, pollution, and filth in our waters is not limited to any one part of the country. This is just one more reason for a vigorous Federal program to clean up the lakes and streams and waters of our beloved county:

WASHINGTON AREA TOLD COLUMBIA RIVER CONTAMINATED, BUT SNAKE RIVER WORSE

PASCO, WASH., July 16.—The water wonderland of the Tri-City area is "buggy."

Benton-Franklin district health officers don't want to cause people to shun the rivers but they can't declare them safe for swimming.

The Columbia is contaminated; the Snake is worse; and the Yakima is worse still. The degree of contamination fluctuates daily and according to seasons, the condition of the sewage treatment plants, and other factors.

A 6 weeks' survey to check bacteria count in the Columbia is under way by the health department. The check will show the population of potential disease-causing organisms in the water.

Dr. Vernon Michael, district health officer, stated a great deal of sewage flows into the river despite sewage disposal plants, plus industrial pollution and bacteria from other sources.

For instance, the sewage disposal plants of Richland, Kennewick and Pasco all meet requirements but they have different degrees to proficiency. Kennewick and Pasco plants give primary treatment and Richland a more complete treatment of the effluence. But in all plants a certain amount of bacteria is carried into the river despite chlorination. The amount varies.

Columbia River water always contains this bacteria. The extent of diffusion depends on the amount of it, riverflow and certain other factors such as lagoons, etc.

Dudley Beall, sanitarian, said today the Yakima River is polluted with animal refuse, sewage and perhaps conditions outside the health district jurisdiction.

The Snake River contains more bacteria than the Columbia. This is believed due to animal refuse.

Dr. Michael said the 6 weeks test will determine bacteria count and try to find its sources. He added that many known germs come from runoff and sewage. Sometimes raw sewage flows into the river when a treatment plant breaks down, he stated.

"Because of these facts it is difficult to judge the pollution of the river from day to day," Dr. Michael said.

More and more people are using the rivers. Beaches and parks are being formed. The health department doesn't want to be a killjoy but the fact is that the river just isn't safe for swimming.

Some may swim for years and not be affected because of immunity, health, amount of water ingested. Others may get sick right away. Principal diseases would be intestinal such as dysentery.

The health department says: "They're swimming at their own risk. We feel the river is more contaminated today than ever."

Inflation

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. OLIVER. Mr. Speaker, I recently had an opportunity, along with a number of my colleagues, to discuss the problem of management of the public debt with Secretary of the Treasury, Robert Anderson.

Naturally, the subject of inflationary pressures played a prominent part in our discussion. At that time, I expressed the opinion that the United States, wealthiest country in the world today, should not place itself in an economic straitjacket because of fear of inflation.

For this reason, I include two amusing, but penetrating columns, the first of which appeared in the Boston Daily Globe on January 26, 1959.

The second column was included in the January 29 edition of the Washington Evening Star.

[From the Boston Daily Globe, Jan. 26, 1959]

THE QUEEN TELLS ALICE ABOUT INFLATION

(By John Harriman)

Bugbear: A kind of imaginary goblin or specter, used to excite needless fear, as in children.

"Well," said Alice, "I've never been able to understand all this talk about inflation we've been hearing lately. What is it anyway?"

The Queen of Hearts smiled tolerantly. "Inflation, my dear child, is too much money chasing too few goods, and this makes prices go up."

"Oh," said Alice, as the Mad Hatter laughed in a kind of growling way in his throat. He, you see, being a sort of an economist, knew better.

WHY THE MAD HATTER LAUGHED

From where the Mad Hatter was standing he could see all the great factories of Wonderland—not going full blast as the Mad Hatter would have liked to see them, but rumbling along with plenty of idle capacity to spare. Really, the Queen of Hearts is quite an idiot, he thought.

But the Queen of Hearts was not quite as stupid as she seemed and after a quick glance at the Mad Hatter's sneering countenance she went on: "Of course, child, there is another kind of inflation, or really two other kinds," she added lightly. "The push kind, which occurs when naughty labor leaders push up wages faster than productivity and then the kind that comes when the big companies of Wonderland raise prices because they are in a position to administer them."

"Is that second kind naughty too?" asked Alice.

"Certainly not," cried the Queen. "Big companies are never, never naughty. You ought to know that, child."

"Oh," said Alice meekly. She was very confused (and the Mad Hatter could see this, and he felt deeply for her). "But tell me, dear Queen. All the stocks you have bought for me; they have gone up a lot, haven't they?"

"They have. And they will go up further child and make you rich."

"Why?" asked Alice.

"Because we are having inflation; an inflation caused at the moment by the wage demands of wicked labor leaders."

"What I don't see," said Alice, screwing up her nose and frowning, "is why labor leaders are wicked or naughty if they are making me rich."

At this the Mad Hatter gave a great shout and threw himself on the ground, grasping his sides and rolling about with laughter. (Remember that he wasn't a regular economist and all the regular economists mistrusted him for his irreverence in never agreeing with them.)

THE QUEEN FINALLY MAKES HER POINT

"Child, pay attention to me—not that idiot," exclaimed the Queen. "You've missed the point. You own stocks because we're in an inflationary age, and nobody owns bonds and everybody owns stocks in an inflationary age. And besides, stocks can make you rich. Don't you want to be rich?"

"Of course," said Alice, simply, still staring at the Mad Hatter and wondering what on earth had got into him. "But, well just suppose that we aren't in an inflation——"

"Really, child," the Queen burst out. "If we weren't in an inflationary age, there would be no point in owning stocks, so we've got to be in an inflationary age. Can't you get that through your head?"

"Yes; I think I understand now," Alice replied thoughtfully.

"Well, it's about time," said the Queen. "You don't want to be ruined by inflation, do you?"

"Oh, no," said Alice.

The Mad Hatter was crying.

The Government of Wonderland announced on Friday that the cost-of-living index last month declined slightly to the level of last June—lower prices on food, automobiles, and clothing.

[From the Washington Evening Star, Jan. 29, 1959]

MILTON BERLE EXPLAINS INFLATION

(By Sylvia Porter)

Milton Berle was having a lot of fun with President Eisenhower's $77 billion budget on his TV show recently. Suddenly, during his monologue came this:

"Inflation? That means your money today won't buy as much as it would have during the depression when you didn't have any."

My family howled—and I ran for pencil and paper to write it down. For he had put into focus a basic aspect of our country.

Why hasn't there been a great outcry against rising prices, swelling public support for measures that really would stop the wage-price spiral? Why don't average Americans feel as strongly as, say, former President Herbert Hoover that inflation is the most monstrous economic evil there is?

Why has grumbling about price rises not been translated into a crusade for price stability or at least, buyers' resistance?

Why is it that most union members are utterly unmoved when the experts try to explain that a $10 pay rise doesn't mean anything if the cost of living goes up $10 at the same time?

ANSWERS ARE OFFERED

The answer to the "why" lies behind Berle's wisecrack. Listen to what I heard as I checked the response to the remark.

From the head of a big Wall Street financial house—a millionaire thoroughly aware of what dollar fluctuation means:

"Oh, that's a beauty, I wish I'd heard him say it. Yes, in the thirties, I could have bought four suits for what one costs today, and I could have had a mansion in the suburbs for the asking. But I didn't buy the four suits and I didn't take over the mansion because I didn't have the courage to splurge. I won't say it in public, but I'll say it to you if you don't identify me. While I think what has been happening to the dollar is terrible, I personally am better off than I ever dreamed I'd be, and so is my family. I wouldn't turn the clock back for anything."

From a middle-aged housewife who lives with her husband, a junior executive in a New York commercial firm, in a small apartment near my home:

"I've always lived in this neighborhood, and I remember passing by the grocery once—it must have been in 1938 or 1939—and seeing the whole window filled with eggs. On impulse, I wanted to go in and buy up the whole display, but Jim's pay had just been cut 10 percent, we were trying to live on $32.50 a week, and both kids were in high school and, well, I just stood and stared into the window. Now I buy in that grocery every day and I buy whatever I want. I don't like rising prices, but I'd rather pay more and have the money to buy than see prices cheaper and be worried again."

WIDOW NOT BADLY OFF

From an active member of the newspaper union in my office:

"Ha, I heard that show and I laughed, too. What does it mean to me? Well, during the depression I didn't have any money, so it didn't matter to me what things cost, because I couldn't buy them. Now my money buys less, but I have the money. Better off? Sure, I am. Did the union help? Of course it did, and I'm all for it."

From a widow, a friend of my mother's, who's living on insurance, social security, and income from a small investment portfolio:

"That's cute, and I know what he means. When Steve worked it out so I'd get $250 a month from insurance I thought I'd live comfortably forever after. That dream is busted. But you know what's making up for it? My social security. And I've been making money on my stocks. I'm complaining, but I'm really not so badly off. Honestly."

Not until the majority of Americans feel they're being more hurt than helped by rising levels of wages and prices will the cry come, "Halt!"

Persistent Unemployment Needs Congress Action

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, the serious problem of permanent unemployment for millions of American workers is receiving considerable attention from well-informed writers and experts on social and economic questions.

In my own State and in my own district the plight of these unemployed and their families conflicts sharply with the President and White House theorists who continue to say that all is well and 1959 will be more prosperous than ever before.

I cannot agree with those who see a float of unemployment as necessary for their so-called better business climate. Nor can I understand the callous disregard of administration leaders for the intense human suffering that this condition breeds.

Mr. Speaker, the editorial writer of the Reading Times illustrates how increased productivity and automation permits record-breaking output with fewer and fewer workers.

He points to the responsibility of Congress to face this problem with positive action in calling for the inactment of the area redevelopment bill.

Under leave to extend my remarks, Mr. Speaker, I include herewith this editorial from last Saturday's issue of the Reading (Pa.) Times:

PERSISTENT UNEMPLOYMENT NEEDS CONGRESS' ACTION

Writing in the New York Times last Sunday, A. H. Raskin, the Times' expert on labor and related subjects, had a most depressing story to tell.

In an article that was obviously well documented and written only after a tremendous volume of research, Mr. Raskin said in his leading paragraph: "Some of the country's major mass production centers are haunted by the prospect of permanent pools of jobless workers as a carryover from the recession."

The article, which was based on a survey by Times correspondents in 16 big industrial cities, stated that Detroit, the capital of the huge automobile industry has one-eighth of its work force idle at a time when the output of 1959 cars is climbing toward its peak. The steel and coal center, Pittsburgh, has twice as many unemployed as it had in the recession month of January 1958. In New York, 1 worker in every 13 is still jobless.

The article then presents a paradox: "Few of the areas surveyed appeared to be returning to normal in job opportunities with anything like the same speed they had exhibited in moving back toward full production."

Mr. Raskin and the men who gathered his material for him find several reasons for this. One is automation, in which machines take the place of men. Another is the decentralization of production. (More and more work is being shifted to assembly plants away from Detroit; more and more steel is being poured in mills away from Pittsburgh. The transfer in military emphasis from tanks to electronic devices, from aircraft to guided missiles, has caused a substantial reduction in requirements for industrial employment on defense programs.)

This is happening, the article states, in 16 big industrial cities. Can anyone believe it is not also happening in scores of smaller cities throughout the country? No one can so believe if he knows anything at all about what has happened to the basic textile industry—the manufacture of cotton, woolen, and synthetic cloth—in New England, for the aforesaid and for other reasons. Look at New Bedford. Look at Fall River. Look at Providence. Look at Biddeford-Sacco. Look at many another basic textile town. They are not ghost towns but they are the industrial and economic skeletons of what they were a dozen years or so ago.

Look at what is happening just to the north of us, in Schuylkill, Luzerne, and Lackawanna Counties, the anthracite heart of America. There are also industrial ills, leading to great unemployment, in certain bituminous areas. Accordingly, we may be permitted to believe that many small and medium-sized cities are hit in proportion to the big 16 the Times writes about.

What to do? Well, President Eisenhower, just a few days before the election last November 4, vetoed an area redevelopment bill which would have placed millions of dollars at the disposal of areas which need to attract new plants in order to approach full employment. We said at the time that we believed that the veto was economically and socially unjustified.

On Tuesday Senator PAUL DOUGLAS, of Illinois, introduced another such bill, calling for a fund of nearly $400 million in loans and grants from the Federal Government, for redevelopment purposes. We believe, in view of the Times' abundant documentation of the need for redevelopment, the need for many more jobs than now appear in the offing, that Senator DOUGLAS' bill should be passed without delay, as the previous bill was passed and that if Mr. Eisenhower once more vetoes it, it should be passed over his veto.

The States Are Something, Still

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. JOHANSEN. Mr. Speaker, some months ago a constituent stopped me on the street back home and asked, "Don't the States have any rights any more?"

The question, and its implied protest, is, in my judgment, becoming increasingly pertinent and crucial. Moreover, it has a significant and most revealing historical precedent.

Back in 1867, as an aftermath of the tragic Civil War and as a part of the equally tragic Reconstruction era controversy, U.S. Senator Charles Sumner, of Massachusetts, was advocating consolidation of virtually all governmental powers in the National—that is, Federal—Government.

It is worth noting that his motive was to establish through the whole country absolute equality of civil and political rights.

Regarding Sumner's views, his biographer, Edward L. Pierce, writing in 1893, said:

Thoughtful students of the American system recognized, even at that period when national power was being pressed to its utmost verge in the interest of freedom, that Sumner's conception was one-sided. He admitted indeed the place of States in our system, as supplying opportunities for education and meeting local wants; but he treated them as conveniences rather than essential organs of national life, and his conception reduced them almost to the level of counties and towns—as if States, with equal representation in the Senate and with jurisdictions guarded by the Constitution against national interference, bore any real analogy to the municipal divisions of a State, which are useful for local administration but absolutely

subject, as to their sphere and even as to their existence, to legislative power.

Commenting on Sumner's views his own colleague from Massachusetts, Senator Henry Wilson, remarked critically after Sumner had lectured in Boston, "The States are something, still."

Today I wonder just how much longer Senator Wilson's statement can be made truthfully and accurately.

Item: Increasingly the Federal Government is establishing itself as the agency for "supplying opportunities for education and meeting local wants."

Item: Continually, and in more and more fields, States are finding their authority to legislate either sharply curtailed or specifically banned by decree of the U.S. Supreme Court. While the integration decision is the most spectacular and presently the most disturbing example, it is only one.

Item: Openly even Members of Congress are urging that there is every reason to use—the Federal tax system—in preference to State and local systems where the choice exists—which means progressive centralization and federalization of the tax-leving and revenue-dispensing function of Government.

Item: Recently a distinguished Federal judge—not from Michigan—confessed to me that the practical meaning of the 10th amendment—supposedly reserving broad and vital powers to the States—is becoming increasingly obscure and uncertain, a situation which he deplored.

Item: More and more it seems to me—as I stated this week on the floor of the House—we face the possible supreme irony and tragedy that, under the guise of creating alleged social rights, we will so centralize Government, so nullify the 10th amendment, and so weaken the responsibility, rights and powers of the States that the security of all rights and liberties of our citizens will be jeopardized by an all-powerful Government in Washington.

Are we really willing to reduce the sovereign States to the status of counties in a single, Federal superstate? I think not.

Social Security Protection

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. DINGELL. Mr. Speaker, today I am introducing a group of bills which are intended to close up some significant holes in social security protection provided for our old people, our widows and children, and those of our workers who become disabled. In brief my proposals would:

First. Provide hospitalization benefits for individuals who (a) are eligible, or potentially eligible, for old-age benefits, (b) are the survivors or dependents of insured workers, or (c) are disabled;

Second. Reduce the retirement age from 62 to 55 for women and from 65 to 60 for men;

Third. Provide a more liberal definition of disability for both the cash payment program and the disability freeze;

Fourth. Eliminate the requirement that an individual must have attained age 50 in order to qualify for cash disability benefits;

Fifth. Raise the limit on outside earnings, without loss of benefit, from $1,200 to $1,800 a year;

Sixth. Clarify the law so that it is clear that social security benefits shall be exempt from all taxation;

Seventh. Increase the earnings base for tax and benefit purposes from $4,800 to $6,000 a year.

The most important area in which action is needed is in the provision of hospital care insurance for our older citizens. It is one of the unpleasant facts of our times that the age group which probably needs this type of insurance the most—elderly people over 65—finds itself in the position of being the least protected. Just over one-third of the people over 65 and one-sixth of the people over 75 have hospitalization of any sort.

Many private plans refuse to accept older people after they pass a specified age and drop members or raise rates as age increases. These practices seem to be the accepted method of avoiding adverse risks and holding down the premium rates. Moreover the plans which do not discriminate against the older subscriber—Blue Cross and others—are finding competition increasingly severe from those that do.

The bill which I have introduced provides a simple and straightforward remedy—a hospitalization benefit—to the present social security system. Under the bill anyone who would be entitled to receive old age, survivors, or disability insurance benefits, would also be eligible for up to 60 days of hospitalization in a semiprivate room in any calendar year. The cost would be paid directly to participating hospitals from the appropriate social security trust fund. A total of some 13 million persons—including the dependents and survivors of eligible workers—would be given this protection at the outset. The bill provides for utilization of qualified State agencies and private nonprofit organizations, and it preserves the right of each patient, upon referral by a licensed physician, to make his own choice of a hospital.

The insurance in the bill would include the usual services, drugs, and appliances furnished by a hospital—that is, bed and board and the nursing, laboratory, and ambulance services, use of operating room, staff services, and those other services, drugs, and appliances which are customarily furnished by the hospital to its bed patients. The insurance would not cover any medical or surgical care, except such as is generally furnished by hospitals as an essential part of hospital care. It would not cover hospitalization in any tuberculosis or mental hospital or an institution which furnishes primarily domiciliary or nursing care.

I also have reintroduced a bill to reduce the retirement age to 55 for women and 60 for men. Age 65 for retirement is an arbitrary figure which was established without any convincing social or economic reason. The healthy and vigorous, who are permitted to work, almost uniformly continue beyond the present age of 65. This is evidenced by the fact that the average age of retirement for men under the social security system is 68. On the other hand, many persons because of health, company compulsory retirement, automation, and other events beyond their control are forced off their lifetime jobs. Once the older worker is thus removed from the labor market, the difficulties in finding new employment are often insuperable. He is, then, in a very real sense, retired, yet must struggle through the interim years until he reaches the age specified in the Social Security Act.

The two amendments I propose to the disability provisions are a necessity if we are to have a meaningful program. The requirement of age 50 for disability benefits has no defense in reason. The worker who becomes disabled at age 45 is just as much in need of benefits as the worker aged 55.

Fully realizing that disability benefits will mean nothing to the man who cannot qualify for the strictly worded and strictly administered definition of disability in existing law—inability to engage in any substantial gainful activity—I urge the Congress to act speedily in adopting a more equitable provision. The definition I propose would be closer to those in the Civil Service and Railroad Retirement Acts and would allow the worker to qualify if he was unable to engage in a substantial gainful activity which is the same as or similar to the occupation or employment last performed by him on a regular basis before the onset of such impairment. As the law is now administered it is a flat on your back proposition, and the social security definition is much more severe than in other Federal disability programs.

A liberalization of the so-called retirement test is another much-needed development. At a time when living costs are cutting deeply into the protection furnished by benefits—averaging around $70 per month per retiree—the $1,200 per year earnings limit makes a marginal existence mandatory and discourages attempts to better oneself. My proposal, to raise the annual earnings limitation to $1,800, is a reasonable start in the solution of this perplexing problem.

As a means of protecting beneficiaries from possible State and local taxation of their meager benefits, I have introduced a bill which would make it clear that social security benefits are exempt from all taxation. At present the Federal Government does not tax such benefits, but this is the result of Treasury ruling rather than specific provision of law. Such an enactment would clarify this muddy situation at all levels of government.

Finally, I have introduced a bill which will raise the wage base for benefit and tax purposes from $4,800 to $6,000 a year. Last year Congress, in raising the wage base from $4,200 to $4,800 a year, took a step in the direction of bringing the earnings that are creditable for social security more nearly into line with the great increase in wages which has occurred in the past decade. But we did not go far enough. The original law in 1935, which used a $3,000 wage base, covered all the wages of 97 percent of covered workers thereby implying that the program should cover all the wages of almost every American worker. If the full earnings of the same proportion of workers today were to be covered the wage base would have to be set at more than $8,000. My proposal, to increase it to $6,000 a year, is needed to help regain this lost ground and, incidentally, would provide a saving which would help to finance a part of the cost of the other improvements I am advocating.

I believe we have every reason to be proud of the evolution of our social security system. We should always remember, however, that the history of this legislation has been one of action, and the frontier of social security is not closed.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Williams of Delaware, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Cotton, and Curtis.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Langer, Aiken, Capehart, and Carlson.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Gruening, Moss, Dworshak, Kuchel, Goldwater, Allott, and Martin.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Langer, Dirksen, Hruska, and Keating.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Cooper, Dirksen, Case of New Jersey, Javits, and Prouty.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Yarborough, Clark, Jordan, Carlson, Langer, and Morton.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Neuberger, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Case of South Dakota, Martin, Cooper, Scott, and Prouty.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Morton, and Keating.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, Fairfax Hotel.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS
JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Appendix

Mrs. Abraham Lincoln's Visit to New England in 1863

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, January 27, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entiled "Mrs. Abraham Lincoln's Visit to New England in 1863," written by James Duane Squires, Ph. D., chairman of the department of social studies at Colby Junior College, in New London, N.H.

Mr. President, Dr. Squires is a distinguished historian and an authority on the life of Abraham Lincoln. His article was recently given at a meeting of the Lincoln Society in Boston, which is composed of men and women from the six New England States who have a deep interest in the life and activities of our 16th President.

Mr. President, in this year in which we honor the 150th anniversary of the birth of President Lincoln, I am happy to bring to the attention of the general public Dr. Squires' contribution to the ever-growing body of material covering Lincoln's life. This article by Dr. Squires is indeed a valuable addition.

I am informed by the Public Printer that the article is estimated to make approximately 2¼ pages of the RECORD, at a cost of $182.25.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MRS. ABRAHAM LINCOLN'S VISIT TO NEW ENGLAND IN 1863

(By James Duane Squires, Ph. D.)

From the viewpoint of the historian the problems involved in this study have been numerous, interesting, and to some extent unsolvable. Although materials were examined in more than a dozen libraries and archival collections, including the Congressional Library, it was not possible to locate any written record of the trip by one of the participants. All that can be done, therefore, is to piece together a number of facts from a wide variety of sources, and to explore with diligence certain New England newspapers for the months of August and September 1863.

Despite these difficulties, however, the narrative of this journey by Mrs. Abraham Lincoln and her two sons to New England in 1863 is a most interesting one. It is well worth an effort at reconstruction in our day almost a century later. Let me suggest five reasons why. In the first place, it was the longest trip that Mrs. Lincoln ever took during her years in Washington. Secondly, it was one of those rare occasions when she traveled with her two sons. Thirdly, the communications exchanged between President Lincoln and his wife while she was away testify convincingly to the warm affection and devotion which existed between them. Fourth, Mrs. Lincoln, while in New England, was in a rare and relaxed mood, perhaps the last time during the war that she exhibited her natural charm and happiness. She had emerged from the shroud of gloom which had covered her since Willie's death in 1862, and was not yet plunged into the new sorrows caused by the deaths of her favorite half-brother and her brother-in-law later in 1863. Finally, it was from this trip that Robert T. Lincoln developed his interest in Manchester, Vt., which led to his retirement there many years later.

The origins of the journey, I think, are clear enough. As we all are aware, Abraham Lincoln and his family during the war years spent most of the summer months in the Anderson Building at the Solider's Home in the environs of the capital city. They had moved there on July 1, 1863. The next morning, as Mrs. Lincoln was driving into the city, she was thrown from her carriage. In addition to bruises, she suffered head injuries which, as it turned out, healed slowly. On July 3, the President telegraphed Robert, who was having his final examinations at Harvard, that his mother's accident was not serious. But 8 days later he was disturbed about her, for on July 11 he telegraphed his eldest son, "Come to Washington." Three days later he wired again, "Why do I hear no more of you?" Robert was already nearing Washington, and later on the 14th he saw his parents.

This factor of Mrs. Lincoln's injury and slow recovery was the first reason for the trip that summer. Again, July and August in 1863 were excessively warm all along the Atlantic seaboard, and Mrs. Lincoln never thrived in the hot and humid weather of the capital city. In his recent book, Stanley Kimmell comments on the sickening heat and dirt of Washington in the summer of 1863. No wonder the kindly and thoughtful President wished to speed his wife's convalescence by getting her away to a more agreeable climate in northern New England.

A third factor involved Robert T. Lincoln. As a freshman at Harvard, in October 1860, Robert had visited the White Mountains and had deeply enjoyed the experience. He had been urging his mother to visit them ever since his own journey there. As Mrs. Elizabeth Grimsley's letters indicate, Mrs. Lincoln had been hoping to do this very thing ever since the spring of 1861. Moreover, Robert had just completed successfully his third year at Harvard College and would be 20 on August 1. What could be more natural for an affectionate mother like Mary Lincoln than to observe these two anniversaries with a trip with her sons?

One other aspect of Robert's relation to the trip was suggested by the astute John Hay in a memorandum to J. G. Nicolay, dated August 7, 1863:

"Bob and his mother have gone to the White Mountains. Bob was so shattered by the wedding of the idol of us all, the bright particular Teutonne, that he rushed madly off to sympathize with nature in her sternest aspects. They will be gone some time. The newspapers say the tycoon will join them after awhile. If so, he does not know it."

It is a little surprising that the metitculous Hay failed to mention the fact that Tad Lincoln accompanied his mother and elder brother on this search for nature in her sternest aspects.

Mrs. Lincoln and Tad were in New York by Tuesday, July 28, for the President telegraphed them there that Robert would join them the next day. Presumably the family group went to Boston on Thursday, July 30. This was Mrs. Lincoln's third trip to the capital city of Massachusetts since she had become the First Lady. She had been there on a 2-day visit in May 1861 with Mrs. Grimsley, and again for a longer stay in November 1862. She invariably stayed at the Revere House, a hotel not now in existence, but which then stood in Bowdoin Square on a site now occupied by a municipal fire station.

The Boston Daily Journal on the very day that Mrs. Lincoln and her sons arrived in that city, i.e., on July 30, put this headline on a news dispatch: "President Lincoln To Visit New England." The source for this incorrect statement was an unnamed Washington correspondent. The next day the Journal amplified its original report to read as follows:

"Mr. Lincoln contemplates making a short visit to the New England States during August, if his official duties will permit. He is sadly in need of a little relaxation. He will avoid all the fashionable places, and proceed quietly to the White Mountains, where he will meet Mrs. Lincoln and his eldest son."

Again, it is to be noted that there is no mention of Tad's presence in the party.

By Saturday, August 1, 1863, the Manchester Daily Mirror in New Hampshire had the story with some further embellishments:

"Mr. Lincoln contemplates making a short visit to the New England States during August, if his official duties will permit. He is sadly in need of a little relaxation. He will avoid all the fashionable places and proceed quietly to the White Mountains, and meet Mrs. Lincoln and his eldest son. The President will decline all receptions and ovations, but will go as a quiet citizen on a health-seeking tour."

Supplementing this, the New Hampshire Patriot, a newspaper not in sympathy with the national administration, at Concord rather sourly observed on Wednesday, August 5:

"'Father Abraham Coming.' It is stated that the President is coming to the White Mountains to cool off and rest. The Boston Post says he couldn't do better, and that the country can get along even if he is perched on the top of Mount Washington."

Gov. Joseph Gilmore, of New Hampshire, was a man well acquainted with what today we would call public relations, and he read his papers carefully. On Tuesday, August 4, he wrote the President:

"I see from the public prints that you are intending to spend a few weeks among the mountains of New Hampshire. May we not have the privilege of welcoming you to our State capital? I have no desire to subject you to speeches or parading you over our dusty streets in the boiling sun. But if you were to let me know a day or two before your arrival that you would spend a night at least in my house, the people would give you a spontaneous and informal ovation which would do your soul good."

To this friendly letter the President replied on Friday, August 7, as follows:

"MY DEAR GOVERNOR GILMORE: I thank you very heartily for your kind invitation to visit Concord and especially for the exceedingly cordial terms in which you have conveyed it. I very much regret that I cannot at present accept it. I am by no means certain that I

can leave Washington at all this summer. The exacting nature of my official duties renders it exceedingly improbable. I assure you, however, that I am nonetheless sincerely grateful for your kind intentions and for the expressions of personal good will contained in your letter. I am,

"Very truly yours,

"A. LINCOLN."

While this high-level correspondence was going forward, Mrs. Lincoln and her two sons left Boston on Saturday, August 1, and journeyed by rail to Alton Bay, N.H. From that point they took a steamer across Lake Winnipesaukee to Center Harbor on the northwest shore. This was the regular tourist entryway to the White Mountains in those years, traveled by thousands each season. Mrs. Lincoln and her sons, according to the Manchester Daily Mirror, spent Sunday, August 2, in Center Harbor. From that point on Monday the 3d they "staged it to Conway, where gentlemen from Boston put their private carriages at her disposal."

In a special dispatch to the Boston Daily Journal, published on August 8, but dated Tuesday, August 4 at the Kearsarge House in North Conway, that paper's New Hampshire correspondent wrote:

"Mrs. Abraham Lincoln and her two sons arrived here last evening from Center Harbor. Their party will leave here tomorrow morning for the Glen House and Tip Top House, Mount Washington, in a handsome turnout which has been especially detailed for their accommodation with an old and popular driver in charge. They will visit all points of interest on route. While at North Conway Mrs. Lincoln and family have been very courteously entertained at the Kearsarge House; gentlemen from Boston having their carriages with them have put them at the disposal of the Presidential party.

"Mrs. Lincoln has expressed herself more than delighted with the elegant and unobtrusive attention which the guests at North Conway have given her.

"The weather is beautiful and the company unusually large all through the mountains."

The Mount Washington carriage road, at that time the only method of riding up New Hampshire's loftiest peak, began at a point close to the Glen House, and ran upward along the east face of the mountain. It had been authorized by the State legislature of 1853, but had not been finished and opened for traffic until August 1861. It had proved to be a great tourist attraction and, now in its third season, was heavily patronized. On Thursday, August 6, Mrs. Lincoln and Robert joined the throng of tourists and drove to the Tip Top House. The Boston Daily Journal correspondent in his dispatch dated August 7, which he headed "Thanksgiving Day on Mt. Washington," wrote as follows:

"Yesterday—130 visitors came to Tip Top and in the crowd came Mrs. A. Lincoln and her son Robert. Mrs. Lincoln is a lady of medium size rather round favored and quite fleshy. She was dressed in a dark riding habit, dark bonnet and veil. She has a very fair, cheerful, smiling face, which does one good to look upon. She is quite light complexioned, has blue eyes and dark auburn hair, and on the whole, as might be expected of a President's wife, has a very agreeable way. Her son, Robert, is a dark complexioned lad of some 16 years.

"Today Mrs. Lincoln came up again from the Glen."

On this second visit Mrs. Lincoln delighted the Boston journalist by asking him to take down the mountain for immediate mailing to Washington a letter from herself to the President. What a pity that this letter has not survived.

The dispatch to the Boston Daily Journal which has just been quoted is worthy of note for at least three reasons. First, it is one of the few complimentary descriptions of Mrs. Lincoln penned by a newspaper man after her crushing grief in her son, Willie's, death. No doubt its kind words about the First Lady reflected her true felings that summer day on the top of Mount Washington; certainly at that moment the horror of war and the tensions of the Capital City seemed far away indeed. Second, this dispatch correctly notes that the President's Thanksgiving Day proclamation, dated July 15, 1863, but set for Thursday, August 6, was generally observed throughout the North. Third, the journalist gave a succinct description of Robert T. Lincoln, although he grossly underestimated the young man's age. Actually, Robert was not 16, but had just passed 20.

Although this particular correspondent failed to mention Tad Lincoln, the writer for the Manchester (N.H.) Daily Mirror was more explicit. In the issue of that paper for August 8, the following comment appears:

"Mrs. Abraham Lincoln and her two sons, Robert and Thomas, the latter about 10 years old, are creating quite a sensation in the mountain region."

Knowing the high spirits of the younger boy, we may surmise that it was he rather than his more dignified older brother who was creating the sensation.

It was while his family was in the White Mountains that the President on Saturday, August 8, wrote his charming and oftenquoted letter to his wife, summing up the weekly grist of news from Washington, and containing the famous line: "Tell dear Tad that poor 'Nanny Goat' is lost, and Mrs. Cuthbert and I are in distress about it." This delightful letter is reproduced in full in Stefan Lorant's new book, "Lincoln: A Picture Story of His Life."

Just how and when the Presidential family left the White Mountains I have not been able to ascertain. They were still there as late as Tuesday, August 11. But on Thursday they were en route to Boston. The Manchester Daily Mirror in its issue for Friday, the 14th, stated that:

"Mrs. Lincoln and her two sons passed through here yesterday afternoon on their way home from the mountains, and stopped at the Revere House in Boston last night."

On the same day, Friday the 14th, the Boston Daily Journal reported that "Mrs. Lincoln and her two sons are at the Revere House on their return from the White Mountains."

A similar item appeared in the Boston Evening Transcript for the 14th, and on the 15th the Boston Evening Traveller noted that the President's wife and her two sons had spent the morning on a steamboat excursion in Boston Harbor.

Mrs. Lincoln never forget her pleasure in seeing the White Mountains in August 1863. Sixteen years later, in 1879, when she was far removed from her days as First Lady and in much anguish of spirit, she yet found the time and energy to write a long letter to her grandnephew, Lewis Baker. In this missive she urged him to take a vacation in New England, and especially to visit the Tip Top House on Mount Washington. So strongly did she wish him to do this that she offered to pay his vacation expenses for 4 weeks. It is proof of her happy memories of her own trip there in 1863 that Mrs. Lincoln recalled the exact name of the hotel on the mountain summit.

There is a little uncertainty about the return of the family group to Washington. The Washington Star, an evening newspaper, reported on Monday, August 17, that Robert Lincoln had reached the Capital City this morning. The dispatch stated that Mrs. Lincoln was staying on in New York. Tad is not mentioned in this story. It seems probable to me that the younger boy returned to Washington with his brother, while Mrs. Lincoln remained in New York. The New York Tribune on Saturday, August 22, gave this news item:

"Mrs. Lincoln, who has been in the city a few days, paid a visit on Thursday to the French frigate, *La Guerriere*, where she was received with the honor due to her position, and with that courtesy characteristic of the French gentleman."

Whether she remained in New York after this appointment on the 20th, or went down to Washington, I am not positive, but the latter alternative seems to me unlikely.

At any rate, Mrs. Lincoln and Robert, accompanied by Mrs. Abner Doubleday, wife of the well-known Union general and a close friend of the First Lady, soon went back to New England once more. This time, probably at the suggestion of her hostess, the President's wife and son journeyed to Manchester, Vt. Arriving there on Monday, August 24, they registered in the Equinox House of that town, and remained there for a fortnight. The President's telegram to his wife, found in the "Collected Works," volumne VI, under date of August 29, has been printed with an erroneous address, i.e., Manchester, N.H. The mistake must have been made in the secretariat of the Executive Mansion, for we may assume that the President knew where his wife was. His two subsequent telegrams to Mrs. Lincoln, assuring her that all was well in Washington, dated September 3 and September 6, respectively, are also in the "Collected Works," and are correctly addressed to Manchester, Vt.

Maj. General Doubleday joined his wife and her guests on Thursday, August 28. The Manchester (Vt.) Journal in its issue for Tuesday, September 8, observed:

"Mrs. Lincoln and her son, and General Doubleday and lady left town yesterday, after a stay of 2 weeks."

They went back to New York, from which point, no doubt, Robert left to begin his fourth year at Harvard. His mother, who was taying at the Fifth Avenue Hotel in New York, received in quick sequence three tlegrams from the President, dated respectively September 20, September 21, and September 22, urging her to return. On September 24, the President wrote Mrs. Lincoln telling her of the terrible battle of Chickamauga and the death there of her Confederate brother-in-law, Ben Hardin Helm. It is my understanding that she went home at once after receiving this communication. She had been away almost 2 months.

There is existing manuscript evidence, however, to indicate how thoroughly Mrs. Lincoln had enjoyed her trip. In the Stone collection of Lincolnia at Boston University, one may read a personal letter from the First Lady to Franklin Orvis at Manchester, Vt. Mr. Orvis was the proprietor of the inn at which Mrs. Lincoln's party had stayed. Dated April 14, 1864, this hitherto uncited letter reads as follows:

"MR. FRANKLIN ORVIS.

"MY DEAR SIR: Illness alone has prevented my writing to you, to express my thanks and obligations to you, for the geological books and delightful maple sugar and molasses you so kindly sent. Since my charming visit to Manchester last summer, how frequently and gratefully your kindness has been remembered, and how often I have wished you would visit Washington, so that in a measure I could repay it. The only drawback to my pleasure was that my poor husband was not breathing the same delicious air we were. Our son Robert graduates about the 20th of June, and if his father can leave, consistent with his duties here, he will be present. If so, I shall feel quite tempted, if he can, to make a little flying visit to your Green Mountains. I am sure the pure air would be more refreshing even than it was to me. Please present my kindest regards to Mrs. Orvis, your good mother, and sisters, whilst I remain sincerely and gratefully your friend.

Mrs. LINCOLN."

So ended Mary Todd Lincoln's two-phase trip to New England in 1863. It was not her last visit to this area, for the next summer she and Tad again came to Boston and Cambridge, this time to attend Robert's class-day exercises at Harvard on June 24. Later that summer she and her sons were in Vermont once more, first at Rutland, then at Manchester. But this visit of 1864 is a story in itself, and another one.

The trip in 1863 which I have to describe in this paper, for the reasons given in the introduction, will always remain of deep interest to students of the Lincoln family. Aside from the wives of our Presidents who came from New England, Mrs. Lincoln, I believe, was the first First Lady to make an extended visit to this region. For that reason alone, if for no other, we are happy in the memory that hotels in three New England States 95 years ago last August carried on their guest registers the names Mary Todd Lincoln, Robert Todd Lincoln, Thomas Lincoln.

The Plight of New Jersey Commuters

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, February 3, 1959

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Plight of Jersey Commuters," written by Tom Barrett, and published in the New York Herald Tribune of February 2, 1959. The article outlines the very real problems which New Jersey and surrounding States face in the efforts to maintain essential passenger service.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLIGHT OF JERSEY COMMUTERS—FOR 70,000 WHO RIDE TRAINS, END OF LINE IS IN SIGHT

(By Tom Barrett)

The end of the line is in sight for nearly half of the 160,000 daily New Jersey commuters to New York City.

This is the nearly half—70,000 a day at latest count—who make the daily trek to Manhattan via the rail-tunnel or rail-ferry service of six major New Jersey railroads.

It includes the broker of Wall Street, the ad man of Madison Avenue, the secretary at Rockefeller Center, and the saleslady of Fifth Avenue, who call the Garden State home.

For 50 years, at least, it's been the railroads who have been on the defensive; the rates have been too high, the service erratic, the cars dirty. These are the perennial and standard complaints of commuters.

Now it's the railroads' turn to complain; the fares are too low; the public doesn't use the services available; the railroads are only quitting on customers who have been quitting on them.

The quitting customers are those who show an increasing preference to travel to and from New York by bus and private car. These are the people who represent the one-third drop in rail commuters in the past 10 years.

While the warning signs of the railroads have been flashing in deeper shades of red since the passage last summer of the National Transportation Act of 1958, the final red-over-red that will bring rail commuter service in New Jersey to a halt will still prove a shocker, railroad officials admit, unless some authority—and it won't be the railroads themselves—comes up with a substitute system of transportation.

ROCKEFELLER URGING IMMEDIATE ACTION

The impending severance of the major transportation lifeline for New Jersey residents working in New York, is, in the words of Governor Rockefeller "an intolerable prospect for commuters."

The Governor warned:

"We all know what the problem is—dwindling commuter services which are threatened with extinction. We have passed the time for study. We have reached the time for action. We have passed the time for calling on Washington or someone else to solve the problem.

"Let's face it realistically ourselves and take the steps that have to be taken now to insure adequate, efficient, convenient commuter services for the residents of our great metropolitan areas."

The Governor hopes to take the first realistic step jointly with Governor Meyner of New Jersey and Governor Ribicoff of Connecticut following a meeting of the three next Tuesday with a transit solution high on the agenda.

PSC WANTS LINES RESTRAINED BY ICC

The critical element of time in the commuter crisis has been emphasized by the New York Public Service Commission in an appeal to the Interstate Commerce Commission to use restraint in permitting railroads to pull out of commuter services pending an overall solution.

The National Transportation Act, favored by the Interstate Commerce Commission, has paved the way for railroads to give up services which seriously hamper their ability to operate in the black.

And to the New Jersey railroads, passenger service is in this category.

Take the cases of the Jersey Central Lines, which serves commuters in parts of Hudson, Union, Somerset, and Hunterdon Counties on one branch and those from Monmouth County (North Jersey Shore), Union (Elizabeth), and Hudson on another, and that of the Delaware, Lackawanna & Western Railroad, which does commuter business in Essex, Morris, Somerset, Bergen, and Passaic Counties.

In 1948, the Jersey Central carried 14,000 commuters and 4,000 other passengers a day to and from New York. The other passengers were those who rode during off-commuter hours between 10 a.m. and 5 p.m. and after 7 p.m.

Today, the same line lists 10,000 commuters and 2,000 other passengers.

On the Lackawanna, the 28,000 daily commuters of 1948 have dwindled to less than 20,000 and the noncommuter from 11,300 to 6,900.

Despite sizable fare increases, 100 percent or more in many cases, and a cutback in operations, the Jersey Central today lists losses of $3,253,000 a year in passenger operations; the Lackawanna $3,629,000.

The financial troubles of these two roads are matched by other railroads in New Jersey—the Pennsylvania, Erie, West Shore Division of the New York Central, the Susquehanna, and the Hudson and Manhattan (Hudson Tubes).

When will the railroads finally call it quits on commuters?

The Lehigh Valley Railroad, down to a few hundred commuters, has already asked the ICC for permission to drop this service.

Earl T. Moore, president of the Jersey Central Lines, says in his case the request for the elimination of commuter service could be sudden.

"It may come in the form of 10-day notice that the railroad just can't carry on," he said in an interview.

Perry M. Shoemaker, president of the Lackawanna, said complete abandonment of commuter service, in his case, probably will be preceded by a sharp cutback in existing service.

"We have already notified Governor Meyner we are making an abandonment study on our run from Summit to Gladstone, affecting about 2,000 daily riders. That's in an area of influential development but the passenger rail business just does not support the costs of the line," Mr. Shoemaker said.

RAILROADS BLAME TAXES AS EXCESSIVE

"We are also, by necessity, trimming operations on our Morristown line and if things keep going the way they are, we may find a way to cease all passenger runs at Newark and not continue into Hudson County," Mr. Shoemaker warned.

Governor Meyner was sought by the railroads last year as an intermediary with Hudson County municipalities which the railroads claim have levied an excessive tax burden.

The railroads, which asked a year's deferment in paying an $18 million tax bill, were told by the Governor that no deferment was forthcoming.

As the Governor expressed the attitude of the municipalities:

"If the individual homeowner is assessed penalties when he doesn't pay on time, why shouldn't railroads get the same treatment?"

LINES SEE NO NEED TO RUN AT A LOSS

The threat to move out of Hudson County in a fight over high taxes imposed there would affect the Hoboken terminal of the Lackawanna which it shares jointly with the Erie Railroad. Passengers going to New York would then have to ride the last 10 miles or so by bus, Hudson Tubes or Pennsylvania Railroad.

As to whether the New Jersey railroads can go through with their abandonment threat in view of the long established sympathy of the New Jersey Public Utility Commission on behalf of the commuter, Mr. Shoemaker countered:

"While the State public utility commission, in practice and prior to the Transportation Act of 1958, has adopted a different attitude from ours, there is certainly no moral obligation and probably no legal one to furnish passenger and commuter service at a loss. Since the incurring of great losses is the only way of furnishing passenger and commuter service as demanded by the State in the past, the responsibility should be taken from our hands."

The position of the railroads was stated even more bluntly by Jersey Central's Mr. Moore, who said the railroads were no longer in a position to carry on the responsibility of commuter and other passenger services.

"Just to meet our costs, we would have to increase the present commuter fares by 90 percent," he said. "Should we lose any riders through attrition over the near doubling of fares, then we would be forced to raise the fares all over again.

"This would go on until we had no riders at all. Rail passenger service just can't pay for itself, especially if it is done by a taxpaying private enterprise."

Definition of a Liberal

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 3, 1959

Mr. GOLDWATER. Mr. President, one of the least understood situations today involves the proper interpretation of the term "conservative" and the term "liberal."

Mr. President, there was published in the Wall Street Journal of Monday, January 19, 1959, a very good editorial entitled, "Quote Liberal End Quote," and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

QUOTE LIBERAL END QUOTE

One of our readers asks today why this newspaper puts quotation marks around the word "liberal" when it is used in a modern political sense.

Politically, the word "liberal" comes down to us from the British and the dictionary says that in this connotation the word means having tendency toward democratic or republican, as distinguished from monarchial or aristocratic forms—as liberal thinkers, liberal ideas in politics.

Today, however, a great many of the people who have appropriated this word for their political purposes don't fit this meaning. These liberals are not liberals at all; most of them believe not so much in the growth of individual freedom as in the growth of the state.

In fact the term "liberal" in politics today usually describes the most ancient type of reactionary, for people who believe in an all-powerful state are people who believe in the forms of government that resulted in enslaving men, not in freeing men. That's been true all along, whether the all-powerful state was that of the Caesars or the kings, or their more powerful presentday counterparts, the dictators.

Maybe it's also that we dislike having violence done to a fine, old honest word.

Now we haven't any right to tell people they can't use any word they want to describe—or to disguise—their activities or their intentions. But when something isn't what it seems to be, we think perhaps we ought to distinguish it from the real McCoy.

So we put quotes around it. Just as many newspapers do when they write about "Prince" Mike Romanoff.

Hawaii, With a Tradition of Freedom and Good Government, Deserves Statehood Now

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 3, 1959

Mr. YARBOROUGH. Mr. President, the mental picture which the mention of Hawaii often calls up is one of pineapples, palm trees, carefree islanders, and surfboarding at Waikiki. I feel we fail ot see the real Hawaii—the Hawaii which I feel deserves statehood this year. I have coauthorized a bill to grant statehood now.

The items mentioned in our mental picture figure prominently in Hawaii, of course, and are definite assets and good reasons to offer in support of my argument for statehood. Along with the fact that 6,423 square miles of land and 575,771 people would be added to our Union of States, I believe the intangible assets of Hawaii should also be considered.

The Hawaiian Islands have a stability of government and a record of protection of life and property in keeping with the highest traditions of American freedom and justice. They have had a stable government for more than 100 years, first a monarchy, then a republic, then a Territory. In the recent elections, 87 percent of the electorate cast their ballots. This is far above the national average.

The per capita income in Hawaii is ahead of 23 of our present States and Hawaiians pay more in taxes than the national average.

Mr. President, in further support of my arguments for Hawaiian statehood, I request unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in my hometown paper, the Austin (Tex.) Statesman for Friday, January 30, 1959, under the heading "Statehood Owed Hawaii."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STATEHOOD OWED HAWAII

This country and both its political parties are obligated by sentiment and repeated promises to give statehood to Hawaii. There have been objections to this, usually on the claim that Hawaii has such a polyglot population that the national security might be jeopardized. Yet a Hawaiian battalion, made up of Japanese citizens, was the most decorated in World War II.

Another claim is that the Harry Bridges outfit would tie up the economy of Hawaii. This may be true. Bridges has done that in the past.

But unions have tied up the economy in this country too on various occasions. Strikes have shut down great industrial plants, airlines, newspapers, manufacturing concerns, and organizers right here in Texas in the Port Arthur case tied up a business district by morally illegal picketing of a large number of small firms whose workers they aspired to organize and control in a catchall New York union.

So that argument doesn't hold very well in the case of Hawaii. What does count is that if Alaska, a noncontiguous land area with a smaller population and larger land mass is found to be desirable as the 49th State, then Hawaii, with a smaller land mass and a large population, and by virtue of its strategic economic and political importance should not be left out in the cold. Simple justice demands it.

Bill To Let Gas Producers Gouge the Public Is up Again

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, February 3, 1959

Mr. PROXMIRE. Mr. President, a new natural gas bill is in the House hopper, and, despite the fact that this measure, like its predecessors, is clearly against the interests of most sections of the country it will have the powerful support of House and Senate leaders.

The Milwaukee Journal of Sunday, February 1, contains an editorial which analyzes the new bill and assesses its chances. I ask unanimous consent, Mr. President, that this editorial be printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BILL TO LET GAS PRODUCERS GOUGE THE PUBLIC IS UP AGAIN

The natural gas and oil interests are back as congressional suppliants again, seeking to remove Federal controls from the price of natural gas produced by so-called independent operators.

Again it is Representative HARRIS, Democrat of Arkansas, chairman of the Committee on Interstate and Foreign Commerce, who lends his powerful position to author the natural gas bill. The bill, H.R. 366, is in the House hopper and HARRIS means to get action.

This time the bill has some new twists—including changes meant to satisfy the coal lobby that surplus natural gas won't be dumped at low prices to large industrial users. The gas interests, as Representative DINGELL, Democrat of Michigan, points out, hope to pick up some 15-odd votes from coal areas with this provision.

Twice the natural gas bill has passed Congress and met Presidential vetoes—once by former President Truman and most recently by President Eisenhower, who was shocked by what he called arrogant lobbying. Last year the bill looked like a cinch until a letter turned up announcing a $100 a plate dinner to be given by Representative MARTIN, Republican of Massachusetts, by the oil and gas interests. The letter contained an implication—unknown to MARTIN—that the affair was aimed at influencing votes. The revelation killed chances of passage.

It's too much to hope that the oil and gas interests will continue to be so arrogantly stupid right out in public. They can't keep making mistakes—or can they? The big hope is now that there are enough new men in Congress who would oppose the bill to prevent its passage. But don't let hopes get too high. The Senate and House leaders—Texans LYNDON JOHNSON and SAM RAYBURN—favor the bill.

And what they want they usually get.

Voting Rights for the District of Columbia

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, February 3, 1959

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "Hawaii and the District," published in the Washington Evening Star of January 21, 1959.

There being no objection, the editorial was ordered to be printed on the RECORD, as follows:

HAWAII AND THE DISTRICT

As if there were some connection between the two, the President couples statehood for Hawaii and home rule for the District of Columbia in the same short breath. Recommending both in his budget message, he says that further delay in either would be unconscionable.

Hawaii was made a Territory in 1900. The Territorial form of government is the normal step preliminary to statehood, and Hawaii meets all reasonable standards for admit-

tance now as a full-fledged State. There is no good reason for further delay.

The same thing is not true concerning further delay in so-called home rule for the District of Columbia. Far from being unconscionable, further delay in home rule for the District would be highly desirable, especially if it led to abandonment of the idea that home rule means worthwhile voting rights. A semi-Territorial form of government for the District has previously been recommended by this administration as the form of home rule most likely to work in this Federal city. Something of the same sort was tried here briefly and abandoned 25 years before Hawaii even became a part of the United States. There is not much sense in trying it again.

What should be done is to give the people of this city voting representation in Congress and in the choice of President and Vice President of the United States. With such rights established, Congress and the President should work toward development of this city as the Capital of the United States and forget the play-acting diversion of some futile form of home rule, which would delay rather than hasten that desirable and readily attainable development.

Strange Bureaucratic Practices

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 3, 1959

Mr. THURMOND. Mr. President, it has always been disturbing to read statements attributed to official State Department sources which undermine the policy of the Government in international affairs. Columnist Constantine Brown, in the Tuesday, January 27, 1959, edition of the Evening Star, comments on this unfortunate situation. He observes that South Korean President Syngman Rhee was depicted in a November story as being so weak physically that he could serve no real useful purpose as head of the Korean Government. Yet, in truth, Mr. Rhee, a gentleman whom I have known personally, and in whom I have the utmost respect, is in excellent condition—both physically and mentally. This reminds Mr. Brown of the treatment Generalissimo Chiang Kai-shek received at the hands of some high officials in the State Department in the 1940's.

I ask unanimous consent that this column, entitled "Strange Bureaucratic Practices," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STRANGE BUREAUCRATIC PRACTICES—ARTICLE ON HEALTH OF RHEE, ATTRIBUTED TO TOP U.S. PLANNERS, STIRS PROTEST

(By Constantine Brown)

There is something strange in the activities of our evergrowing bureaucracy which is supposed to follow the policies of the administration in office.

The taxpayers have been compelled to fork over since the end of the war close to $100 billion for foreign aid in various forms. The principal reason why the American taxpayers' representatives (the Members of Congress) have voted large sums year after year for this project was our effort to stem or roll back international communism which we recognized as the main danger to survival of the free world whose leader we have become.

When our Legislators approve substantial economic and military aid to countries like Yugoslavia and Poland, it is in the hope that somehow, some time, we may be able to detach them from the Moscow-Peiping conspiracy aimed principally at the United States.

It is because of the fear of another international Communist aggression that we are building up, at the taxpayers' expense, in the Middle and Far East close allies such as the Turks, Iranians, Pakistanis, Filipinos, free Chinese, and South Koreans. Since the American taxpayers are digging into their pockets without much grumbling to "buy insurance for the American people," as Secretary Dulles has frequently stated, one would assume the high officials of the State Department would not purposely try to undermine the public's confidence in those Asian leaders who are most determined to fight international communism to the bitter end.

Last November a weekly magazine with a nationwide circulation printed a story to the effect that South Korean President Syngman Rhee's health had so deteriorated that he could serve no real useful purpose as head of the government. An official personality who had just returned from Seoul and had marveled at President Rhee's vigor (both physical and mental), wrote the editors a letter pointing out pleasantly the fallacy of the item printed in a highly reputable magazine and, to back his contention, inclosed a recent picture of Mr. Rhee. An official of the magazine answered very politely, explaining that "—our sources for the items published from Washington were top State Department planners and we were publishing their views. Our report was based on personal interviews and not rumors."

This is highly revealing. The State Department officials, like those of the Defense Department, are very secretive toward newspapers and newspapermen in an unprecedented manner. An unauthorized official—that is one who has not been cleared by the department head—will not give a reporter even the time of day. What is not secret or confidential is at least restricted. Rumors about the health, habits and other personal things of heads of state, be they allied, neutral or hostile to us, are not easily pried from our top State Department planners unless there is a strong political-diplomatic reason for the leak.

For instance, during the war there were numerous leaks (mostly completely unfounded) about Generalissimo Chiang Kai-shek and the Gissima. The grapevine informed correspondents about their venality and that of the Kuomintang government; about the manner in which the Kuomintang was pocketing American financial assistance, and so on. On the other hand, the grapevine was extolling the high qualities and statesmanship of Mao Tze-tung, who was described as a great agrarian reformer.

But in those days there was a group of policymaking officials in the State Department in Washington and in Chungking (the wartime capital of China) who believed firmly that Chiang and his followers were millstones around our political neck. There were many in this country who were still very much confused over the actual objectives of our then Russian ally. This is no longer so. In the last 14 years the American people who wanted to open their eyes even slightly have seen the true face of international communism.

We know that the Communists across the 38th parallel are not agrarian reformers. The policies of the succeeding administrations in this country since 1948 have clearly shown that the Communists are our only enemies. Hence, it appears unbelievable that high State Department officials should continue a policy of leaks about popularly elected heads of government in the Far East such as Mr. Rhee and Philippines President Garcia.

The Right To Work Issue

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 3, 1959

Mr. GOLDWATER. Mr. President, the right to work issue was fought out in several States last year. Around the country it is the general consensus that the issue is dead.

Mr. President, I disagree with that belief. I feel that in the very near future in one of our campaigns the major issue will be wrapped around the unbridled power of the union boss. Whether it will be called right to work, voluntary unionism, or whatever other form it may take, it will be represented by the philosophy behind the right to work movement.

Mr. President, there was published in the Deseret News of Salt Lake City on January 17, 1959, an editorial entitled "The Right To Work," and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE RIGHT TO WORK

Rather than accept the challenge to make membership in a union so desirable and worth while that employees want to join, some Utah union officials prefer to take the easy way—and men's freedom with it.

Through a bill introduced in the Utah House of Representatives Friday in their behalf to repeal Utah's right-to-work law, union leaders prefer to force employees to belong whether they want to or not. LaMar D. Gulbransen, president of the AFL–CIO, spokesman for the sponsoring labor groups, told reporters that the right-to-work bill has hindered union membership growth in the State.

This, if true—and no proof has yet been established—is admission that in and of itself union membership is not now attractive enough to appeal to all workers. The argument for voluntary membership—or nonmembership—is too obvious to need elaboration; it should be the right of free men to choose their own course of action.

Mr. Gulbransen's further argument that Utah's right-to-work law "has resulted in Utah's per capita income dropping in relation to other States" also bears some questioning. Utah's law became effective in May 1955. At that time, Utah manufacturing production workers were earning an average of $76.63 per week (according to the U.S. Bureau of Labor Statistics). Three years later, May 1958, the same workers were earning an average of $89.15, or $12.52 more each week.

Manufacturing workers in the three Mountain States that have outlawed compulsory union membership have enjoyed a more rapid increase in their average weekly earnings than have workers in the five Mountain

States where union leaders were still permitted to force membership upon the workers during the same period.

The U.S. average increase in wages for the 3-year period was 7.5 percent. In States without right-to-work laws (Colorado, Idaho, Montana, New Mexico, Wyoming), the increase was 10.2 percent. In the States with right-to-work laws (Utah, Arizona, Nevada) the rate of increase was 14.4 percent. In Utah alone it was 16.3 percent, more than twice the national average rate of increase.

Labor's argument for compulsory membership rests on the assumption that the desirability of union membership is so unquestionable that those who refuse to accept it voluntarily must be required to do so. If this desirability is so unquestionable, why then do the union leaders need a compulsory bill?

Those whose faith in the infallibility of union leadership is less than complete certainly have the right as free American citizens to determine for themselves whether or not they want to belong. The deep question is: Do the unions exist for the members, or the members for the union?

Isn't the right to work one of the basic human rights which Government is bound to protect? Or is it restricted to union members? Or do nonmembers fall outside the human category?

Rather than work toward the repeal of Utah's right-to-work law, union officers ought to concentrate their efforts on trying to make membership so worthwhile that every employee can easily see the advantages and by his own free will join without being coerced into it by an arbitrary law.

James P. Preston

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 3, 1959

Mr. CASE of South Dakota. Like many of my colleagues, Mr. President, I was deeply saddened last week to learn of the death of Mr. James P. Preston, superintendent of the Senate Press Gallery for 35 years before his retirement in 1955.

Many of the outstanding acomplishments of this devoted Senate employee are recounted in an article appearing in the Washington Post and Times Herald of January 31, 1959.

In addition, he was known to many Senators for his many special courtesies. For example, one of my prized mementos is a miniature rocking chair fashioned by Mr. Preston, who was skilled in woodworking. For this piece Mr. Preston used pine wood from the stand erected on the east front of the Capitol for the inauguration of President Eisenhower and Vice President NIXON in 1953.

Mr. President, I ask unanimous consent that the article reviewing the life of Mr. Preston be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRESS GALLERY'S JIM PRESTON

(By Everard Munsey)

When Jim Preston retired from his post at the Senate in 1955, veteran Capitol Hill reporters and lawmakers could scarcely accept the reality. It seemed James D. Preston had always been in the center of activities at the Senate and, indeed, he had been there for 58 busy years.

Mr. Preston, who died of pneumonia Thursday, was born on August 2, 1876, on C Street, within sight of the Capitol dome. Inheriting a taste for journalism from his father, Herbert A. Preston, longtime Washington correspondent of the New York Herald, he became associated with the Washington bureau of the Boston Journal and the Chicago Inter Ocean at the age of 14.

Covering the 1896 conventions for his papers, he reported the bolt of Republican delegates opposed to the adoption of the gold standard and William Jennings Bryan's famous "Cross of Gold" speech. When "General" Jacob Coxey's army marched on Washington the same year, Jim Preston was on the scene for a first hand story.

HEADED PRESS GALLERY

Then in 1897, Mr. Preston, not yet 21 years old, was elected superintendent of the Senate Press Gallery. Those were the days when Senators, elected by their legislatures, were hardly inclined to publicize their activities, except through their favorite reporter. Mr. Preston always remembered that the Senate resolution declaring war on Spain in 1898 was passed in an executive session, with press and public barred.

In the 35 years he spent as superintendent of the gallery, he became indispensable to reporters. He was in the center of all press information, telling from notes or memory what committees were meeting, the status of bills, and the situation in almost every matter involving the Senate. A physical change, as great as the change in attitude accompanying the institution of direct election of Senators, occurred during his tenure. The one old crank telephone was replaced by modern equipment while typewriters were introduced with rules and regulations for the gallery.

AIDED CONVENTION WRITERS

Jim Preston was also in virtual charge of the press section at the great national conventions during these years and earned the gratitude of correspondents for his diplomatic handling for seating and his arrangement of telegraph and hotel accommodations.

On his 20th anniversary as superintendent, members of the press gallery gave Mr. Preston an automobile in appreciation of his work.

In 1931, he left the press gallery, moving to the office of the Librarian of the Senate. There his poking around in old papers turned up some priceless historical documents, including several communications written by George Washington and the original Second Inaugural Address.

His interest in documents aroused, he paid his way to England, where he spent several months at the British Museum studying British methods of document preservation. In 1935 he became assistant administrative secretary at the National Archives and for 6 years directed work to centralize valuable Government-owned documents at the Archives. He also arranged exhibitions of the collection.

RETURNS TO SENATE

Longing for the Senate grew too strong, however. "The excitement of the place was in my blood and I couldn't get it out," he said, as he celebrated acquisition of the job of indexer of the Senate Journal. He returned to many of his old ways, to the delight of Capitol Hill reporters. Shortly, after his return, he took charge of registration of Senate lobbyists.

Throughout his career at the Senate, Mr. Preston kept a running diary. Recorded there are the rules of the Senate by the Republican triumvirate, Aldrich, of Rhode Island, Hale, of Maine, and Allison, of Iowa, the arrival of LaFollett in 1906 and the Republican defection in the West and the consequent Democratic majority in 1912. He took that diary with him when he went to Hollywood in 1939 as technical adviser and bit actor in "Mr. Smith Goes to Washington."

As befitted his English ancestry, Mr. Preston was often mistaken for British Prime Minister Neville Chamberlain—until he spoke. He once delighted President Roosevelt with an impersonation of Chamberlain at a Gridiron Club show. The President was also pleased by another work of Mr. Preston's a huge sphinx with a long cirgarette holder which Mr. Preston made from dampened paper when the question of a third term was the biggest political riddle. Mr. Roosevelt took the sphinx to Hyde Park.

PROMOTED GOLF COURSE

Besides woodworking, which he did very skillfully, he lover golf and was a promoter of the Rock Creek Public Gold Course. He sponsored national public links tournaments and, during recess of Congress, assisted in the conduct of four national tournaments of the U.S. Golf Association.

He lived at 4724 15th street NW., for about 36 years, until entering the hospital several months ago.

He married Mary E. Sanford, daughter of a Baltimore ship captain, in 1902. Mrs. Preston now lives with her son, Edward H. Preston, in Lynbrook, N.Y., Mr. Preston also leaves a sister, Theodora C. Preston, of Washington.

University of California Receives International Education Citation

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 3, 1959

Mr. ENGLE. Mr. President, in these days of international tensions it is very gratifying to read of the work of organizations and individuals who are working constructively to improve understanding among nations. On January 30 the Institute of International Education cited the University of California for doing a distinguished job in developing a sound program of international educational exchange. Dr. Robert Gordon Sproul, president emeritus, accepted the award for his university, and I am proud to ask unanimous consent to have the text of the citation printed in the Appendix of the RECORD.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

CITATION FOR A U.S. UNIVERSITY

To the University of California, a great cosmopolitan center of education on the shores of the Pacific, the Institute of International Education presents its award for distinguished service.

At the university a teaching staff of 5,300, both native sons and men from the great academic centers of the world, combines the excellence of scholarly tradition with the vigor of new inquiry, unrestricted by national boundaries. Here is a faculty which includes 6 winners of Nobel prizes, 59 members of the National Academy of Sciences, and in the aggregate the largest collection of Guggenheim fellows in the world.

Cal, a relatively young State university, demonstrates that in the United States a great institution is judged neither by its age nor by the fact that it is not located in the green hills of New England—but only by the standards of excellence it has achieved. Scholars from centuries-old academic centers of Europe and the Orient recognize that Cal in less than a hundred years has proved itself to be a strong, healthy, and prolific member of the international academic family.

Here, international education has flowered for half a century and more. Here, uncounted thousands of persons have come from abroad to earn degrees and to serve their countries on return. Their names include three former presidents of our sister republics—Mexico, Colombia, and Ecuador; Ministers of Agriculture in Egypt and Iraq; a Minister of Commerce in Pakistan; leading educators, doctors, administrators, in nearly every country and on every continent. Here are cultivated the habits of mind and spirit that helped to produce an educational system in the Philippines; a health service in Indonesia; an improved civil service in Italy; a Chief Justice of the United State Supreme Court, and a host of statesmen, governors, and advisors in the council of nations.

From the University of California hundreds of American students have gone to other countries as winners of Rhodes, Fulbright, and other international scholarships.

At Berkeley, generations of foreign and American students have been drawn together by the strength and presence of a great international house in which men and women of every nation live constructively and creatively.

To dramatize the imaginative and creative contributions which the colleges and universities of the United States are making to the improvement of international understanding, the Institute of International Education presents its distinguished service award to the University of California.

Britain's Verdict on Socialism

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 3, 1959

Mr. THURMOND. Mr. President, the alert Anderson (S.C.) Free Press of January 22, 1959, ably comments on the trend in Great Britain away from socialism, while pointing out that we in the United States are moving in the direction of the welfare state. Those among us who would continue in the direction of socialism should consider the results of the experiment in Great Britain before it is too late in this country to reverse the current trend.

I ask unanimous consent that this article, entitled "Britain's Verdict on Socialism," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRITAIN'S VERDICT ON SOCIALISM

With the United States already well on the way toward a socialistic form of government, it would seem that recent developments in Great Britain should—even at this late date—make American citizens sit up and take notice of where we are heading and what we can expect if we continue our present course.

According to a special report in a recent issue of U.S. News & World Report, Britain's 13-year-old experiment in socialism is being written off as a failure, with private enterprise emerging stronger than ever. The report states that searching inquiries just completed by a parliamentary committee, by industrial and management organizations, and by individual experts show that the British public has soured on Government operation of basic industries. Even the Labor Party, which brought socialism to Britain, is reversing its stand.

Important facts which have emerged are as follows:

Efficiency in nationalized industries is shown to be considerably lower, over all, than in comparable private industries.

Costs are higher because managers of nationalized industries are not under pressure, as are private owners, to show a profit or even to make ends meet. Deficits are covered by huge Government subsidies.

Prices in most nationalized industries are kept artificially low by political pressure, bear no relationship to costs. The consumer gets stuck for higher taxes and inflationary financing that is required for subsidies.

Labor relations in nationalized industries turn out to be no better—and sometimes considerably worse— than in private industries, contrary to Labor Party expectations. The record of strikes and noncooperation between workers and management in the nationalized coal mines and transport industries is among the blackest in Britain.

Between 1946 and 1951, the Labor Party's program to make Britain a socialistic state took over, as public enterprise, coal, electricity, gas, rail and highway transport, steel, cable communications, the Bank of England, and civil aviation. Using coal as a case in point, the report reveals that $1 billion has been poured into the mines since 1946 to modernize and maintain them; yet, despite this investment program and the recruitment of 11,000 additional miners, the British mines produced slightly less coal in 1957 than in 1951. The investment program for the mines has been termed a failure by a parliamentary committee that investigated the coal industry last year, and it warned that a second program now under way is also in jeopardy.

With a few rare exceptions, the nationalized coal industry has gone into the red in its current accounts year after year. During a 10-year period of scarcity and a sellers' market, the mines accumulated a $75 million loss which had to be covered by Government subsidies in addition to the $1 billion provided for a capital investment.

In fact, the promise made by the Labor Party that notionalized industries would, in time, stand on their own feet without Government subsidies—is proving unrealistic. Steel, an expanding industry, was nationalized for a brief period and then returned to private ownership. It provides a striking contrast to the declining coal industry. Steel production has increased from $12.7 million tons in 1946 to 21.7 million in 1957. The steel industry has not only earned a profit but has financed a substantial part of its $1.5 billion program of expansion from its own resources, while still managing to cut prices and pay its workers wages that are among the highest in British industry.

Of late, Britons who have been asking what's really wrong with nationalized industries have come up with some of the answers. The men who run Britain's nationalized industries are influenced more by political pressure than by commercial realities. Since the Government in power, whether Labor or Conservative, finds it expedient to keep both consumers and workers happy, it resists price increases to appease the consumer and raises wages according to union demands to please the workers. By holding down prices while allowing wages to rise, the result has invariably been a loss at the end of the year.

Overstaffing, inefficiency, and waste are other reasons given for the failure of nationalized industries. In some instances, union pressure keeps two men on a job where only one is neded. The unions have resisted any efforts by management to drop unneeded workers and cut costs and, until recently, political considerations have prevented management from forcing a showdown.

To sum it up, after 13 years of living with it, Britain is ditching socialism as "old-fashioned" and impractical and turning back to private enterprise. But here in the United States, socialism, centralized government, or the welfare state—whichever we prefer to call it—is on the way up. The voices of our courageous and conservative leaders are raised in protest, but are lost in the increasing clamor for more government in business, more Federal subsidies.

If the citizens of the United States are not to heed the advice of their own countrymen who warn of the dangers ahead, are they also determined to ignore the facts as revealed by the experiences of other nations? Britain has written off its experiment in socialism as a failure. What further proof is needed?

Union Power Versus Public Interest

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 3, 1959

Mr. GOLDWATER. Mr. President, on the subject of the illegitimate power vested in union bosses an excellent editorial entitled, "Union Power Versus Public Interest," was published in the Wall Street Journal of January 29, 1959, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNION POWER VERSUS PUBLIC INTEREST

The measure of any union reform proposal is how well it grapples with two issues: The protection of union members against unscrupulous union bosses, and the protection of the public against excessive union power.

The recommendations that President Eisenhower sent to Congress yesterday would deal effectively with the first issue, or at least would promise great improvement. By requiring public reports, proper records, secret ballots, criminal penalties for willful violations—in these and other ways the legislative proposals would go far to insure democratic and responsible union organization and to prevent the methods by which unions have been able to abuse their own membership.

But the second issue—the issue of union power—is the more basic, because it is untrammeled union power which threatens the entire public, including union members. The threat is not only the paralysis of whole industries, which has happened often enough, but potentially the paralysis of the whole economy and hence the whole Nation.

It has long been evident that one prime source of such dangerous power is the unions' specific exemption from the antitrust laws, which make such economic power im-

possible for any other group in our society. On this the President's message is silent; it makes no suggestion for removing the exemption.

That is not to say, however, that it does not try to come to grips with union power at all. In at least two important respects it would curb the application of the power.

One of these reforms would outlaw blackmail picketing, a practice whereby a union coerces an employer to recognize it, even though the employer has already recognized another union or the majority of employees don't want the coercing union. Plainly enough, this practice is not only gangsterism but also a bludgeon for a union to use to expand its power. Making it illegal would be, to say the least, a belated victory for elementary justice.

The other proposed reform in this connection would tighten the existing restrictions on secondary boycotts. As it is now, a union, the teamsters, for example—since this is one of their specialties—can put tremendous pressures on a concern with which it is having labor troubles; it can persuade individual truck drivers and members of other unions to boycott any firm doing business with the first concern. The union can also threaten another employer with labor trouble if he persists in doing business with the first firm—and that is often a very effective threat.

Such pressures are so effective, in fact, that they enable unions to extort hot cargo clauses from employers. These are provisions under which an employer agrees not to require his employees to handle goods from a firm having union difficulties. This, too, is a device much admired and used by the teamsters.

All these secondary boycott practices—which, incidentally, can be especially tough on smaller businesses—are a gross and obvious violation of individual rights; just as clearly they are blunt instruments for entrenching and widening a union's power.

Now it's being said in Washington that these remedies for blackmail, picketing, and secondary boycotts are too severe to win the approval of the present Congress, and that Congress will more likely take to the revived Kennedy bill. The latter, along with other glaring deficiencies, omits these two reforms.

That prospect may be true; certainly the problem of union power versus the public interest is a complex one, both politically and and intrinsically. At least, however, the administration is indicating some routes to a solution; it is trying to show the public how vital is the public's interest.

Perhaps that will help Congress, too, to see the problem whole. We hope it will not wait until it is jolted by an event such as Teamster Boss Hoffa's achieving his dream of becoming king of all transport workers in the country. But, late or soon, Congress is going to have to face squarely and entirely the problem of overriding union power.

Unions and the Law

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1959

Mr. LINDSAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the New York Times of January 30, 1959, and the New York World Telegram and Sun of January 29, 1959, relating to the competing bills now before the Congress designed to correct certain labor abuses and undemocratic practices followed by some unions. Both bills are designed to promote and protect the rights of individual union members within the union organization. However, reasonable men will differ when it comes to changes or additions to the National Labor Relations Act—Taft-Hartley Act—rather than proposals that have as their immediate objective greater democracy, honesty, and efficiency within the union structure. These editorials suggest the importance of considering these two areas separately from each other:

[From the New York Times, Jan. 30, 1959]

LABOR UNION REFORM BILLS

The overwhelming demand of the public, supported by the AFL–CIO, that dictation and corruption by union officials be outlawed in this country may now be thwarted again by partisan politics and irrelevant issues. Two competing measures are now before Congress, where there should be only one—and a bipartisan one at that. They are the Kennedy bill, cosponsored by 11 other Democratic Senators, and the bill introduced by Republican Senator GOLDWATER, based on the President's labor message to Congress.

But a striking feature of these bills is their wide agreement on ways to democratize and purify unions. Both require full reporting and disclosure, policed by the Secretary of Labor, on such matters as organization and governing procedures, financial operations and transactions that involve a conflict of interest. Both require the administration of union funds solely in the interests of the members, backed by punitive sanctions. Both call for a secret ballot, free of coercion, in periodic elections of officers; freedom to run for office, with a ban on the use of union funds to support any candidate, and minimum standards for trusteeships of local bodies. Incidentally, why not require a majority vote of all members involved to validate a strike?

Bipartisan support for a measure along these lines should not be too difficult to mobilize. The main trouble is that the two bills differ widely—both as to what is in them and what is left out—in such matters as picketing, secondary boycotts and the jurisdiction and operation of the National Labor Relations Board, which call for amendments to the Taft-Hartley law. And not only are the differences between the bill extremely hard to reconcile, but the problems they deal with are controversial in themselves—which intensifies the differences.

But, after all, these are matters that primarily involve the power and external relations of labor unions, not how they manage their own affairs. Doesn't this mean that amendments to the Taft-Hartley law should be made through a separate, and carefully considered, overall measure? They seem like excess baggage which might well be temporarily jettisoned now for the sake of reaching the main and immediate objective: Greater democracy, honesty and efficiency within American labor unions.

[From the New York World-Telegram and Sun, Jan. 29, 1959]

UNIONS AND THE LAW

Two of the big labor union reform bills now have been introduced in Congress—by the Eisenhower administration and Senator JOHN F. KENNEDY. Another, being drafted by Senator MCCLELLAN, chairman of the Senate Rackets Committee, is yet to come.

The logical hope would be that Congress take the best of all three and thus produce a law which will clean up the abuses, the corruption and arrogance exposed by the McClellan investigations. Both the Kennedy and the administration bills are aimed in this direction—the latter more so.

In one important respect, the Kennedy bill is remiss. It does not deal with secondary boycotts. While the Taft-Hartley law on the books since 1947 forbids secondary boycotts, the administration bill attempts to tighten this ban, which has been widely evaded. It deals specifically with threats, coercion and forcible restraint—the usual methods in secondary boycotts.

The two bills differ on what constitutes illegal picketing.

The administration measure would outlaw picketing in jurisdictional disputes, where the issues already have been settled legally or where the union cannot prove sufficient interest on the part of employees. The Kennedy bill would also outlaw blackmail picketing where a money payoff was the purpose.

Both types of picketing are immoral and ought to be outlawed.

There are other complex differences between these bills which must be studied in detail in the effort to give a fair shake to union members (as contrasted to union bosses) and to the public.

Any law which reaches in this direction is an improvement—and if Congress will stick to those two objectives, it not only will reduce the abuses revealed by the McClellan investigation, but will be doing the union movement a wholesome favor.

Health Insurance for Senior Citizens

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1959

Mr. KEOGH. Mr. Speaker, the welfare of our senior citizens has been, as it should be, a matter of growing concern in recent years, as their numbers have continued to mount in proportion to the population.

The maintenance of an adequate standard of living for senior people and of adequate housing and improved health and medical care facilities for this segment of our population, have been a matter of great concern to government, labor, and industry. Over the past 25 years each has done much to help in these worthwhile objectives.

As a member of the Ways and Means Committee and of the House, I have long taken an interest in social security and other legislative proposals to provide more and deserved comfort and security for people in the later years of their lives. Industry and labor have worked together in the development of improved pension and retirement plans. For some years I have sponsored a bill to extend to the self-employed the same tax-deferrable privileges enjoyed by approved and qualified employee pension plans. I have hopes that that bill, which last year passed the House by an overwhelming voice vote, will be enacted this session or, at the latest, during this Congress.

Unfortunately, progress assuring the 65-plus group adequate means with which to meet the burden of higher costs for medical care has not kept stride with other social welfare advances. Those

over 65, generally, have been unable to obtain health insurance coverage.

There are now about 15 million people of age 65, or more, in the United States—about 8.6 percent of the total population—and only about 6 million of these have hospital-surgical coverage. This coverage for the most part is under plans which they paid for prior to age 65 and which plans have advanced to permit retention of coverage after age 65.

It is, therefore, very encouraging to many to note the intensified efforts on the part of the insurance industry and the medical profession to solve this problem and to give to those over age 65 the opportunity of providing for their own medical care costs through private initiative.

The Continental Casualty Co., one of the Nation's largest insurance companies, has pioneered in this field and other insurers are following suit.

The Continental 65-plus policy, after being tested in several States, has recently been introduced in my home State of New York and in seven other Eastern States.

By successfully applying the principle of group insurance to individuals, Continental has found that it is possible to make available, without restriction, basic hospitalization and surgical insurance coverage to those age 65 plus.

This new plan admittedly is not a panacea. For this critical problem, it most certainly does represent a great and feasible stride forward in the expansion of voluntary health prepayment plans for those generally more in need of such protection, and, as such, merits the public recognition by those in government, industry, and labor who long have urged the encouragement of such worthwhile experiments. We shall see.

The Legacy of Dr. Wise

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. FARBSTEIN. Mr. Speaker, on Sunday last Dr. Jonah B. Wise, the spiritual head of the Central Synagogue of New York, passed away. Rabbi Wise was known as an elder statesman of religion. He has been described as one of the most contributive and distinguished leaders of American Judaism of this generation. He was a leading exponent of interfaith cooperation.

Rabbi Wise was one of the founders of the United Jewish Appeal and served continuously as a national chairman of that organization from its founding until last year, when he was named honorary national chairman. It was under his leadership that the UJA was able to raise sufficient funds to help the oppressed and needy Jews throughout the world.

Under leave to extend my remarks, I include the editorial which appeared in the New York Times of February 3:

THE LEGACY OF DR. WISE

There must be at least a million persons in the world whose unhappy lot has been ameliorated by the efforts of Dr. Jonah B. Wise, who was for so long the chairman of the United Jewish Appeal. There are other millions who have been inspired by his leadership in the effort to help refugees of all faiths. There are millions of his own coreligionists who looked to him for a special type of interpretation of religious thought. They, also, are his heirs.

We like to think, however, that his greatest contribution to our time was his understanding of the need to bring together persons of differing backgrounds of religious faith in a common cause of religious feeling and purpose. In this sense he was much more than an outstanding leader in his own faith. He was also a leader in the cause of better understanding among men.

Unions in Politics

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 3, 1959

Mr. GOLDWATER. Mr. President, I do not wish to burden the RECORD with insertions all of the same character, but I realize the subject is of great interest to the American people. In the hope that editors around the country who read the RECORD may be encouraged by remarks of some of their brethren in the larger cities, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Wall Street Journal touching on the subject of the illegitimate, unbridled power of union bosses, which is entitled "The Only Political Party."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE ONLY POLITICAL PARTY

When George Meany recently said organized labor might some day have to set up its own political party, his remark was not taken very seriously even by other unionists.

That's natural, since labor already has its own party. In fact, some say that COPE—the AFL-CIO's Committee on Political Education—is the only political party in the United States today.

To be sure, this "party" works through the Democratic Party. But its effectiveness is no less for that. As a report from Washington in this newspaper today notes, 77 percent of the Senate candidates backed by COPE in the November voting were elected; in the much larger House, COPE's score was 62 percent.

And now, not surprisingly, the political bills are beginning to come due. Labor has a small army of lobbyists in Washington ready to oversee the enactment of the unions' legislative goals of lots more Federal spending for all kinds of socialistic purposes. They may not push everything at once, realizing that they can overdo their zeal and also that after 1960 they may have won the White House as well as much of Congress.

A revealing tactic in this connection is to press promptly for a weak union "reform" bill to forestall the possibility of a tough one; then, after 1960, they could hope to accomplish one of their important aims: The dismantling of the Taft-Hartley Act.

Well, we know of no legal objection to the unions having their own party or to lobbying for what they consider their legislative interests. All the same, we think the strategic and perhaps dominant position now occupied by the unions in Congress raises questions to which all the people ought to give some serious thought.

Is it right, from any point of view, for union members to have to pay for the support of their leaders' political candidates? That is what happens now, even though many members do not share their leaders' views. It is also the members' dues which finance the lobbyists working for legislation which not all of the members want.

Is it right for a large number of Senators and Representatives to be in the pockets of the unions? It may sound naive to say it, but, after all, these men are supposed to represent their whole constituencies, which they cannot conceivably do when their political life depends on organized labor. It would be an unhealthy development no matter what the group; it is especially so in the case of unions, with their heavy burden of collectivism and corruption.

Is it right for any group to enjoy political power vastly out of the proportion to its numbers? There are well over 170 million Americans, of whom some 15 million belong to unions. And very few of those are in a position to determine union policy or political strategy. It is perfectly plain that a tiny group of union leaders are well on the way to being able to dictate the policies of the U.S. Government.

The core of the labor problem in this country is too much power. It is power expressly granted by the law, and it is already the power to paralyze the national economy. From the excessive power comes the flagrant corruption, for if men are put above the law they are all too likely to act accordingly. On the economic power is based the tremendous political power. It is far too much power for any group to wield, far too much for the safety of the Nation.

These are not theories or formless fears. They are facts parading before our eyes today. We had better not delay deciding whether we really do want to have just this one political party.

Closing of Caven Point Army Terminal, Leonardo Ammunition Depot, and Curtailment of Activities at Bayonne Naval Base

EXTENSION OF REMARKS
OF
HON. DOMINICK V. DANIELS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1959

Mr. DANIELS. Mr. Speaker, under leave to exend my remarks in the Appendix of the RECORD, I include a letter received from Mr. Frank Murray, president of Local No. 1247 of International Longshoremen's Association Independent who states that the matter of closing the Caven Point Army Terminal in Jersey City, the Leonardo Ammunition Depot, and the curtailment of activities at the Bayonne Naval Base by the Department of Defense has created a desperate economic situation to longshoremen and allied craft industry of New Jersey and New York and requests a probe of the Defense Department. Since I am interested in the matter of employment in the port of New Jersey, especially as it

effects my constituency in the 14th Congressional District, I commend this letter to your attention:

INTERNATIONAL LONGSHOREMEN'S ASSOCIATION INDEPENDENT,
Jersey City, N.J., January 27, 1959.

Hon. DOMINICK V. DANIELS,
House of Representatives,
Washington, D.C.

DEAR SIR: The longshore and allied craft industry of New Jersey and New York has felt a desperate economic pinch during the past several months. This has resulted from the closing of Cavan Point Army Terminal in Jersey City, the Leonardo Ammo Depot, and the curtailment of activity at the Bayonne Naval Base by the Department of Defense.

During the closing days of the last session of Congress, we, together with public officials of Jersey City and Hudson County and representatives of commerce and industry, contacted Members of the House, appealing to them for support in our fight to save the ports of New York and New Jersey from being sacked by the Defense Department.

Meetings were held in the Pentagon, telegrams were sent to the White House, the local press backed up our pleas but to no avail.

The Defense Department through the voices of Messrs. Frank Higgins and Courtney Johnson insisted that Cavan Point was closing for reasons of economy. That no cargo would be diverted from the port of New York. That it was a dunnage storage area.

We labeled these charges false. We now hereby request you as our Representative from New Jersey to launch a full-scale investigation of the Department of Defense.

We shall also invite your fellow Members from Manhattan, Brooklyn, and Richmond Counties to join with you in this request, inasmuch as many of their constituents have been affected when Staten Island was closed for economy.

On an enclosed sheet we submit a list of charges which we feel in justice should be answered to the hundreds of families of unemployed longshoremen. Many of these men have exhausted their unemployment benefits and are faced with the plight of being forced on relief roles.

We are requesting Messrs. GALLAGHER and DANIELS from the 13th and 14th Districts of New Jersey to serve as our chairmen and that they insert our charges into the CONGRESSIONAL RECORD.

U.S. Senator HARRISON WILLIAMS, Jr., has arranged a meeting to be held at the Pentagon, February 6 at 2 p.m., and has assured us that the matter will be brought up on the Senate floor.

We have full confidence that you will aid us in this fight and return to the ports of New Jersey and New York their just deserts.

Copies of this letter together with the statement of charges have been sent to all newspapers in the metropolitan area.

Very truly yours,

FRANK MURRAY.

[Enclosure: Statement of charges.]

CHARGES

We accuse the Department of Defense with a systematic sacking of ports of New Jersey and New York under the guise of economy. We accuse that military cargo has been channeled from New York in general, and into Philadelphia in particular.

We cite as examples the closing of piers in Staten Island, Leonardo Ammo Depot, Caven Point, and curtailment of activity at the Bayonne naval base. We ask is the Brooklyn Army base to follow?

We state that the Defense Department has created a monopoly for the handling of thousands of tons of military cargo and turned these shipments over to one firm, the Northern Metals Co. in Philadelphia.

We ask why 200 stevedoring firms in the New York harbor were not given an opportunity to bid on these military cargo contracts. But Northern Metals was awarded the contract without bidding.

We ask is it in the best interest of the Government to pay for storage, warehousing and rentals for 70 acres of land in Philadelphia when 365 acres of tax free, rent free property owned by the Army exists in Jersey City known as Cavan Point.

We ask is it wise economy for ships to have to sail 10 extra hours to reach ports in Europe from Philadelphia. Or to have to wait for proper tides before vessels can berth in the Northern Metals Docks, via the Delaware River.

We ask why a former commanding general of the New York Port of Embarkation resigned a high position from Northern Metals Co. We ask are there at present any high ranking former military officers on this company's payroll.

We ask why the same reason to close Staten Island was given to the public officials of the counties of Manhattan, Kings, and Richmond in 1954 and then to New Jersey officials in 1958.

We ask Presidential Assistant Wilfred S. Persons where have the millions of tons of military cargo which were handled at the closed piers shipped from during the years 1954 to 1958, inclusive, when he stated, "I have been advised that no cargo has been nor will be diverted from New York."

Finally we ask why Secretary of Defense Neil McElroy feels that any further meetings with New Jersey officials will serve no useful purpose.

A Mountain of Wheat

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial that appeared in the Boston Daily Globe, February 2, 1959, which is worthy of the consideration of the Members of the Congress:

A MOUNTAIN OF WHEAT

The farm problem in the United States today is best approached if one realizes that it is an instance of the machine throttling man, a social problem more than an agricultural one. Scientific farming has so increased the yield from the ever-diminishing amount of land give over to crops that we are slowly being suffocated under a mountain of wheat. In 1958, America harvested the greatest general crop ever from the smallest amount of land planted in any year since 1918.

In 1959, it has been estimated, the job of storing, managing and partially disbursing our food surpluses will cost us $1 billion alone. Our budget item for price supports and stabilization of farm incomes will be $5.4 billion. This is about 40 percent of the national farm income.

Meanwhile, the poor in Haiti riot for want of food, and well-to-do Brazil is tormented by a touch of famine. Even at home, anomaly rides the scene. About 1.5 million farm families in the United States have cash incomes of less than $1,000 a year. Of the many farms producing wheat, only a little more than half collect 90 percent of the Government subsides.

The big corporation farm prospers. Some large farms produce crops for which there is no market, calculating their enterprise deliberately to make money through the parity payment system, worsening the Government's storage headache. Better the crop should be plowed under. Meanwhile, the family farm is being forced to the wall. The number of men on farms declines; and homes decay.

This is the situation that President Eisenhower's latest message on farm policy seeks to correct. Unfortunately many of its recommendations will be unacceptable to a majority of the Congress.

The farm situation has worsened under the Eisenhower Administration. The flexible prices supports, so praised by Secretary Benson, have not proved themselves to the point that the Democratic Members of Congress will be inclined to vote him the broad powers that the President has asked. Others will simply be unwilling to abandon the parity program based on the 1910–14 formula.

Yet it seems almost certain that some other formula must be found. The principal point to be seized in regard to the matter is that the parity program, rigidly linked to farm income levels of 1910–14, was devised to ensure production and now must be twisted to serve the opposite purpose of somehow combining with acreage control to fight overproduction. And this at a time when scientific agriculture has made a mockery of acreage control.

Perhaps the farm problem is insoluble. Whatever system is devised, absurdities creep in, which only means that times change, economies alter, and man progresses. What is needed is an approach which strives to set a balance and permits quick decision by Congress or speedy action by the Department of Agriculture to restore the balance when it starts to totter.

Senator LYNDON JOHNSON says curtly that Congress will come up with a workable farm program that will not be conceived out of a desire to punish the farmer for the sins of the Agriculture Department. At least both sides see that the point of no return has been reached under the present system, and that something drastic must be done to restore and maintain a stable reciprocation of price and production in a broadening farm economy.

UNCLE DUDLEY.

British Turbines, Keep Out

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which was broadcast over WDSU–TV and WDSU Radio on January 27, 1959:

BRITISH TURBINES, KEEP OUT

Representative HALE BOGGS has criticized—with good reason—the way this country has just slammed the door on a British electrical company. The story is not one of fair play.

The United States, which has repeatedly urged its allies to emphasize trade, not aid, invited the British to bid on work for large hydroelectric projects in this country.

In this case, the British put in a bid on furnishing two turbines for a dam to be built in Arkansas. They went to all the expense and effort of surveys, blueprints, and estimates to put in their bid, even though they knew the odds were against them. The odds were unfavorable because, under our law, a foreign bidder has to bid 6 percent lower than an American company to win the contract. And if the American company happens to be in an area of substantial unemployment, the foreign company has to bid 12 percent lower.

Bidding on the turbines for the Arkansas dam, a British company managed to beat those odds. It bid 19 percent lower than the lowest American company—a difference of some $300,000.

Then, some days after the bids were opened and the British bid turned out to be much the lowest, a Government agency in Washington ruled that the contract would go to an American company after all. The agency said that national security was involved, although, as Boggs points out, the same office had said that this kind of machinery has no defense significance.

The original announcement, incidentally, that the contract would go to a Philadelphia firm, instead of to the British company, came from Republican Senator HUGH SCOTT, of Pennsylvania.

So, on our invitation, the British invested considerable time, effort, and money, to bid on this project. Then, after they put in the best bid, the contract went to an American company on a technicality—a sort of change of rules announced after the ball game was over.

The British are now hollering "We wuz robbed." Or, maybe being British, they're hollering "We were robbed."

However they're saying it, we can hardly deny it. This is no way for the United States to do business with an ally.

The Sixth Year Begins for the Monitor, Official Catholic Newspaper of the Diocese of Trenton, N.J.

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, the Monitor, the official Catholic newspaper of the diocese of Trenton, N.J., is embarking on its sixth year of publication.

The fifth anniversary edition of this worthy newspaper was replete with reports of the widespread support the Monitor has received from the Roman Catholic community throughout Mercer and Burlington Counties. Indeed, the appreciation for the fine service the newspaper has performed has not been confined to members of Catholic congregations alone. Leaders of labor, business, and government have recognized that the invaluable information obtainable only in the Monitor of many of the varied affairs as well the attitudes in the Catholic community has been of tremendous service not only to the members of the Catholic faith but to themselves as well.

No one can doubt that the official newspaper of the diocese has been supremely successful during its first 5 years, and the future of the Monitor is particularly promising now. Although its lay audience has been large, a drive is now underway for total support by the families of the diocese.

The Most Reverend George W. Ahr, the Bishop of Trenton, under whose auspices the Monitor was initiated, has sent an open letter on this circulation drive to everyone in the diocese. In his letter the bishop emphasized the value of the Monitor to the clergy and the laity alike through its dissemination of information to the people of the diocese.

Bishop Ahr declared that—

In the Monitor the diocese has a newspaper of which we can all be proud. But more than that it is an efficient aid to the bishop and priests in their difficult task of bringing to you a wider knowledge of things Catholic, a deeper understanding of your holy faith, a more vigorous development of your life of grace.

The sixth anniversary edition of the Monitor once again reminds the people of the Fourth Congressional District, which I have the honor to represent, of the great loss we all sustained with the tragic death of Msgr. Richard T. Crean in the fire which destroyed St. Mary's cathedral. The good monsignor somehow found a place in his incredibly crowded schedule to foster the development of the Monitor and its further service to our people, along with many other fine things for the benefit of the people of our diocese and our State of New Jersey. Once more, an otherwise glorious milestone in our history is saddened by the fact that Monsignor Crean cannot be with us to observe the growth of the Monitor as a spiritual and moral force throughout our religious and lay community.

Chief Robert V. Murray, Metropolitan Police Department

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. TEAGUE of Texas. Mr. Speaker, last week a colleague of mine, who has just been assigned to the District of Columbia Committee, was quoted in the newspaper as stating that the Police Department of the District of Columbia is one of the worst in the world.

Mr. Speaker, I have been a member of the District of Columbia Committee for 12 years. I have observed the Police Department and believe that they have one of the most difficult police jobs of any city in the world and that they do one of the best jobs of any police force of any city.

Washington is certainly the crossroads of the world. The Capital of our Government is located here, as well as many foreign diplomats, and each of these groups cause a special police problem.

It is true that there is a high crime rate in Washington, but for sure the police do not cause the crimes.

I want to compliment the Washington Metropolitan Police Department and their chief, Robert V. Murray, and to include at this point a copy of a resolution adopted by the House District of Columbia Committee commending Chief Murray:

Whereas Chief of Police Robert V. Murray, of the Metropolitan Police force of the District of Columbia, has rendered outstanding services to the Nation's Capital in the field of law enforcement: Now, therefore, be it

Resolved, That the Committee on the District of Columbia of the House of Representatives hereby commends Chief of Police Robert V. Murray, of the Metropolitan Police force of the District of Columbia, for the distinguished service he has rendered as the chief law-enforcement officer of the Nation's Capital, and the committee also commends and approves his administration of the Metropolitan Police force of the District of Columbia.

Resolved, That, the chairman of the committee is authorized to have prepared and to present to Chief of Police Robert V. Murray an appropriate replica of this resolution and to extend to him the sincere best wishes of the committee for continued success in his administration of the Metropolitan Police force of the District of Columbia.

JOHN L. MCMILLAN, Chairman; JOHN DOWDY, HENRY O. TALLE, JOS. P. O'HARA, HOWARD W. SMITH, BILLY MATTHEWS, JAMES C. DAVIS, OREN HARRIS, JAMES C. AUCHINCLOSS, JOHN J. ALLEN, JR., DEWITT HYDE, JOEL T. BROYHILL, A. L. MILLER, SID SIMPSON, JOE HOLT, ROY W. WIER, THOS. G. ABERNATHY, JOHN BELL WILLIAMS, CARROLL KEARNS, KATHRYN E. GRANAHAN, ABRAHAM MULTER, OLIN E. TEAGUE, JIM PATTERSON, JIMMY MORRISON.

2d Lt. George W. P. Walker

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. DORN of New York. Mr. Speaker, it is with great sadness that I inform my colleagues of the death of 2d Lt. George W. P. Walker, son of Mr. and Mrs. George Walker of 1103 East 34th Street, Brooklyn, N.Y. Lieutenant Walker was in an aircraft accident in North Carolina while he was en route to Oakland, Calif., for overseas assignment.

Lieutenant Walker was my appointee to the U.S. Military Academy and when he was graduated from that institution in June of 1958, he stood No. 1 in his class. For the entire time he attended the Military Academy, he was carried on the dean's list.

Upon graduation, he was presented with the following awards:

For having the highest rating in mechanics of fluids, a portable typewriter, presented by the National Society, Daughters of the American Revolution.

For excellence in intercollegiate debating, a wristwatch presented by the Consul General of Switzerland.

As the No. 1 man in military topography, a wristwatch presented by the Daughters of the Union Veterans of the Civil War.

The Francis Vinton Greene Memorial, caliber .45 pistol, presented in the name of Mrs. Greene, for standing No. 1 in general order of merit for 4 years; a set of books presented by the American Bar Association for having the highest rating in law; a silver tray—called the Eisenhower award—presented by Mr. Charles P. McCormick of Baltimore, Md., for excellence in military psychology and leadership.

In addition to maintaining his very high military and academic standing while at the Academy, Cadet Walker was active in extracurricular activities, and during his last year held the rank of lieutenant in the Corps of Cadets.

The Nation has lost a potential outstanding military leader and the loss is indeed a great one. I was proud to have been his sponsor, and I join in grieving with his parents.

Balancing the $40 Billion Defense Budget by Firing 17 Custodial Employees Under the Contracting-Out Subterfuge

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mrs. SULLIVAN. Mr. Speaker, after months of effort—telephone calls, correspondence, further correspondence, and more telephone calls—I have finally obtained from the Department of Defense its explanation for the proposed dismissal of 17 longtime career employees in St. Louis and their replacement through the device of contracting-out the work they do.

These 17 men are in the custodial force at the Army Support Center in St. Louis. They have worked for the Government for from 7½ to 20 years. Many are veterans—this is the kind of work which is normally supposed to be reserved for veterans who qualify—and some are disabled veterans with 10-point preference under civil service.

I am now informed that by contracting-out their work to private enterprise, we are going to be well on our way to solving "the general funding situation within the Department of the Army" which has "required that stringent economy measures be imposed."

WHERE ARE THE ELUSIVE FIGURES ON ECONOMY?

Mr. Speaker, we all expect and demand that the Defense Department exercise strict economy. We all know that the greatest part—the overwhelming part—of the huge budget Congress has been asked to enact for the coming fiscal year represents expenditures of the Department of Defense. If we could save substantial sums in Defense Department expenditures, we could almost certainly enjoy the luxury of cutting taxes, and certainly we could eliminate the nuisance excise taxes. So cutting Defense Department expenditures—if that is safe to do, in light of our defense needs—would be most acceptable to all of us.

But I have not been convinced that firing 17 longtime employees of the Army Support Center in St. Louis and turning over the work of these custodial employees to private enterprise on a contract basis, will put any significant crimp in a $40 billion defense budget. Further than that, I cannot obtain—I have not been able as yet to obtain—any figures actually showing there would be any saving at all. The figures are elusive.

In fact, Mr. Speaker, my information is that the substitution of a private contract for the custodial work now done by these modestly paid civil service employees would actually cost the Government more rather than less for cleaning the installation in St. Louis.

CAREER GOVERNMENT EMPLOYEES SUMMARILY FIRED

In the meantime, these 17 employees, many of them up in years, face a bleak prospect in looking for other work. I have received very moving letters from some of the employees outlining their problem in finding other employment after, in some cases, a lifetime of working for the Federal Government in an unskilled or semiskilled capacity.

It was this situation, plus the difficulty in finding any clearcut evidence of savings to the Federal Government as a result of these dismissals, which led me to intervene in the case as soon as I learned in December that these men had been notified of their scheduled dismissal as of February 15, 1959.

As I said, Mr. Speaker, I tried immediately to find out how the Government would accomplish any savings through the dismissal of these men, since the work they perform is going to be performed in any event—and by a private contractor who must not only pay prevailing wages but must make a profit in order to stay in business.

I said that the figures on possible savings are quite elusive. I am convinced, further, that if any such figures exist, they are, in fact, illusive.

The chairman of the House Appropriations Subcommittee on Defense Appropriations has sought the same figures. I am beginning to doubt that any such figures exist.

It appears to me that someone in the Department of the Army dreamed up a bright idea as to a way to get around personnel ceilings and make it appear through a subterfuge that the Army was cutting down on civilian employees. By firing employees and contracting out the work they do, the Army apparently can show a reduction in employment even though there is no corresponding reduction in expenses, and even though costs may actually be much higher.

If this is what has been happening, then I certainly think the responsible officials in the Department of Defense should crack down—and the Civil Service Commission and the Bureau of the Budget should also intervene. And Congress, also, must look into this problem—not because of 17 employees in St. Louis but because their situation seems to be part of a nationwide pattern.

MONTHLY REPORTS ON GOVERNMENT EMPLOYMENT

Mr. Speaker, a few days ago, the Joint Committee on Reduction of Nonessential Federal Expenditures issued its monthly report on Government employment for the month of December. It showed a slight cut of 2,943 in the number of Federal employees from the previous month's total of 2,351,824.

The Joint Committee added, Mr. Speaker—and to me this is most significant in view of the situation I have discovered in the Army Support Center in St. Louis—the Joint Committee added that the decrease in overall Government employment of 2,943 represented a cut of 3,930 civilian workers in the military departments against an increase of 987 in employees of the civilian agencies.

How many of the 3,930 civilian employees let go by the military were taken off the rolls only to have their work turned over to private contractors at a cost at least equal to, and probably higher, to the Government? That is the figure I would like to know about, Mr. Speaker.

GENERAL ACCOUNTING OFFICE INVESTIGATING

In several instances in the past, Mr. Speaker, the military services—and particularly the Army—have been disclosed to have contracted for services through private enterprise in order to maintain a fictitious employee ceiling on total personnel. I am aware of the fact that the General Accounting Office has looked into several such instances, and has found the ceiling on employees cannot legally and properly be circumvented by farming out, on contract, work normally done by Government employees.

The General Accounting Office is currently conducting an inquiry into the proposed dismissals in St. Louis, and I sincerely hope it can establish the true facts. I have not been able to get those facts on specific costs or savings from the Army. In fairness, I might say that the Army informs me there are substantial reductions in direct costs obtainable through contracting out custodial work of this nature—and I will place that letter in the RECORD later in my remarks—but I have seen no figures to bear this out. And the information does not coincide with information I received elsewhere from sources I deem to be reliable.

EXCHANGES OF CORRESPONDENCE

Mr. Speaker, I submit, in chronological order, some of the correspondence I have sent or received on this matter.

First, the letter I wrote to Secretary of Defense McElroy shortly after this matter was brought to my attention, and after I had made a series of preliminary inquiries by telephone:

[LEONOR K. (Mrs. JOHN B.) SULLIVAN,
Third District, Missouri]

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., December 12, 1958.

Hon. NEIL H. MCELROY,
Secretary of Defense,
Washington, D.C.

DEAR MR. SECRETARY: I have recently learned of a Department of Defense action

in St. Louis involving a group of faithful career Government employees, many of them with 10-point preference as disabled veterans. The whole situation smacks of shabby treatment and fiscal dishonesty. I am writing to you in the hope that you will not only correct this particular situation but see to it that any similar episodes occurring elsewhere are stopped.

In an apparent desire to reduce the number of civilian employees of the Department of Defense, someone in the Department dreamed up the idea of eliminating certain custodial positions and then placing out the work on a contract basis. As a result, a majority of the men now employed as laborers in the custodial department of the St. Louis Area Support Center have been notified their jobs will be eliminated February 15 and the work put out on contract. When I inquired about this I was informed that the orders had come from the 5th Army Headquarters, who got their orders from Washington, based on a determination to reduce the number of employees. So far as I can determine there will be absolutely no saving in costs and, in fact, operating costs may increase.

The men involved have been employed by the Federal Government for periods ranging from 7½ to 20 years. There are only a few of them involved and I can appreciate the fact that with all the worries that you have you may not have the opportunity to look into a matter involving perhaps 17 employees in an installation in St. Louis. Yet I think the principle involved here is important enough to justify the concern of everyone in the Department of Defense interested in preventing injustice to faithful, long-time employees and interested also in avoiding the presentation of a dishonest picture of "economies" in the Department.

May I have a report on this matter at your earliest convenience?

With best wishes, I am,

Sincerely yours,

LEONOR K. (Mrs. JOHN B.) SULLIVAN,
Member of Congress, Third Ditsrict, Missouri.

Mr. Speaker, since the monthly reports on Government employment issued by Senator BYRD's joint committee may well have been a factor in the Army's desire to contract out various types of work to private enterprise, and since I know the Senator from Virginia would want to make sure that the figures his committee issues reflect the true conditions of Government employment, I addressed the following letter to Senator BYRD in his capacity as chairman of the joint committee:

DECEMBER 12, 1958.

Hon. HARRY F. BYRD,
Chairman, Joint Committee on Reduction of Nonessential Federal Expenditures, U.S. Senate, Washington, D.C.

DEAR SENATOR: Each month the joint committee of which you are chairman issues reports on the number of Government employees and the increase or decraese in Government payrolls. This is useful information for the Congress to have and I am sure stimulates the executive department in seeking to hold employment in line.

May I respectfully point out, however, that in an attempt, apparently, to make its employment picture look better that it really is, the Department of Defense seems to have adopted a policy of discharging long-time, faithful, career Government employees and awarding this work on a contract basis to outside firms.

A situation of this kind has just been called to my attention at the Army's St. Louis Area Support Center, where a majority of the custodial staff—men with from 7½ to 20 years of service, including a number with 10-point preference as disabled veterans—are to be discharged as of February 15th. I have checked and I have been informed that the Federal Government will not save any money by such a step but may, actually, pay out more than it presently does for this work.

Of course, by eliminating these jobs and others like them the Department of Defense presumably shows a better employment picture while hiding or disguising the cost of custodial work in other accounts or items of its budget.

I wonder if there is any way your committee can investigate this type of practice and see to it that the departments do not provide a misleading and totally dishonest picture of their employment costs by resorting to subterfuges of this kind, particularly when career Government employees are cast adrift after a lifetime of service.

With best wishes, I am,

Sincerely yours,

LEONOR K. (Mrs. JOHN B.) SULLIVAN,
Member of Congress, Third District, Missouri.

Furthermore, Mr. Speaker, if the contracting out of custodial work was in fact a subterfuge to get around ceilings on personal services employment, and could cost the Government far more in the long run than retaining faithful employees in the work, it occurred to me that the President's chief budget officer, the Director of the Bureau of the Budget, would want to look into the situation. Consequently, I addressed the following letter to Mr. Stans:

DECEMBER 12, 1958.

Hon. MAURICE H. STANS,
Director, Bureau of the Budget, Washington, D.C.

DEAR MR. STANS: May I call your attention to a situation in St. Louis which I think is reprehensible?

After a lifetime of service, a group of Federal employees on the custodial staff of the Army's St. Louis Support Center—all of them with from 7½ to 20 years service, some of them with 10-point veterans' preference—have received notice of discharge as of February 15. The work they have been performing is to be put out on contract to private firms. I am informed that there will be absolutely no saving to the Federal Government as a result of this step, although there will be great hardship on the individuals involved.

Could you give me the thoughts of the Bureau of the Budget on measures of this kind taken by individual agencies to carry out the orders of the President to cut down on employment, when the measures taken are subterfuges of this kind, saving no money whatsoever and perhaps costing more than the present system?

Does the Bureau of the Budget exercise any supervision or control over agencies putting out more and more of their work on a contract basis to private firms when there is absolutely no saving involved and when it actually costs the Government more in the long run?

With best wishes, I am,

Sincerely yours,

LEONOR K. (Mrs. JOHN B.) SULLIVAN,
Member of Congress, Third District, Missouri.

Following, Mr. Speaker, is a reply I received from Senator BYRD, dated December 15:

CONGRESS OF THE UNITED STATES,
JOINT COMMITTEE ON REDUCTION OF NONESSENTIAL FEDERAL EXPENDITURES,
December 15, 1958.

Hon. LEONOR K. SULLIVAN,
House of Representatives, Washington, D.C.

DEAR MRS. SULLIVAN: I have your letter of December 12. I am very glad that you have called this matter to my attention.

I share your concern over such a practice and I shall look into the matter thoroughly.

With high regards and very best wishes.

Faithfully yours,

HARRY F. BYRD,
Chairman.

The Office of the Secretary of Defense acknowledged my letter to the Secretary in a reply dated December 16, and indicated the Department of the Army would seriously study the allegations. That letter follows:

OFFICE OF THE SECRETARY OF DEFENSE,
Washington, D.C., December 16, 1958.

Hon. LEONOR K. SULLIVAN,
House of Representatives.

DEAR MRS. SULLIVAN: This is to acknowledge your letter to the Secretary of Defense dated December 12, 1958, in which you requested a report pertaining to certain personnel practices by the Army in the St. Louis Area Support Center. Secretary McElroy is out of the country on official business.

Your letter complained of elimination by the Army of certain custodial positions in order to reduce the number of civilian employees, and then allegedly having the same work effected by contractors. This is a matter within the purview and knowledge of the Department of the Army, and I have therefore taken the liberty of referring your letter to the Secretary of the Army for direct reply to you.

Please be assured that the allegations contained in your letter will be seriously studied, and investigated if necessary.

Your interest in this matter is appreciated.

Sincerely yours,

CARLTON R. ADAMS,
Captain, USN, Deputy Assistant to the Secretary (Legislative Affairs).

On the last day of the year, Mr. Speaker, the Assistant Director of the Bureau of the Budget, Mr. Elmer B. Staats, responded to my letter of December 12 as follows:

EXECUTIVE OFFICE OF THE PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D.C., December 31, 1958.

Hon. LEONOR K. SULLIVAN,
House of Representatives, Washington, D.C.

MY DEAR MRS. SULLIVAN: This is in response to your letter of December 12, 1958.

Administration policy, as expressed in Bureau of the Budget Bulletins 55-4 and 57-7, reads as follows:

"It is the general policy of the administration that the Federal Government will not start or carry on any commercial activity to provide a service or product for its own use if such product or service can be procured from private enterprise through ordinary business channels. Exceptions to this policy shall be made by the head of an agency only where it is clearly demonstrated in each case that it is not in the public interest to procure such product or service from private enterprise."

Savings to the Government are not always apparent in action taken under this policy because comparisons of cost may not include all relevant costs of the agency production unit, Government and private accounting systems differ which makes comparison difficult, and because taxes paid by the private entrepreneur to Government may offset apparently higher costs.

Agencies are required to carry out actions under this policy in an orderly way. They have been directed to give adequate notice to the community and employees in advance of discontinuance or curtailment, and where necessary to assist employees in finding other employment.

Through such measures it is hoped that the inevitable dislocations which occur can be minimized to the end that a viable econ-

omy might be maintained and responsible Government promoted.

Please get in touch with us if we can be of further assistance.

Sincerely yours,

ELMER B. STAATS,
Assistant Director.

BUDGET BUREAU SEES VIABLE ECONOMY IN FARMING OUT 17 CUSTODIAL JOBS TO PRIVATE ENTERPRISE

Mr. Speaker, I read the letter from Mr. Staats with great interest—and a somewhat sinking feeling in the pit of my stomach. If I gather its drift correctly, we are to turn over to private enterprise all jobs now performed by Government employees except where it is clearly demonstrated in each case that it is not in the public interest to procure such product or service from private enterprise.

Under that approach, I am sure we could conceivably justify firing nearly everybody in Government except the Cabinet members and a few assistants. We could hire taxis instead of chauffeurs for the entire executive level of the executive department; we could farm out the Council of Economic Advisers to the Brookings Institution and the Budget Bureau to one of the big industrial management firms. We could assign Westinghouse or General Electric the task of administering the Atomic Energy Act; and we could fire a whole slew of generals, admirals, and Assistant Secretaries of Defense and farm out their work to corporations expressly formed for that kind of servicing operation.

This may be taking the thing far afield, Mr. Speaker, but the principle is the same. We are firing 17 janitors in St. Louis in order to shore up private enterprise, assure a viable economy and perhaps—we do not know for sure, but perhaps—save some money, perhaps only by the fact that we will collect taxes on the private contractor doing the work these 17 men have performed.

Mr. Speaker, on January 20 the Army directed another interim letter to me on this matter, as follows:

DEPARTMENT OF THE ARMY,
OFFICE OF THE SECRETARY OF THE ARMY,
Washington D.C., January 20, 1959.

Hon. LEONOR K. SULLIVAN,
House of Representatives.

DEAR MRS. SULLIVAN: This is in further reply to your inquiry pertaining to certain personnel practices by the Army in the St. Louis Area Support Center.

Please be advised that the investigation of this matter is continuing. Upon receipt of the necessary information you will be informed immediately.

Sincerely,

JOHN W. B. WALTERS,
Lieutenant Colonel, GS, Office, Chief of Legislative Liaison.

After nearly 2 more weeks of waiting, while the February 15 deadline for the dismissal of the custodial employees at St. Louis rapidly approached, and after a number of calls to find out what, if anything was happening on this, I have finally received the Army's reply to my letter of December 12.

This letter, dated today and hand-carried to me, is as follows:

DEPARTMENT OF THE ARMY,
OFFICE OF THE SECRETARY OF THE ARMY,
Washington, D.C., February 2, 1959.

Hon. LEONOR K. SULLIVAN,
House of Representatives.

DEAR MRS. SULLIVAN: This is in reply to your recent inquiry regarding the proposed release of custodial laborers at the U.S. Army Support Center, St. Louis, Mo., and assignment of the custodial work on a contractual basis.

The general funding situation within the Department of the Army has required that stringent economy measures be imposed. Since, in many instances, the application of such measures has brought about a reduction in available manpower without a corresponding reduction in the amount of work to be performed, local commanders have been forced to explore every possible means for continuing their operations.

The St. Louis Support Center was faced with this problem when, approximately 7 months ago, it became necessary to assume the maintenance of additional office space in the Mart Building. At that time, due to budgetary limitations, space authorizations would not permit the employment of any additional personnel for the performance of this additional work and it was decided to contract for its performance.

Experience with this contract indicated that there were a number of advantages to the installation. First, a substantial reduction in direct cost has occurred, even though the contractor is paying prevailing union wages for such work. Second, the contractor furnishes all equipment and supplies, thus relieving the installation of the work involved in procuring, accounting for, and repairing numerous items of property not required for the conduct of its mission. Third, there has been a substantial reduction in the overhead required for supervision of the custodial work.

Further budgetary limitations have now required that the St. Louis Support Center seek additional means of carrying out its mission without jeopardizing essential operations. Such limitations were partially met by not filling 13 vacancies arising from personnel actions such as retirements, transfers, and resignations. In the light of earlier favorable experience with contract operations, and in order to conduct operations fully within fund limitations, it was decided to reduce the maintenance staff by 17 employees and to enter into an additional contract for the performance of this work.

Any action which causes the loss of loyal and experienced personnel is always regretted by the Department. You may be assured, however, that every effort is being extended by the center to find other employment for the employees involved. To date this action has resulted in the probable placement of three employees.

Thank you for your interest in this matter, and I hope that the information furnished will be of assistance to you.

Sincerely,

C. G. DODGE,
Brigadier General, GS, Deputy Chief of Legislative Liaison.

MORE INVOLVED THAN 17 CUSTODIAL JOBS

Mr. Speaker, it is not very encouraging that in the period since early December until now—a period of 2 months since these 17 men were notified they were going to be let go—the Army's "every effort" in helping the men find other employment has resulted in "the probable placement of three employees."

That, more than anything else the Army and the other agencies involved have said, or omitted from saying, sums up the cruelty of this whole high-handed episode.

It may seem a bit far-fetched for me to go into so much detail here today over the jobs of 17 custodial employees in an Army installation in St. Louis. But these are not 17 fence posts, or 17 desks, or 17 cases of floor wax. They are 17 long-time, career Government employees, in jobs normally reserved for and assigned to veterans, and some are disabled veterans. There are 17 families involved here. One of the men who wrote to me has 8 children—he is a 10-point disabled veteran with 22 months of overseas service to his credit and 16 months of service in the States in World War II.

Both the Disabled American Veterans and the American Legion have intervened in these dismissals because of the pattern and trend they reflect in disguising Government personnel costs by turning out career employees—frequently veterans—and replacing them through the private contract subterfuge.

I appreciate the interest other Members of the House have showed in this problem when I discussed it with them, and I appreciate the follow-up inquiries which several have made. I hope we can save these 17 jobs. But the principle involved here goes far beyond the 17 men involved. It goes to the heart of decency in personnel and fiscal policies in Government.

The Big Jump

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article entitled "The Big Jump," which appeared in the supplement with the first issue of Looking Ahead for 1959, a publication issued periodically by the Second Bank-State Street Trust Co. of Boston, Mass.

Since this subject is most timely, it may be of interest to my colleagues:

THE BIG JUMP

Probably your great-grandchildren will be told in school that the space age began in 1959—the year when earthlings made their first real contact with the moon.

But men have been going to the moon, in their imaginations, for 5,000 years—ever since Etana, the shepherd, went there on an eagle to complain to God about oppressive taxation in Babylon.

Science-fiction was written way back in the second century and parodied by Lucian, the Greek, in his "True History." Lucian's hero got to the moon by accident when his ship was carried aloft by a waterspout while sailing beyond the Pillars of Hercules, where almost anything could happen in those days. He found there a race of creatures who drank air and ate the smoke of roasting frogs.

During the Middle Ages life was too grim for fantasy, but in the 1600's speculation about space travel was renewed. Francis Godwin, Bishop of Hereford, in his "The

Man in the Moone, or a Discourse of a Voyage Thither," published in 1638, imagined a flock of geese as the prime mover. The birds were trained to follow a white sheet which, when manipulated as a yachtsman might handle a spinnaker, enabled the pilot to navigate. He reported that the inhabitants of the moon were a peace-loving people whose language could be written only in musical notes. In the same year another bishop, John Wilkins, wrote "The Discovery of a World in the Moon," a quasi-scientific discussion of the possibility of earth men living on the moon. In 1649 Cyrano de Bergerac, in his "Histoires Comiques," dreamed of rocket propulsion with the sun as a source of power.

Galileo could have told them that their tales were tall because he had a good look at the moon with his telescope in 1609, but the Inquisition soon silenced his heretical talk about a new conception of cosmography.

Probably the best-known yarn that has been spun about travel to the moon is Jules Verne's "From the Earth to the Moon," written in 1865. His crew was shot from a giant gun and circled the moon without landing. Verne was followed 5 years later by Boston's Edward Everett Hale, who wrote a serial story called "The Brick Moon," for the Atlantic Monthly. Dr. Hale seems to have been the first to imagine an artificial earth satellite.

John Jacob Astor made his contribution in 1894 with his "Journey to Other Worlds" and H. G. Wells, in 1901, in "The First Men in the Moon" imagined a material called cavorite that canceled the earth's gravity.

For the last 50 years we have been getting closer and closer to our nearest neighbor in the galaxy, but we are still earth bound. We are, as one scientist put it, like a potato bug in a sack of potatoes in the hold of a ship wondering what makes the ship go. But we will soon know more and you may be sure that such news as reaches us will be reported in Looking Ahead.

Why do we want to reach the moon? "Because," as a famous mountain climber once said, "it's there."

My True Security

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. BENNETT of Florida. Mr. Speaker, I am happy to include in the RECORD today, an excellent speech which was made by Miss Pattie Ritter, of Jacksonville, Fla., on the subject of true security. It seems to me that the message of this young lady is one which all good Americans should profit by reading.

The speech follows:

MY TRUE SECURITY

Exactly what is security? A feeling? An emotional state? It is these, but, also, it is an everyday feeling. Security is something that everyone must have to be a natural human being, not just in the United States, but all over the world. I must possess it in everything I attempt to do. Security exists everywhere, but in order for it to progress, everyone must believe in it.

We, the citizens of the United States of America, have known security from our first few moments on earth. We have found it in our homes, and in the love of our parents. Security starts in the home and is an influence on all of its surroundings. "The strength of a nation, especially that of a republican nation, is in the intelligent, well-ordered homes of the people." This quotation, taken from the "New Dictionary of Thoughts" could not be more true, but how few of us realize it. Most homes and parents are taken for granted. If they were suddenly taken away from us, only then would we realize how very fortunate we are.

There must be security in our homes. If it does not exist we are without the strength, the supporter of our Nation. There must be security in our Government. Ever since 1787 citizens have enjoyed a fair and secure Government. Without our Government, we are without the United States we all love. Security lies in all our privileges we enjoy as citizens of the United States of America. Our freedom of speech and of the press—being able to voice our views, our problems, our anticipations. Our freedom of education. Our country offers to us an education worth much more than a bike, a car, or pretty clothes, and it is up to us to take hold on this opportunity and make the most of it. Our freedom of religion—being able to attend the church of our choice, worshipping God in our own way. When I think of the many people all over the world who are not free to worship God in their churches on Sunday or any other day of the week, who have to hide their respect for our Almighty Creator, I feel so ashamed of myself for being too lazy to get out of bed and give 1 hour of my time to the Supreme Being, God, that has made me possible.

Yes; there is security in many things. I can live as I please and where I please. I can choose my own friends, elect the people I want to represent me in my Government. I can worship God in the church of my own choice and in my own way. I can attend a school provided for me and millions like me without obligation. I do not have to be afraid to voice my opinions or thoughts. I can go to sleep at night, knowing that my family and I are protected from harm.

What is my true security? It is the United of America, and all of its opportunities, lying before me like an open book. I am so lucky and proud to be able to say, this is my country, I belong to this country, and I will, until my death, cherish this unfailing gift that has been given to me.

The Late Judge Lloyd Herzka

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mrs. KELLY. Mr. Speaker, on February 10, 1958 Judge Lloyd Herzka was called to his eternal home. The entire Brooklyn citizenry was deeply grieved. He was one of Kings County's most promising citizens, dearly beloved, a loyal friend and true American.

When the Honorable John Cashmore, president of the Borough of Brooklyn, was honored at the Beth El annual dinner, he paid a special tribute to Judge Herzka in his speech, which I quote here:

Rabbi Halpern, Mrs. Herzka, Mr. Toastmaster, distinguished guests, ladies and gentlemen, how can I possibly put into words all the thoughts that are in my heart at this moment.

Just let me say I am grateful. I am grateful to your chairman, Mr. Stark, and to Mr. Benne Katz for their kind and generous words of friendship.

I am grateful to the mayor of the city of New York who has given up an evening of much needed rest and relaxation so that he could be with me at one of the most important events in my life. And I feel honored indeed that Joe Sharkey and Judge Moss, two of my oldest friends, could be here to take part in these ceremonies.

Let me say that I am thrilled, and I am deeply moved by this beautiful expression of your sentiments.

Mixed with the pleasure of being here tonight, there is a considerable note of sadness. For anything that I have been able to do for Beth-El Hospital has only been a continuation of the great work started by the late Judge Lloyd I. Herzka.

For many years he was my assistant. He was a loyal and devoted friend, whose friendship I sadly miss.

If praise has been earned for any good works, then it is his praise, and I shall accept it for him and in his memory.

I will accept and I will treasure this gift only with the understanding that I serve as a symbol for Judge Herzka and for every one of you here who has worked so tirelessly for Beth-El Hospital.

If I have been privileged to give even a small part of myself to help in this great humanitarian work I feel well rewarded, for it has brought to me a kind of spiritual satisfaction which each one of us grows to cherish more and more as our age and wisdom increase.

You, the friends of Beth-El, have never sought and never will seek earthly reward for your charity, but if every the temptation comes to complain about the endless demands that works of charity make upon you, stop for a moment and ponder upon the message that is contained in a little poem which Lloyd Herzka used to like to quote:

"Go break to the hungry, sweet charity's bread,
For giving is living the angel said,
'Must I be giving again and again?'
The weary wondering question came,
'No!' said the angel piercing me through,
Just stop when the Lord stops giving to you."

And now let me thank you once again for this beautiful gift which Mrs. Cashmore and I will treasure.

Let me thank you, too, for the beautiful tribute that you have paid me here tonight. It will provide me with a memory to cherish the longest day that I live.

Responsibility Passes to Democrats

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an editorial which appeared in the Arizona Daily Star, Tucson, Ariz., under date of January 21, 1959.

The editorial follows:

RESPONSIBILITY PASSES TO DEMOCRATS

President Eisenhower's official presentation of his $77 billion budget to Congress initiates a measure that carries in it the

destiny of the value of the dollar. Indeed, it might be said that it carries in it a test of the moral character of the American people. As the wealthiest people the world has ever known, will they have the character to tax themselves to pay for what they can afford to have, or are they going to evade payment by borrowing for current expenses?

This new budget, which is the largest in the peacetime history of the country, might well be criticized as being too large. Yet it represents a compromise between two extremes of those who call themselves "liberals" and the others who call themselves "conservatives." Three-fifths of the total sum goes for national defense and security, which should convince doubters that more money than ever is being spent for such purposes.

Now that the President has done his duty, it is up to Congress to do its duty. Since Congress is controlled by the Democrats, the responsibility falls squarely on the shoulders of the Democrats. If they scorn the budget as too small, then they should provide new taxes to pay the bills. If they insist on spending more and more and borrowing to pay for current expenses, they will have initiated a precedent which will forecast a progressive depreciation of the purchasing power of the dollar.

The eyes of the world are upon the United States to see what happens. For years, and as a part of our foreign-aid program, we have insisted that other nations balance their budgets. If the Democrats fail to do this with our own budget, it should not be hard to realize that the prestige and the sincerity of the United States will sink to a new low.

What a spectacle it would be to see the wealthiest and most powerful Nation the world has ever known evade paying for what it can afford from current revenue.

Are the Democrats of Congress going to fail to meet this historic test?

Bloomington, Ind., an All-American City

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1959

Mr. BRAY. Mr. Speaker, I am pleased to announce that a city in my district, Bloomington, Ind., has been selected as one of the all-American cities by Look magazine and the National Municipal League. This is an honor extended to only 11 medium-sized cities throughout the Nation.

Bloomington is a city with which I have had a long and special association, and its achievements are always filled with meaning for me. It has truly been a second home to me since I first went there as a freshman at Indiana University in 1921, and worked at Wells' Cafe. Throughout the years I have had continued close contact with Bloomington. My wife is a professor at Indiana University and my son is a senior in the law school there.

I have lived in Morgan County, which is adjacent to Monroe County, of which Bloomington is the seat, all of my life, as has my family since 1822. The people of Bloomington are and always have been representative of a friendly, kind, but rugged independence so typical of those living among the rolling hills of southern Indiana. I have known that Bloomington is an all-America city but I am glad to see it receive official recognition.

From long association I know the kind of teamwork which binds the citizens of Bloomington together in one successful civic enterprise after another. I have seen it exemplified in many instances, and I saw it again last fall when they made their presentation before the panel that selected this year's honor cities. I joined the delegation sent out to Colorado Sprngs, and after seeing first-hand their presentation I felt their selection was assured.

While I was happy to see Bloomington grow and become an increasingly important industrial center, I was fearful that this growth might destroy that friendly, helpful village atmosphere that has made Bloomington such a fine place in which to live and raise a family. But the true greatness of Bloomington is its ability, despite its growth and increasing importance, to remain the kind, friendly community that I knew years ago.

The same judgment applies to Indiana University. One cannot adequately discuss Bloomington without discussing the university, nor discuss the university without discussing Bloomington. Both have lived and grown together for about 140 years. Indiana University has steadily grown from a small but outstanding midwestern school to one of the largest universities in the country and, like Bloomington, it has retained its personal and friendly atmosphere, reflected in its interest in each student.

Perhaps the greatest thing that can be said of any city is that it is a fine place to live. You can certainly say that of Bloomington. It is most outstanding in livability.

Two Amendments To Be Offered to H.R. 2256

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1959

Mrs. ROGERS of Massachusetts. Mr. Speaker, the following are two amendments which I propose to offer to the bill H.R. 2256, which I understand will come up for action on the floor tomorrow afternoon. I believe it will be difficult for the veterans to pay the high interest rates proposed in H.R. 2256:

AMENDMENT TO H.R. 2256, 86TH CONGRESS, AS REPORTED WITH A COMMITTEE AMENDMENT

Section 2(a) of H.R. 2256, 86th Congress, as reported with a committee amendment, is amended by (1) striking the word "and" before "(2)" and inserting a comma in lieu thereof, and (2) by adding before the period at the end thereof the following: "and (3) by adding at the end thereof a new sentence to read as follows: 'In every case in which a loan is guaranteed under section 1810 and the interest rate is more than 4¾ per centum per annum, the Administrator is authorized to pay out of appropriations directly to the veteran, during the period the property is owned and occupied by the veteran as his home, and at such intervals as he may prescribe by regulations, an amount representing the difference between the interest paid by the veteran on the loan at the rate actually charged, not exceeding the maximum rate chargeable hereunder at the time the loan was made, and the amount of interest that would have been paid had the rate been set at 4¾ per centum per annum.'"

ADDITIONAL AMENDMENT TO H.R. 2256, 86TH CONGRESS, AS REPORTED BY THE COMMITTEE

Amend section 2 of H.R. 2256 by adding a new subsection (c) as follows:

"(c) Paragraph (1) of subsection (d) of section 1811 of title 38, United States Code, is amended by adding at the end thereof the following: 'In every case in which the interest rate on the direct loan is more than 4¾ percent per annum, the Administrator is authorized to pay out of appropriations directly to the veteran, during the period the property is owned and occupied by the veteran as his home, and at such intervals as the Administrator may prescribe by regulations, an amount representing the difference between the interest paid by the veteran on the loan at the rate actually charged and the amount of interest that would have been paid had the rate been set at 4¾ percent per annum.'"

Mr. Speaker, it is important to legislate additional money for GI loans. I feel the veterans fare better if they can secure loans under VA auspices.

COMPARISON OF GI LOANS AND FHA LOANS

There are certain definite advantages to GI loan financing over FHA financing from the viewpoint of the veteran borrower and these advantages are present even if the two loans bear an identical interest rate.

The obvious advantage to the GI loan is that it may be obtained for home, farm, or business purposes whereas the FHA has no comparable farm and business loan program.

Other advantages of GI loan financing are as follows:

First. The GI loan guarantee or insurance is furnished without charge to the borrower whereas FHA loan insurance is paid for by the borrower through a mortgage insurance premium payment of one-half percent per annum on the monthly declining balance of the loan.

Second. The VA valuation of the property fixes the maximum price which the veteran may pay for the property. The FHA valuation is used in determining only the maximum loan amount and the purchaser may pay in excess of the FHA appraisal if he chooses to do so.

Third. The GI loan may be made for 100 percent of the approved purchase price. The FHA loan may be no more than 97 percent of the FHA valuation of the property in cases where the property is valued at no more than $13,500 and for a lesser percentage as the value of the property increases. Consequently, a downpayment requirement exists in FHA insurance authority which is not present in VA authority.

Fourth. The GI loan may be prepaid by the borrower at any time without premium or fee. A prepayment fee of 1 percent of the outstanding principal balance may be required if the borrower wants to pay off an FHA loan before maturity.

Fifth. The VA has authority to purchase defaulted GI loans where the holder refuses to extend indulgence in deserving cases, thereby affording the borrower a further opportunity to keep his home. The FHA has no comparable authority.

Sixth. The VA has more limitations on foreclosure action by lenders which are designed to protect the veteran's interest and prohibit precipitous action.

Seventh. The VA has a statutory directive to release an original veteran borrower from liability under certain conditions where the property is sold and a new purchaser assumes the mortgage indebtedness. The FHA has no such requirement.

Deep in the Heart of Dixie

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. COLMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to submit an editorial under date of January 29, 1959, from the Wayne County News, a weekly newspaper published in Wayne County, Miss., by Mr. Harvey Hurt.

I think that even a casual reading of this editorial will prove enlightening to even the most biased critics of the Negroes' educational facilities in the South.

The editorial follows:

DEEP IN THE HEART OF DIXIE

Gene Wirth, in his column, Magnolia Mirror, in the Jackson Daily News and Clarion-Ledger, compiles some very interesting figures on taxation in Mississippi, as follows:

During the 1956–57 school session the State paid $109.99 per Negro child in public schools at a total cost of $22,505,475, while during the 1957–58 school session the State paid $118 per Negro child at a total cost of $23,922,209. Of these millions spent for Negro education, this figured that the white taxpayers picked up 90 percent of the check.

Since Mississippi's program started in 1954 to provide equal school facilities, the education finance commission has approved 186 construction projects for Negroes at a cost of $39,576,910.37, while during the same period it approved only 39 construction projects for white children at a cost of $12,100,544.47. The white children received 23.42 percent while the Negro children received 76.58 percent, and the white taxpayers footed 90 percent of the bill.

By the time this equalization program is completed, Mississippi's taxpayers will have coughed up more than $200 million on schoolbuildings. Based on the present percentage of racial distribution of school construction funds, Negroes will receive over $150 million while the white children will receive less than $50 million.

During the current 2-year period, the State will extract from the taxpayers' earnings and then give away in all forms of welfare some $88,327,400. Of this amount, only 38.97 percent or $34,421,187.78 will go to the State's white people, while 60.79 percent or $53,694,286.46 will be given to the State's needy Negroes.

For old-age assistance, the State will take from the taxpayers' earnings and then give away $59,400,000. Of this amount, only 40.70 percent or $24,175,800 will go to the State's needy white people, while 59.11 percent or $35,111,340 will be given to the State's needy Negroes.

For aid to the blind, the State will give away $5,807,400. Of this amount, 42.11 percent or $2,445,496.14 will go to the State's needy white blind people, while 57.56 percent or $3,342,739.44 will be given to the State's needy blind Negroes.

For aid to dependent children, the State will take from the taxpayers' pockets and then give away $17 million. Of this amount, only 27.32 percent or $4,644,400 will go to the State's white children, while 72.22 percent or $12,277,400 will be given to the State's needy Negro children.

For aid to the permanently and totally disabled needy persons, the State will give away $6,120,000. Of this amount, 39.34 percent or $2,407,608 will go to the State's needy disabled white people, while 60.31 percent or $3,690,972 will be given to the State's disabled Negroes.

These figures would seem to be convincing enough that the white taxpayers of Mississippi are paying heavily to assist and advance the Negro.

The Court Blandly Disregards Its Own Established Principles

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I present two timely editorials of broad interest which appeared in the Shreveport Times, Shreveport, La., on January 26, 1959:

THE COURT AGAIN BLANDLY DISREGARDS ITS OWN ESTABLISHED PRINCIPLES

A few days ago the U.S. Supreme Court handed down another of its blandly inconsistent decisions, one which gained little public attention, because it affected only a single individual, but which is important as indicating the manner in which individual Justices hop back and forth across the judicial fence at will.

The case involved a single and very limited question under section 92 of the Articles of War, whether the United States legally was in time of peace in June 1949. A soldier in California had been convicted of conspiracy to commit murder, conviction coming through military court-martial on the ground that the United States was not legally in time of peace. If the Nation was in time of peace the case should have been tried by civil courts. The Supreme Court ruled, 6 to 2, that the country was legally in time of peace and ordered the conviction reversed.

Justices John Marshall Harlan and Tom Clark wrote the dissenting opinion, stating quite abruptly that the Supreme Court in 1921 had ruled on this point, holding at that time that "in time of peace" signified "peace in the complete sense, officially declared," and that this was not the condition in 1949 any more than it had been in 1921. In the current California case, all litigants agreed that peace had not been officially declared in the complete sense.

Speaking for himself and for Justice Clark, Justice Harlan said:

"I think that Congress, and the military authorities charged with the implementation of the Articles of War, should be able to rely on a construction given one of those articles by an unanimous decision of this Court."

The two dissenters pointed out that Congress had never objected to the Supreme Court's 1921 decision—on the contrary, Congress reenacted the military statute concerned without amendment.

Justices Harlan and Clark said that they failed to understand how their colleagues could hold that between 1921 and 1949 the meaning of the statute had changed so that "the authority under the statute then confirmed must now be denied."

That is sound and solid law. It is the principle of the long-accepted—and now often rejected by the Supreme Court—stare decisis. This simply means settled law; that points of constitutionality of Federal statutes passed by Congress, or points of issue in the Constitution itself, when once determined by the U.S. Supreme Court remain so determined until and unless Congress passes new law or the Constitution is amended by the people.

But it is necessary to point out that the sound principles of jurisprudence which Justices Clark and Harlan pointed out in this decision apparently did not occur to them in some of their own previous decisions, noticeably as recently as last September when they again voted to void the power of States to maintain racially separate schools.

Justice Harlan obviously is impressed by the fact that the 1921 decision as to court-martial or civil trial was a unanimous decision. Obviously he believes that Congress and the military, once this unanimous decision was rendered and since there had been no new law on its subject, should have been able to rely in 1949 on the ruling that had stood for 28 years. In 1899, Justice Marshall Harlan's grandfather, the first John Marshall Harlan on the Supreme Court, wrote a decision in which the Supreme Court held unanimously that "the education of the people in schools maintained by State taxation is a matter belonging to the respective States, and any interference on the part of the Federal authority with the management of such schools cannot be justified except in the case of a clear and unmistakable disregard of rights secured by the supreme law of the land." And that decision became the supreme law of the land just as much as the present desegregation decision of the Supreme Court.

Were not the southern States—or segregation States outside the South—entitled to rely upon that ruling? (That case was *Cumming* v. *Board of Education*). In 1927, in *Gong Lum* v. *Rice*, the Supreme Court again considered the allegation that segregation is in itself a denial of equal protection of the laws. Again, the Supreme Court refused to tamper with established construction of the Constitution—with "settled law," with stare decisis, since there had been no change in law or in the Constitution on the issue at stake.

In 1954 when the Supreme Court wrote its original opinion on the current school cases, the Cumming case had stood for 55 years and the Gong Lum case for 27 years.

The principles of "settled law" which Justices Clark and Harlan criticized for violating in the case of the California soldier are the same principles which Justice Clark violated in the original 1954 Supreme Court desegregation decision, and which both have violated in desegregation decisions since 1955 when Justice Harlan became a member of the Court.

It has been clear for some time that nothing is safe these days from the Supreme Court through having been established and

accepted by time, previous Supreme Court rulings, or action or inaction of Congress. Apparently, Justices Clark and Harlan are not safe even from their own expressed judicial principles, on the basis of their votes in the California soldier's case and in the desegregation decisions.

BOMBINGS SHOULD BE HANDLED BY STATES

J. Edgar Hoover's reluctance to have the FBI pushed further than it already is into the campaign against church and school bombings should receive the support of Congress when House and Senate consider the various proposals before them to make such bombings punishable by Federal law.

As the Sun of Baltimore points out in a recent editorial, "We may be sure that Mr. Hoover is as much against the bombings as the best of us. The idea that bigots can write their bigotry with dynamite into the desolation of houses of worship is repellent. But repellent, too, is the prospect of slow Federal drift into every government responsibility across this continental Nation. Especially repellent is the prospect of an FBI swollen into a universal police force and bound as its first effect to wither local policing. This, obviously, is the main danger Mr. Hoover foresees."

Among the proposals to make school and church bombings a Federal offense—which would authorize FBI entry into any such case—is a seven bill package introduced by the two Republican Senators from New York, JACOB K. JAVITS, and KENNETH B. KEATING. This package, in addition to making such bombings a Federal offense, would ban hate literature from the mails.

A similar bill, broader in some respects but confined to bombings, is offered by two Democrats, Senators JOHN F. KENNEDY, of Massachusetts, and SAM J. ERVIN JR., of North Carolina. This measure is said to have the backing of 30 to 40 Senators. In the House, Chairman EMANUEL CELLER, of the House Judiciary Committee, is sponsoring similar bills, as he did at the 1958 session.

Shipping explosives across State lines for terroristic purposes would have been made a Federal crime by a key provision of a bill advanced last year by CELLER and Representative KEATING, then the ranking minority member of CELLER's committee. The specific ban was against such interstate transportation "with the knowledge or intent that it will be used to damage or destroy any building for the purpose of interfering with its use for educational, religious, charitable, or civic objectives, or of intimidating any person pursuing such objectives."

The bill would have justified immediate entry by the FBI in bombing cases by setting up a presumption that explosives used in bombings had been brought across State lines. It, and other similar measures, are in conflict with the position of the Department of Justice that ordinarily crimes of violence, including bombings of religious buildings, are subject to exclusive State jurisdiction, "even if they are a conspiracy and even if the conspiracy is operative in several States."

In this case the position of the Department of Justice and the expressed opinion of Mr. Hoover should prevail. Further extension of FBI authority into State police spheres should be avoided, both as detrimental to local police and as generally undesirable.

It is also worthwhile, in considering this legislation, to raise once again the question of why the same liberal Congressmen who are so eager to push through this antibombing legislation, turning over State and local police powers to the FBI, are not sponsoring similar legislation with regard to bombings and other terrorist activities by labor unions.

It is a safe bet that if provisions making labor terrorism a Federal offense were tacked onto the bills making church and school bombings a Federal offense, a good part of the support now given the latter measures would suddenly and mysteriously evaporate. And this despite the fact that local enforcement has been far more effective and energetic where school and church bombings have been concerned than in the case of labor violence.

Address by Secretary of Defense Neil H. McElroy Before the Women's Forum on National Security

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. SIKES. Mr. Speaker, under permission granted me to extend my remarks and include extraneous material, I request that the attached address by Secretary of Defense Neil H. McElroy be reprinted in the CONGRESSIONAL RECORD:

CHANGING DIMENSIONS IN NATIONAL SECURITY

"Changing Dimensions in National Security"—I wonder if you realize how very apt such a theme is for your forum discussion. In these days of exploding technology, change is the one constant dimension in national security.

Sometimes your Secretary of Defense feels that the component elements of our national security have all the stability of ladies' fashions—a subject with which each of you is concerned and quite obviously well informed. You know, for instance, better than I, that strange things happen from season to season to such items as necklines, waistlines, and hemlines. Once in a very great while you ladies can rise up and exercise some control over the changing dimensions of fashion—as witness your boycott and the consequent sack of the sack and the demise of the trapeze.

Changes in weapons come upon us even more unexpectedly than changes in fashions. They are also apt to be more radical and fantastically expensive. In fact new elements in defense frequently arrive on the scene just after we've made a huge investment in yesterday's weapons' style. This upsets the defense budget keepers just as a sudden change in fashion raises havoc with your clothes budget. But you have options. If you don't like a new fashion you can rise up en masse and reject it collectively. In my experience as a husband and the father of two girls who are now young women, this seldom happens but it is theoretically possible. Or, you can choose, to ignore the new fashion for economic reasons and wear last year's model. This also seldom happens. Again—I'm speaking as a husband.

In the serious business of defense, unlike the world of fashion, we do not have the option of freezing styles in weapons nor can we reject new weapons for either aesthetic or economic reasons. In fact, we must carry on unceasing research deliberately to outmode what was invented and built just yesterday—however uneconomic such a practice may be. We must, in short, seek to change dimensions and catapult into new and untried areas. In the business of defense the cow has already jumped over the moon. Almost anything can happen in the future. Ask Dr. Wernher von Braun when he speaks to you tomorrow.

He can testify also to the impact of a vast dimensional change on a brand new, freshly caught Secretary of Defense to be. On the night of October 4, 1957, I was attending a dinner at the Army's Redstone Arsenal at Huntsville, Ala. It was one of the last stops on a month-long orientation trip I had made to military installations across the country. A group of us were discussing the changing dimensions in warfare. While we were talking about changes which would be brought about by guided missiles Dr. von Braun was called to the telephone. He returned, visibly excited, to inform us that the Russians had just announced the successful launching of an earth satellite. To the three standard dimensions of warfare—land, sea, and air—a fourth had been added, space. And this, just five days before I was to assume office as Secretary of Defense.

Yes, in the 16 months I have been in office there has been a steady and rapid evolution in our defense posture. But, while the dimensions of national security have changed, the overall superiority of U.S. military power in relation to any potential aggressor has not and must not change. While we cannot always be first with every link that makes the chain of our defense—we must always be first in the sum total strength of all the links. That is where we are tonight and that is where the Department of Defense is determined to remain.

Last September I expressed to the American Legion Convention in Chicago:

"Fullest confidence that the United States is ahead of the Soviet Union in overall strength in being * * * now."

I wish to bring that statement up to date by repeating it to you tonight. And, I wish to add that the Department of Defense, fully supported by the President, has no intention of allowing this condition to change. We believe that our planned military programs are adequate to achieve this result for the foreseeable future. You and the country may be assured that our programs will keep pace with what our official intelligence warns us any enemy of the United States may have in the future. Our budgets support military programs tailored to produce what that intelligence tells us we must have.

Americans have always shown themselves capable of both great effort and great sacrifice in times of national danger. Our whole history as a Nation testifies that our people need only to be informed and aroused to take any action necessary for national survival. I am told by Mrs. Gunn that the very purpose of this forum is to inform and arouse this representative group about the threat to our security. I'm glad that Mrs. Gunn used the word "aroused" and not I. As the loving husband of Mrs. McElroy and speaking as a veteran of 30 years of marriage I hold with Charles Dickens that—

"There is something about a roused woman * * * which few men like to provoke."

I agree, however, that the total resources of America can never begin to be marshaled unless the women of this country are kept informed of the problems facing us as a Nation. You need only be convinced that everything you hold dear—your home, your security, your children—calls to you for help. Victory in war, hot or cold is not possible without your support, it's as simple as that.

Now let me tell you something about the changing dimensions of the world I live in these days—the Department of Defense. I entered the Pentagon with the Space Age. For those engaged in the business of defense, entering space is vastly different from the use of new and unproved weapons in the known elements of land, sea, and air. True, such weapons as the airplane and the submarine changed the dimensions of warfare over the years but the changes came about by a process of evolution. Weapons of the space age—and I refer specifically to long

range missiles—have caused and will continue to cause a revolution in the art of warfare, with all its violent side effects.

We must devise whole new categories of weapons both offensive and defensive. Thus, you can see not only have the dimensions of new weapons changed but the very bench marks—the very points of reference from which measurements may be made—have shifted.

Let me, at this point, give you just one example to illustrate what I mean. Up until a very few decades ago it took weeks for a weapon to be launched against America because it had to come by sea—then with the advent of the long range airplane the time for possible warning was reduced to hours. Then, suddenly, as the guided missile burst upon us we found ourselves up against one of the most fantastic defensive requirements ever placed upon military technology.

Instead of weeks or hours the missile will allow us something on the order of 30 minutes for defensive action. The actual number of minutes will depend on the effectiveness of our warning systems—systems which must be redesigned to meet the threat of a missile traveling 25 times as fast as the speed of sound. To devise a weapons system which will in the time required, detect, track, fire at, and destroy, such a small fast moving target, is a challenge military technology must meet.

Our scientists and engineers have dedicated themselves to this task. They are spurred on by the knowledge that technology has given to the offensive missile a striking and destructive power of well over one hundred thousand times the bomb which we knew in World War II as the "blockbuster." You can now understand why I say the bench marks from which dimensions are measured have shifted.

In any commercial enterprise there are six basic elements known in management studies as the Classic M's. They are machines, men, materials, methods, money, and markets. Markets we don't have to worry about in the defense business. But the other five we must deal with to accomplish our objectives and their dimensions are constantly changing. Let's look at machines first.

Last year we were told by General Betts from the Office of the Director of Guided Missiles that technology in this day and age does not stand still—and that was the understatement of 1958. Later in this year's forum you will see and hear a dramatic story by Mr. Joe Powell of the Department of Defense on the "Collapse of Time" and the effect of the stampede of technology on our machines of war.

I've already told you about our defensive problems with missiles. They stagger the imagination of even a scientist. Let me just mention some of our more serious management problems with other weapons, submarines, for example. This is a weapons delivery system where we now enjoy a qualitative and technological superiority. We know that in less than 2 years our atomic submarines will be able to hurl powerful ballistic missiles many hundreds of miles. They will create grave problems in detection and defense for any potential enemy of the United States. But Russian submarines likewise pose serious defensive problems for us. While we believe they do not now have atomic submarines we must assume that whatever we have the enemy is capable of producing—sometimes much faster than we thought possible.

So, the increasing complexity and destructiveness of modern machines of war create new and grave management problems. You have to know just when and how long to go along with an old weapons system and just when to put your money and faith in a successor system. And, of course, they must overlap for a while. This is not unlike buying the newest style before you know whether it will take. However, in the case of weapons, you bet your very life. The security of the country may hang in the balance on right decisions. Machines are indeed a changing dimension of national security.

The second M—materials—are likewise a defense management headache. No longer can we depend alone on the common materials of other wars. Excursions into outer space and deep under the sea call for exotic metals and plastics, for new and better fuels and for more powerful explosives in smaller packages. One of the major projects of the Advanced Research Projects Agency of the Department of Defense, for instance, is the development of a more powerful solid fuel needed for our third generation intercontinental ballistic missiles. Defense management is solving this problem and adding another new dimension to national security. In doing so we have devised new methods—the third classic M of management.

ARPA, the Advanced Research Projects Agency I mentioned a moment ago is in itself a new organizational method established by management for the purpose of advancing our knowledge in—to name just a few of its projects—the field of missiles, anti-missile missiles and military space vehicles. Set up to handle advanced research and development programs, ARPA utilizes the best brains of the university and industry. It focuses particular skills on special problems whose solution is vital to America. Old methods of research are too slow to cope with the pace of technology. Your defense management must and is finding new ones.

The fourth M is manpower. The research and development, production and operation of new weapons systems puts space age strains on our manpower resources. We must utilize the best scientific and engineering brains the country now possesses in research, development and production. At the same time we must take steps as a Nation to educate and train the scientists, the engineers, and the skilled workers of the future. Democracy's future demands and depends on an unending supply of well-educated citizens—educated, that is, to cope with all changing dimensions of the space age.

Mere numbers of men used to be a measurement of this Management M. Today skillpower and brainpower have had to make radical improvement in efficient use of manpower. A guided-missile ship, for instance, with a crew of 1,000 men but no skilled electronic technicians, wouldn't have any fighting power. The same is true for other modern weapons systems of our Army, Navy, Air Force, and Marines.

Therefore defense management needs better educated and better trained soldiers, sailors and airmen to operate the complex machines of war devised by our scientists and engineers. Technology has multiplied the penalty for stupid or careless error 10,000 fold. The error of yesterday's gunsmith could cost us only a musket or two. The error of today's technician could cost us a bomber worth, literally, its weight in gold.

Improving our educational system to cope with the new demands of technology is an all-hands, all-American task. The average citizen can't invent fuels, build missiles or fly an airplane but he can and should find out what's needed in the field of education and take steps to insure that his community fills the needs.

Now, we come to the fifth and last great M of management, money, a problem that affects all of us. I imagine if I were able to listen to the conversation of any one of you ladies for a few days I would be bound to hear you say, "Everything costs more these days." That's true of clothes, food, automobiles, houses and luxuries. It's also true of the materials and machines of defense. We buy everything you buy, we feed, cloth and house millions of people. Our costs have gone up, too. That's tough enough on our budget. But the cost of military hardware, unlike the ordinary commodities we buy, didn't go up just a little—it blasted off into space.

If an automobile cost 50 times as much today as it did in 1945 you'd be shocked and probably decide to keep your old one. Yet as the President pointed out in his State of the Union message today's fighter aircraft are 50 times more expensive than the fighters of World War II and we can't use the old ones. Our Polaris firing submarines will cost 15 to 20 times more than the conventional subs of the last war.

Of course, the weapons we buy at these increased prices are much more powerful. Indeed, their effectiveness oftentimes goes up in much greater ratio than their cost. We must have these weapons, regardless of cost. But in buying them defense management strives to spend your money in the most efficient manner possible.

Let me emphasize that money is important to defense but it's no panacea. You can't purchase prepackaged defense. It's the job of defense management to translate the amount of money needed into a winning combination of men, methods, materials, and machines. I think we have that combination.

In addition to the changing dimensions in national security brought about by the five great M's of management, we are always conscious of another M looking over our shoulder. This M stands for moments—we know you can't spend deficit time and you can't borrow minutes. Our potential enemies have exactly the same amount of time we have. He who uses his moments most wisely will be the winner in the cold or hot war of the future.

The framework I have set for your forum discussions bears principally on the problems of military defense. I would not want you for one moment to think that changing military dimensions are the only ones that are important to national security. The last few years have seen tremendous changes in the dimensions of the economic competition between the nations of the free world and the Communist bloc. These years have not lessened either, the changing political and psychological pressures. To these changes we must be responsive. We must, in fact, continue to develop political, psychological, and economic programs of our own—programs which are as appealing as our military might is unassailable.

America's military might is for defense not aggression. The dimensions of your Military Establishment keep changing only to make it clear to any aggressor than an attack on us would be foolhardy.

America's defense will remain geared to reality—we will keep pace with technology. We will keep America's military strength superior to that of any nation which threatens us.

We will—that is, if we—and I mean all of us—take care to insure that the dimensions of our minds keep pace with the dimensions of our problems. Our mental dimensions represent our ability to understand the problems ahead and our determination, with God's grace, to conquer those problems.

Ladies, your forum represents citizenship at its best—informed citizens are the priceless ingredients of a democracy—our democracy in particular. I salute you and join you in your efforts to keep America strong.

An Appraisal From a Citizen of Cuba

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received in my office from Carlos Cabrera, a citizen of Cuba. In its simplicity it speaks more eloquently than could anyone who has not suffered under the tyranny of a dictator. Without further comment, then, it follows, introduced by a shore note to me written on the margin of the letter:

THE CUBAN SITUATION

HAVANA, CUBA, *January 22, 1959.*

To the EDITOR.

DEAR SIR: I would like to have your permission to write you, not only this letter but others, from time to time, to keep you informed on how the man on the street feels and thinks about the present revolution and the Provisional Government of Cuba.

First of all, permit me to say a word in favor of the Provisional Government. It has been formed by young men (I am old), with great honesty and intelligence, as we have not seen it before in Cuba. But besides that, they have a surprising capacity for work. To find a man, the head of a government department, who did not have an hour's sleep in the last 72 hours is nothing exceptional these days. And these men will greet you with a smile and answer as many questions as you care to ask, as if they would have lots of time and nothing else to do.

We were very much surprised when the rebel army entered Havana. The men were so modest and polite that it was difficult to believe that these were the same men who fought with so much tenacity against an enemy 10 times their number, with much better armament, tanks, planes, navy, etc. But the previous army had no morale or reason why to fight.

Men at Havana were forgetting such courtesies as letting the seat to a lady in the bus, ask for permission, giving thanks, etc., and these rebels, in that respect, have gone back to the XIX century. While in the mountains, they were given instructions, not only on military matters but on other subjects, among them civics.

Now a word about Fidel Castro. Some papers, outside of Cuba, have referred to Dr. Castro as the "new strong man of Cuba." The strong man in Cuba, as you know, was Batista and it seems they are greatly confused when they compare our leader with the head of the previous Government.

Dr. Castro could have anything he would wanted in Cuba, after what he has done for us. But he wants nothing. We think so much of him, that he is often compared to our Apostol José Martí. There was a meeting yesterday, to back the provisional government and I believe that about a million persons attended it. We were parading from 2 o'clock in the afternoon to about 8:30 p. m. There were many foreign correspondents who would attest on the enthusiasm of the people for Fidel Castro. Hundreds of thousands came from the interior of the island.

With reference to the executions it is estimated that, during the Batista regime (about 7 years) there were more than 10,000 persons taken from their homes at night, tortured to get information from them, killed and buried anywhere, in large groups. In a town, near Havana, there were 90 persons killed in one night.

A few days ago, eight policemen and soldiers were executed. But that was done, as in every case, after a fair trial was conducted, at which the tribunal listen to all evidence, no matter how many hours it would take. A military tribunal might carry on for 14 or more hours, without interruption, to have the facts clear and listen to everyone who has something important to say.

The referred to policemen and soldiers executed, were responsible for the death of 53 persons, robberies, etc. Since these persons had relatives, father, mother, brothers, etc., who were present when the men were taken from their homes and went the following day to the police or soldiers quarters, they furnish much more evidence than it was required to sentence the men to death. But the men had their lawyers and could appeal to a higher tribunal.

The code used in these trials was the one approved by the rebel army while in the mountains which, in its turn is a part of the much larger one used by the Cuban army in our wars of independence.

On the other hand, 59 army officers, from colonel to lieutenant, were released the same day. It is believed that they were guilty of something, but it could not be proved to the satisfaction of the tribunal, and the motto is: better let free an assassin than to kill an innocent man.

A week after the shooting was over, there were no policemen on the streets and traffic was directed by our Boy Scouts with no trouble at all.

We are enjoying peace and liberty as we have not known in Cuba in the last 25 years.

Cordially yours,

CARLOS CABRERA.

MY DEAR MR. PORTER: This letter was sent to several periodicals in the United States of America. I am taking pleasure to send it to you in case you have not seen it. Thanking you for your attention to this letter.

Very truly yours,

CARLOS CABRERA.

Prayer Offered by Hon. Harold T. Garvin

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1959

Mr. EDMONDSON. Mr. Speaker, on January 12, 1959, at a breakfast honoring Oklahoma's newly elected Governor, Lieutenant Governor, and other elected officials, an inspiring prayer was offered by the president pro tempore of Oklahome State Senate, the Honorable Harold T. Garvin.

Because Senator Garvin's prayer is sure to have meaning and significance for all Americans in these days of stress and trial, it is here reproduced for the RECORD. Senator Garvin's prayer:

Since it is through the mercy of Almighty God that another day is added to our lives, we here dedicate both our souls and our bodies to Him and to His service in sober, righteous, and Godly lives; to the glory of His Kingdom and the everlasting benefit of this great State; and in such dedication, we ask that He confirm and strengthen us.

Knowing the weakness of our nature and the many temptations which we meet daily, we ask that He have compassion upon our infirmities that we may be restrained from sin and ever mindful of our duty.

We pray that He will imprint upon our hearts such a dread of His judgments and such a grateful sense of His goodness as to make us both afraid and ashamed to offend Him.

In particular, we implore His grace and protection in the days, the weeks, and the months to come—that He will keep us temperate in all things, and diligent in our several callings.

We ask that He grant us patience under our afflictions; grace to be direct and upright in all our undertakings; quiet and peaceable; full of compassion; and ready to do good to all men according to our abilities and opportunities.

We pray that He will direct us in all our ways; defend us from all dangers and adversities; and take us and all who are dear to us under His fatherly protection.

These things we humbly beg in the name of the Governor of all men.

Future Status of Military Installations

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to call attention to the following resolution adopted by the Beauregard Post of the American Legion, DeRidder, La., on January 12, 1959. This resolution follows the announcement of the closing of Fort Polk, a permanent military installation in Louisiana:

RESOLUTION ADOPTED BY BEAUREGARD POST NO. 27, JANUARY 12, 1959

Whereas the deactivation and closing of Fort Polk will greatly affect the citizens of the State of Louisiana and particularly those residing in Beauregard and Vernon Parishes; and

Whereas the periodic opening and closing of Fort Polk during recent years has lessened the confidence of these citizens in the long range planning program and objectives of the Department of Defense; and

Whereas it is felt that proper planning by the Department of Defense would enable it to make effective use of existing military installations, thereby eliminating the practice of scrapping costly established installations and building others to replace them; and

Whereas the present method of operation not only disrupts and dislodges many thousands of citizens each year, but it also has a disastrous effect on the economy of the local areas involved and it also affects the economy of the United States as a whole: Now, therefore, be it

Resolved, That the American Legion, from the local to national level, institute a program to determine if existing military installations can be continued in their present capacity or be utilized in a more economical manner in the future; and be it further

Resolved, That a copy of this resolution be introduced at the Mid-Winter Conference of the Louisiana Department of the American Legion on January 24, for the purpose of having it brought before the national convention of the American Legion at its next meet-

ing. That a copy of this resolution be forwarded to the Members of the Louisiana congressional delegation with a request for their support and cooperation.

O. W. WEST,
Commander, Post No. 27.

Attest Correct:

E. B. MURRELL,
Adjutant, Post No. 27.

Joe Pearson, a Dedicated Humanitarian

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. ANFUSO. Mr. Speaker, there is a very unique charitable institution in my congressional district which caters directly to the poor, the aged, the destitute. This institution is known as the Free Kosher Kitchen of Williamsburg; and it provides not only free food to needy individuals but also relief for entire families, help to youths who are in trouble with the law, reinstatement of families on welfare rolls, and other forms of direct aid to the poor.

The founder and president of this institution, which is today recognized by the welfare department of New York, is Joe Pearson. He is a dedicated man and a devoted humanitarian. He is loved and respected by the people of the district for his charitable work for the Free Kosher Kitchen and many other noble causes.

In this week's issue of the Williamsburg News, published in my district, there appears an article about Joe Pearson and the Free Kosher Kitchen. It is written by Harvey Rosenfeld, a very able columnist and reporter, and reads as follows:

ABOUT IMPORTANT PEOPLE
(By Harvey Rosenfeld)

The 28th annual banquet of the Free Kosher Kitchen of Williamsburg is ready for its unveiling this Sunday night, February 1, at the Grand Paradise. All the intense preparation and dedicated efforts will reveal that night what the institution has accomplished.

The last few days before the events has, in the past, resulted in a column heralding the affair, spotlighting the celebrities in attendance, and profiling the guests of honor. Joe Pearson, devoted president and founder of the kitchen, wanted to make sure this year would be no exception. He provided us with a long roll of personalities to be expected, and an alert signal for the guests of honor. As regards himself, hardly a word was mentioned. He just requested that he be shown the article when printed.

But we refuse to listen to you Mr. Pearson. This column is yours. Though many personages will be there that night, you take top billing. Though the dais will be heavily populated with names from diverse fields of human activity, your work in charity has preeminence over all the rest.

This is not meant to disparage, among others, the two guests of honor, who were accorded the same rank last year. In their work, they do not have to account for any defect in their performances.

"Big Joe" Rosenfeld, Jr., author and philanthropist, has allayed the distress of many, using such soothing powers when the cries of the unfortunate reached him. Formerly associated with radio station WMGM, he now is the messenger of charity at WABC. But his deeds remain the same. In combination with Jim Gordon, a sports announcer once associated with WMGM, they speak over the microphones from midnight to 6 a.m. They work while most men sleep, so that many will have something to wake up for.

And Congressman VICTOR L. ANFUSO's record in Washington is a source of pride to his many constituents whom he represents. Many organizations, to which he has attached constant service, recognize his worth by the honors they accord him. As for his future, it can only be indictive of more success.

These men, however, are well known. Newspaper readers have seen their names in the familiar black and white. But to most Joe Pearson is at best a name which we may have vaguely heard of. Yet, those who have been aided by his generosity can fill in the details.

Joe Pearson likes poetry. The lines he writes are put into practice, though. When he formed the free kitchen about three decades ago, he penned such a poem. It was in the midst of the depression, and his verse was the expression of a man who wanted to help. It read:

"A feeling heart—a helping hand
Does its part, that hope and sunshine again ascend.
A generous soul, a noble mind
Will hear a brother's cry and peace will find
When wounds are healed and hunger stilled,
When hopeless life with faith and love once more filled."

Joe Pearson became the minstrel of charity. He will tell you that for some people the depression still exists. The poor do not know any economics. For the emotionally depressed, there can be no prosperity. Working for the poor at 228 South First Street, he purveys food for 70 families weekly. These people, mostly aged, have the benefit of both cooked and uncooked food.

His wife, Tillie, has been a faithful aid in the running of the kitchen. And undoubtedly there are many others who share in the prizes of charity. Yet, the institution is run by one. The pile of papers and bills which fill Joe Pearson's living room is ample evidence.

The free kitchen is not only food. Its menu is complete with relief and rescue. Recognized by the welfare department, it has saved families whose cases were rejected by the department. Each year Joe Pearson pleads for 25 youths in trouble with the law; he reinstates 50 families on the welfare's register; numerous people are released through his efforts from mental institutions.

In Williamsburg, Joe Pearson helps in other ways. He is an unknown but important wheel in the Democratic machine of the 14th assembly district and has many a time been selected as an alternate delegate to presidential conventions.

This is the work of Russian born Joe Pearson, a father of four and grandfather of five. This is not the type of a column he wanted for the banquet, but it is one he deserves.

Farm Surpluses Can Be an Asset

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, on January 29, 1959, Gilbert Rohde, president of the Wisconsin Farmers Union, sent a telegram to Senator LYNDON JOHNSON, detailing the need for a responsible farm program that would utilize the abundant production of our farms to raise living standards at home and win friends abroad. Under leave to extend my remarks, I would like to include a copy of Mr. Rohde's telegram in the RECORD:

President's Eisenhower's farm message shows pathetically weak imagination and no long-range vision in attempting to solve administration-created price-depressing farm surpluses. U.S. farmers, world's most efficient agricultural producers, could be a Godsend to low-income and hungry Americans and to overseas nations desperately in need of economic development to withstand the inroads of international communism—and these farmers could see incomes rise as surpluses are put to wise use. Our farmers should not be penalized through lower income for the administration's dismal failure to grasp the urgent need of putting farm surpluses to effective implementation domestically, and as major foreign policy weapon. Wisconsin Farmers Union urges congressional leadership, under vigorous guidance, to reject administration request to produce still lower farm prices, more farm surpluses and fewer farm families. In its place, we need responsible farm and food policy that, in benefiting all Americans and providing aid to free world nations, will be America's answer to the recent 21st Communist Party Congress plan of Soviet Premier Khrushchev.

The High Cost of Asylum

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column from the Washington Post and Times Herald for Wednesday, January 28, 1959:

BATISTA UNHAPPY IN REFUGE, AT COST OF A MILLION
(By George Dixon)

A well-known Latin-American diplomat underwent an odd metamorphosis the other night. He is ordinarily one of the most cautious gents in diplomacy but something came up, or went down, which turned him from a listener to a talker.

He had no difficulty attracting an audience because everyone knew he had been thick as thieves with Batista, although he represents a South American country far removed from Cuba. But the thing that served most to win him attention was his disclosure that he has been in contact with the deposed Cuban President since the latter took exile in the Dominican Republic.

The diplomat threw out the provocative line that his dear old amigo was not wildly happy over his asylum. Satisfied that he had us properly on tenterhooks, he repeated that Batista was not a happy man at all.

Playing along with him, one of our number murmured sympathetically that it must be hard on a dictator to be torn from his despotism, but that Batista had the consolation of being with his great friend and fellow dictator, Generalissimo Rafael L. Trujillo, adding:

"It must have touched Batista to be welcomed with open arms to the Dominican Republic."

One of the first things a properly trained diplomat is taught not to do is snort, but this careerist forgot his training. He snorted that Batista was not teary-eyed with gratitude toward Trujillo.

He proceeded to tell us the inside story of how one despot gave sanctuary to another. The revealing recital left me disconsolate.

The distinguished diplomat gave us a vivid word picture of the meeting, as he had gotten it direct from Batista. The fleeing Cuban was literally welcomed to Trujillo City with open arms. Trujillo folded him in brotherly embrace, but after all the Latino embrazos were over, and the formalities of asylum dispensed with, the Dominican took the Cuban exile aside.

"You are, of course, welcome," beamed Trujillo. "Everything that is ours, is yours. But there are things we must think about."

By this time, Batista's smile of gratitude was beginning to change to one of uncertainty. He asked the benefactor if he would mind being a little more explicit.

"Well," said Trujillo, "we spent millions on public relations. When Peron came here, we had to augment our public relations budget; when Perez Jiminez came we had to increase it even more. Now that you are here we will have to increase it again.

"It is going to be very costly to combat this bad publicity and it seems only fair that you contribute a share."

"What is a few dollars between friends?" shrugged the benefactor beneficently. "We think you should contribute $1 million."

Batista did.

Address by Gen. Maxwell Taylor, Chief of Staff, U.S. Army, Before 35th Annual Session of Institute of World Affairs

---

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1959

Mr. TEAGUE of Texas. Mr. Speaker, it is gratifying to me to note a growing awareness within the State and Defense Departments that an all-out nuclear-type general war is less likely to occur than all other types of war from the extremely limited to the type fought in Korea.

Following this unavoidable logic, well substantiated by recent history and the international situation, our attention must be inescapably focused on the Army and its ability to meet the contingencies involved in less than a general nuclear war.

The modernization of appropriate Army equipment is, I am convinced, absolutely necessary to improve the capability of the Army in conjunction with sister services to meet the possible challenges which lie ahead.

At the present time the Army has on hand an equipment inventory of approximately $14 billion, of which $5 billion consists of World War II models or older. Experience has shown that the average wearout cycle for Army equipment is approximately 10 years. Thus, $1.4 billion of new procurement is required to offset annual wearout and obsolescence of the current inventory, without considering additional inventory needs. The Army's fiscal year 1960 procurement funds available to offset wearout and obsolescence amount to $1.19 billion. This means that at this rate the inventory is being depleted at the rate of over $200 million per year.

It is bad enough that the Army has reached a point with its current equipment where it is no longer economical to maintain it or at best it is incapable of meeting the stepped-up requirements of today's or tomorrow's possible war. To not provide sufficient funds to maintain the current level of inventory is, in my opinion, completely inexcusable. That this inventory is only about two-thirds of what the Army should have further compounds the felony.

Modernization of Army forces will tend to improve the Army's strategic mobility as well as its ability to fight. An effort is being made to develop lighter, more effective weapons and equipment.

It naturally follows that modernization of the Army should be accompanied by modernization of the sea and airlift upon which the Army, along with the other services, is so dependent.

I have read with a great deal of interest the speech which the Army Chief of Staff delivered before the 35th annual session of the Institute of World Affairs in Pasadena, Calif., in December. This speech, dealing primarily with limited war, contains four conclusions of paramount importance if we are to be properly prepared for limited war. Two of these conclusions pertain to the need for modernization and mobility which I have already discussed. The remainder of the speech, however, is of such significance that I desire to insert it into the RECORD in its entirety.

The address follows:

IMPROVING OUR CAPABILITIES FOR LIMITED WAR

(Address by Gen. Maxwell D. Taylor, Chief of Staff, U.S. Army, 35th annual session, Institute of World Affairs, Pasadena, Calif., Dec. 8, 1958)

I appreciate very much the opportunity to appear before this distinguished gathering and to talk about a few of the significant aspects of national security which confront us. It is a pleasure for a soldier to be able to share this platform with the eminent speakers who have preceded or will follow me in dealing with your theme of "Agenda for American Action."

In choosing a topic for my discussion this evening, I have decided to talk about limited war, what it is, why it is important to understand, and what are some of the requirements to cope with it. This choice is made because of the recurrent debates over our readiness for this kind of threat which appear in current press and radio. In view of the complexity of our national strategy it is not surprising that there are some misunderstandings about the nature of the problems which deserve a few words of clarification. At the outset, let me define general war and limited war as they are generally understood today. General war would be a direct armed conflict involving the United States and the Communist bloc in which our national survival would be at stake. In a conflict of such magnitude it is probable that weapons of all magnitudes would be used with little or no limitations. It is depicted as an atomic fight to the finish by the two great power blocs.

The definition of limited war then becomes relatively simple—it is any military conflict short of a general war, one in which our national existence is not at stake. Thus, limited war covers a wide range of military action, from a patrol action to an operation on the magnitude of the Korean war or greater. While this definition is very broad, further to refine it leads to complications which add nothing to the clarity of the concept.

If I were asked why the growing interest in the limited war question, I would say that it is because we have all noted the fact that they have occurred—and in impressive numbers. In fact, a total of 17 limited war situations have arisen since 1945. They include a wide variety of military actions such as the Chinese civil war, guerilla operations in Greece and Malaya, the North Korean aggression, the Hungarian revolt, and the recent renewal of hostilities in the Taiwan Straits by the Chinese Communists.

Further, these have not necessarily been small or short wars. By striking a statistical time-manpower balance of all 17 limited wars, one finds that they have averaged about 2½ years in length and 570,000 men engaged. In most cases, a very significant military effort was required to bring these limited wars to an end.

Thus, in the past 13 years, there has been a notable incidence of active military operations short of general war. It is possible to pass from this fact to the inference that they will continue to occur and that the rate of occurrence may increase. This possibility arises from the fact that the Soviet leaders have always shown a willingness to take chances, even when they had no counterpoise to our preponderant atomic power. With the rise in their capability in the atomic and missile fields we may expect increasing intransigence on their part. We may well be required to respond to increased levels of provocation in an atmosphere of increased international tension. We have seen evidence of increased Soviet belligerence at the time of the Syrian crisis last year, in the situations in Lebanon and during the recent Taiwan Straits incident—all of which have occasioned Soviet threats of nuclear devastation directed at our allies and ourselves. The renewed pressure on Berlin is the most recent case in point.

The sober thought that both sides have the capability of destroying each other should nuclear weapons be used without restraint is a hard fact of life with which we are going to have to live for the indeterminate future. Meanwhile, the Communists are well aware of the very material gains they have made in the past through the more limited forms of aggression. Therefore, under the cloak of fear imposed by mutual atomic capabilities it would appear quite likely that they may henceforth undertake to kick us harder and higher on the shins than they have done during the period of our atomic monopoly.

At such a time it is well to take inventory of our resources and ask ourselves if we have the wherewithal to cope with the threat of limited aggression. I will speak now only of our military assets, recognizing that our national assets are truly wider than the military; that our national strength is an aggregate of political, ideological, and economic strengths as well as military resources. However, for the purpose of our discussion I am going to talk primarily about military matters.

Approaching the problem from the negative side, I should like to point out the military assets that we have which do not contribute primarily to coping with limited war. For example, the power of our atomic retaliatory bomber and missile forces is so destructive that it is difficult to conceive of a limited situation in which they would be

applicable. I make this observation while recognizing that forces of this kind are absolutely indispensable to deterring that general atomic war which it is our primary purpose to avoid.

By the same token, our expenditures for continental air defense—the interceptor planes of the Air Force and the surface-to-air missiles of the Army—do not contribute to our limited war effectiveness, notwithstanding their necessity for deterring or fighting a general war. The early warning systems, while justified by the requirements of general war, will have no use in lesser situations.

The Navy has very warranted concern over the submarine threat arising from the build-up of the Soviet submarine capability. On the other hand it does not appear probable that antisubmarine warfare would play a significant part in any limited war. Thus, our assets in that particular field would not contribute primarily to a limited war capability.

Likewise, I would say that those activities which we group under civil defense, although highly important and representing the expenditure of considerable money and effort at both Federal and State levels, do not contribute to limited war.

Indeed, most of our present atomic weapons systems may be of doubtful use in limited war, the doubt increasing in proportion to their destructiveness. In such wars, our normal role has been and probably will continue to be the provision of assistance to a friendly nation resisting some form of aggression. Under such conditions it will be important to rescue our friends with minimum damage to their homelands.

From what has been said thus far, it is apparent that we have a very impressive list of military assets which do not accord to any great degree with the requirements peculiar to limited war.

On the other hand, we do have important assets which are directly applicable to limited war. I would not say that the entire Army can be counted as a primary limited war asset, for in addition to our participation in continental air defense I mentioned earlier, a significant portion of our combat forces are deployed overseas, particularly in Europe. There they are involved in a defensive mission to deter or resist Soviet-bloc aggression in that area. While we can detach forces from Europe, as we did in the case of the airborne battle group which was sent into Lebanon last July, we would be reluctant to reduce our overseas deployments for use in limited wars outside their present location. The Army force specifically oriented toward readiness for limited war is the Strategic Army Corps, or STRAC, which is based in the United States, together with the back-up forces supporting its employment.

The marines are also a definite limited war asset in their amphibious role. This fact was illustrated by their use in Lebanon, where marine forces afloat moved in rapidly to seize the Beirut Airfield and the port, preparing the way for Army elements coming in by air and water to expand the beachhead and settle down for the long pull.

A great deal of the Tactical Air Command may be counted as a limited war asset, ready for rapid deployment overseas in similar manner as our Strategic Army Corps. So may be the Navy carrier forces, which can provide air support in peripheral areas where airfields do not exist ashore. Likewise, the long-range air and sealift furnished by the Air Force and Navy by which Army forces can be strategically deployed are a very important part of our limited war resources.

To summarize, I would say that a good part of the Army, the Marines, the Tactical Air Command, some of the Navy's carrier forces, and the strategic airlift and sealift represent a tabulation of our principal limited war assets.

Having identified what we have to work with, a logical question is, "Do we have enough?" I will try to answer this in two ways: first by discussing some specific situations short of general war, which are now history, and then by reference to some studies that have been made of hypothetical cases. In combination, such an examination should give us some insight into the adequacy of our means. Although I am going to speak primarily about Army forces, from what I have said thus far, it should be clear that there is no suggestion that limited war is an Army monopoly in any sense of the word, but a problem which confronts all of the services.

Korea is the most conspicuous case of U.S. experience in limited war. It is interesting to reflect that the Communists could not have picked another spot on their periphery where the United States could have reacted so successfully to sudden aggression as in Korea. It was most fortunate that they chose an area in close proximity to our Japanese base, where we had forces—unprepared though they were—but at sufficiently short range to permit a rapid reaction. As we study possible areas of future limited wars, one doubts that the Communists will be so obliging the next time. In any event, although we did respond in time in Korea, it was really touch and go. We literally had to assemble our Army on the field of battle under the bullets of the enemy, welding it into an effective combat force barely in time to avert defeat.

The most recent experience in operations of the small-war type was our expedition to Lebanon, mounted at the request of the lawful government of that country. This operation was, from a technical military point of view, entirely successful. By dint of careful advance planning permitted by due warning, all services responded rapidly and reached their destination in an acceptable lapse of time. However, in addition to the advantage of adequate warning, the operation was made simple by the absence of a shooting situation at destination, and the forces employed were limited. Thus, it is not possible to draw general conclusions from our experience in Lebanon.

Because of the limited experience derived from actual cases, the Army Staff has undertaken a number of hypothetical studies of possible limited war situations where the United States might be involved. From these studies coupled with practical experience, four major conclusions have been developed.

First, the reaction time of U.S. forces should be improved. Next, this improvement can be obtained in part by careful joint planning and training. Such training would include exercises involving elements of all services to rehearse the organization, dispatch, and movement of task forces to destination. Third, many logistical obstacles to strategic mobility exist, similar to those encountered in Beirut, where a single airfield and restricted port facilities limited the rate of buildup of our forces ashore. After these logistical bottlenecks have been viewed as insurmountable obstacles. My response is that if the leaders responsible for the development of naval power 200 years ago had accepted the conditions of the harbors, ports, and facilities around the world as they found them, we would not be able to project our naval power abroad as we can now. We have today the same problem for the projection of land power, in conjunction with its supporting air and sea components.

Finally, we determine from these studies that our limited war forces must have the most modern equipment. This equipment would include both conventional and low-yield atomic weapons and be characterized by lightness of weight and air transportability.

My conclusion then is that, although we new have a significant capability to cope with limited wars, we can and should take steps to improve it. So then the question becomes: "What should we do about it? What are these steps?"

My view is that we should embark on a five-point program to improve the capabilities of the Army and our sister services to meet the possible challenges posed by limited war. The salient points of this program are (1) the modernization of appropriate equipment; (2) the improved strategic mobility of limited war forces; (3) the preplanned use of air and sealift; (4) expanded joint planning and training; and (5) the publicizing of our limited war strength once it is reality.

In speaking before the national convention of the American Legion last September, the Secretary of Defense stated:

"Our Army has been undergoing a modernization program designed to prepare it for the stepped-up requirements of today's or tomorrow's possible war, not yesterday's. * * * This modernization program is by no means complete. We intend to push it vigorously."

In pursuance of Mr. McElroy's injunction, the Army intends to push its modernization along the following lines:

Dollarwise, our problem is not a simple one. Approximately 60 percent of the dollar value of the Army's inventory of equipment was procured during World War II or the Korean War; 10 percent of it is of pre-World War II vintage. As a result, many items have reached a point where they are no longer economical to maintain or are incapable of meeting "the stepped-up requirements of today's or tomorrow's possible war." As a result, we need to include second-generation missiles, light atomic weapons, improved conventional weapons, and many new types of air and ground vehicles to advance tactical mobility. To direct and control our units and weapons, we require improved lightweight signal communications based upon newly designed radio equipment.

The modernization of our forces will tend to support our second point; improved strategic mobility. As the Army lightens its loads, we hope that our sister services will modernize the sea and airlift upon which we depend for our startegic mobility.

As a part of our program to improve strategic mobility, we need to determine the logistical bottlenecks to mobility about the world which I earlier mentioned and endeavor to eliminate them. These can often be minimized by the forward stockage of supplies and equipment in critical strategic areas, to reduce the tonnages which must be transported in an emergency.

The third of our five points is the preplanning of the contingent use of a certain amount of air and sealift for possible limited war requirements. At present, the Army has no indications of the lift which would move its spearhead forces in an emergency. Some predesignation of air and sea elements for planning purposes would materially shorten the time required to get the initial forces on their way to a limited war situation. The actual lift would not be made available without the specific approval of the Joint Chiefs of Staff.

I do not suggest that such preplanning should cause a certain number of planes or ships to stand idle, marked "For Army Use Only." That makes no sense to me. However, it would make a great deal of sense if the Army knew in advance that in an emergency, a given amount of lift would be available at designated airfields and ports, on JCS approval. This knowledge would contribute materially to realistic planning for the rapid reaction of our spearhead units to limited war situations. I should add that the possibility of effective coordination of such preplanning will be facilitated by the new joint staff authorized by the recent re-

organization act of the Department of Defense.

In this latter regard I would like to say that, in my judgment, this legislation and its implementation now in progress, represent a major step forward in the achievement of an organization better able to deal with the military exigencies of today and the future. One important use of the new joint staff should be directed toward the accomplishment of the fourth point of the limited war program; namely, expanded joint planning and training for limited war. Such joint action might include the checking and testing of plans for overseas movement of forces, the verification of their readiness, and the actual movement of token forces as training for emergency situations. I should like to feel that we are as effective in meeting the complex requirements of limited war as SAC is in meeting the requirements of general atomic war. I think SAC is a most impressive military organization. Its complete dedication to readiness in its particular field is most impressive. I should like to find a similar intentness on the limited war problem.

The final point of the five-point program is to make clear to the world our readiness to react adequately anywhere to the challenge of aggression. To many observing America from a distance, we appear to be a country prepared to fight in case a general war should be forced upon us, but with unknown resources for a lesser response. It is highly important for psychological reasons to publicize our capabilities to react with weapons and means short of those associated with massive retaliation. This evidence of readiness could be attained through the exercising and testing of our limited war forces. Illustrative of what I have in mind was a small operation on a limited scale about 3 years ago in Thailand. We sent a joint airborne, seaborne task force into this area for the purposes I have described. The Army furnished an Honest John rocket unit from Japan, a Marine unit and Navy ships participated, as did planes of the Tactical Air Command. The task force was assembled in Bangkok in about 48 hours. This exercise made a very favorable impression in southeast Asia as a token demonstation of the reaction capability of American forces in that area.

In conclusion, I would stress again that I am not preaching a purely Army program. All services are involved in this five-pronged effort to improve our effectiveness in limited war. It is an essential extension of our national policy. We must overcome any impression that we are a country which can respond with a big bomb and little else. Although we have significant assets now to cope with limited wars, these can and must be improved so that it can be made crystal clear to both our friends and foes that we can respond promptly with proper weapons and proper forces to any challenge. It is the goal of the Army to develop its strength so that it may play its indispensable part as a member of our tri-dimensional team in presenting this flexible military capability to the world.

Who Won What in Cuba?

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1959

Mr. PORTER. Mr. Speaker, Karl Meyer, brilliant young editorial writer for the Washington Post, concludes his article in the current Reporter magazine with the question, How much longer will the United States seem to be running after the crowd shouting "Wait for me! I'm your leader."

Under a previous consent, I am including the text of this excellent analysis of the situation in Cuba, entitled "Who Won What in Cuba?":

WHO WON WHAT IN CUBA?

(By Karl E. Meyer)

How Fidel Castro became the best known Latin American in this country—surely only Juan Peron and the Trujillos père and fils could give him a contest—constitutes a minor epic in the history of the hemisphere. The Cuban revolution began inauspiciously. On December 2, 1956, Castro invaded the coast of eastern Cuba with a guerrilla force of 81 men crowded aboard a leaky Mexican yacht. His invasion was spotted from the air, and the Cuban Army met the insurgents when they landed on the jungle shore, eliminating, I was told by Castro, all but 12 of the rebels.

Yet this was the nucleus of an army that ultimately grew to about 8,500, seized control of half the island, humbled one of the best-equipped military forces in the hemisphere, and sent President Fulgencio Batista fleeing to Ciudad Trujillo. Castro's story is a narrative worthy of Sabatini, Dumas, or Hemingway, but, let us be frank, with also just a slight flavor of opera bouffe.

As with others who spring from Hispanic stock, it is the genius of the Cuban people that moments of epic heroism and national tragedy are leavened to some degre by the absurd. There was, for example, the time that the rebels impertinently kidnaped the world's leading auto racer, Juan Manuel Fangio, of Argentina, right under the nose of Batista's police. Senor Fangio emerged from his ordeal no worse for wear, with a good-humored smile on his face, and an immense pile of clippings for his scrapbook.

And who should stride before the footlights after the shooting was over to announce that he had spent the past months with the rebels? Who indeed but Errol Flynn, a little stouter perhaps than in his days of portraying Robin Hood, but with a thirst for melodrama still unquenched.

The Cuban revolution, in sum, violated many of the time-tested precepts of insurrection. It came during a period of unusual prosperity, and it was fought for the most part while tourism as usual prevailed. Last fall I spent 10 days in Santiago de Cuba, capital of the province that was the seat of the rebellion. The army ruled by truncheon; midnight killings and rebel reprisals were common. Castro's detachments made forays into the suburbs. Yet amidst this state of siege I was able to charge my stay at the leading hotel on an American credit card. One wonders how Richard Harding Davis would have reacted to this report-now, pay-later arrangement for covering a revolution.

Yet all this—the heroic and the seriocomic—is properly the province of the dramatist. I would like to focus on three broader themes: the dilemmas of a hero in an organization age, the waning of the caudillo, and the plight of U.S. diplomacy in which every gain for freedom seems a paradoxical setback to the State Department.

THE OBSOLESCENCE OF HEROISM

Our age has reason to assume all heroes guilty until proven innocent. In a century that has grown cynical about saviors armed with a sword, it is not surprising that Fidel Castro is regarded with equal parts of admiration and distrust. Cuba, to be sure, is only an island, but atrocities are as deplorable there as on a continent; Batista has given proof of that. Moreover, ours is an era of organization which has as its emblems the research team, the secretarial pool, and the group therapist. Our age dwells in bureaucratic halls, preaches the futility of revolt, and confines its taste for the epic to adult Westerns. Our dissenters tend to be either beat or glumly angry.

Castro has confounded the categories of his age, and for that he cannot easily be forgiven—or understood, for that matter. And yet surely one is still free to hope that this misguided heretic will become more than a captive lion on "Face the Nation," or just another tabloid-size dictator in our backyard.

In the United States, it would be regarded as a mild form of insanity for an ambitious young lawyer to jeopardize his career at its start by leading a quixotic revolt for republican ideals. And yet this is what Castro did shortly after he got his law degree at the University of Havana, a year after Batista had returned to power in a bloodless coup. Leading a band of a hundred youths, Castro attempted a commando-style capture of the military barracks in Santiago. The attack was bloodily repulsed; and Castro was caught, tried, and sentenced to 15 years in prison. The date of the attack—July 26, 1953—provided the slogan for Castro's movement.

Freed from jail by a congressional amnesty, Castro took flight to Mexico and with the help of money from his wealthy sugar-planter father organized an army for an invasion. When the report came that Castro's invaders had been cut down by army bullets (and that Castro himself had been killed), even his friends sorrowfully concluded that the last had been heard from him. But Castro and a handful of followers took shelter in the peaks of the Sierra Maestra in Oriente Province. The rugged terrain proved an impregnable fortress against an apathetic army, while Batista's air supremacy was nullified because his planes were unable to spot rebel installations. Thus, by hit-and-run raids, Castro was able to expand his realm and ultimately bottle up the island's key sugar ports, striking at the heart of the Cuban economy.

His success would have been inconceivable without one essential factor: the support, either active or passive, of the great mass of citizens in Oriente, Castro's birthplace and the island's largest and richest province. This support for a youngster who brought his province economic hardship, and even misery, cut through all strata of Oriente's society.

Anyone who spent time, as I did, traveling around Oriente during the fighting can testify to the passionate quality of his backing. One instance remains vividly in my mind. In Santiago, I asked one of the city's wealthiest sugar planters, a self-made man, whose holdings were largely in rebel-controlled areas, how he felt when Castro's forces set his fields afire and scorched his profits away, as they had done the year before. His reply in Spanish was succinct, immediate, and explosive: "I am enchanted."

Plainly one reason why Castro won such backing is that he was a symbol of resistance to an occupying army as brutal as it was venal. But it also was an eloquent tribute to the character of a leader whose guerrilla force was disciplined and relatively restrained.

I lived for 10 days with rebel forces in the Sierra Maestra, and spend 3 days with Castro himself. For a guerrilla army composed of unpaid volunteers, many of them unlettered guajiros native to the hills, I was impressed by the tough-minded intelligence I found. As to Castro, I was struck by his tremendous vitality, his articulateness and wit, and his thoughtfulness—in roughly that order.

In a land where most men are short and wiry, Castro is a 6-footer whose energy is awesome; like all Latin Americans, Castro loves to talk, but unlike some, he talks ex-

ceedingly well—even in English, which he speaks with vigor if without grammar.

Indeed, he is a virtuoso in the art of personal communication; the intense look through owlish, horn-rimmed glasses, the politician's amiable squeeze of the shoulder, the apt joke, and the studied concern with the listener's reaction. Combined with this is an indifference to physical surroundings: whether he is crouched in his shoebox-sized headquarter's cabin or marching at the head of a column in clothes as shaggy as his beard, the stream of words is incessant and sharply articulate.

For a man who has spent most of the past decade in the twilight world of revolutionary activities, his thinking shows a surprisingly thoughtful bent. Castro has fought like a zealot, but in private conversation he does not talk like one. Anything but an inflexible doctrinaire, he struck me as speculative and pragmatic.

In politics, he has insisted that his crusade had a single objective: the restoration of a freely elected government in Cuba. Yet on such details as the role of political parties he has been unsatisfyingly ambiguous. In economics, he asserts that he has changed his mind about the virtues of nationalization and favors a program of moderate reform and welfare legislation. I asked him if he wanted a New Deal for Cuba.

"Yes," he drawled, "but if you write that, be sure to say you asked me whether I favored a New Deal for Cuba and I said 'Yes.' Otherwise, people would think I want to be the Franklin Roosevelt of Cuba." (Castro has repeatedly said he does not want to run for the presidency, pointing that he is too young to qualify under the constitution. Nonetheless, Castro's voice prevails in the provisional government led by his choice for president, former Judge Manuel Urrutia Lleo. The caliber of the new regime's ministers has been generally high, representing Cuba's more moderate elements.)

On the debit side, however, have been the rash acts of Castro's subordinates—and some rash statements from Castro himself. Doubtless revolutions are not namby-pamby affairs, but the hijacking of airplanes and the seizing of United States citizens are a strange way of winning friends and influencing Washington. More worrisome has been the victorious movement's insistence on vengeance. Last November, Castro threatened reprisals against all traitors who participated in a Batista-sponsored election, and the recent sentences of the revolutionary tribunals have certainly lived up to that promise. Castro's angry threat that if the United States tried to interfere with the executions by landing marines—no one had suggested it—there would be "200,000 gringos dead in the streets" may have been just "blowing off steam." But the cynics and some sniggering Habaneros are already betting that Castro will prove a counterfeit idealist. Perhaps they are right. Those who hope that the age of individualism has not altogether vanished hope time will show that Cuba will be a better place because Castro failed to become an organization man.

THE ROTARIAN REVOLUTION

If nothing else, the collapse of Batista draws attention to an admirably perverse phenomenon that is taking place in our backyard. Elsewhere in the so-called underdeveloped areas of the world, democratic governments are yielding to dictators—but in Latin America precisely the opposite tendency is evident.

Four years ago, 9 of the 20 Latin American republics were ruled by caudillos; today, only 3 dictators survive—and of these, only Generalissimo Rafael Trujillo of the Dominican Republic is without visible challenge. (But all men are mortal, and it is delicious to contemplate what life will be like in the era of Trujillo, Jr., when El Benefactor's heir turns the Republic's postage stamps into a gallery of pinups.) The region's democratic tide began in Argentina in 1955, when Juan Perón fled into exile aboard a Paraguayan gunboat. In 1956, Manuel Odría of Peru voluntarily stepped down and Anastasio Somoza of Nicaragua was assassinated. A year later, the Colombians rid themselves of Gustavo Rojas Pinilla, and in 1958 neighboring Venezuela overthrew Marcos Pérez Jiménez. And now Batista is following a well-worn itinerary via Ciudad Trujillo.

All this, to be sure, is a negative achievement and offers no guarantees that new men on horseback will not soon prance into power. But accompanying this decline of the caudillo has been an extraordinary sequence of free elections in which the opposition party has not only won at the polls but has peacefully taken office. Within the past few years, this has been true in countries as diverse as Costa Rica, Venezuela, Argentina, Chile, Honduras, Guatemala, and Uruguay. Meanwhile, Mexico continues its two decades of stable and reasonably free government under President Adolfo López Mateos. And in Colombia, after a decade of fratricide, the Republic's two rival parties have joined forces behind President Alberto Lleras Camargo, one of the hemisphere's most esteemed liberal statesmen.

One interesting aspect of this steady democratic evolution in Latin America has been the aggressively antidictatorial position the Catholic Church has taken, notably in Argentina, Colombia, and Venezuela. Even in Cuba, where the church has traditionally been timid in politics, the hierarchy remained officially neutral in the civil war while the lower clergy and Catholic action groups actively sided with the rebels.

But more fundamental has been the changing structure of society in most Latin American countries. The region is in a ferment of economic growth, and one consequence has been the growing influence of Latin America's nascent middle classes. Another result has been the emergence of trade unions and a militant labor leadership pressing for swifter change.

In Cuba it is unthinkable that Castro could have waged his revolution without the support of the island's growing, if still small, professional and middle class. My contact with the rebel forces—I can record his name now—was Mariano Roca, a developer and appliance dealer who was an officer in both the Rotary and the Lions clubs. The man who undertook grave risks by smuggling me through the army lines to meet Castro was a General Motors dealer. Néstor Hernández, owner of the largest ice plant in Santiago, took equal risks in hiding me upon my return.

Everywhere I traveled in Cuba during the civil war, I found the most thoughtful and articulate supporters (and sympathetic critics) of Castro's movement precisely among groups that had the most to risk in a time of turmoil and anarchy. Although the labor movement remained lukewarm toward Castro until the closing battles, country clubs in Havana were frequently the rendezvous of rebel sympathizers.

Indeed, the medical profession was in the front ranks of the opposition to Batista. Some of Cuba's leading doctors joined Castro's forces in the hills; the four hospitals built under their supervision were the first established in the primitive back country of Oriente. Almost a year ago medical men took the lead in framing a manifesto condemning the Batista government that was signed by 42 of the island's religious, professional, and civic organizations. In December physicians openly refused to celebrate their traditional holiday as a protest against the barbarisms of the Batista regime.

Because of this strong middle-class complexion of the Castro movement, the charges that the insurgents were the harbingers of communism has seemed a wry joke to those who were familiar with the rebellion's unlikely recruits. But not only does his bourgeois support seem a barrier against communism; it also holds hope that whatever course Castro may take the pull of Cuba's democratic tide will be steady and strong.

WHAT ARE WE AFRAID OF?

Like their counterparts elsewhere in Latin America, the Cuban middle classes are in revolt against the whole tradition of government that has held the region in thrall. Graft, favoritism, police brutality, profligate waste of public funds, neglect of education, and rule by military and landed oligarchs—all these are the venerable afflictions which the emerging Latin middle class seeks to eliminate or at least moderate. Is there anything on this agenda that should cause panic in the long corridors of the State Department?

Yet there's the rub. In Cuba as elsewhere in the hemisphere, the United States has frequently been caught in a melancholy posture of embarrassment when its good neighbors to the south overthrow a dictator and enlarge liberty's realm. Why this should be so is a puzzle that fully deserves the investigation of a Senate Foreign Relations subcommittee that is now underway.

It must be noted, of course, that the predominant position of the United States during Cuba's revolution was cautious neutrality. Last March 14, the State Department clamped an embargo on the shipment of arms to either side, a step that pinched the Batista regime far more than the rebels, who were adept at smuggling. But few Cubans today believe that our policy was one of neutrality. One obvious reason is that Batista, who controlled what the press and radio could say, was careful to muffle the facts. Another reason, however, is that our official representatives allowed themselves to be used in a way that lamentably implied United States support for a government that was detested by its own people.

Until 1957, the Ambassador from Washington was Arthur Gardner, whose personal chumminess with the Batista clique was widely known. His successor was Earl E. T. Smith, who had previously distinguished himself as a broker, sportsman, and Republican fund raiser in Florida. Mr. Smith was a novice, and only 6 days after he had presented his credentials to Batista he enraged the government by expressing a perfectly human if undiplomatic feeling of shock at seeing Batista's police hose down a group of women demonstrators in Santiago. But after this incident, Mr. Smith developed more affable relations with the Batista set and made it known that he regarded Castro's rebels as an unsavory bunch of troublemakers. Mr. Smith has been recalled to Washington, but the sour aftertaste remains in Havana.

A more prickly controversy concerns the U.S. military mission in Havana. This group of 30-odd officers resides in Cuba under the terms of the Rio pact aimed at defending the hemisphere against communism. To the Cubans, however, it seemed worse than meddlesome for a group of U.S. military officers to be associated with the Cuban Army in the midst of a civil war, especially since the pact specified that in cases of civil strife the mission could be recalled. What particularly galled the Cubans was a much-publicized occasion last March when the mission, in a mood of convivial camaraderie, threw a congratulatory dinner for Gen. Francisco Tabernilla in honor of his promotion to chief of staff. Tabernilla has now left Cuba, and there are indications that the sociable mission, too, may be asked to depart.

These blunders, combined with the friendly association between the United States business community and the Batista regime, have contributed to the unpopularity of the United States in Cuba. But short of outright intervention, it might fairly be asked, what

can we do to disengage from a dictator's embrace?

Obviously, we can be scrupulously proper in our relation with dictators, both in public and private, without exhibiting excessive cordiality. This would rule out most of the gross errors committed in Cuba. It would also eliminate the embarrassment caused by the award of a medal to Venezuela's recent tyrant, Perez Jimenez.

An attitude of distant coolness to dictators is one side of the coin; the other is the obvious need to give warm and friendly support to the emerging democracies of Latin America. Here again, the United States record is ambiguous. The most grievous case of neglect came in Argentina after the overthrow of Juan Peron. An honorable and moderate-minded provisional government headed by Adm. Pedro Aramburu came to Washington, hat in hand, for help. The aid it got was both skimpy and belated, in large part (it is understood) because U.S. oilmen were unhappy about Argentina's policy of developing its own oil and because private power groups were annoyed about unsettled claims against a nationalized Buenos Aires electric concern.

Will we also risk offering too little too late to other democratic countries in Latin America? Economic distress in the hemisphere is widespread, mainly because the world prices of key commodities have declined sharply, and the one-crop economies of most Latin countries are extremely vulnerable to fluctuating prices. Some slight stirrings in Washington indicate that the seriousness of Latin America's plight and the scope of United States opportunity are at last registering on official consciousness. Dr. Milton Eisenhower has spoken out forcefully about the need for action. The Brazilians have come up with an arresting suggestion for "Operation Pan-America," a regional development plan which if given effective U.S. support might awaken new hope in the hemisphere.

And yet there was an uneasy symbolism in the way Dr. Eisenhower's latest report on Latin America was released to the press. This report, based on Dr. Eisenhower's recent tour through Central America, stressed the need for a cooler policy toward dictators. It was distributed to the press on December 30, but since Press Secretary Jim Haggerty dislikes giving a preference to either morning or afternoon newspapers, it was marked for release on Sunday, January 4—and hence Dr. Eisenhower's critical words about dictators came as a tardy echo of the explosion in Cuba. How much longer will the United States seem to be running after the crowd shouting "Wait for me. I'm your leader."

A Continuing Report From Cuba

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article concerning the new Cuban Government which appears in the February 8, 1959, issue of Our Sunday Visitor, the national Catholic action weekly:

WHY WERE THEY WRONG ABOUT CUBA?—U.S. COMMENTATORS HAVE TAKEN FOR GRANTED THAT THE PEOPLE BEING EXECUTED WERE MERELY POLITICAL OPPONENTS—THEY WERE NOT—THEY WERE CRIMINALS WHO MURDERED, TORTURED, RAPED

(By Dale Francis)

Denunciations of the executions by the new Cuban Government have followed no political lines. Fulton J. Lewis and Edward R. Murrow found themselves in surprised agreement. David Lawrence and Max Lerner wound up for the first time in years saying almost exactly the same thing. The anti-Communist editor of American Opinion and the decidedly left-leaning editors of the New York Post were in agreement.

All without exception denounced the executions and they were joined by the editorial writers of all the secular newspapers in the United States.

But even as they denounced the executions, the highly regarded Catholic Bishop of Mantanzas, a man known for his progressiveness, was declaring that not only were the executions just but that had the Government not carried them out it was quite possible that the people could have validly taken the law into their own hands.

What was the difference between these two widely separated viewpoints? Why was it that the Nation's opinion makers held such a vastly different viewpoint than this outstanding bishop?

The answer is simple. The bishop knows the situation, the opinion makers do not. Unfortunately radio commentators, columnists, editorial writers, opinion makers in general, believe it necessary that they comment on every issue that attains prominence whether or not they really know anything about the issue or not. This is exactly what happened in relation to what has been going on in Cuba.

U.S. commentators have taken for granted that the people being executed were merely political opponents. They are not. They are criminals who have murdered, tortured, raped.

Few men know this better than Bishop Alberto Martin y Villaverde, bishop of Matanzas, one of the most highly respected leaders of the church in Latin America.

Reinaldo Bermudez and Rene Fraga were two of the Catholic youth leaders in the city of Matanzas. Reinaldo works in the chancery office. Rene was an outstanding Catholic from the days when he was just a boy and he become a leader in Catholic Action. His home was near the bishop's home.

They were not members of the rebel forces but they were suspected of rebel sympathies and so the police of Matanzas arrested them. They were questioned and tortured.

Perhaps you saw the picture of Pepe Caliente, the notorious torturer of Matanzas, showing how prisoners were forced to kneel for their beatings. It was featured in some U.S. papers in a series of pictures that seemed almost designed to build sympathy for Pepe Caliente, who since has been executed.

They beat Reinaldo and Rene like that. They tortured them for 3 days. Reinaldo survived their tortures but his battered and beaten body took months to recover.

Rene was tortured even more brutally. Those who measure pain say that one of the most intense pains of all is that of a burning cigarette pressed against the skin. The police did this over and over to Rene Fraga until finally, crazed by pain, he broke loose and started to run away. They shot and killed him and tossed his body onto the roof of a little shack down along the bay.

The people of Matanzas, who knew and loved Rene Fraga, came out for his funeral and Bishop Martin, who was close to Rene and loved him, came to the cemetery, too. But the police didn't want the bishop there so they fired their guns over his head and forced him to turn away.

These were things Bishop Martin remembers. He is not a man seeking vengeance, he is a man seeking justice and he knows justice demands that murderers be punished.

The first public trial in Havana was the trial of the commander at Holguin and in one of the most astonishing bits of inanity in television history, the man on trial was compared by NBC's Frank McGee to the Christians in the coliseum.

Holguin is one of my favorite towns in Cuba. It reminds me somehow of a west Texas town, why, I'm not quite sure. Few towns suffered more. One day the people of Holguin awoke to discover 25 men hanging from the trees on the edge of town. They were murdered to teach a lesson to the people.

The man on trial was charged with 48 murders. It seems difficult to make many Americans understand but these were not combat deaths, these were murders of men suspected of rebel sympathies, suspected of aiding the rebels.

How many were murdered no one really knows. I see Raul Castro claims 10,000 were murdered in Oriente Province but that is twice the amount given to me. My figures came from Archbishop Enrique Perez-Serantes, archbishop of Santiago de Cuba; Carlos Chain, civilian administrator of Oriente Province; and Oscar Cossio, director of the Red Cross for Oriente. They considered carefully and when they gave me a figure they told me they considered it a minimum figure. They said at least 5,000 people were murdered in Oriente Province. Since that time new mass graves have been found, and the figure mounts upward.

But the tortures that always preceded murders were also inflicted upon people who were not murdered. There is one officer still being sought who had one of the most horrible tortures of all. When he is caught he will be thankful for police protection for he must fear what would happen to him if his victims seized him.

The story of his method of torture was told to me by Father Francisco Guzman, S.J., and his knowledge comes from those who suffered.

In the villages throughout Cuba there were those who sold war bonds to help the rebels and there were those who bought them. The Batista men wanted to end this and so they sought to terrorize the people and to find out who helped the rebels.

This man brought in a suspect—and Father Guzman said he did this not just once but many times—and tied him to a chair. Then he brought in the wife of the suspect and before the husband, had a soldier rape the wife.

This happened in Cuba, not once but many times. And when the officer and the soldier are found they will be given great mercy if they escape the revenge of their victims and are executed by the courts.

Father Guzman told me of another similar incident where the fiancee of a suspect was raped before his eyes, not once but many times. The experience was too much for her and she is hopelessly insane.

If Americans could find some understanding of the crimes that have been committed in Cuba in the last year and a half then they would understand that the executions of the murderers and torturers are justice and not "blood baths."

A priest said to me, a little helplessly, "But I can't understand Americans. In the United States, when a man murders one then you give him a trial and if he is found guilty you place him in an electric chair and execute him. But when a man here murders 30 or 40 and we try him and when he is found guilty, execute him, you accuse us of being barbarians."

There was no way for me to answer this priest except to say, "They just don't know, Father, they just don't understand."

But now you do understand and you must tell others. See that your Congressmen and Senators read this series of articles and if you want to help the people to Cuba to recover then send your help to the Most Reverend Enrique Perez Serantes, Archbishop of Santiago de Cuba, Santiago de Cuba, Oriente, Cuba.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Williams of Delaware, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Cotton, and Curtis.

Committee on Foreign Relations

Messrs. Green (chairman), Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Langer, Aiken, Capehart, and Carlson.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Gruening, Moss, Dworshak, Kuchel, Goldwater, Allott, and Martin.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Langer, Dirksen, Hruska, and Keating.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Cooper, Dirksen, Case of New Jersey, Javits, and Prouty.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Yarborough, Clark, Jordan, Carlson, Langer, and Morton.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Neuberger, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Case of South Dakota, Martin, Cooper, Scott, and Prouty.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Morton, and Keating.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, Fairfax Hotel.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Addresses Delivered at Testimonial Dinner in Honor of Leslie L. Biffle

EXTENSION OF REMARKS
OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, January 28, 1959

Mr. JOHNSON of Texas. Mr. President, on behalf of the distinguished minority leader, the Senator from Illinois [Mr. DIRKSEN], and myself, I desire to make a brief statement and to propose a request.

On Tuesday evening, January 20, 1959, a testimonial dinner was given at the Mayflower Hotel in Washington in honor of the Honorable Leslie L. Biffle, former Secretary of the Senate, in commemoration of his 50th year in Washington.

We are advised by the Public Printer that the remarks made on that occasion exceed the 2-page limit, and that the estimate of the cost of printing is $351. Notwithstanding that fact, we ask unanimous consent that these remarks be printed in the Appendix of the RECORD.

Mr. DIRKSEN. Mr. President, Leslie Biffle is by all odds one of the most gracious and obliging personalities I have ever encountered in my lifetime. He has been completely unselfish, regardless of political identity, in being kind and helpful to everyone he might serve. The testimonial dinner in his honor was richly deserved, as were all the encomiums which were spread on the record.

So I am delighted in joining the majority leader in asking that these proceedings be made a matter of record in the CONGRESSIONAL RECORD.

Mr. JOHNSON of Texas. Mr. President, I thank my delightful friend from Illinois for his eloquent tribute to this faithful public servant. I was privileged to attend the dinner, although I arrived there just before it concluded. I have never seen a dinner in Washington which was attended by more members of both parties who felt so sincerely that they wanted to honor a public servant. The distinguished minority leader has expressed better than I can how all of us feel about this former officer of the Senate.

There being no objection, the proceedings were ordered to be printed in the RECORD, as follows:

J. HOWARD MCGRATH. Ladies and gentlemen, the invocation will be offered by the Rev. Frederick Brown Harris, Chaplain of the U.S. Senate. Please stand.

Dr. HARRIS. Let us lift our hearts in prayer. Oh Thou God of the best we aspire to be in our highest hours, we are grateful for the sacrament of friendship, and for the contagion of a friendliness which is not mixed with the alloy of self-seeking.

In a world where so much is marred by unworthy covetousness, we thank Thee for the abiding beauty of a care for one's fellows, pictured in the Book of Ages, where Thy servant, Saint Paul, tells of a love that is patient and kind, that is not jealous nor boastful, that is not arrogant and rude, that does not insist on its own way, that is not irritable nor resentful; a love that does not rejoice in the wrong, but rejoices in the right.

We come this hour with glad and grateful hearts to honor a friend whose record fits this scriptural frame and who, across the years, has lived in his house by the side of the road, and been a friend of man, who has a place of affection in the hearts of a host who have felt the warmth of his selfless interest in public and private life, across fruitful years for a half century in this Capital City.

With deep appreciation for all he means to so many, we salute this radiant friend in whose heart there is malice toward none and charity for all, and who, in the school of the years, has learned—

"To think without confusion clearly,
To act from honest motives purely,
To love his fellow man sincerely,
To trust in God and heaven securely."

We come in the name of the Master of all good workmen. Amen.

(The National Anthem.)

J. HOWARD MCGRATH. I now present on behalf of every and all persons that are here tonight, in force and on our behalf, Mrs. Perle Mesta.

Mrs. PERLE MESTA. My father always taught me that a woman—a mother or sisters, or a wife—was behind any man's accomplishments, and tonight we have the charming wife of Mr. Biffle, and I am delighted to present these roses, on behalf of this committee, to Mrs. Biffle.

J. HOWARD MCGRATH. We will now proceed with the purpose which brought us here—that is, to have a dinner.

A panoramic picture of the guests tonight; the camera is in that direction, directly opposite me; if you could give your attention for 2 minutes, the picture would be concluded.

Will you please cooperate in the taking of these panoramic pictures. This is not a sound picture, so upstairs you can make as much noise as you like.

Gentlemen and ladies, you will find on your table a sheet entitled "Friends of Leslie Biffle." These are enclosed in a cellophane envelope. It is our hope that each of you will sign his name, carefully preserving these sheets so that they can be incorporated in a volume that will be presented to Mr. Biffle as a remembrance of those who are here tonight. So, if you have not already signed your sheet, please do so now, reenclose it in the cellophane envelopes, and the waiters or members of the committee will collect it. The sheets that you have signed, friends of Leslie Biffle, that are to be included in a volume to be presented to him which have not already been collected, please see that your waiter picks them up and brings them to the head table.

Ladies and gentlemen, we must be on with our business. I would like now to present those who are seated at what is commonly known as the head table. There is no significance about the personages of those who are here and are about to be presented; they are symbolic of the many beloved friends of our guest of honor. If you will bear with me I will ask each of them to stand for your approval.

To my left, Mr. Felton M. Johnston, the Secretary of the Senate; Mrs. J. Borden Harriman, the grandma of the Democratic Party; Mr. Paul Butler, chairman of the Democratic National Committee; Mrs. Thomas C. Clark; Rev. Frederick Brown Harris; Mrs. Perle Mesta; Robert V. Fleming; Mrs. Samuel F. Pryor, Jr.; Senator Lister Hill; Mrs. Styles Bridges; Justice Wm. O. Douglas; Mrs. John L. McClellan.

On the other side of the table I would like to present Mr. James W. Carkner, chairman of the board of Pepsi-Cola of which our honored guest is a distinguished member; Mrs. Felton M. Johnston; John W. Holton, the Administrative Assistant to the Speaker of the House of Representatives; Mrs. Wm. O. Douglas; the Attorney General of the United States, Mr. Wm. P. Rogers; Mrs. Frederick Brown Harris; the Honorable Joseph W. Martin, Jr.; Mrs. J. Howard McGrath; Hon. Styles Bridges; Mrs. Lister Hill; Justice Tom C. Clark; Mrs. Leslie Biffle.

Now, it becomes my very pleasant duty and honor to present to you my cochairman of this magnificent tribute to our honored guest. There are happy privileges that come to one in a lifetime but none more rewarding than to have as a working companion, in a cause that is so wonderfully rewarding as this we are engaged in tonight, such as I have had. There have been no conspiracies betwixt nor among us save one—I agreed with my cochairman that he would seat the Democrats and I would seat the Republicans—so if any of you have a problem about where you are or why you are, blame each of us and find out where you are. I now want to introduce to this gathering which has been a real effort on behalf of those who are in attendance, and those who could not be here for many and varied reasons, the man who has contributed the most to making this affair the bipartisan, nonpartisan, triple partisan, whatever partisan you have—our cochairman, Sam Pryor.

SAMUEL F. PRYOR, JR. Thank you Mr. Chairman. Honored guests and distinguished guests and friends of our honored guest, Reverend Harris, that world you spoke of, Mrs. Pryor and I have had the privilege of seeing nearly every living corner of it and I can honestly say it's a beautiful world. In fact, I sometimes think we have Heaven on earth here, with the exception of one thing—people. People cause trouble, confusion, and unhappiness. But, tonight, tonight we have one of the great exceptions to the rule. Our guest of honor has brought happiness to nearly everybody in this room. He's brought kindness, regardless of party, regardless of whether you're big or small, he's been kind to us. And also we have another person of this category. We are very fortunate to have him. He is in the midst right now of making the United States a better place to live, not only for us, but, more important, for our children. And he comes from the same background; in fact since my party has been referred to, may I say he has a great many of the qualities of Abraham Lincoln. It is a great privilege the

committee has given me to introduce to you all our toastmaster, Senator JOHN MCCLELLAN.

Senator MCCLELLAN. Thank you, Sam, Mr. Cochairman, Les and Mrs. Biffle, distinguished guests, my colleagues in Congress, ladies and gentlemen. I should like also to thank the entire committee on arrangements and to express my deep appreciation for the privilege of serving as your toastmaster this evening. To have the pleasure of participating in this program in that capacity is a very high honor, indeed, and one that I shall greatly cherish because I regard this testimonial dinner as one of the most outstanding functions of this kind ever held in the Capital of the United States.

I know this is a happy occasion for all of us. We are here to do honor to a very dear friend and to a truly great American, on this the 50th anniversary of his entering into public service with the National Congress here in Washington. This magnificent audience, your presence here now, is an eloquent tribute to him who has earned our eternal admiration and esteem by the unselfish and devoted service he has so faithfully and abundantly given to his country.

Naturally, I am doubly proud, because he is a fellow Arkansan. Truly he is a beloved son of the great wonder State and one in whom all of her citizens take justifiable pride and in whom they are well pleased.

Our guest of honor first came to Washington in 1908 as secretary to the Honorable Robert Bruce Macon, Congressman from the first district of Arkansas. In that capacity his talents and qualities soon appeared and were recognized. They quickly attracted the attention and interest of Members of the Congress, and he was repeatedly called to serve in important positions in the U.S. Senate and in fact to almost every important non-Member position in that body, finally culminating in his being elected Secretary of the Senate in 1945 by the unanimous support and vote of both the Democrats and Republicans alike and later elected again to that same position in 1949. It was my privilege to place him in nomination before the Democratic conference on that latter occasion. I think some of the things that I said then at that time when there was no occasion like this in my mind nor contemplated, I think some of the things I said would bear repeating here this evening. I refer to his many years of faithfulness and devotion and loyalty to the Democratic Party, to the unexcelled highly capable and efficient service he has rendered in the many places of trust and responsibility he held, to his affable and matchless personality, and to his many courtesies and accommodations that have throughout the years indelibly endeared him to the hearts of all of us.

But, there is still more to the story. In the drama of national life many personalities have from time to time played impressive roles on the Washington scene. Presidents, Members of Congress, Cabinet members, and other Government officials, come and go. While they are here they make their influence felt in politics and on the affairs of our Government and the Nation, some of them only to a small degree, and others with potent effects and results. During the time our honored guest served as secretary to the minority and as secretary to the majority, particularly when the Democrats were in power, as Secretary of the Senate, but few men, if any, have had equal or greater influence than he was able to bring to bear in the direction of forces of the Democratic Party or in the formulation of policies and the enactment of laws by the National Congress.

His counsel has eagerly been sought by legislators, by administrators, by diplomats, and by military leaders and even by Presidents of the United States. He has been a counselor and adviser, a confidant, whose opinions and judgment were respected and often followed by those in the highest positions of trust and responsibility. I truly feel inspired on this occasion, but I must not, of course, monopolize the time. It wasn't expected that I should make even these many remarks, but I couldn't refrain from doing so.

Now, before I introduce our other speakers, I may say that there have been literally thousands of messages received from friends all over the Nation, and it is impossible for the presiding official at this dinner to read all of them, or to even call the names of the large number of friends who join us here tonight in this way of paying tribute to our honored guest. But, I shall read some few that I think would be of interest to you and that I think you would like to hear. The first is:

"Regret I cannot be present this evening, to join your many friends, in tendering you this well deserved recognition. My kindest regards and best wishes always.

"J. MILLARD TAWES,
"Governor of Maryland."

"A new Governor does not have much time to travel. This becomes extremely regretful on the occasion such as this, when so many friends are joined in honoring Leslie Biffle on the 50th anniversary of his arrival in Washington. Very few individuals have made so many friends during a lifetime. Very few people have had such an influence on the destiny of our fellow citizens.

"I join all of you in expressing to Leslie many happy returns of this momentous day.

"MICHAEL DI SALLE,
"Governor of Ohio."

"Because of a mandatory commitment here I regret that I cannot attend the testimonial dinner to Leslie Biffle so I have requested Dick Patterson, my commissioner of commerce and public events, to represent me. Leslie Biffle has been a distinguished public servant for many years. Among his many fine attributes is his capacity for friendship. He has friends everywhere because he himself is a friend. The list of his friendships ranges from ditchdiggers to leaders in law, industry, and politics, to statesmen, ambassadors, and scientists. Loyalty is in Les Biffle's bloodstream. He never forgets a friend, he never fails to reward one. I salute him with admiration and affection.

"ROBERT F. WAGNER,
"Mayor of the City of New York."

"It is a most fitting and well deserved recognition of an outstanding career, and of a man who has followed a creed of placing the welfare of others ahead of his own. May I add my hearty congratulations and best wishes, may I further say that I am proud to be among your many warm friends and admirers.

"FRANK E. MCKINNEY."

"I hope you will tell Les Biffle how sorry I am not to be in Washington for his testimonial dinner. He is getting just what he deserves.

"Regards,

"ADLAI E. STEVENSON."

"Now I want to read you one from Arkansas:

"DEAR GENERAL MCGRATH: It is a real pleasure to enclose herewith a copy of a resolution which unanimously passed both houses of the Arkansas general assembly yesterday. I have signed the resolution and will transmit original copies, along with my signature, to the members of the general assembly to Mr. Biffle, as soon as the resolution is enrolled. I regret very much that I am unable to be present at the dinner tonight; however, it will be deeply appreciated if you will convey my personal congratulations and best wishes to Mr. Biffle, who is certainly one of Arkansas' most distinguished and favorite sons.

"Most sincerely,

"ORVAL E. FAUBUS,
"Governor."

May I read you the resolution?

"SIXTY-SECOND GENERAL ASSEMBLY OF THE STATE OF ARKANSAS JOINT HOUSE AND SENATE RESOLUTION, JANUARY 19, 1959

"Whereas there will be a testimonial dinner honoring Leslie L. Biffle at the Mayflower Hotel in Washington, D.C., on Tuesday evening, January 20, 1959; and

"Whereas the Honorable Leslie L. Biffle is a native of Piggott, Clay County, Ark., from where he went to Washington in 1908 to distinguish himself and bring honor to his native State with 50 years of public service in the Nation's Capital; and

"Whereas the Honorable Leslie L. Biffle has become enshrined in the hearts of his fellow men through his great acts of mercy, compassion, brotherly love, and a benevolent spirit that has given joy and sustenance to thousands of people; and

"Whereas during this period of 50 years in which he worked in the service of his Government, of his country, and his fellow men, this son of Arkansas has constructed a place of greatness as he has moved with charm and warmth, trust, and dignity in the political arena; Now, therefore, be it

"Resolved by the House of Representatives of the 62d General Assembly of the State of Arkansas (the Senate concurring therein), That the General Assembly of the State of Arkansas does by unanimous action hereby commend their fellow citizen, the Honorable Leslie L. Biffle, for a half century of devotion in the service of democracy; be it further

"Resolved, That a copy of this resolution be sent to the testimonal committee dinner in Washington, D.C., to the Piggott Banner, in Piggott, Ark., to the Piggott Public Library, and to the Honorable Leslie L. Biffle of Washington, D. C."

Here is one that I know is from a dear, dear old friend:

"DEAR LES: Conditions have arisen which will prevent my making a trip east on the 20th as I had hoped. I congratulate you on the wonderful show of appreciation our friends are giving you. The Senate and the country never had a more faithful public servant than Leslie L. Biffle. I have never regretted anything more in my life than not being able to be with you on this occasion.

"Sincerely yours,

"HARRY S. TRUMAN."

And, now I am happy to read a message from the highest authority in the land:

"DEAR LESLIE: I am sorry that I cannot join the friends who are with you this evening to congratulate you in person on your first 50 years in Washington. You have long been known as one of Washington's foremost citizens, noted for your warm personality, your readiness to be helpful, your professional efficiency and your loyal service. You have carved out a position that is unique in this city. Only a man of deep understanding, fine character, and a warm personality could have formed the many and warm friendships that enrich your life. Truly, you have done much to make Washington a better and more pleasant place in which to work and live. May the Lord in his providence keep you healthy and happy in the years to come.

"With best wishes to you and Mrs. Biffle.

"Sincerely,

"DWIGHT D. EISENHOWER."

I certainly am not going to take further time. We have a brief program arranged. Some of our speakers that had been invited are unable to be present. Quite some time ago, when this meeting was first initiated, the Speaker of the House of Representatives, the Honorable SAM RAYBURN, graciously accepted an invitation to be present and to speak to us on this occasion. Subsequently there was arranged a state dinner at the White House, and, of course, you know what takes precedence in such a situation. So, our Mr. SAM, our beloved Speaker, is at the White House this evening, but he has here as his

representative one who has already been introduced to you as his administrative assistant and whom I am proud to present again, Mr. John W. Holton.

JOHN W. HOLTON. Senator MCCLELLAN, distinguished guests and friends of Les Biffle: Les, I do not think we need to ring the bells tonight because the entire membership is already here.

I bring you the friendly and warm greetings of Speaker RAYBURN. If you have read the biography of the distinguished honor guest tonight and the biographies of many other illustrious statesmen of our time, the Speaker would have me remind you that if you really want to reach the pinnacle of success, you must have had some association with the House of Representatives.

Mr. Biffle, your charming lady: I extend to you my sincere congratulations on this happy occasion. My wish for you is that your life may be spared for long and useful service; that the path of life may lead you by still waters; that you will be healthy; that you will find a prosperous and strong America and the world in peace.

Senator MCCLELLAN. Thank you, Mr. Holden. The gentleman I shall now present to you is now serving, I believe, his 17th consecutive term in the Congress of the United States. He has twice been Speaker of the House of Representatives, and is one of the best known, the most influential, and one of the most loved Republicans in the United States: I give to you, Hon. JOSEPH W. MARTIN, JR.

Mr. MARTIN. Mr. Chairman, distinguished guests, the guest of honor and friends of Les Biffle, I am glad my good friend and neighbor Howard McGrath explained where he seated the Republicans. I was rather lost why a back seat Republican should be at the head table; but your explanation cleared that up most thoroughly. He did it from the kindness of his heart. You see we live only 12 miles apart. But what is the reason I am so happy to come? Because it gives me the privilege of paying a warm personal tribute to a man who through the years has won the affection, the regard, and the esteem of all who come in contact with him. He's a great American. He has given 50 years of service to our country. Think of the events that have happened in all those years, and realize that Les Biffle has played an important part in so many of them. My good friend JOHN MCCLELLAN has stated he has been the confidant of Presidents. He has been the confidant of Senators and I can remember him 35 years ago in the early days when we House Members ventured into the rarefied atmosphere of the Senate—he would extend to us a helping hand. Now, of course, we go over there with the brusqueness of the modern age; because we have so many former House Members over there now. Sometimes we think we run the Senate. Well, at the critical moments they show us that we don't. But I find it a great privilege to come here tonight. It's a wonderful tribute to see this magnificent gathering, fine telegrams and messages, that have come from all over the country. They are heartening, they are warming. And they indicate to us the building of America is due to lives like Leslie Biffle's doing the everyday work, thoroughly, conscientiously, and with but one thought—what is best for America. Oh, my friends, as we face these critical years that are ahead, we need dedicated Americans, we need men of undoubted loyalty to our country, for that is the only way we are going to come through. It doesn't make much difference after all, whether we are Republicans or Democrats, the one great thought must be, "Are we doing what we honestly believe is best for America?" Are we doing our best to build this great country of ours? And so wherever I sit, in the back seat or the front seat, that shall be my purpose, because I love this country. It has done so much for all of us. I know it can't be written in the stars, that in this hour this great country shall fail. No, we are going to go forward, we're going to go forward because we have men like Les Biffle, men of stalwartness, men of courage and men of discernment. * * * As I looked over that bicycle over there, automobile I guess it is, it says: "The Arkansas Pollster," and Les, I know the results of your polling. Sometimes as a Republican, I rather resented the reports you brought back from the country, but I know one thing always, that your reports were thorough and you were a keen observer. And, so I say to you tonight, I wish you well, Les. You see all these people who have come here tonight to pay tribute to you and your wife. It must make you feel proud; it must make you feel happy. Because after all, material possessions may vanish; the financial wealth that men accumulate may disappear; but the real friends a man earns are enduring. They are the real wealth. Les, you're a millionaire in the friends that you and your wife have accumulated in your long 50 years of service. May God bless you and take care of you in the years ahead.

Senator MCCLELLAN. Thank you, Congressman MARTIN. I certainly take back nothing I said about him, don't you agree with me?

Senator LYNDON JOHNSON, our able and distinguished majority leader, in the Senate, was also to address the group this evening. He gladly accepted when the invitation was extended, and, unfortunately for us, he, too, is at a command performance at a state dinner down at the White House. But, he has a representative here, in the distinguished Senator from Alabama, one of the ablest men on the Hill. He is Chairman of the important Senate Committee on Labor and Public Welfare. He served some 15 years in the House of Representatives and is now serving in his fourth term in the United States Senate. I am pleased to present to you, my able distinguished colleague and friend, Hon. LISTER HILL.

Senator HILL. Mr. Toastmaster, Les Biffle, distinguished guests, ladies and gentlemen, when I was called at the last moment, advised that our distinguished Majority Leader LYNDON JOHNSON could not be here tonight, and that our fine assistant leader, MIKE MANSFIELD, is ill with pneumonia and could not be here tonight, and therefore, I had been chosen to say a few words at this time, frankly I was frightened. And then I thought about Les Biffle, and I thought, "Well, there'll be no trouble about that speech, except that it will take all night to tell all the good things about Les Biffle. And, then I was reminded, my friends, that 2 years ago last fall, Les Biffle sent me out to Iowa to make some speeches in the campaign there and I was with this good gentleman and his good wife; we were going to a city about 100 miles north from Des Moines, the capital, the good lady was driving the car and I was sitting on the front seat with her and the good husband was sitting behind, when we got about 15 miles out of our appointed destination we ran into one of the hardest rains I have ever seen in my life. The rain really came down in sheets. Just at that time the automobile stopped. It had given out of gas. Fortunately, it stopped right at a farmer's driveway and the good husband and I got out, went into the farmer's house, and of course he gave us enough gas to go on into the city. But you can imagine that on our way in, we really gave that lady a good time about giving out of gas. That night after I had spoken and the meeting was over she came up to me, shook my hand and said, "Senator, I want to congratulate you. I gave out of gas but you certainly didn't."

Who is there here who knows where Piggott, Ark., is? Well, there are a few, but I tell you my friends, it's the place whence came Leslie Biffle to Washington and that was 50 years ago. Think of it, that was before most of us here this evening were even born. But, I want to say this about Les Biffle: all the ladies tell me that he's still young, charming, and captivating. He had his start, just as many of us did in the House of Representatives and then got demoted and came on over to the Senate. He fell under the eagle eye of that great statesman from Arkansas, Joe Robinson. Joe brought him to the Senate folding room; and ever since then Leslie Biffle has been a-busy folding good things for his friends, for the Democratic Party, and for our country.

During World War I, the War Department sent Leslie to France; there he made a record to be proud of, one of honor and distinction. And when he came back he was made the factotum of the Senate, the doer of all things. Wherever a good man was needed, wherever a wise man was needed, Leslie Biffle was put into the breech. For we know that this fellow Leslie Biffle never puts off anything until tomorrow. He always gives everything his best attention, he attends to every detail, to every little requirement, and the job he does is always the paragon of perfection. And then as JOHN MCCLELLAN has told us, in 1933 Les became secretary to the majority in the Senate, and there ripened that friendship that made Leslie Biffle the intimate friend, the closest confidant and counsellor to the one and only, the immortal Mr. "Veep" our own beloved Alben Barkley. In those early days, Leslie Biffle contributed so much to the passage of legislation that took our Nation out of the depression of the thirties, that he was named a member of the American Battle Monuments Commission by the gallant leader, Franklin D. Roosevelt. And, may I say that he is honored tonight and we are all honored by the presence of one of his fellow members on the American Battle Monuments Commission, Mrs. Wendell Willkie.

In 1945 Les became the Secretary of the Senate and when our good friends the Republicans came into power with the 80th Congress of course they took the job; so Leslie came with the Democratic policy committee. I remember, as a member of that committee, we had a lot of discussion on some of the problems and we had to sit around the table trying to solve those problems, and finally some member would say, "Les, what do you think about it?" and then Les would seem to know everything. It was like turning the light on in a dark room and we gazed and the wonder grew how this little small head could carry all that Les knew. But, you see, Les not only thinks himself but he knows what everyone else thinks. Why, if he were in the Senate today, he would know exactly what BOB BARTLETT and ERNEST GRUENING were thinking. He made so many contributions to the work of the Senate and did so much for the Senate that we nominated him Mr. Biffle the Senator at Large from the United States. Our good friend, that great and fine American JOE MARTIN, referred to this poster up here; you see it. Well, you know for a long, long time we heard about the Arkansas traveler and we wondered who was the Arkansas traveler. In 1948, as you recall, all the experts, and all those who thought they were experts, declared that there was no question about it; the election was in the bag for the Republicans. Governor Dewey was certain to be the next President of the United States. Well, Leslie Biffle went back to Piggott, Ark. He went into the old trunk, got out the old blue denim overalls that he had down there on the farm, put on a pair of old brogan shoes, got him a tin lizzy and he went out across the country to visit the people, the farmer, the filling station operator, the corner grocery store operator, right down to the grassroots of American democracy, and then he began to send back the reports that the Democrats could win, that the Democrats would win, and I often wonder how much those words of encouragement and assurance from Leslie

Biffle inspired that two-fisted fighting campaigner, give-'em-hell Harry. Our Republican friends know that Les is their friend; they also know his love for the Democratic Party that he is the dedicated Democrat. It is as a friend above all else that tonight we pay our tribute to him. He is the friend that asks no questions, needs no assurances, makes no demands. All that he asks is to extend a helping hand, to do something for his friend and, as his friends we rejoice to pay our tribute to him. In Leslie Biffle and the example of his life we see the nobility of friendship, the strength of character, the fellowship of humility, the gospel of humanity, and the love of God. To know Leslie Biffle is to love him, to name him is to praise him.

Senator McCLELLAN. Thank you, LISTER; thank you very much. I am indeed pleased to present to you another of my colleagues in the Senate, the former Governor of the great State of New Hampshire, now serving, I believe, his 22d year in the Senate. He was minority leader in the 82d Congress, the President pro tempore in the 83d Congress; he was also chairman of the Appropriations Committee during that Congress, and I may say to you that he is the ranking or the senior Republican in the United States Senate and the ablest statesman in the Republican Party. I present to you the Honorable STYLES BRIDGES.

Senator STYLES BRIDGES. Mr. Chairman, Les, Mrs. Biffle and friends of Les Biffle. Probably few men in America have more genuine friends over the length and breadth of this country than Les Biffle. He is known for many of his accomplishments. One of those accomplishments referred to here this evening was the time in 1948 he went out as a pollster. He, at that time, attained a reputation as being a sort of "barnyard Gallup." He conducted a barnyard Gallup poll. It has been recalled here how he dressed up in old clothes, took a Ford pickup truck and started out to learn the political sentiment in this country. You know what happened and how he told the then President Truman that the pollsters had underestimated his strength. Les urged the President to hustle during the last few weeks of the campaign. This advice was followed, unfortunately, and the result was that on election day the Republicans were singing that song, "Hang down your head, Tom Dewey." There is one thing that most of you don't know, however, and that is that we Republicans were on the job at that time. We sent a man out to follow up Les Biffle. The only thing different was that we had him buying turkeys instead of chickens and we found that there were more chickens in this country than turkeys, much to our disappointment. Now, Les didn't make a poll in 1954 or 1956. He rested on his laurels but this last year he made a poll and he predicted that the Democrats would gain 14 seats in the Senate and 25 in the House. The rest is a sad story and I won't go into it. It reminds me of the anecdote about our President from the little State of New Hampshire, Franklin Pierce, who, incidentally, was a Democrat. We also at that period produced another great citizen who was the publisher of the New York Tribune—Horace Greeley. They didn't care for each other. After Franklin Pierce had been elected President—and this is a true story—Greeley sent one of his reporters back to the little town of Hillsboro, N. H., to make inquiry as to what kind of a President the local people thought Franklin Pierce would make. He finally went to a storekeeper by the name of Smith and said to Smith, "What kind of a President do you think Franklin Pierce will make?" The storekeeper in his typical Yankee tone said, "Well, I'll tell you. He has done pretty well here in the State in all the State offices he has held, but when you spread him over the whole country he will wear kind of thin in places." That was our only trouble last fall. We were a little thin in places. Now, when Les was Secretary of the Senate and when he was secretary of the majority here, he was known to us on the Republican side as a sort of "walking encyclopedia" and he lived up to that because he was the author of more proposals than I can describe on various bills which were sponsored by other people. He was uncanny in his ability to predict how the votes were going to come out and how each Senator was going to vote. As a matter of fact on several occasions I saw polls prepared by Biffle in which he predicted how I would vote before I had decided myself. It was a great source of wonder to me and admiration too to see Les Biffle move around the Senate floor and whisper to the various Senators. He is the only man I know who can whisper to you and not move his lips. I have always thought he would make a great, great ventriloquist. The only thing that bothered me was what Democratic Senator would he use as the dummy. Seriously speaking, there are a great many things about Les Biffle in which he and his family and all his friends can take great pride. He has done well for a country boy from Arkansas. He has attained a pinnacle in the Nation's Capital that few men reach. And I don't believe there is anyone in this room who would deny that there is no one individual on the American political scene today who has made more friends, real friends, in both political parties than Les Biffle. And as long as the American political scene continues to attract men of Les Biffle's character we don't have too many worries about the future of our Nation. He has my affection, my respect, and my esteem. You know, in closing, that I have not always agreed with the former President of the United States, Harry Truman, but he said at one time, and I quote, "They don't make them any better than Les Biffle." As we say on the floor of the U.S. Senate, I wish to associate myself with those remarks.

Senator McCLELLAN. I have a pleasant surprise for you. We are very happy that the distinguished majority leader of the Senate has been able to break away from the White House long enough to join us. LYNDON, you have the mike—they are waiting for you.

Senator LYNDON JOHNSON. Mr. Chairman, Mr. Biffle, my fellow Americans. Somebody once said that there are two ways for every boy in Arkansas to go. He can either go up in the world or he can go to Texas. A loss to Texas can be a gain to the Nation. Les Biffle is one Arkansas boy who went up in the world but none of us are here tonight to honor him for that alone. For Les Biffle did more than to go up in the world for himself. The important thing is that he helped a great many others go up in the world themselves and once there he helped all of them serve the Nation better. When Les Biffle left his native Arkansas and came to Washington he brought with him far more than what he packed in that little suitcase. He brought good sense, warmth, and human understanding, and a lot of real backbone. As long as he was here his supply never ran low. He made men stronger, he made the Senate stronger, he made his party stronger, and he made a great contribution to strengthening his Nation by his counsel and his leadership. This is a great thing for any man to have said of himself. I hope, Les, that you will admit it to yourself. We honor you tonight as a man because you deserve it. In a larger sense, though, we honor you for the standard of selfless service which you have set because this Nation deserves such a standard of service. You, as all your friends know, spent your time here seeding your party with responsibility. I know it must be a great satisfaction to you and your gracious lady to see the harvest now being reaped by your party in these fields of responsibility. If I were writing you a postcard instead of speaking as I am I think you would appreciate the new meaning of an old message if I would say only, "Having a wonderful time, wish you were here with us."

Senator McCLELLAN. Thank you, LYNDON, we are so happy that you could get away from the White House dinner in time to join us and your remarks, I think, are a very fitting close and climax to the speeches we have had here this evening. My part on this program is coming to a close. Before I turn the gavel over to the cochairman, however, I should like to recognize and have her stand and take a bow—the estimable and charming lady, Mrs. Alben W. Barkley. Mrs. Barkley.

Now may I say, and I know everyone of you will join me in these sentiments, I want to say to Mrs. Biffle that every tribute paid here this evening to your illustrious husband and every sentiment we have expressed for him, you share in our thoughts equally. You have been to him a wonderful companion. You have made it possible for him to achieve his great success and to be endeared to all of us as we have expressed here tonight. I now turn the gavel back to your distinguished cochairman, J. Howard McGrath.

J. HOWARD McGRATH. I assure you that I have made every effort to have my cochairman, Sam Pryor, take this place but he has declined. Leslie, you know that we would not have a testimonial in your honor unless we brought gifts so we have them and, briefly, I will present them to you and to Glade without remarks. First of all, let's open this up because these are very valuable gifts. On behalf of each and all who are gathered here, Les, we give you your 100th watch. And to you, Glade, we give you your 1,000th diamond. But above and, oh, yes, there is a little throw in here, Les, this is a book. You are from Arkansas, you know what a book is. It is something with a proud name on the back and a cover on each side but inside this book will be the most precious names you will ever know, at least for the next 50 years. So, once in a while when you are not at a Cafritz party or a Mesta party look through this book, read these names and remember us. Now, for all who are here and who are not here who have contributed to this dinner, I just want to announce that when the Biffles go home tonight, in their apartment there will be set up the finest yet produced color television set. This is a delicate instrument and it was thought unwise to display it here but this is the picture for all to see. As a matter of fact it is so delicate that Pryor and myself decided that we had better insure it for a year, so Les, if anything goes wrong with this machine for the next year, it is on us. After that you are on your own. These are our gifts. Don't you want to thank us for them?

LESLIE L. BIFFLE. My wonderful, wonderful friends. I am deeply, deeply touched at what you have done tonight. What an anticlimax this is going to be in the way of a speech. I am going to suggest to you something that you know already. I am as nervous as a June bride—it's true, too. I did pencil a few lines this morning. Thought I would be able to read them, but you turned out the lights on me. My good friends, I am deeply indebted to you all for this party, including the presents. I don't know how to thank you. So many have put in hours and hours—working day and night. I am very grateful. It says here, I am the happiest man in the world. I have already said the next paragraph. My 50 years in Washington. It's a long, long time in anybody's life. I arrived in the Capital City the last of November 1908. I was one of the greenest young fellows that ever arrived in the Capital; however, I know a certain fellow who was a little green when he came to Washington.

I am calling no names but many of you know him. He got a job in the Senate in 1935, he studied and worked hard for 10 years, and then he was given another place. Shortly after that he was given still another place, which he held until January 1953. I think he has a job in a library out in the Middle West some place. May I tell you folks how I happened to come to Washington? In the month of May 1908, Congressman Macon came to my hometown, Piggott. He was running for reelection. I went with my father down to the train to meet him. He walked up the street and the Congressman asked my father's permission for me to take him around and introduce him to the different people in our community. Well, I took him to the courthouse, to the different stores around the square, to the cotton gin, and to the sawmill. About 3 weeks after that my father had a letter from the Congressman saying he would like to appoint me his secretary. My father accepted before he could change his mind. He was so happy about it. I borrowed some money, I think it was $60. I went to a school in Little Rock to study shorthand. I think they called it "cross-electric." I never heard of it since. In the fall my father took me to St. Louis, bought for me a new suit, cost $11, and a new hat, cost $2. He put me on the train, day coach to Cincinnati, in an upper in a sleeper from Cincinnati to Washington. Our train had to wait about 3 hours for connections from Cincinnati to Louisville. I asked the conductor if it would be all right for me to walk down the street a little piece. It was just getting dark, the street lights were on. He said, "Yes, but don't go too far." While I was out walking it started to rain. My suit got wet; my hat got wet. The next morning when I got up I had a lot of trouble getting my trousers on—(it was an upper berth) you ought to try getting your clothes on in an upper berth in the mountains—when the train is throwing you from one side to the other. I may tell you I had a little trouble getting into that upper berth. I didn't know anything about a ladder. Had never seen a pullman before. The colored man wasn't in the car at the time, so I put my foot on the arm of the lower berth and tried to get up. Couldn't make it. A fellow sitting across the aisle from me said, "Buddy, if you will wait awhile the porter will bring you a ladder," which he did and I finally made it. I must say that the Congressman was certainly nice to me. He would dictate the mail to me in the morning, would go over to the House, and come back in the afternoon to sign it. It would take him about 3 hours to correct my letters and I would have to stay until about 11 or 12 at night rewriting them. It is a wonder he didn't send me home after the first month. I remained with the Congressman until he left public life and I then went over to the Senate side where I held various positions. Finally, I became Secretary of the Senate. Let me tell you of one of the most interesting experiences I ever had. It was in January 1947. The question before the Senate was the seating of Senator Bilbo. We at that time did not have a Vice President, President Truman having gone to the White House. The man who was to be President pro tempore was a Senator-elect. His name was way down on the list to be sworn in. I had to preside, being Secretary of the Senate at that time. The galleries were crowded, the floor packed and jammed. The debate started on Bilbo. I was not permitted to call a Senator to come and relieve me when I wanted to go to lunch or do anything else, all day long, all day long. It was a long, long afternoon. If you folks could see some of the notes that I have on file that different Senators would write and send up to me. "Les, would you like me to go out and eat a little lunch for you or would you like me to do this or that?" I must say this about my dear sweet wife, Glade. She has been a tower of strength to me. She has been a little peeved at me since Christmas. I gave her a Hagerstown Almanac. There is also something about Glade. Many of you know I am cross and irritable and hard to get along with. I sometimes go home cross and say something critical to her. She doesn't say a word back. She just shuts up like a clam. If she would fight back a little I think I would feel better, but she goes right along washing dishes or sweeping the carpet or something. She has been, as I said, a tower of strength to me. I had the most efficient help when I was Secretary of the Senate—Mrs. Darling, Mrs. Kraus, Mrs. Roche, and Mrs. Tucker. They were all very able girls and they were all loyal to the cause. Guess that's a blank piece of paper. Again, I must tell you how very grateful I am to you for the wonderful things that have been said about me tonight. You have touched me beyond expression. You have made me very happy and you have made my family very happy. My two sisters are sitting here. They came up from Miami for this occasion. Thank you ever, ever so much.

J. HOWARD MCGRATH. Now the first part of our program is over. We have a beautiful entertainment program. I hope that all of you can stay to listen to it. I turn you over now to Director of Music.

(Eddie Pierce presented entertainment here.)

J. HOWARD MCGRATH. I think now we have had quite a wonderful evening. The program has run a little longer than planned, but on behalf of Leslie and Glade and all of us who have had the privilege of being on this wonderful committee, I want to thank you a thousand percent. A thousand percent is the interest that we hope to make next year on the prosperity of America.

"If America Forgets Where She Came From, if the People Lose Sight of What Brought Them Along, Then Will Begin the Dissolution," Carl Sandburg, Biographer of Abraham Lincoln, Declares

---

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, the distinguished Lincoln scholar, Carl Sandburg, poet and philosopher, wrote in his book "Remembrance Rock" that:

> If America forgets where she came from, if the people lose sight of what brought them along, if she listens to the deniers and mockers, then will begin the rot and dissolution.

Surely, the inspiration to be derived from the great lessons of the past which are set forth in our rich heritage of historic American sites, buildings, objects, and antiquities is of the utmost significance and importance in guiding the present as well as future generations toward similar high standards and worthy attainments.

With this thought in mind, legislation to save this cultural heritage has been sponsored by the gentleman from Pennsylvania [Mr. CURTIN], the gentleman from New Hampshire [Mr. MERROW], the gentleman from Wisconsin [Mr. REUSS], the gentleman from Mississippi [Mr. SMITH], the gentleman from New York [Mr. WAINWRIGHT], the gentleman from New Jersey [Mr. WIDNALL], the gentleman from Texas [Mr. WRIGHT], myself, and no doubt others.

The need for such legislation, Mr. Speaker, was first made evident by the protests of the Federal Commission of Fine Arts, the American Institute of Architects, the National Trust for Historic Preservation, the Society of Architectural Historians, the National Park Service, the New York Times and many other newspapers, as well as a large number of groups interested in conservation of our resources.

In introducing his companion bill the gentleman from Texas [Mr. WRIGHT] declared that:

> Studies by these groups and by others have made it obvious that literally thousands of the most priceless treasures of our national heritage have been plowed under and utterly destroyed by the bulldozers of a ruthless progress during the past few years. The tragedy is that in most such instances, the destruction was wholly unnecessary. The valuable historic objects could have been preserved without retarding progress.
>
> We obviously should not permit this thoughtless and wanton destruction of these last relics of our past, because they provide, in many cases, the only visible links to connect us with periods of our own national history. They remind us of the greatness of our past, of the hardships endured by those who with such painstaking care laid the foundations of our history.

Congress has, in the past, enacted legislation to preserve historic American sites, buildings, objects, and antiquities. I would cite, in this connection, the act entitled "An act for the preservation of American antiquities," approved June 8, 1906—16 U.S.C., sections 431, 432, 433; the act entitled "An act to provide for the preservation of historic American sites, buildings, objects, and antiquities, and for other purposes," approved August 21, 1935—16 U.S.C. 461 and the following; and section 7 of the act of August 27, 1935, as added July 18, 1940—40 U.S.C., section 304a–2.

Certainly, the intent of the Congress is clear enough in this matter. It clearly intended to preserve our heritage, but the present administration has chosen repeatedly to ignore the intent of the Congress.

It recommended to Congress that the historic Civil Service building, in Washington, D.C., designed by Robert Mills, architect of the U.S. Treasury Department building and Washington Monument, be destroyed in order that the site could be used as a parking lot.

It recommended that the historic State, War, Navy building in the Nation's Capital be replaced with what it described as a more efficient modern building.

Morristown, N.J., National Historical Park has been threatened with a federally assisted highway, 90 percent of the cost of which is furnished by the Federal Government.

It proposed to survey some 30 historic buildings across the country preparatory to replacing them with more efficient office space, too. Obviously, these recommendations were part of a plan to reward builders who were faithful to the Republican Party with fat contracts.

But this this not the end of this sorry tale, Mr. Speaker.

A number of historic buildings dating back to the Revolutionary period, including the ancestral homes of the Lee family of Virginia, are right now in danger of being obliterated to make way for the new Chantilly Airport. These homes should be preserved and, if necessary, relocated.

The old San Francisco Mint, one of the few buildings to survive the earthquake and fire of 1906, a classic building of great historic and architectural value, has been declared surplus by the General Services Administration. The site is wanted for a parking lot.

A historic Dutch mansion, built around 1790, was acquired by the Government along with the surrounding land on the Hudson River for a Veterans' Administration hospital. This building certainly could have been preserved on the site as a museum and used as a waiting cottage for visitors. Instead, it was sold to a wrecker for $32. The wrecker dismantled it, sold the facade for $3,000 and disposed of the remainder in piecemeal sales.

It is to be hoped that the Committee on Public Works, and the Committee on Interior and Insular Affairs will move rapidly to consider the legislation dealing with the preservation of our great heritage which has been referred to them and that they will favorably report this legislation to the Congress early in this session. There is no time to lose, particularly in view of the fact that the administration obviously considers that the legislation previously enacted by the Congress does not apply to it.

I include here two items which gives some idea of the scope of the problem which I have been discussing.

WANTON DISREGARD OF OUR HERITAGE

An architect visiting West Point a few years ago was admiring the superintendent's residence, beautifully situated to command a sweeping view of the West Point plain. The oldest building still being used at the Academy, this one has housed almost every Superintendent, and so has historic as well as architectural value.

"We're tearing it down for more barracks room," an officer told him matter-of-factly.

The architect was horrified. Couldn't it possibly be saved? No, the plans were made.

The visitor hastened to Washington and buttonholed Congressmen and Senators, but could interest none. Then he had an inspiration: he called on Senator HARRY F. BYRD of Virginia. "Senator," he said, "did you know that Gen. Robert E. Lee's famous home while he was superintendent of West Point is about to be destroyed?"

The Senator was incredulous. "Get me West Point," he said to his secretary. No one will give a verbatim report of the ensuing conversation, but the destruction plans were canceled and today this architectural landmark still stands, used and admired.

The patriotic architect is but one of many Americans who are alarmed at the wanton razing of places precious to our heritage. All over the country structures that help recreate our past are being sacrificed to make way for shopping centers, superhighways, skyscrapers and subtopias. Studies indicate that at least 25 percent of the finest historic and architectural monuments that existed in the United States in 1941 have been destroyed.

Much of this destruction is the result of callous disregard of cultural values. Residents of Charleston, S.C., used to point with pride to their Orphan House Chapel, designed in 1802 by Gabriel Manigault, one of the finest of early American architects. Culturally it was of national importance and when a mail-order house acquired it along with other property for a retail store, Charlestonians begged the company to spare the charming chapel. But it was destroyed to enlarge the parking lot.

Boscobel, a classical mansion dating from 1804, was considered one of the most distinguished examples of Hudson River architecture. Located in Westchester County, N.Y., off the grounds of the Franklin D. Roosevelt Veterans Hospital, it was in rapidly deteriorating condition in 1950. Despite local efforts to save it, Government officials declared it surplus property and sold it for $35 to a wrecker, who tore it down.

Even in ruin it was beautiful. Admirers of the old house raised enough money to purchase the dismantled structure and move it, piece by piece, to a 30-acre park site at Garrison, N.Y. There it lies today, while devoted sponsors go about the heartbreaking job of collecting funds to reconstruct the mansion as a community center and museum of Hudson Valley history and art.

Why save old places? What can they contribute to living in the world today?

A nation with no regard for its past will have little future worth remembering. We need authentic, tangible reminders of our national virtues and heroes to make us feel a part of the best in our heritage. Properly presented, they breathe life into past experience. The most cleverly illustrated children's book cannot compare with the Farmers' Museum at Coopertown, N.Y., for example, as a means of giving boys and girls the feel of rural living before the Civil War. The housewife churning and cooking, weavers fashioning fabric from wool or flax, the brawny blacksmith working red-hot iron, the country storekeeper cutting into a generous head of cheese—all create a vivid picture of the industrious men and women of the time. City youngsters are enchanted by Cooperstown's farm animals, the team of sleek brown oxen pulling a cart, the parade of gray geese and goslings. A morning there is not merely a history lesson, but an unforgettable taste of early America.

Historic preservation speaks to the spirit. In 1942 an Army private wrote to John D. Rockefeller, Jr., about his visit to colonial Williamsburg: "Of all the sights I have seen and the books I have read, none ever made me sense the greatness of this country with more force and clarity than when I saw Williamsburg slumbering peacefully on its old foundations."

Williamsburg and Cooperstown are famous. But many a lesser known locality, taking a fresh perspective of its past, is finding an old courthouse or residence, even a covered bridge or a tavern, that is rich in historical associations. How can such sites be preserved?

Deciding just which structure to select, how to raise the money to save it and present it to the public is a baffling job for amateurs. Fortunately they can get advice from the National Trust for Historic Preservation, a private, nonprofit organization supported entirely by patriotic individuals and organizations. Anyone can join. Chartered by act of Congress in 1949, it owns a number of historical properties, but its chief task is encouraging and guiding other groups over the country. Its president, Richard Hubbard Howland, is an architectural historian, and he and his staff of five experts are continually at work advising townspeople how to make the most of their best. More than 250 preservation organizations are affiliated with the National Trust and support its programs in their own areas. Trust services are rendered by mail or by on-the-spot consultation.

A number of cities have put entire areas under architectural control. Charleston, S.C., started it in 1924 by passing an ordinance creating the Old and Historic Charleston District. Since then, New Orleans has preserved the Vieux Carré, Boston has set aside Beacon Hill, Washington has protected Old Georgetown, and Natchez has made her finest architectural area inviolate. The National Trust has stimulated this activity in dozens of cities by distributing copies of model ordinances, and publishing regular reports of new legislation.

The National Trust helped bring to life the Mississippi River town of Galena, Ill., once a busy lead-mining center. A century ago as many as 18 steamers loaded and unloaded at its levees at one time; Joseph Jefferson performed and Jenny Lind sang there. Galena gave the Union its most distinguished general, Ulysses S. Grant.

But as the years passed, traffic left the river for the highways. The lead mines failed. The town sank into oblivion, and its young people drifted away. Today it has one-third the population it boasted in 1858.

Four years ago, when the National Trust held its annual meeting in Chicago, members were invited to visit Galena. They were enchanted to find an almost untouched antebellum town on steep hills with a wonderful river view. But the General Grant home was shabby and dominated by a souvenir stand peddling tawdry tourist trinkets.

A careful restoration of the home was started; the famous Market House was saved from becoming a parking lot, and Galena's last remaining old firehouse, built in 1836, was restored. By last November 200,000 people had visited the once sleepy town, and Galena had opened a productive mine of tourist gold.

Historic homes can retain their charm and still be put to good everyday use. In Washington, D.C., when three handsome buildings of the Federal style were about to be torn down for a parking lot, a group of neighbors formed Historic Georgetown, Inc., an organization designed to prove that preservation will pay. They sold stock at a dollar a share, bought the buildings and leased them to a restaurateur, a florist, and an interior decorator.

D'Estrehan Plantation House in Louisiana, built in 1787 and remodeled in 1840 in the style of the Greek revival, was one of the finest homes overlooking the Mississippi River. An oil company took it over. But instead of destroying this beautiful reminder of our 18th century agricultural economy, the 20th century technologists restored it. They now use it for administrative offices.

As the experience of Galena and many other towns testifies, preservation can be good business. A recent Government survey shows that an average of only 28 tourists a day visiting a town with historic attractions will bring in as much money during a year as a new business with a $100,000 annual payroll.

The true preservationist, however, is not motivated by money. His is the spirit of Ann Pamela Cunningham, the South Carolina woman who almost singlehandedly saved the proudest prize of all our past—Mount Vernon. Washington's home was in sad disrepair and in danger of falling into ruin when she formed the Mount Vernon Ladies' Association. In 1858 the association bought the historic place for $200,000 and restored it as a national shrine.

Now is the time for every town to take stock and determine what is most worth

preserving. As Lewis Mumford has said, "The concrete cloverleaf is becoming our national flower." In the next few years 41,000 miles of new highways will charge through some of our last surviving wilderness areas, through major cities, along historic old roadways. Many communities may not attempt to save their historic places until it is too late.

How can you tell what to save? Here are a few touchstones which the National Trust suggests be applied to any building or site.

1. Is it of substantial historical or cultural importance to your community, State, or Nation? It could be a mansion, a pioneer's squared-log cabin, a sod house or even an Indian mound.

2. Is it suitable, that is, is it accessible to the public and in presentable condition? Generally speaking, say the experts, it is better to preserve than repair, better to repair than restore, better to restore than reconstruct.

3. Can you maintain it, once you've bought it? Few places can sustain themselves from admission fees. If yours cannot, and is not fully endowed or otherwise self-sustaining, perhaps it can be adapted to use by an organization or business firm without losing its significance.

If we can save enough of the homes, churches, courthouses and other places where Americans who went before us lived and worked, we can sense their way of life, their ideals and character. We want our children to sense them, too. Unless we act now, few of these firsthand lessons from the past will remain.

NATIONAL TRUST FOR HISTORIC PRESERVATION,
Washington, D.C., February 1959.

To: Members and friends of the National Trust for Historic Preservation.
From: Richard H. Howland, president.
Subject: United States Mint in San Francisco.

On February 18, at 2 p.m., on the third floor of the Public Health Building, in the Civic Center in San Francisco, a public hearing has been arranged to permit interested organizations and individuals to express their views on the preservation of the old mint. This hearing is of utmost concern, not alone to those who wish to see this nationally significant architectural monument preserved, but to all who realize the threat it poses to the legal basis of preservation as defined in certain Federal laws.

By a wise provision of the act of August 27, 1935 (49 Stat. 885), as amended July 18, 1940 (54 Stat. 764); 40 U.S.C., 1952 edition, section 304a–2, the Administrator of General Services is authorized to demolish any building declared surplus to the needs of the Government. Before proceeding with demolition he is to inform the Secretary of the Interior in writing of his intention to demolish it, and shall not proceed to do so until he has received written notice from the Secretary of the Interior that the building is not of national significance.

Between April 23, 1956, and August 23, 1957, eight buildings were referred for opinion to the Secretary of the Interior, and only one, the San Francisco Mint, was given the nationally significant designation, in a report dated December 6, 1956. It was then agreed that the building would be turned over to the National Park Service as a national historic site for their administration. An item in the 1959 budget provides for its renovation as headquarters for the Western Division of the National Park Service, which includes five Western States, Alaska, and Hawaii. The offices now occupy expensive rented space in the city. It would also provide for museum exhibits telling the story of the San Francisco Mint, its importance in the financial history of the country, of the process of coinage, and of the valor and courage of the citizens of San Francisco as exemplified by the heroic efforts of those who saved it in 1906.

City officials have asked their Representatives in Congress to disregard the evaluation of the Secretary of the Interior, and the provision of the law for Federal responsibility for preserving its nationally significant structures, and demolish the building (at an estimated cost of at least $250,000) to return the site to the city for private development as a parking lot or building site.

The American Institute of Architects, the Society of Architectural Historians, and the National Trust for Historic Preservation have also rated the Old Mint as one of the few notable historic buildings and architectural monuments in the city of San Francisco. Its demolition at this time would be a short-sighted waste of our national heritage, and one that the future could only regard with deep regret. Rehabilitated, it could become one of the city's major tourist attractions, and an incentive for redevelopment of the area surrounding it.

In other great cities, Philadelphia, Boston, St. Louis, and Providence, major efforts are being made to preserve many buildings of less distinction. It has been repeatedly demonstrated by careful study that such historic attractions bring to the areas that save them a larger share of the $20 billion annual tourist business.

Culturally, the old mint built in 1873, is accepted as one of only three or four important buildings in San Francisco to survive the fire and earthquake of 1906, and one of the finest examples of 19th century Federal architecture in the West. It was designed by the great A. B. Mullett, leading architect of Government buildings of the post Civil War era. Writing of its value to the city, State, and Nation, Stephen W. Jacobs, president of the Pacific section of the Society of Architectural Historians stated: "The San Francisco Mint, of Columbia blue stone with a classical portico of Rocklin granite, has retained its characteristic setting with cast iron fence and fountains, and beds of greenery. The integration of the tall chimneys at the rear, which served as flues for the metal retorts, gives the whole complex an unusual and striking character. On the interior, the high ceilings and the vaults of brick on iron beams retain the early type of Federal construction which represented a pioneering attempt at structural engineering and fireproofing. Its massive construction enabled the mint employees to save the building and the $200 million it contained during the 1906 fire, when a 7-hour battle was fought by mint employees and soldiers with a single, 1-inch fire hose to keep at bay the flames gnawing at its barred and iron-shuttered windows. One of the best surviving examples of Government architecture sponsored by Jefferson and Jackson in the early days of the Republic, the old mint is probably the only building in San Francisco famous throughout the country for its design character."

"San Francisco is unusually fortunate that the Federal Government has retained this building and is willing to restore it and maintain it in an eminently suitable way at no expense to the city," Mr. Jacobs stated in another report. "It seems almost incredible that the city does not realize how lucky it is to have what is perhaps its most important architectural monument maintained at no expense to it. * * * There is every reason why the Old Mint should remain one of our principal monuments and a memorial of San Francisco's unique history."

David E. Finley, chairman of the board of trustees of the National Trust, in a letter to the Administrator of General Services Administration stated the Federal responsibility for observing the spirit as well as the letter of the law governing demolition of nationally significant structures in January 1957, "The preservation of this building is important not only because of its intrinsic merits but also in order that the Government may set an example for the preservation of important historic monuments."

On January 23, 1959, at a meeting of the full board of trustees of the National Trust held in Washington, a resolution was passed again sustaining the cogent reasons for preservation of the Old Mint, and instructing us to communicate to our concerned members and member organizations an appeal for their support. We are accordingly asking our member organizations to send representatives to the meeting of February 18, and for individuals to attend the hearings if possible, also. May we urge that you write your Congressman sending copies to City Planning Commission, City Hall, San Francisco, Calif.

Tribute to Hon. Richard B. Russell, of Georgia

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 4, 1959

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of remarks on January 30, 1959, by the Honorable JAMES E. VAN ZANDT, Member of Congress from the 20th District of Pennsylvania, in presenting to the distinguished senior Senator from Georgia [Mr. RUSSELL] the annual Minute Man of the Year award of the Reserve Officers Association of the United States.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, JANUARY 30, 1959, IN PRESENTING U.S. SENATOR RICHARD B. RUSSELL, OF GEORGIA, THE ANNUAL CITATION BY THE RESERVE OFFICERS ASSOCIATION AS MAN OF THE YEAR FOR 1959

It is a signal honor to have been selected to present the Reserve Officers' Association annual citation to the citizen who has contributed most to national security in these times.

The recipient of this year's award is a distinguished Member of the U.S. Senate, and since it is the habit in Congress to rely upon the Congressional Directory for background information, it is interesting to observe that the recipient of the award is recorded in the pages of the directory listing Senators as follows:

"RICHARD BREVARD RUSSELL, Democrat, of Winder, Ga."

This is the sole reference from a biographical standpoint to one of the most able and popular Members of the U.S. Senate.

Even though his biographical sketch is the personification of brevity, Senator RUSSELL'S official activities embrace chairman of the Senate Committee on the Armed Services, and membership on the powerful Senate Committee on Appropriations.

He is also a member of the congressional Joint Committee on Atomic Energy and, in addition, is serving as a member of the Board of Visitors to the Military Academy, the Board of Visitors to the Naval

Academy, and the Board of Visitors to the Air Force Academy.

The resolution selecting Senator RICHARD B. RUSSELL for this annual citation describes him in a manner in keeping with his worthwhile contributions to our national defense.

The resolution that accompanies the citation reads as follows:

"Reserve Officers Association of the United States annual citation to the citizen who has contributed most to national security in these times: 1959, RICHARD BREVARD RUSSELL.

"An association resolution: To the Honorable RICHARD BREVARD RUSSELL, because throughout your career you have been—

"(a) Profoundly aware of the obligation of every citizen to service to his nation, and by continuing precept and example aided in keeping alive this vital tradition;

"(b) Broadly knowledgeable in history and motivations of peoples and nations of the world, you have exercised a genius for leadership critically contributing to this Nation's victories in wars;

"(c) Nobly motivated in your public service, you have shunned narow considerations, including partisanship, but rather have fixed your course and your influence toward highest standards of national interest;

"(d) Deeply dedicated to honor and duty, you have given of your strength and genius far beyond and above the call of both honor and duty.

"In the name of this Nation's first Minutemen, who gave our forefathers the inspiration and instinct to contest to the death for their liberty, this association proudly recognizes your service as a patriot, and its meaningful contribution to the national security shared by every citizen of the United States in these times.

"For the association—by the National Executive Committee, Washington, D.C., January 30, 1959.

"(Signed) Rear Adm. Leon J. Jacobi, USNR, national president, Detroit; and Col. John T. Carlton, USAR, executive director, Washington."

Senator RUSSELL—or DICK as you are known to your thousands of friends—it gives me great pleasure to present you with the Reserve Officers Association award of Man of the Year for 1959, and with it I extend my sincere congratulations.

The Business Users of the Mails

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 4, 1959

Mr. JOHNSTON of South Carolina. Mr. President, as chairman of the Committee on Post Office and Civil Service, it has been my privilege to preside over committee hearings when business users of the postal service have testified. These sessions have emphasized just how important our Postal Establi hment is to a healthy American economy. Too often we forget the role which the post office plays in helping to keep the machinery of business going. Countless thousands of businessmen use the facilities of the post office to advertise and sell their products.

The present administration has been too prone to attack business users of the mail, charging them with causing all the ills of the postal service. In the balance sheets which executive departments transmit to the Hill, no notice is ever taken of the wealth created, the employment opportunities afforded, the taxes paid by customers of the Postal Establishment.

It was encouraging, therefore, to observe in an article published in the New York Times of January 28, 1959, some kind words regarding the Nation's businessmen who depend on the post office to transmit their sales messages to the American people.

I know that the ranking Republican on the committee, the able Senator from Kansas [Mr. CARLSON], feels as I do about postal patrons and will recommend the Times article to the attention of the Senate. I therefore ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TOPICS

RESULT OF THE BLACKOUT

An interesting result of the recent newspaper blackout, when any bit of informative reading matter took on the aspect of a brandy-laden St. Bernard to a lost mountain climber, was the care with which all members of the family read the morning mail. Bills weren't let go until each item was scrutinized. Small print was read with as much solicitude as the large print. And business mail, of the kind that often winds up, unread, in the waste basket, enjoyed far more attention than ever before was lavished on it. Many of us joined—perhaps to remain as members even after the newspaper returned—the army of adventurers whose mailboxes are an ever-changing vehicle for all kinds of wonderful flights of imagination. Helping us on these flights, of course, are business concerns that realize that the postal system represents a direct link to prospects for their products and services. The post office is delighted; last year it received $272 million of welcome revenue from business mail. And the postmen are at their happiest when the mail flow is at its heaviest for, in the words of Gilbert and Sullivan, they are then employed at their employment.

THE FULL MAILBOX

Who doesn't remember the days when, as children, we would clip every coupon in the back of the magazines, fill them all out, and mail them in? And for no other purpose than to receive mail specifically addressed to us, a definite sign of growing up. Nor has the excitement really diminished. A full mailbox can be as good for the morale as a full stomach. Content often has little to do with it. While there is little so heartwarming as a letter from a friend, written in familiar hand, an interesting piece of business mail often is quite attractive, too. The fact that it is printed rather than written in hand does not remove completely the personal touch. It means that we are on various lists, as persons interested in specific things, specific ideas, specific publications. Not everybody in the world is on the same lists, because, with the wisdom peculiar to this trade, it is realized that not everybody in the world shares the same interests.

A UNIQUE INDUSTRY

Behind the business mail borne daily to mailboxes near and far is a unique industry. According to the Business Mail Foundation, more than a billion and a half dollar are invested each year to bring things to our attention by way of the mailbox. Many organizations deal wtih the public only by mail, while others use the mail to supplement efforts in other channels. Business mail is also a favorite technique of that American hero, the small businessman. Many a company, long in business and respected for integrity, consists solely of an individual, a product or a service, and a happy union with the post office. As a result of this combined effort, 16 billion pieces of printed matter find their way each year into our mailboxes, with commercial mail resulting each year in sales of merchandise worth more than $20 billion.

SELLING BY MAIL

The use of the public mails for other than personal messages and business-to-business communication is by no means new. It was, in fact, a tool in the forging of our country. Stoking the fires of liberty before the American Revolution was the Committee of Correspondence, through which such patriots as John Hancock and Samuel Adams dispersed as they were throughout colonial America, kept one another informed. The method was not unlike methods used today. A circular letter was printed and mailed to members of the committee in New York, Boston, Philadelphia, and wherever else patriotic groups existed. Since that time entire cultures in America have been built around the catalog from the mail-order house. Many a shopping problem has been solved in the comfort and quiet of the living room. Of all the forms of selling that American ingenuity has devised, none is closer to us than business mail—as close as our mailbox.

Institute of International Education Award to Leonard Bernstein

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, February 4, 1959

Mr. JAVITS. Mr. President, last Friday evening, January 30, at a dinner in Washington, D.C., the Institute of International Education marked its 40th anniversary. This commemoration was a part of the Third National Conference on Exchange of Persons which the institute sponsored in cooperation with some 139 national private and public agencies interested in exchange programs. As a feature of the anniversary celebration, awards were tendered to organizations, institutions and individuals who have made unusual contributions to the improvement of understanding among nations. Among the five awards presented was one to the American born and educated composer and musician, Leonard Bernstein. It is my pleasure to ask unanimous consent to have printed in the Appendix of the RECORD the citation of Mr. Bernstein by the institute for his outstanding contributions in behalf of his native land as a cultural ambassador in what has been termed the international language, music.

We are very proud of Leonard Bernstein, and I am delighted to see him so honored.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

CITATION FOR AN INDIVIDUAL

To Leonard Bernstein, American-born and American-educated conductor, composer, and cultural ambassador of the United

States, the Institute of International Education presents its award for distinguished service.

All great art, and music in particular, transcends the barriers of language. Music is itself a universal language. Mr. Bernstein speaks it fluently.

Performances by Leonard Bernstein and other American artists have demolished the cliche that the people of the United States are completely materialistic and concerned only with technical gadgets.

The Cultural Presentations Program of the Department of State, ably administered by the American National Theatre and Academy, has given the world a chance to see and hear the best of our performing artists. In the first 6 months of 1958, American symphony orchestras, ballet companies, drama groups and individual artists performed in more than 500 cities in 94 countries. The jazz of Dave Brubeck, the spirituals of Marian Anderson, the modern dance of Martha Graham, have been offered to audiences who had never before seen or heard an American artist.

The impact of cultural diplomacy is clear. Mr. Bernstein and the New York Philharmonic, in their recent tour of Latin America, were acclaimed everywhere.

For example, the Caracas Daily Journal said, "The visit here of the New York Philharmonic under the baton of the great conductor, Leonard Bernstein, enables the United States of America to speak to Venezuela in a field where the bonds between people are strongest." Le Prensa in Lima said, "Critics have classified unanimously the presentations of the Philharmonic as an event without precedent in the musical history of Peru." El Mundo Argentina in Buenos Aires said, "Without any doubt, the New York Philharmonic is one of the most perfect orchestras which it is possible for the human ear to hear." Even El Siglo, the Communist daily of Santiago, said, "The men who make up the orchestra are very great artists and they carry the message of beauty and emotion in a language which crosses frontiers and is common to all human beings, and can for a moment calm the passions and hatreds which daily life awaken in man. The performance of the New York Philharmonic was magnificent."

In 1949 Leonard Bernstein composed his second symphony, "The Age of Anxiety." A decade later, we still live in anxious times—but so did Bach, Beethoven, and Brahms, whose affirmation of the triumph of good over evil is so superbly interpreted by Mr. Bernstein.

In recognition of the significant role which the American artist plays today in cultural exchange, the Institute of International Education bestows its distinguished service award upon Leonard Bernstein, whose music unites us in the belief that harmony will one day prevail among all men.

Seapower Is Not Just Men-of-War

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, February 4, 1959

Mr. BUTLER. Mr. President, at this late date, after the experiences of two World Wars and the Korean conflict, no justification of the American merchant marine should be needed. Yet, year after year, our merchant navy is a target for elimination by those who fail to appreciate its true significance. These uninformed critics might well reflect carefully upon a recent definition of seapower made by Adm. Arleigh A. Burke, Chief of Naval Operations, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SEAPOWER IS NOT JUST MEN-OF-WAR

(By Adm. Arleigh A. Burke, USN, Chief of Naval Operations)

Seapower is not just men-of-war. It includes freighters, tramp steamers, passenger liners, tankers, and the many other ships which make up the merchant marine.

But seapower is even more than this. It is the sum total of weapons, ships, shipbuilding capacity, and geography which enable a nation to use the sea advantageously during peace and war.

These are the physical things, the tools of seapower. They can be made effective only by a nation whose people are aware of the advantages offered by the sea, and whose government understands the employment of its maritime assets.

With the great progress the world has made in communications and transport between land masses, seapower has become progressively more important as free nations have become more interdependent economically and militarily.

As populations have grown, as world resources have developed, maritime commerce has also increased. In the past 10 years world commerce has increased 50 percent.

Ten years ago United States water-borne foreign commerce was 188 million short tons. By 1956 this had risen to 327 million short tons—and it is still going up.

This indicates not only a continuing, but an increasing need for shipping.

Yet while our water-borne foreign commerce has nearly doubled in 10 years, the percentage of this traffic in ships flying the American flag has gone down rapidly.

In 1947 American-flag ships carried 54 percent of our foreign oceangoing commerce. This percentage has been decreasing steadily since then until it is now just 20 percent.

The implications of this trend are too serious to be ignored. The United States is the greatest trading nation in the world today. We exported last year one-fifth of the world's total export trade of $100 billion.

We are heavily dependent upon the sea, and this demands not only that we control the sea but also that we have the means to use the sea. This means ships under effective American control.

Both in peace and in war, a strong American merchant marine is essential to the strength and well-being of our country.

Commendation of Federal Bureau of Investigation by National Commander of American Legion

EXTENSION OF REMARKS

OF

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 4, 1959

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Hon. Preston J. Moore, national commander of the American Legion, commending the FBI and its Director, J. Edgar Hoover.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY PRESTON J. MOORE, NATIONAL COMMANDER, THE AMERICAN LEGION

At its 40th national convention in Chicago last September, the American Legion went on record commending both the Federal Bureau of Investigation and its Director, J. Edgar Hoover, for their vigilance and effectiveness in protecting our Nation and its people from Communist subversion, while at the same time, respecting the rights and freedoms guaranteed by the Constitution of the United States.

Since that time I have been asked on many occasions, "Why was it necessary to reiterate a confidence in the FBI and Mr. Hoover shared by every loyal American?"

The answer is that there are some individuals in this country and certain publications determined to discredit the FBI and its Director. It is difficult to attribute any purpose to these attacks other than a desire to destroy this Federal law enforcement agency and its leader as an effective deterrent to undetected, unopposed Communist subversion in this country.

That a deliberate smear Hoover and the FBI campaign, similar to the Communist Party's unsuccessful efforts of 1940, has been launched is no mere supposition.

The entire October issue of Rights magazine, the official publication of the Emergency Civil Liberties Committee, branded by the Internal Security Subcommittee of the U.S. Senate Judiciary Committee as a Communist front organization, is devoted to an article, "The FBI and Your Freedoms." It is, of course, a biased, one-sided attack on the FBI, distinguished only by its omission of any reference to communism's denial of human dignity or humanitarianism.

Coincidentally, or so the timing suggests, a recent issue of The Nation magazine featured an article by Fred J. Cook, attempting to discredit the FBI. Some reviewers have evaluated this piece as 60 pages of distortion, half-truths and innuendoes.

Finally, and most significantly, former FBI agents have been approached recently by reporters of the New York Post seeking derogatory material on J. Edgar Hoover. These reporters have extended their beat to Paris, France, in what is obviously a far-flung and must be a discouraging attempt to do a character-assassination job on Mr. Hoover.

Evidently the initial failure of this mission resulted in the New York Post stepping up its major effort in Operation Gumshoe back in the States. Apparently forgetting, at least momentarily, that they were supposed to obtain information, not reveal it, reporters for the paper disclosed to unquestionably reliable New York sources that the Post plans to assign reporters to Washington, D.C., and other cities to skulk around restaurants and other public places in the hope of digging up information that could be used against Hoover and the FBI.

The American Legion believes that the American people will not permit their justified confidence in Mr. Hoover and the FBI to be compromised by scurrilous distortions and half-truths. Nor will they allow irresponsible journalism to blind them to the need for continued FBI investigation of the dangerous Communist conspiracy in this country.

Mr. Hoover and the FBI have earned the gratitude and trust of every American. They ask only that they be permitted to continue their essential and effective efforts to protect our country and all of our people from Communist subversion.

The American Legion believes they should be given this right. We believe that our people should reaffirm their faith in Hoover and the FBI by insisting that they push more vigorously than ever their investigation and exposure of the Communist traitors in our midst. We hope that the American press which, with a few tragic exceptions, is commendably patriotic, will continue to give J. Edgar Hoover and the FBI their necessary and persuasive editorial vote of confidence.

Labor Reform and Politics

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, February 4, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial published on January 29, 1959, in the Chattanooga Times. This thoughtful editorial makes a convincing demonstration of the need for action on the Kennedy-Ervin bill and the desirability of separating labor reform and labor relations legislation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LABOR REFORM AND POLITICS

The differences between the labor reform bill introduced last week by Senator KENNEDY, Democrat, of Massachusetts, and the measure called for in President Eisenhower's special message yesterday are more a matter of extent than intent. This is of significance, lest the needed changes advocated by both be obscured, then lost in a welter of political charges and countercharges.

Senator KENNEDY was explicit in his purpose. "This is primarily a labor-management reform bill," he said, "dealing with the problems of dishonest racketeering; it is not a bill on industrial relations, dealing with the problems of collective bargaining and economic power. The two areas of legislation should not be confused or combined."

With that in mind, Senator KENNEDY did not include proposals to amend the Taft-Hartley Act, which is the basic law in the area of labor-management relations. Instead, he said, he would seek the advice of a panel of experts in the field and introduce needed amendments to Taft-Hartley later to be considered on their merits.

Several of the Kennedy and Eisenhower proposals are parallel in purpose, including provisions to insure fair elections of union officials, regular inspection of financial records with penalties for misuse of union funds or destruction of certain records and closer supervision of union affairs by the Secretary of Labor with additional authority to move decisively to eliminate corruption in union ranks.

If anything the Kennedy bill goes further by specifically prohibiting persons convicted of serious crimes from serving as union officers and spelling out additional safeguards against improper management of local unions by the parent organizations through so-called trusteeships.

Mr. Eisenhower went on to call for changes in the Taft-Hartley Act clauses covering certain types of picketing and secondary boycotts, among other things. It was precisely this field that Senator KENNEDY said should be covered separately in order that the anti-racketeering measure not become bogged down in consideration of the broader aspects of labor-management relations.

In this respect then, Mr. Eisenhower's characterization of the Kennedy bill as a halfway measure seems unfair and may be a political maneuver designed to offset the Senator's advantage in having introduced the first bill.

There is need for sensible revision of labor-relations laws, based on experience as well as revelation of union corruption, and there is room for recommendations from both sides of the aisle. But, as exhibited last year, the need cannot survive the play of pure politics.

The Case of Povl Bang-Jensen

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, February 4, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a column, These Days, by George E. Sokolsky, which was published in the Washington Post and Times Herald, Wednesday, February 4, 1959.

In his penetrating analysis entitled, "Bang-Jensen and the U.N.," Mr. Sokolsky reveals many important facts about the particular case of Povl Bang-Jensen. I place such importance on the information contained in this column that I am inserting in the CONGRESSIONAL RECORD as a further means of alerting the American people to this situation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THESE DAYS—BANG-JENSEN AND THE U.N.
(By George E. Sokolsky)

What does membership in the United Nations mean? Is this a body in which a member state, particularly one that pays a large part of the expenses of running the institution, has nothing to say?

An American citizen addressed a letter to the American Ambassador to the United Nations, Henry Cabot Lodge, concerning the dismissal of Povl Bang-Jensen, a United Nations official, a citizen of Denmark, who was entrusted with taking testimony from Hungarian refugees. Bang-Jensen was authorized to guarantee the witnesses that their names would be disclosed to no one and he gave the guarantee. Ultimately, he was dismissed from the United Nations for refusing to give up the names of these witnesses whose relatives would have been murdered, to say the least.

A reply was sent to my correspondent by Stephen Lancaster, who signs himself Public Affairs Officer:

"The status of Mr. Bang-Jensen in relation to the United Nations is strictly a matter between the Secretary General of the United Nations and Mr. Bang-Jensen, who is a citizen of a foreign country, Denmark. It does not call for any comment by the United States representative to the United Nations. In fact, it would be improper for him to appear to trespass on a matter involving Denmark. Similarly it would be regarded as unwelcome interference if a foreign power took an active interest in a case involving a U.S. employee of the United Nations. You may recall Mr. Lodge's effort to eliminate disloyal Americans from employment by the United Nations in 1953. This was regarded as a matter between the United States and the Secretary General, one in which intercession by a foreign government would have been improper."

This is a case which does not particularly involve Denmark, and the fact that Bang-Jensen is a Danish citizen is incidental. The case involves the dignity and honor of the United Nations and all the members thereof. The United States as a member and the largest dues payer to the United Nations cannot avoid responsibility for the administrative conduct of that body. If Bang-Jensen were a citizen of Patagonia or Ghana or any place, the principles at issue would be the same; namely, that when an official of the United Nations takes testimony from individuals on the guarantee that the names of the witnesses would be kept from the persecutor of his country, that promise must be inviolate. Bang-Jensen was not acting in this capacity as a Dane; he acted as an official of the United Nations.

What is the role of the Secretary General of the United Nations? He represents no country. He is a hired administrative official who is assigned to the housekeeping functions of a growing organization which can only exist as long as there is no war. The first Secretary General was Trygve Lie, a Norwegian, who tried to establish the position of Secretary General as a kind of head of the universe. He was tactful and avoided projecting himself beyond the terms of the Charter.

The second Secretary General is Dag Hammarskjold, a Swede, who seeks to build his position into something more than mere administration. He has in some measure succeeded because the exigencies of the times, the cold war, require a neutral to perform tasks, regarding which there can be considerable distrust. Many do not regard Hammarskjold as a neutral, but rather as one who would pay any price to keep the United Nations afloat. And of course, the biggest price that must be paid, if Russia is to remain in that body, is to favor Russia over the United States.

Bang-Jensen is a victim of that attitude. The Russians demanded his scalp because he would not disclose the names of his witnesses. The whole matter became administratively difficult. To give the list of Hungarians even to Dag Hammarskjold would mean that it would become available to all Iron Curtain personnel on the administrative staff of the United Nations; to refuse to obey Hammarskjold is insubordination. Therefore Bang-Jensen was fired.

Lancaster's explanation, which is probably a form letter, does not hold water. It is an alibi and therefore meaningless. An honest answer would have been: "The Russians have our hands tied. We don't want to start anything."

The Talmadge Farm Plan

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 4, 1959

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial entitled "Sane Program in Store?" from the January 30, 1959, issue of the Atlanta (Ga.) Journal.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SANE PROGRAM IN STORE?

The administration's limp proposals for farm aid legislation make the bill offered by Senator HERMAN TALMADGE look all the better.

President Eisenhower Thursday sent to Congress a message calling for some changes in existing programs but offering nothing really new or far reaching.

The President's message had about it the same tired look that has adorned other administration congressional efforts this season.

Senator TALMADGE has introduced a measure which would provide for a major overhaul of present farm policies. His proposal would put free enterprise back down on the farm and yet give the farmer reasonable governmental assistance.

The dynamic nature of the Talmadge bill already has gained it the approval and support of major Democratic powers. The peaked nature of the Eisenhower proposals undoubtedly will deliver up even more support for the Senator's program.

It's too early to predict anything but prospects appear to be growing bright for sane farm legislation at last.

Legality of Adoption of 14th Amendment

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Wednesday, February 4, 1959

Mr. STENNIS. Mr. President, on February 3, there appeared in the Washington Evening Star an illuminating article by the able and widely read columnist, David Lawrence, on the subject of the legality of the adoption of the 14th amendment and other related questions. This article carries a serious challenge that should be met with forthrightness. It should have wide circulation, and I therefore ask that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INTEGRATION AND THE CONSTITUTION—LEGALITY OF THE 14TH AMENDMENT AS BASIS OF DESEGREGATION QUESTIONED

(By David Lawrence)

The people of Virginia are not happy over the enforced integration of their public schools. They feel they are being coerced into doing something against their will. They have been told the Constitution is "what the people of the United States say it is." But is it always? In no State of the Union have the people ever voted to approve any change in the Constitution that requires integration or desegregation in the public schools.

Nine men sitting in the Supreme Court of the United States have, however, said they interpret the 14th amendment to require desegregation in the public schools.

But did the people ever ratify the 14th amendment by the method prescribed by the Constitution—namely, by two-thirds of both Houses of Congress and three-fourths of the States, either through their legislatures or constitutional conventions?

The historians tell us this wasn't done. The Secretary of State who proclaimed the 14th amendment in 1868 frankly expressed his doubts as to whether it had been legally ratified.

Upon what were these doubts based? Abraham Lincoln had said the Union was indissoluble and that no State could secede. When the War Between the States was over, President Johnson, in May 1865, formally proclaimed amnesty to former rebels and established provisional governments in the Southern States. During that summer, new State legislatures and Members of Congress were elected. All these governments in the South—except one—ratified the 13th amendment, abolishing slavery. Their ratification was accepted as legal. So they were unquestionably in the Union.

When, however, Congress met in December 1865, all the Senators and Representatives from the Southern States, except Tennessee, were excluded from both Houses of Congress. Nevertheless, the 14th amendment was voted on by Congress and was formally submitted to the States in June 1866. Ten Southern States rejected it.

Congress thereupon passed a law putting the South under military rule and specifically ordering the States to ratify the amendment or remain excluded from the Union. The President vetoed the bill and called it plainly unconstitutional, but it was passed over his veto. Federal troops took command of the State legislatures in the South.

Under military rule, the Southern States—with their legislatures composed largely of Negroes, because most of the white voters had been disenfranchised—ratified the 14th amendment. W. E. Woodward in his "American History," one of the best known of the standard school textbooks—published in 1936, long before the present acute controversy arose—says the "ratifications were obtained at the point of the bayonet." Historians are unanimous about the facts.

Up to 1896 not a single court of importance held that the separate but equal idea for public schools was a violation of the Federal Constitution. In fact, the highest courts of several States, including Massachusetts, Ohio, and New York, repeatedly upheld the "separate but equal" doctrine as conforming to the Federal Constitution. Even the same Congress which had ordered the 14th amendment ratified by the South under military coercion passed a law providing for segregated public schools in the District of Columbia. Yet the present Supreme Court of the United States, before its 1954 decision, asked for testimony on the intent of the framers of the 14th amendment, and then called the facts as submitted "inconclusive."

The truth is the present Court followed precedent in declining to examine the legality of the process by which the 14th amendment was allegedly ratified. Every time anyone has tried to get the previous Justices to examine the issue—and this has happened several times—the matter has been turned aside as political. No decision has ever been rendered by the Supreme Court on the merits of the case. This was doubtless due to the feeling that, if ever passed upon, the amendment would have to be declared illegal.

But why turn the clock back to 1868? This question is often asked, and it is answered by asking another question: Why in 1954 turn the clock back to 1896 to invalidate the doctrine of separate but equal which was for 58 years the law of the land?

This correspondent attended an integrated public school, both in the elementary grades and in high school, and would gladly attend one again if he were a student. If a constitutional amendment were proposed that would permit the States to deal with this subject, this writer would vote for such an amendment. If the 14th amendment were adopted today by the States, and it specifically forbade segregation, this writer would welcome it as an expression of the free will of the people uncoerced by bayonets and representing the desires of the American electorate.

In the absence of any Supreme Court decision to the contrary, the 14th amendment is assumed to be valid. This means Federal court orders based on its provisions must be obeyed. But no State is denied the right to try by legal means any form of circumvention to achieve its objectives. This is lawful until the court in each case specifically rules otherwise.

Meanwhile, can America afford to let the record of fraud and coercion stand as it is before the world—or will a troubled conscience some day make the people of the United States square that record by a lawfully adopted amendment to the Constitution?

Antarctica's Value to Nation Increasing

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, February 4, 1959

Mr. YARBOROUGH. Mr. President, the old saying "It's a small world" is being graphically proved now in Antarctica. Mention of this frozen land still conjures pictures of snowy wastes inhabited only by penguins and a few hardy explorers.

From 1954 to now, approximately 10,000 Americans have been in the Antarctic, thanks to Operation Deep Freeze and other activities. And we are there to stay; not as mere visitors, but as keeping permanent bases there. The value of this region for scientific, business, and defensive purposes is becoming more and more recognized throughout the world. The Russians also have bases in Antarctica.

In recognition of the importance of this vital region, I have cosponsored a bill to create the Richard E. Byrd Antarctic Commission.

Due to atmospheric conditions, scientists say the Antarctic is the best place in the world from which to launch devices bound for outer space. In addition, the area is of supreme significance in assuring our national security, particularly when we are under threat of guided missile attack. And thirdly, uranium and copper have been found and there is a great deal of marine life in the water surrounding the Antarctic Continent. I am confident further exploration will uncover other facets of economic value. There may be other scientific advantages locked in this 5½ million square mile area.

I feel our Nation should take immediate action to capitalize on the considerable investments we have made and will continue to make in Antarctica. It would be a practical move from the scientific, economic, and defensive standpoints.

Mr. President, in support of this, I request unanimous consent to have printed in the Appendix of the RECORD an article by Jim G. Lucas which was published in the Washington Daily News for Tuesday, January 20, 1959, under

the heading: "Eight Nations To Stay in Antarctica."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EIGHT NATIONS TO STAY IN ANTARCTICA—TYREE WILL COMMAND U.S. FORCE

(By Jim G. Lucas)

At least 8 of the 12 nations which established Antarctic bases during the International Geophysical Year—including the United States and Russia—intend to remain there indefinitely, Rear Adm. David Tyree said today.

Admiral Tyree will take over as commander of Operation Deep Freeze, the American Antarctic force, in April. He will succeed Rear Adm. George Dufek, who is retiring.

The permanent Antarctic community will include parties from the United States, Russia, New Zealand, Australia, Argentina, Great Britain, France, and Sweden.

ENIWETOK

Admiral Tyree until recently was deputy of U.S. forces at the Eniwetok nuclear testing grounds and commander of Joint Task Force Seven, the naval supply force in those tropical waters. He flew to Washington last weekend after his first visit to the Antarctic.

Admiral Dufek will remain in command until the last ships are out of the ice, probably in March. After the changeover, Tyree will remain here working on future programs. He plans to fly to the Antarctic in August or September.

Admiral Tyree said we will leave approximately 150 scientists and military personnel in the Antarctic to winter in at four stations. These are at the South Pole, McMurdo Sound, Byrd, and Hallet. The United States is turning its base at Ellsworth over to Argentina and its Wilkes base to Australia.

REDS EXPANDING

The Russians will maintain four, perhaps five, bases. Admiral Tyree said the Russians not only intend to stay, but are expanding the operation. But he said our force of 150 men will be, by far, the largest in the Antarctic this winter.

The 18-month International Geophysical Year ended December 31 and its scientific functions temporarily have been transferred to the National Science Foundation. Admiral Tyree said there is some thought of setting up a permanent American Antarctic Foundation.

He said our interest in the frozen continent is primarily scientific. Studies will be made this winter into meteorology, minerals, glaciology, the ionosphere, and cosmic rays.

To date, he said, approximately 10,000 Americans have been in the Antarctic, beginning with the first trip of the icebreaker *Atka* in 1954. Deep Freeze has cost between $75 million and $85 million.

The Navy is making surveys looking to the construction of a permanent airfield near McMurdo Sound, and some estimates of its cost run as high as $300 million.

Address by Hon. Herman E. Talmadge, of Georgia, Before the American Coalition of Patriotic Societies

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 4, 1959

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address which I delivered on Tuesday, February 3, 1959, at the 29th annual convention luncheon of the American Coalition of Patriotic Societies, held at the Mayflower Hotel, in Washington, D.C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CONSTITUTION AND RESPONSIBLE GOVERNMENT

(Text of remarks of Hon. HERMAN E. TALMADGE, of Georgia, in addressing the 29th annual convention luncheon of the American Coalition of Patriotic Societies held in Washington, D.C.)

President Lory, distinguished guests and members of the American Coalition of Patriotic Societies, to have the privilege of sharing this significant occasion with you is a twofold pleasure for me.

Not only is it a great honor for which I am deeply and humbly grateful but, even more important, it affords me the desired opportunity to express to you and the societies you represent my profound gratitude for the assistance and support which you gave me, as a freshman Senator, in obtaining an unmistakable expression of public sentiment on the question of freedom of debate in the Senate.

The 364-page printed transcript of testimony, statements, and letters compiled by the special subcommittee of which I was chairman during the 85th Congress was the most comprehensive presentation of public sentiment on limitation of debate ever assembled. It was an impressive and convincing document which confirmed my long-held belief that the rank and file of the American public consider free debate in the Senate a vital safeguard of individual liberty in this country.

While I personally was opposed to any change in the Senate's rule governing cloture, I am pleased to report to you that the revisions made will not affect materially the right of any Senator to speak out in defense of the viewpoint of his State and people. Furthermore, I am convinced that the addition of a new provision recognizing for the first time in the rules of the Senate the body's constitutional continuity more than offsets the changes which were made.

Considered in balance, I believe those of us who adhere to the concept that the Senate is a continuing repository of State sovereignty on the national level won an impressive victory for constitutional government—a victory in which you of the American Coalition of Patriotic Societies can take particular pride for the invaluable role which you played in making it possible.

I want to thank each of you here today as representatives of your individual organizations for the magnificent way in which you acted to bolster our defense of constitutional fundamentals. And I especially want to express my gratitude to your alert and able executive secretary, Mrs. Leetch, for her indefatigable efforts in seeing that you and, through you, your organizations and citizens at the grassroots level throughout the Nation were fully informed about the ramifications of the issue. She is doing an outstanding job for you and the Nation.

It is most gratifying and encouraging to those of us in Congress who subscribe to the philosophy that responsible government is the product of strict adherence to the Constitution of the United States word for word as it is written to know that we are backed in our position by dedicated organizations with truly national memberships like the American Coalition. I wish this country had 100 more groups like yours to espouse the principles of the Declaration of Independence and the Constitution of the United States and I am confident that if we had them the affairs of our Nation, both foreign and domestic, would not be in their present sad state.

The Declaration of Independence was written to give expression to the principles which our forefathers learned from bitter experience were essential to the maintenance of liberty and the Constitution was drafted and ratified to perpetuate those principles for posterity.

Under them the United States was founded as a nation in which government at all levels would be the least government necessary to do for the people what the people could not do for themselves.

Under them the United States was founded as a nation which respected the rights and integrity of other nations and demanded that it be accorded the same respect.

Under them the United States was founded as a nation dedicated to faith in God and the right of the individual to achieve his highest destiny under God consistent with the right of every other individual to do the same.

So long as the United States adhered to those founding principles, it grew, prospered, and was respected throughout the world.

But in recent years the United States has departed from those founding principles and, as a result, its economy is deteriorating, the rights of its people are being circumscribed and it is losing the respect of the other nations of the world.

In foreign affairs we have taken the position that we are always right and everyone else is always wrong. We have undertaken to try to make the world over in our own image and in so doing have sought to substitute words for wisdom, dollars for deeds, and bluster for good faith.

In domestic affairs we have countenanced the development of the philosophy that an all-powerful Central Government is better qualified to manage the affairs of the people than are the people themselves. In so doing we have sanctioned an ever-encroaching Federal bureaucracy which is steering the Nation on the road to bankruptcy and totalitarianism.

In personal affairs we have built unto ourselves false gods of creature comforts and have become so preoccupied with an all-consuming quest for security that we have forgotten the words of the Psalmist that "blessed is the nation whose God is the Lord."

Is it any wonder then that our enemies depict us throughout the world as a nation of neurotic, meddling busybodies who attempt to buy what we are unable to earn and to preach what we ourselves are unwilling to practice?

Is it any wonder then that we are burdened with a taxload which borders on confiscation and a national debt which has mortgaged future generations and that government by laws enacted by the elected representatives of the people has given way to government by executive decree, judicial edict, and Federal bayonet?

Is it any wonder then that we have become a Nation plagued by stomach ulcers and heart attacks in which personal debt and national crime have reached all-time records and the Golden Rule is something which is used only to print on advertising rulers?

The sum total of the experience of mankind is that the inevitable result of the failure to profit by the mistakes of the past is to repeat them in the future.

Distressing as it is to admit, we in the United States seem bent upon proving that we have learned nothing from the past of either our own or any other nation.

What other conclusion can be drawn from the plain facts that the policies which we are following at home and abroad are diametrically opposed to the principles upon which our country was founded and are parallel to the courses which have brought

about the downfall of every other major world power in history?

The apologists for our present course of personal and political expediency seek to promote their ends through the coercion of conformity and the intimidation of labels. Their reply to criticism is to call the critic a reactionary or worse and to plead in the name of their brand of pseudo-progress that changing times and changing conditions have made our founding fundamentals obsolete.

They would have the American people believe that the Constitution of the United States is an accordion which can be contracted or expanded to play any tune which might be popular at any time rather than the music by which the instrument is supposed to be played.

The lessons of the past give the lie to those constitutional improvisers.

They choose either to forget or deliberately to ignore that the collapse of Roman law under the weight of a decadent bureaucracy heralded the conquest of Rome by the barbarians.

They choose either to forget or deliberately to ignore that the attempt of the British Empire to extend its control over the world reduced Britain to national bankruptcy, state socialism, and military impotence.

They choose either to forget or deliberately to ignore that every nation in the history of the world which has sought to control the destiny of the world at the expense of its own citizens has fallen from within or without.

It could happen to the United States unless we change our course.

It will happen to Soviet Russia unless that country changes its course.

The advocates of our present course maintain there is no alternative.

I emphatically reject that philosophy of fatalism.

There is an alternative to a foreign policy based upon the inevitability of world conflict.

There is an alternative to a domestic policy based upon the regimentation of people and resources.

There is an alternative to a personal philosophy based upon physical existence as an end unto itself.

That alternative is simply expressed in the development of an America so strong militarily, economically, and spiritually that any nation choosing to attack us invites not retaliation but annihilation.

And it is an alternative which can be realized only in a return to the principles of individual freedom, free-enterprise economy, and government on all levels which is the servant, not the master, of the people.

The cause of our present national dilemma is what Thomas Jefferson characterized as "more machinery of government than is necessary."

With the exception of the external menace of communism, all of the ills and problems of the United States can be summarized in the one phrase—too much government.

The American economy is suffering from too much government.

We have 48-cent dollars and face the prospect of 10-cent dollars as the result of ever-broadening governmental policies and programs which are bankrupting our Nation and mortgaging our future.

American prestige abroad is suffering from too much government.

We find ourselves despised and distrusted throughout most of the world as the result of our continued interference in the affairs of other nations through our various bureaucratic and paternalistic programs of spending and instruction.

The American people themselves are suffering from too much government.

The mushrooming Federal establishment, like quicksand claiming its victim, is steadily embracing more and more affairs traditionally and constitutionally regarded as local matters and as a result the individual citizen finds himself with less and less voice in the conduct of his local government and its institutions.

I cannot bring myself to believe that the majority of American people approve of the current philosophy that central governments must be all things to all men and do all things for all men.

To the contrary, the mail which I receive from all sections of the Nation indicates to me that the average citizen is gravely concerned about the present course of our Nation and the consequences of pursuing it to its ultimate conclusion.

It is my belief that the American people want to see the Federal budget balanced and the Nation's economy stabilized.

It is my belief that the American people want the United States to cease doing for people in other countries what it either is unable or unwilling to do for our own citizens here at home.

It is my belief that the American people want the Federal Government to confine its activities to those areas reserved to it by the Constitution and leave the management of all other affairs to local people on the local level.

It is my belief that the American people want above all else for the United States to be made militarily and economically secure and for themselves to be left alone to run their own affairs and enjoy the fruits of their own labors.

Our present course offers only one of three ultimate conclusions: conquest from without, collapse from within or development here in the United States of a totalitarian government as reprehensible as that which exists in the Soviet Union.

It is incomprehensible to me that free men and women living in a free society will choose to wait supinely for either of the first two consequences or to countenance passively the implementation of the latter.

I choose rather to believe with Thomas Jefferson that:

"The people may be misled or deceived for a time, but where the avenues of truth are open there men will learn to reject what is false and harmful. Where the people are well informed, they can be trusted with their own government; whenever things get so far wrong as to attract public notice they may be relied upon to set them to rights."

Throughout the Nation there is a growing awakening to the dangers inherent in our country's present policies and a swelling voice for a recognition of the lessons of the past through a return to the fundamentals of constitutional, republican government.

I feel with all my being that the American people already would have expressed themselves in favor of such a return to fundamentals had they had a clear-cut choice at the polls.

They certainly did not have it last November and frankness compels the observation that the overwhelming sweep of the Democratic Party was less an endorsement of its program than it was a repudiation of the Republican Party for its failure to act decisively to solve the Nation's problems.

Perhaps the saddest aspect of our present situation is that at this critical juncture in our national life, we of the United States have no one in a position of top executive responsibility to whom we can look for dynamic and imaginative leadership to thwart the spread of inflation and regimentation at home and to deal with the threat of communism abroad.

But I have unlimited faith in the desire and willingness of the American people to demand that their national house be set in order and I believe that that desire and willingness is not far from making itself felt.

In a constitutional republic such as ours, the masses may not be immediately articulate, but once given leaders and leadership they are swift in making their wishes felt and known.

A fact which must never be discounted is that the essence of our concept of constitutional government is, from the words of the Declaration of Independence, that our National Government derives its "just powers from the consent of the governed."

It is true that policies and programs can be initiated and sometimes even carried out without the "consent of the governed" but ultimately, as always has been the case in our national life, the will of the people has overwhelmed the efforts of those who sought to frustrate or circumvent it.

The most serious constitutional problem to confront our Nation since the War Between the States is the direct result of the failure of those in responsible positions of leadership in all three branches of the Federal Government to take into account the fact that governmental programs and policies to be implemented successfully must square with the "consent of the governed."

I refer to the present effort to force a new social order upon an entire region of our Nation by judicial constitutional amendment.

It is my firm conviction that the historians of the future in looking back upon the present time will record as one of the gravest and most costly mistakes of our national life the decision of the Supreme Court of the United States to usurp unto itself authority to make judicial questions out of matters of human relations which should be left to the orderly processes of evolution.

I say that, my friends, because, unless Congress acts soon and decisively to resolve that issue on a realistic, constitutional basis, the inevitable result will be the destruction of public education throughout the South. And, engaged as we are in a life-or-death struggle with the forces of world communism, the United States cannot under any circumstances afford to permit such a tragic consequence to rob it of the minds and talents of a great segment of its youth.

The answer is not to be found in the use of Federal bayonets, Federal control of education, or rearing a generation in ignorance.

My long and serious study of the question has convinced me that—feelings on the subject being as strong and as inflamed as they are on both sides—there is only one solution compatible with constitutional concepts to which all persons of all shades of opinion can subscribe.

That solution is to invoke our heritage of "consent of the governed" by amending the Constitution of the United States to give the people on the State and local level the right to determine for themselves the manner in which the issue will be solved in their localities.

It was with that in mind that I last week stood before the Senate and, with all the sincerity of my being, proposed a constitutional amendment which would read as follows:

"Administrative control of any public school, public educational institution, or public educational system operated by any State or by any political or other subdivision thereof, shall be vested exclusively in such State and subdivision and nothing contained in this Constitution shall be construed to deny to the residents thereof the right to determine for themselves the manner in which any such school, institution, or system is administered by such State and subdivision."

The adoption of such an amendment would settle the question for all times and rid the Nation of a divisive issue which threatens to tear it asunder.

That is true because such a provision in our Constitution would leave the citizens of each State and locality free to make their own decisions in accordance with local conditions and prevailing attitudes as to how

and when their schools would comply with the Supreme Court's school decision.

That is true because such a provision in our Constitution would prevent destruction of the public schools of the South and would end for all time any threat from any quarter of Federal control of education.

That is true because such a provision in our Constitution would assure uninterrupted instruction for all the children of this country regardless of their color or place of residence.

That is true because such a provision in our Constitution would permit either retention of the status quo or orderly change as dictated by the requirements of public opinion and make certain that whatever change might take place would be by the constructive process of evolution rather than the destructive process of revolution.

That is true because such a provision in our Constitution would create a basis for unity throughout the Nation at a time when it is vitally important that we present a united front before our enemies.

The public schools of the United States are local institutions which have been established and are operated and financed by local people on the local level and all persons willing to view the question dispassionately will admit that to fulfill their role they must be administered on the local level in accordance with the wishes of the parents of the children attending them.

I do not believe there is any person who is genuinely concerned about the future of our Nation and the education of all its children who cannot and will not subscribe to the proposition of local control of schools.

And it is on that basis that I have appealed to all Americans—particularly to the parents of school-age children—to let their wishes on this subject be known to their Senators and Congressmen. It is an appeal which I reiterate here today and urge that you take it back with you to the citizens and organizations of your respective communities throughout the Nation.

I am convinced that if the public will express itself on this question the result will be to give the 86th Congress a mandate to afford the people of America an opportunity to amend the Constitution to assure for all time to come that control of the public schools shall forever remain in the hands of local people on the local level.

Our heritage as free Americans is that our Government's foundations rest upon the will of the people.

It is a heritage of which we are proud and which the entire world respects.

It is a heritage to which we must adhere if we are to succeed in passing it uncompromised to our children and their children after them.

It is a heritage which is to be put to an acid test in the issues now confronting our country.

Those of us who believe in responsible, constitutional government have our work cut out for us if we are to preserve that heritage.

With our faith in Almighty God and our feet firmly planted on the rock of the Constitution, I am supremely confident that we shall not fail.

I thank you.

Arthur E. (Gus) Cook

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following broadcast by Joseph McCaffrey reporting on "Today in Congress" for the Independent Airlines Association, Friday night, January 16:

A lot of people lost a wonderful friend today.

"Gus" Cook, who spend 60 years on Capitol Hill, died early today. He was 85.

"Gus" was Assistant Architect of the Capitol.

He came to the Capitol as a $1.50 a day laborer—that was back in 1898.

He knew them all in that time. When he came to the Hill, William McKinley was President.

For the last 30 years or more it was "Gus" Cook who served as the official greeter for the Presidents when they arrived to deliver their state-of-the-Union messages.

During World War II, it was Cook who was responsible for security at the Capitol. And he was the key man in the security arrangements for all the Presidents on their visits to the Hill.

Time and time again reporters, this one included, have tried to persuade "Gus" to let them write about his experiences and about the people he knew, as he knew them. But he always turned down the requests.

Only about 6 months ago I talked to "Gus" about this and after he turned me down he said, "Don't worry, Joe. When I get ready to let some one write about me, I'll tell you and I'll answer all your questions."

But this is the only chance I ever had to write about him—and my questions are still unanswered.

Britain's Policy

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following letter which appeared in the Washington Post and Times Herald on Sunday, February 1, 1959. The author of the letter Mr. O. R. Strackbein, is acknowledged to be one of the foremost proponents in this country for the protection of the jobs of American workmen from the effects of unlimited importation of foreign-produced goods.

BRITAIN'S POLICY

I have been much impressed by the great to-do that has been made over the failure of our Government to award an electrical equipment contract to British manufacturers who were low bidders. Even the British Ambassador to this country has expressed dismay over such inconsistency in our policy.

British newspapers have flayed us for similar reasons and have mentioned the close alliance between our two countries as a backdrop, the better to highlight our faithlessness.

It has also been said that we were motivated by crass poltical considerations. Senator HUGH SCOTT, while campaigning for election, apparently gave assurances to business-hungry voters that the contract would be awarded to a Pennsylvania firm, Baldwin-Lima-Hamilton Corp., as it later turned out to be.

What a shame, indeed, that candidates for office should come bearing gifts to voters in the form of promises and assurances. What further shame that the money voted by American taxpayers should be spent in the United States to give employment to Americans out of work.

These complaints only show how far we have gone in fanning the expectations of those who look to us for favors from abroad. The British Ambassador, indeed, said quite clearly that if we had no intention of awarding public contracts to foreign bidders we should not invite bids from them.

He has a point there, and a good one.

Let us turn to page 477 of the printed hearings before the House Ways and Means Committee on Renewal of the Trade Agreements Act, February 17 to March 7, 1958. The following testimony is found there: "For example, since its creation in 1947, the Central Electrical Authority of Great Britain has limited its procurement of power and transmission equipment to domestic suppliers because, as its official report to a parliamentary committee of inquiry states: 'It would be unwise for the electricity supply industry (of England and Wales) to be dependent upon foreign manufacturers for spares and maintenance.'"

Now, that is straight to the point, forthright, and admirable. It shows clearly that we could learn from the English; and we would not be in the present hassle.

In your editorial of January 24 you say that "a strong odor of fish emanates from the denial of a turbine contract to the English Electric Co. on national security grounds." That company's bid, you say, was 19 percent below that of Baldwin-Lima-Hamilton.

Should there be any wonder that the English company could underbid by 19 percent when its wages are about a half to two-thirds below those paid by electrical and other companies in this country? Do you want our wages cut to the European level, or what have you in mind?

O. R. STRACKBEIN,
Chairman, Nationwide Committee on Import-Export Policy.

Tribute to Hon. Norris Cotton, of New Hampshire

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, February 4, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Concord Daily Monitor relative to my colleague [NORRIS COTTON] entitled "COTTON'S Big Job."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COTTON'S BIG JOB

Senator COTTON has won appointment to the powerful Senate Finance Committee which deals, primarily, with Government financing. And what it does also involves taxation.

It is pleasant to think that there is a possibility of Federal tax reductions. There is hope this can be accomplished by the obviously painful and difficult process of budget balancing, but it would be welcomed by any other method the Government can devise.

Just about everyone, from the troubled business managers to the man or woman of moderate income feels the strong pinch, year by year, of Federal tax requirements. Everyone wants taxes reduced, but the best guess is that it will not be brought about in the immediate future.

In Congress there are pronounced Democratic and liberal Republican tendencies to pile on perhaps billions above Eisenhower's suggested budget. There are powerful pressures spurred on by results of the recent congressional elections.

There are demands for more rocket and missile production and research, for higher unemployment relief, for aid to seriously depressed areas. There is talk of vastly expanded Federal aid to education and of providing free hospital and medical care for millions of social security beneficiaries.

Eisenhower's $77 billion spending means $1 out of every $5 the American people earn. And these Americans already know that inflation means rising costs for all housewives and a falling value in pay envelopes.

When he was informed of his appointment to the Finance Committee, COTTON said he believed taxation is one of the most serious problems the country faces. There will be widespread endorsement of this observation.

Taxes must come largely from privately generated income. The burden is a heavy one. The taxpayer cannot be blamed for wondering where it will all end of for reacting with a black rage against taxes of any description.

COTTON and other members of his committee face difficulties. They will be urged to spend more, not less. They will be told the public demand for Government services has priority over a spending pattern based on thrift.

Broad scale tax reductions may not be just around the corner. But easing, as far as possible, of the tax load could produce valuable results for the entire Nation.

Dan Flood Justifies Confidence With Work at Mine Catastrophe

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilkes-Barre Sunday Independent, February 1, 1959:

DAN FLOOD JUSTIFIES CONFIDENCE WITH WORK AT MINE CATASTROPHE

When the people of Luzerne County, in their wisdom, last year once again reelected DAN FLOOD they got more than a Congressman.

They got a man who, when the emergency arose, proved the one real leader available in these parts to serve them.

And if he does nothing more than what he did for the awful mine catastrophe at Port Griffith, when the river breakthrough threatened all the mines of the region, his would be a greater accomplishment than that of most of the other Congressmen who have been elected in recent times—in all of their combined terms.

It was a splendid service and proved that not only is the know-how of experience so valuable in the right hands but that you also need someone who has the force of character to make full use of it.

Actually, Congressman FLOOD was in charge of nothing at the scene of the accident.

In complete command was State Mine Inspector Daniel Connolly, who was assisted by other State men, Federal men, Army engineers, and Seabees.

But it was FLOOD who first and so quickly determined what could be done to help, where to get those who could help, how they could be combined into an effective team and then, serving as liaison man between Federal and State forces, brought them together.

And it was at the Friday night meeting in his office that the work was planned on a scale sufficiently massive to accomplish something.

Before that happened, the struggle that had been made was heroic but also an unequal one.

The resources, the power, and the equipment were just not of sufficient size and strength to make an impression against the almost limitless power of the raging waters.

However, the individuals did their best and the little towns gave their all as they struggled until the State and Federal powers were on the scene.

But in all that time, from beginning to end, most conspicuous by its complete absence was any effort or even sign of interest from the government of Luzerne County—the only local branch of government big enough and with sufficient resources really to try.

Yet not one county leader was in any small way even slightly concerned.

For All Who Care

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. BECKER. Mr. Speaker, under leave granted me, I wish to have inserted in the CONGRESSIONAL RECORD an excellent editorial from the Baldwin (N.Y.) Citizen under date of January 29, 1959, commenting on a timely reminder by the American Legion of the wisdom of recognizing our responsibilities.

The editorial follows:

FOR ALL WHO CARE

The annual "For God and Country" telecast of the American Legion reminds all Americans—with especial force, this year—of the most vital issue of 20 centuries.

As we stand at the crossroads of history, and in the gathering storm that must revolve whether this world is to be God fearing or anti-God, the world's largest body of veteran fighting men asks us to stand up and be counted. It commands us to recall that from its faltering beginnings on the precarious edge of a wild man's wilderness, the strength of this Nation has flowed from God and been manifest in freedom of worship and respect for faith.

Against the shocking background of the recent visit of Anastas Mikoyan—the arch spy who directed the theft of U.S. atomic secrets, and the assassin of the victorious Hungarian freedom fighters—and the hospitality extended by Americans of prominence, we quote from the supplication of the Right Reverend Monsignor John J. Twiss, national chaplain of the Legion:

"Remind us, Lord God, of the pressing need today of reemphasizing, rather than shying away from, the word 'loyalty.'

"Warn us that the recent decline of this concept of loyalty can undermine the foundation of a free America—the family and the home—unless we return to those values and virtues that claimed the uncompromising allegiance of those who founded this Nation and made the struggle for life, liberty, and the pursuit of happiness irresistible and undeniable.

"Above all, help us to be passionately loyal to America and our way of life. Make us nonpartisan in our choice of programs and policies for the service of the Nation. Lord, may we always ask: 'What will best serve America as God wills that America be served?' "

Spiritually, the Nation endures again the discouragement of Valley Forge. And Americans may seek today, as General Washington sought then, the strength of divine guidance, or they may flee to the temporary warmth of indifference and expediency.

This is the critically timely message of the American Legion.

Kansas Observes 98th Birthday

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. AVERY. Mr. Speaker, on Thursday, January 29, 1959, Kansas observed her 98th anniversary of her achievement of statehood. Since 1903 this day of January 29 has held special significance to all Kansans. It has been regularly observed on most of these years by schools, organizations and particularly by the Kansas Day Club. Although the Kansas Day Club does have a political connotation, its membership is open to all and the annual meetings are generally atended by Kansans from all parts of the State. The arrangements for the annual meeting in 1959 were largely taken care of by Mr. Richard D. Rogers, of Manhattan, the president. Among the distinguished guests attending this annual meeting was Secretary of the Interior, the Honorable Fred A. Seaton.

One of the outstanding features of the program for the annual banquet of the Kansas Day Club was a testimonial to Kansas delivered by Ned Cushing from Downs, Kans. Little could I say that would describe this testimonial in addition to the persuasive phrases that it contains. Not only is it a testimonial to Kansas, but it also depicts the great trials that faced the pioneers of Kansas as well as the historical events that have left their mark in the history of our State.

Mr. Speaker, I wish to insert following my remarks this testimonial to Kansas by Mr. Cushing:

Mr. President, distinguished guests, fellow Republicans and Kansans, on this night, the 98th birthday of our great State, I ask that you pause briefly with me to review our "search for the stars."

Ad astra per aspera—to the stars through difficulties since the 1500's the way has been rough and hard for those who have made our great State what it is today, but the motto on our State seal tells us that if we ever expect to reach the stars we must overcome difficulties.

It thrills us to recall the great deeds of those who lived before us, and isn't it natural to wish we could have been present for those historic experiences? If it were possible to make a wish and have it come true, what would you choose?

To ride with Coronado's Spaniards and discover the Indians in the 1500's?

To sing with the French boatmen as they traded up and down the Kansas Rivers in the 1700's?

To explore with Lewis and Clark in the early 1800's, or maybe travel the Santa Fe, Oregon, and California Trails?

To take part in the chaotic, turbulent days of pro and anti slavery when Kansas was only a territory?

To see President Buchanan, on January 29, 1861, sign the Kansas Bill which admitted us to the Union under the Wyandotte Constitution as a child of the Republican Party?

To join those who came to Kansas by covered wagon, on horse, on foot, from the East, North and South, all "searching for the stars"?

Whatever your wish or whatever road to the stars you choose, none can deny that Kansas has had a splendid past as the child of free statehood, a land of variety and extremes, a land of promise and disappointment; all put together into one glorious heritage by the energy and intelligence of determined Kansans before us. A heritage that is ours today.

Yes; we have a legacy reaching back even to the very beginning; to the man who built the first dugout canoe; made the first wheel; fashioned the first instrument of metal; or raised his eyes in worship to the stars. The progress of Kansas as well as civilization has been uneven, but every generation can add something, be it little or much, to this heritage of the past. And today we face the greatest challenge history has ever known. Each one of us, as a trustee of the past, has the task of living up to our heritage and adding something to it.

Our search for the stars must not stop with our early history. How about our present and future Kansas? It is even more vital that we point with pride to what she is and will be than what she was.

In this century the skies are as blue, the clouds as white, the grass as green, the people as courageous, and the rainbows as full of promise as in the days of the pioneers. Kansas is not yet complete, and every time is a good time to live in if we know what to do with it. We should all be concerned about the future because that is where we will spend the remainder of our lives. The past is gone and static. Nothing we do can change it. The future is before us and dynamic. Everything we do will affect it. Each day brings with it new frontiers if we will only recognize them. Existence is a strange bargain. Life owes us little. We owe it everything. The only true happiness comes from dedicating ourselves to a purpose.

What better than to have as our purpose, now and for the future, to build a better and even more glorious Kansas? "Ad Astra per aspera." To search even harder for the stars through difficulties, toward the highest ideas of political, social, and moral excellence. There is politics written in almost every line of Kansas history and if we will make this motto not only the motto of Kansas but of the party which gave her birth and being, the Republican Party, we shall continue onward and upward through all difficulties to ultimate success.

To continue our search for the stars will mean untiring effort—it will require the utmost harmony—it will demand strict adherence to moral right—it will call for the strongest and ablest of leaders. The task will not be easy, but it can be done. We are saying with our presence here tonight that we will reach those stars.

And so, tonight I would propose,

Yes, of difficulties we've had our share
But Kansas is none the worse for the wear,
What's been done should not concern us most,
Rather look to the future as we end this toast.

Federal Government Largely to Blame for Housing Bias

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. DOLLINGER. Mr. Speaker, the Civil Rights Commission, on February 2, 1959 in New York City, began a study of racial discrimination in federally aided housing as well as in the private and public housing fields.

Walter L. Kirschenbaum, public relations director of the Jewish Labor Committee told a Workmen's Circle audience on February 1 at the Workmen's Circle Center, 615 Rittenhouse Street, Washington, D.C., that it was imperative for President Eisenhower to issue an immediate Executive order establishing a committee to aid in the abolishment of discrimination in federally aided housing. He said that such an order would become a beacon for State and municipal governments to follow in the private and public housing arena.

Mr. Kirschenbaum said that sordid housing conditions, created by neglect and apathy on the part of some landlords, had a direct bearing on the attitudes of these landlords toward minority groups.

Depressed areas—

He said—

are depressed because those who own the property have a contempt for those who tenant the buildings. Out of such conditions is spawned juvenile delinquency, racial tensions, moral decay.

There are Little Rock conditions—

Mr. Kirschenbaum said—

because real estate interests have been coddled. They have been permitted by law and by the apathy of public officialdom to destroy the basic tenets of human dignity: the right of human beings to live in peace together without regard to race, religion, or national origin. From segregated housing has also been spawned segregated schools.

Mr. Kirschenbaum said that—

It will become shockingly clear at the Monday and Tuesday hearings in New York, that minority groups are forced to live in ghettoized slums, their children forced to attended segregated and often inferior educational institutions, because decent housing is closed to them, and public housing is consistently under attack from real estate quarters and professional bigots and therefore scarce.

Conditions exist in New York State that cry out for legislative remedy. Existing laws, such as the Sharkey-Brown-Isaacs Law in New York City banning discrimination in private housing was passed in spite of vicious pressure from a combination of bigoted real estate interests and equally bigoted politicians who sought to curry favor for financial returns to political coffers. Right now, in Albany, highly placed officials in the Rockefeller administration are advising against the passage of the Metcalf-Baker Bill which would do on a State level what the New York City ordinance is designed to accomplish locally.

There is sufficient evidence—

Mr. Kirschenbaum said—

to indicate a conspiracy against minorities in the housing field. Such evil practices as coded listings of available apartments, hiking the rental of an apartment after a price had been agreed to, discouraging non-whites from residing in a community after a Negro family had moved in, or spreading vile and ugly rumors about Jews, Negroes, Puerto Ricans in order to create the ghetto atmosphere, are some of the devices employed.

Harry Belafonte's agent had been quoted one rental and Mr. Belafonte a higher one after the landlord learned of the singer's interest in becoming a tenant. In another case, the New York City Commission on Intergroup Relations successfully mediated a complaint brought by a Jewish family against a self-styled cooperative. Cooperatives under the United Housing Foundation which includes the major labor and fraternal organizations have pioneered in breaking the barrier of discrimination in their occupancy practices.

Ghettoes are monuments of shame, built on foundations of bigotry—

Mr. Kirschenbaum told his audience.

He cited examples in the District of Columbia, Chicago, New York State which, he said, "indicates that segregation is a national problem and not relegated to any geographical center."

The labor movement, especially through the AFL–CIO civil rights committee, is determined to crack not only the employment barriers of discrimination but the housing barriers as well. Long before a local law was passed in New York City, the International Ladies' Garment Workers' Union, the Amalgamated Clothing Workers Union, the International Brotherhood of Electrical Workers, the Amalgamated Butcher Workmen, and the Hat, Cap, and Millinery Workers and the Workmen's Circle were sponsoring cooperative housing on a nonsegregated basis—

He said.

Mr. Kirschenbaum announced that the JLC position will be presented by the New York State Committee Against Discrimination in Housing at the Federal Commission hearing. The JLC is actively supporting the antibias housing committee.

In my opinion, Mr. Kirschenbaum's remarks are timely and his statements very informative. I fully agree with him.

Morris Cunningham's Articles on Refugees

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include three very ably written articles which appeared in the Commercial Appeal, published in Memphis, Tenn.

I had the great pleasure of serving with the author of the articles, Mr. Morris Cunningham, on the U.S. delegation to the ninth meeting of the council of the Intergovernmental Committee for European Migration in Geneva, Switzerland. Mr. Cunningham's articles read as follows:

[From the Memphis Commercial Appeal, Jan. 14, 1959]

REFUGEES: PERPETUAL RESULT OF CONSTANT WORLD TURMOIL

(By Morris Cunningham)

WASHINGTON, January 13.—Wars, revolutions and political coups and persecutions loose a continuing stream of refugees upon the rest of the world.

The size of the stream rises and falls in reasonable proportion to the political stability of the combined nations of the world.

For more than 20 years now it has stayed at a high level, falling in one area as peace is restored but rising elsewhere as a new conflict bursts forth.

Nazi persecutions in Germany, the Spanish civil war, Nazi conquests, World War II, Russia's seizure of the satellite countries, Russian persecutions, the Israeli-Arab conflicts, Communist conquest of China, the India-Pakistan division, Indochina, Indonesia, Korea, the revolt in Hungary, Algeria—these and other less-publicized conflicts have fed the stream of refugees, have put people in alien lands, looking for asylum and homes—old people, young people, sick people, healthy people; some good, some bad; some, no doubt, Communist agents.

The United States once was a generous host and a haven for the world's persecuted. Between 1820 and 1914, the United States accepted more than 32 million immigrants. This was in the days when populations and wars were smaller and when conflicts affected lesser numbers of people. In these years the United States served as a primary "escape hatch" for those refugees who had the means and the inclination to migrate.

The wholesale dislocations of World War I brought refugee problems of such magnitude that a continuation of this relatively "open door" policy became impossible. The people of the United States no longer could accept all of the people from abroad who wanted to come here without risking serious dislocations within their own country. As it is, 2,925,000 aliens are registered in this country.

BACKS NOT TURNED

While realizing that they could not continue to carry such a high proportion of the load, the people of the United States have not turned their backs on the problem. Far from it.

Today the U.S. Government is the leader in recognizing the refugee problem and in trying to cope with it on many fronts and through various organizations.

There are various components of the problem since refugees fall into many different categories and situations.

For instance, there are the Germans in Soviet-held East Germany, who are escaping into free West Germany at the rate of 10,000 a month. They are easily assimilated into the prosperous, growing West German economy, particularly since they are of the same nationality and speak the same language.

This is also true with other refugees of ethnic origin or culture similar to that of the country of asylum.

Since the outbreak of the Korean war in June 1950, an estimated 750,000 residents of Communist-held North Korea have sought and found refuge in South Korea. A small number, mostly defecting North Korean soldiers, are still finding their way through the lines.

Between 1950 and 1952, about 175,000 Turks who were living in Communist-held Bulgaria were expelled. They found asylum in Turkey.

Since the cessation of hostilities in Indochina in 1954, about 900,000 persons have moved from the Communist Viet Minh area into free Vietnam. About 150,000 were French and Vietnamese military personnel. The French mostly have returned to France. The others have become a part of Vietnam. In addition, the Chinese community in Vietnam has absorbed about 400,000 refugees from Red China.

FIVE MILLION MOVED

One of the largest movements of people in recent history resulted from the division in 1947 of British India into two nations, India and Pakistan. Shortly thereafter about 5 million Hindus and Sikhs moved from west Pakistan into India and about the same number of Moslems left India for west Pakistan. Since then an additional 3 million Hindus have moved to India from east Pakistan and another million and a half Moslems have moved to east Pakistan from India. While these vast exchanges have not been without difficulties, the immigrants have been accorded equal political rights and their economic problems generally are no worse than those of the people they have joined.

There also are instances of the successful integration or refugees of ethnic origin or culture alien to that of their country of asylum.

For example, France still has about 110,500 of the 400,000 Spanish republicans who fled to France during the Spanish civil war in 1937–39, about 20,000 Armenians who arrived between 1919 and 1926, and about 3,600 Austrians from the Nazi era, all now integrated into French life.

England has about 110,000 former members of the Polish Army and their dependents, and Sweden about 200,000 other Europeans of non-Swedish origin, but including about 50,000 from other Scandinavian countries. All of these also are permanently established in their adopted country.

These are examples of situations where refugees have found new homes with relatively little difficulty.

[From the Memphis Commercial Appeal, Jan. 15, 1959]

REFUGEE CHINESE AND ARABS BIG PROBLEM FOR FREE WORLD

(By Morris Cunningham)

WASHINGTON, January 14.—State Department statistics indicate there are more than 2,600,000 refugee in the world today who have not yet been integrated into the life of an asylum country.

By far the greatest number fall into two groups. First there is the estimated 1 million Chinese who have fled Red China and crowded into teeming Hongkong, the British colony. Next there are the 947,000 Arabs who fled Palestine during the Arab-Israel hostilities in 1948, and since then have been living in camps in nearby Syria, Lebanon, Jordan, and Egypt.

In addition, there are now about 100,000 refugees of the fighting in Algeria. About half are in Tunisia and the remainder in Morocco.

An estimated 50,000 Dutch refugees from the civil disturbances and unrest in Indonesia have been forced to return to Holland.

Austria has about 100,000 unintegrated refugees, mostly from Yugoslavia, Czechoslovakia, and Rumania.

Most other European countries also have varying numbers of refugees of alien ethnic origin or culture who have not yet been integrated into a new life. State Department figures show France with about 75,000, Germany 126,000, Belgium 56,000, Italy 28,000, and other countries with lesser numbers.

IRON COUNTRY ESCAPEES

Many of the latter have escaped from behind the Iron Curtain and therefore are of special interest to the United States.

Escapees, in the American view, are living evidence of the malfunctioning of political-economic systems. So are the elaborate border guards maintained by Soviet Russia and her satellites.

After an escapee has evaded these guards, the aid accorded him is symbolic of Western concern for the satellite populations of Eastern Surope. Word of this aid filters back behind the Iron Curtain and rekindles hopes and disaffection.

Thus, the remarkably successful job that was done in finding homes for the Hungarian freedom fighters was an expression of this realistic though humanitarian policy.

The basic interest of the United States in unresolved refugee problems stems from three factors:

1. The desire of the United States to uphold and support the principle of asylum to refugees and its corollary principle of a refugee's right to choose or reject repatriation. From these principles stems the humanitarian desire of the people of the United States to alleviate suffering among refugee groups.

DESIRE TO STABILIZE

2. The desire of the United States to assure the stability of free world governments. An unresolved refugee problem is a factor in internal stability.

3. The desire of the United States to avoid the creation of factors within free world countries which would be exploited by Communist agents and propaganda either to utilize disaffected refugee groups as a part of the Communist espionage-sabotage-propaganda apparatus or to produce unfavorable comment on free world interest and effort in behalf of refugees.

These, then, are the American objectives in attempting to cope with the never-ending refugee problem.

[From the Memphis Commercial Appeal, Jan. 16, 1959]

UNITED STATES AIDING REFUGEE WOES BY INTERNATIONAL PROGRAMS

(By Morris Cunningham)

WASHINGTON, January 15.—The United States is tackling the world refugee problem on its own and through various international organizations.

Chief among the international organizations is the Intergovernmental Committee for European Migration, a 27-nation group which since its creation in 1951 has found new homes for more than 800,000 migrants and refugees.

Essentially a processing and transport organization, ICEM had received little publicity before the Hungarian revolt, October 23, 1956.

ICEM maintains a secretariat at Geneva, Switzerland, and delegations from the member nations meet there in the spring and the fall.

UNITED STATES MAKES PROPOSAL

Member nations currently are considering a U.S. proposal for a special program aimed at closing the remaining refugee camps in Europe. The camps now house about 38,000 persons, which is less than the average number of European refugees resettled each year.

The U.S. delegation suggested at the November ICEM meeting at Geneva that the program be coordinated with World Refugee Year, which the United Nations General Assembly has designated to begin June 1.

The proposal is to be discussed at the April meeting.

With Western Europe now recovered economically, the U.S. delegation also proposed that ICEM give thought to broadening its program.

WORK WITH EASTLAND

The American delegation's nerve center is the State Department's Office of Refugee and Migration Affairs, headed by Robert S. McCollum, a 42-year-old former Denver, Colo., businessman. His assistants include Richard R. Brown and George L. Warren.

This State Department agency works closely with Representative FRANCIS WALTER,

Democrat, of Pennsylvania and Senator JAMES O. EASTLAND, Democrat, of Mississippi, chairmen of the House and Senate Subcommittees on Immigration and Naturalization.

In addition to participating in ICEM, the United States operates the U.S. Escapee Program and the Far East Refugee Program. These programs aid selected individuals and groups, providing them with food, clothing and other essentials, and working with ICEM to find permanent new homes for them.

CARE FOR ARABS

The United States also participates in the programs of the United Nations High Commissioner for Refugees. This includes the $16 million United Nations Refugee Fund, which is dedicated to the resettlement of difficult cases—those refugees who require permanent institutional care.

And, finally, the United States is the largest contributor to the United Nations Relief and Works Agency for Palestine Refugees in the Near East. This is the agency that cares for the 947,000 Arabs who were forced out of Israel during the 1948 hostilities between the Israelis and the Arabs and who since have been living in camps in neighboring Arab countries.

UNRWA, which cares for them, draws its financial support mainly from the United States, which contributes about 70 percent of the budget. This country has averaged donating about $22 million a year for each of the last 2 years.

American cannot accept all of these people into the country. But we're compensating for this on many fronts and through many organizations, with work, money and planning.

Poison in Your Water—No. 6

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. DINGELL. Mr. Speaker, an article appearing in the Cleveland, Ohio, press on July 2, 1958, set forth some more reasons why the Federal Government must vigorously pursue its efforts to clean up pollution in lakes and streams.

This story entitled "A Terrible Price To Pay" describes the health menace along the shores of Lake Erie resulting from raw sewage being dumped into that lake by the communities of Euclid, Wickliffe, and Willowick. The situation is so bad that the article says, "If a man took a bucket of that polluted water and set it down in Public Square he would be arrested for creating a health menace."

This is the drinking water and the water for recreation that Americans depend upon:

A TERRIBLE PRICE TO PAY
